But as Hindus do not want to monopolise the government of even an independent India, Sir Abdur Rahim need not pass sleepless nights.

Let us, however, consider his stipulation for patronisingly agreeing "to see a self-governing India". He would have the government of the country made as much responsible to

the Muslims as to the Hindus. This can have two meanings. One is that, though the Muslims are a minority, they are to have as many posts in the public service as the Hindus, and also that they are to return to all representative bodies as many members of their own creed as the Hindus. This is an unfair and unjust condition which cannot be fulfilled and will never be fulfilled. If Muslims insist on this condition, they may rest assured that India *will* have indigenous rule without fulfilling that condition but at the same time without depriving Muslims of any just rights. But Sir Abdur's words admit of a better interpretation. Self-rule for India would mean rule by representative bodies, i. e., by political majorities in those bodies. These majorities would consist of members of various creeds and communities, not in proportions fixed for ever, but varying from time to time, just as in the British Parliament the numbers of Baptists, Quakers, Roman Catholics, Jews, etc., are not definitely fixed. In India of the future it would be open for Muslims as for Hindus by their capacity and devotion to public good to form as large a part of these political majorities, from time to time, as they can. There would be no disabilities imposed on Muslims or any other communities on account of their creed. Similarly, as regards posts in the public service, Muslims and all other sects would be free to have as many as they may be entitled to by their superior merit. But, as the Hindus are the vast majority, it is unlikely that, unless they greatly degenerate or diminish in numbers, their share of the paid and unpaid services in the country would not exceed that of the Muslims. But as in India of the future people will think and act nationally rather than communally, such a state of things will not be a grievance.

We agree with Sir Abdur Rahim in thinking that "India's best future lies in giving all the different communities that live or work here the fullest scope to develop and express their distinctive political genius."

Swarajists and the President of the Bengal Council

The President of the Bengal Council was quite within his statutory rights in admitting without previous notice Sir Abdur Rahim's amendment to the resolution recommending communal representation of Muslims in proportion to their numerical strength. But in our opinion, he did not make a right use

of the discretionary power vested in him. The king of England has the power to do many things, but he uses that power very sparingly and cautiously. Sir Abdur's amendment was a vote-catching affair, and as such ought not to have been allowed to be sprung on the Council.

But as the President has the power which he exercised, he did not act arbitrarily or in any worse manner attributed to him by the Swarajists. The conduct of the Swarajists was wrong and undignified. The motion for the removal of the President, which has been negatived, was an unwise move

Rabindranath Tagore's Tour in East Bengal

The poet Rabindranath Tagore's visit to East Bengal has shown the public the hold that he has on the love and respect of Bengalis. It has also furnished occasions for placing before the country high ideals of devoted service. It is to be hoped that these ideals will be lived up to by at least an appreciable portion of his vast audiences in the towns which he has visited

Locarno Pacts

Sir Sivaswamy Aiyar wanted an opportunity for discussing the Locarno treaties or pacts so far as they concerned India. But he and other legislators were denied that opportunity by the Viceroy. India may have to pay, to bleed, to make enemies of nations with whom she has no quarrel, but she must not have the right even to discuss the obligations placed on her by the British Government. Such is the "parliamentary" government we enjoy!

Press Congress of the World

There is every probability that the Press Congress of the world, which is referred to in the following pieces of news, will hold its next session in some place in Europe during next summer.

Columbia, Mo., —Dean Walter Williams, president of the Press Congress of the World, announced here the ad interim committee which will report at the next congress to be held in Europe.

Among the appointments are those of M. Charles Houssaye, of the Agence Havas, Paris, to the committee on news and communications, and M.

Stephane Lauzanne, of the "Matin," Paris, on the committee on ethics, standards and practice.

The Indian press should be represented in it by some competent and leading Indian journalists, we mean journalists who are Indians by race and are not employees of foreign newspaper-proprietors. There are Journalist's Associations in Calcutta and Bombay. These should immediately open communications with the President of the Press Congress for obtaining detailed information about it and sending to it worthy representatives. His address is Professor Walter Williams, Dean of the School of Journalism, University of Missouri, Columbia, Mo., U.S.A.

A Victory of the Defeated

When the World War ended in the defeat of the Central Powers, the Allied Powers, fearful of the possible recovery of the Central Powers, particularly Germany, took various steps for the disarmament of the latter. One of these steps placed serious restrictions on military aviation. Germany had to bow to the dictates of her victorious enemies; but to-day she, with patience and persistence, is trying to transform her defeat into a victory. She has turned her attention to commercial aviation; and in this field she has no equal in the world. In this connection the following newsitem will be of great interest —

A strenuous struggle is reported ensuing between French and German aeroplane interests in the Teheran to capture Persia's interior air mail service. Indications are that the Junkers will win, due to the fact that they have given air demonstrations throughout Persia for a period of two years and to the fact that the government favors German machines.

The Junkers also propose to establish service between London and Peking via Turkey, Persia and Afghanistan, the consent of these countries having been secured. With Teheran as a central station, they propose to manufacture machines and undertake repair work for the district of Persia.

India can learn much from the defeated and disarmed Germany striving to acquire again a dominating position in world affairs, particularly in commerce and industries. To gain the desired goal of freedom, Indian leaders will have to follow the path by which all defeated and disarmed nations secured their rightful place among free nations. Indians will have to assert themselves in spite of all obstacles placed by her alien rulers, in all fields of human activities. India, above

all things, will have to throw off the shackles of intellectual, commercial and political isolation.

T. D.

Afghanistan and Great Britain

Afghanistan marches on towards progress and the Afghan Government is determined to create a place for itself in the international world, as the following news item shows —

The Minister of Afghanistan has purchased, for official purposes, the freehold in Kensington, No. 31 Prince's-gate, at the corner of Exhibition-road and facing Hyde Park. Messrs. Wilson and Co. (Mount Street) and Messrs. Foord and Salberg (Clarges-street) were jointly concerned in negotiating the sale.

Afghanistan is a free and independent State and it has important relations with Russia, Turkey, Persia as well as Great Britain. To safeguard Afghan national interests within the British Empire the Afghan minister in London has purchased new and suitable quarters.

Will nationalist India see to it that India's interests in foreign countries are safeguarded *unofficially* for the present?

The Minto Professor of Economics on Indian Currency

The Minto Professor of Economics to the University of Calcutta, Dr. Pramathanath Bannerjee, has contributed an excellent article on "A Sound Currency System for India" to the February number of the University's organ, *the Calcutta Review*. Due, probably, to the difficulty of packing his ideas on the troublesome subject into a few thousand words the learned professor has left certain things rather vague, and unless these are properly explained there is a chance that the article will give rise to misconceptions.

Let it be made quite clear that we are fundamentally in complete agreement with Dr. Bannerjee. We think alike with him when he says about a managed currency, as opposed to a natural and automatic one, that

Management is not a bad thing in itself, but it can prove a success only when the persons entrusted with the work are possessed of perfect wisdom and the highest degree of honesty.

But where is "perfect wisdom" in this world of frail human beings? Economics

is still an imperfect science, its data are often amorphous, generally doubtful and seldom complete. Hence we have no faith in management of currency as a normal economic policy. And as we can reject management or the strength of the above, we need not examine the honesty, (and its height) of the spiritual heirs to the Hon'ble East India Company. Dr. Bannerjee is right when he says that there is a suspicion in the public mind "that Indian currency is often manipulated in the interests of England". He is also right when he says —

For the present, however, the adoption by India of the gold standard seems to be the only solution of her currency problems.

"For the present", because among the various hopes of humanity, such as those of disarmament, perfect free trade and a single language for all peoples, the hope of establishing an international agency for stabilising the purchasing power of money in the different money areas of the world is the most alive. Dr. Bannerjee supports the adoption of the gold standard because it "makes the largest measure of automatic regulation possible" and he thinks

that the adoption of the gold standard is an economic, social and political necessity.

In so far as he advocates the fundamental issues, one understands Dr. Bannerjee quite clearly. But there are certain other things which help one to get muddled. We shall take these one by one.

Dr. Bannerjee says, towards the beginning of his article, that,

The comparative importance of stability in internal prices and in foreign exchanges need not worry us overmuch. The internal trade of India is many times as large as her external trade. Therefore, looked at from the stand-point of volume of transactions, stability in internal prices seems to be more important than stability in foreign exchanges. But absolutely considered, the foreign trade of India is large enough to merit serious attention. If there is one thing more than another which disturbs the course of commercial and industrial activity, it is uncertainty of exchange. It should be remembered in this connection that there is not only no conflict between stability in internal prices and stability in foreign exchanges but that the two are to a considerable extent closely interrelated.

Does Dr. Bannerjee mean to say that by stabilising the exchange at all costs we shall also be able to stabilise internal prices? There may not be any conflict between the two kinds of stabilisation, but the two being two and not one, it is possible to neglect

one by being too emphatic on the other. Will Dr. Banerjea contradict the assertion that currency manipulations have taken place in this country with a view to influence the exchange without any notice being taken of their effect on internal prices? Will he deny that the coinage of rupees and the printing of currency notes have been carried on in this country to keep pace with exchange manipulations? Will he also deny that such manipulations have an evil effect on internal prices and hence detract from the country's well-being? In view of the above, what is it that makes him so generous towards the exchanges? Why does he judge the importance of the exchanges from an "absolute" point of view and not consider it comparatively with internal stability of prices? Are we to understand that Dr. Banerjea thinks the undisturbed progress of what he calls 'commercial and industrial activity' is of more importance in India's well-being than the smooth running of that section of India's economy which has little to do with foreign trade? In the paragraph quoted above the learned professor of the Calcutta University has slurred over a question of vital importance. We hope he does not mean to suggest that we should concentrate more on the stabilisation of the exchange than on that of the internal price level. The other alternative is that he thinks that *if we take care of the exchange, the internal price level will take care of itself*. But this is something which never happens. Modern economic thought will not support such a view. If Dr. Banerjea holds such an opinion he should make clear his reasons for doing so.

At another place in his article, Dr. Banerjea says.

The question which presents itself at the present moment is not so much the stabilisation of the rupee as the adoption of a sound currency system.

The meaning is not clear. Is not setting up a sound currency system a permanent way to stabilisation and is not a stable rupee a part of a sound currency system? We believe Dr. Banerjea means that a patch-work remedy is not our objective or something to that effect.

We come now to the most important point. Dr. Banerjea is supporting a gold standard. This means that the standard of value of the future currency of India will be a certain quantity of gold of a given purity in the shape of a coin or a paper note representing a claim upon the Govern-

ment to the extent of the same amount of gold. The silver rupee will be a mere token coin, legal tender up to a given sum, and bearing a fixed relation to the gold standard coin. There must be an arrangement for a more or less free inflow and outflow of gold into and out of the body of the Indian currency and this will keep exchange fluctuations within the gold import and export points. There shall be no artificial support given to the exchange to keep it at any particular height. As to the ratio that the token coin or the limited legal tender, the rupee, shall bear to the standard gold coin, the mohur or whatever it may be called, it would absolutely be a matter of internal currency management. Once we decide upon the ratio between the rupee and the gold coin, we must keep it intact anyhow and *this work of preserving the ratio between the standard coin and the tokens shall not in any way be guided by the relative values of gold and silver*. No more than the ratio of sixty-four pice to one rupee is conditioned by the value of copper in terms of silver at the present moment. The moment we talk of giving any importance to *the silver in the rupee* in our currency policy, we shall begin to move towards dangerous grounds. Dr. Banerjea, discussing the ratio we should adopt in which the rupee shall exchange with the gold coin, says

The relative price levels in India and other principal countries of the world are very nearly the same to-day as they were before the war. All these facts point to the conclusion that the 1s 4d rate seems to approximate closely to the natural ratio.

And he continues

If this rate be adopted, measures may become necessary to check any downward tendency of the rate that may show itself. This can be secured by a cessation or restriction of the rupee coinage and a reduction in the volume of notes in circulation. In case these measures fail to maintain the ratio, the Gold Standard Reserve will have to be drawn upon to make good any loss that may be incurred on this account.

Then he says in another place

...The Gold Standard Reserve will in future be employed for maintaining the ratio between the Mohur and the rupee

Now all this is very confusing. If we are establishing a gold standard, why should the Minto Professor of Economics look for any ratio between the rupee and the pound sterling, "natural ratio" or otherwise? The ratio between the Indian standard coin and the British sovereign will be determined by the relative weight and purity of their gold

content and not by comparing price levels or by legislation. The token rupee may bear any arbitrary relation with the standard coin so long as its silver value remains considerably below its face value. If ever, owing to a phenomenal rise in the gold value of silver, the rupee becomes an undervalued coin, then of course there will be time to think of combating the evil by debasing the rupee or by selling silver at a loss or by any other means. But so long as such an eventuality does not arise, as it is very unlikely to do in the near future with silver demonetised in India, it is merely confusing the main issue to talk about the ratio that a silver coin should bear to a gold coin (the sovereign or the Mohur) and to discuss ways and means for keeping the ratio stable.

The profits accruing from the coinage of rupees should be kept as currency reserve in gold and be used to give the gold notes a firmer metallic foundation. As to the wisdom of undertaking to pay gold in exchange of rupees, we have our doubts. Such payments may be made only to a certain extent but not as an obligation. Commencing to think of our exchange relations from the rupee end is to start at the wrong end. Dr. Bannerjee also suggests that our notes "should be made redeemable either in gold or in silver at the option of the government." This again violates the basic principles of a pure gold standard. It savours badly of bimetallism and should not have been suggested by the learned Professor after he had declared the adoption of the gold standard to be "an economic, social and political necessity." Of course the government would be acting within its rights if it encashed notes in silver tokens only to the extent that such tokens were legal tender.

Dr. Bannerjee may well say that he was discussing the relation between the gold coin of the future and the rupee when he wrote about establishing the 1s 4d ratio and that in view of the fact that the rupee has been our traditional standard of value and vast quantities of it are at present in circulation throughout India, the question of ascertaining its value in the new system is of paramount importance. We do not deny that it is so. But Dr. Bannerjee should not have gone about the work in a way which suggests an obsession for establishing a direct rupee-sterling ratio of exchange and for not altogether dissociating silver (as a store of value) from our

currency. Such a half-hearted gold standard will not serve any good purpose and that should be made quite clear.

There are two ways in which we can fix the value of the rupee in terms of our standard gold coin (1) by referring to its purchasing power and (2) by evaluating its silver content. The second is out of the question as that would clash with the principles of a pure gold standard. Dr. Bannerjee has therefore done right to attempt to find the value of the rupee in terms of gold by its purchasing power. The purchasing power of the rupee is much above the purchasing power of the 165 grs. of silver which it contains and the fixing of a ratio of 15 : 1 between the rupee and the Indian equivalent of the sovereign, we think, will satisfy all conditions of smooth running. Conditions of international trade are such at present that with the establishment of a gold standard in India (with the Indian Mohur or standard gold coin buying nearly 22½ shilling worth of goods in general) we can expect a heavy flow of gold towards India. This will greatly facilitate our establishment of the gold standard and the conditions which have made Dr. Bannerjee too cautious to lose grip of silver altogether will probably disappear.

A C

Tagore Criticised

The *Englishman* has suddenly come out with an attack on Tagore's social philosophy or what has been alleged to be his social philosophy. It is an ancient game to misinterpret a thing and then prove that it is all wrong. The conservative organ of the established order, in which plantations and mills occupy the most important place, has made use of this particular method of attack and raved over its self-created grievance at length. We are told

Dr. Rabindranath Tagore has been deplo'ring the spread of organisation, which in his opinion deprives people of the opportunity of cultivating themselves. He would have us return to the ideal of the Vedas, when such occupations as commerce and fighting were restricted to certain castes. The poet's countrymen who insist that India should be allowed to defend herself and who argue that she is capable of raising "millions of soldiers," will hardly endorse his views in this respect.

Nor will Dr. Tagore's plea for the restriction of commercial activities appeal to those who look forward to the development of India's industries and commerce as providing new occupations for the

large army of unemployed. It is written that "man shall not live by bread alone," but it is nowhere suggested that he should go without bread altogether; and we doubt whether even in the Golden Age of India the majority of the people had, "full freedom to cultivate their human personality." The majority, as to-day, must have been mainly occupied in cultivating the soil, and, if commerce were restricted, we imagine a large proportion of non-agriculturists would be forced to become cultivators or starve. Dr. TAGORE is so obsessed with the evils of an organised existence that he is blind to the enormous benefits of organisation.

It is a common fallacy that men of business are entirely absorbed in money-making. Even if it were true, it must be admitted that their activities help to make life easier and richer. Dr. TAGORE may despise material benefits, but we cannot all be Tagores. Moreover, business men are not entirely lacking in higher interests. Sir RAJENDRA-NATH MUKHERJEE, for example, has found time to preside over the Asiatic Society. Mr ROCKEFELLER has just given a princely donation towards an Egyptian museum, and British merchants have repeatedly contributed their energies and wealth to the promotion of moral and spiritual cause.

Tagore has no doubt often preached and written against a certain form of organisation and that kind of organisation certainly does deprive people of the opportunity of cultivating themselves. The *Englishman* would certainly not advocate the keeping up of this defective system on account of its defectiveness. If the *Englishman* could prove that this particular kind of organisation was the only kind and that the benefits yielded by it far outweighed its evils, then of course we could see the *Englishman's* point in contradicting Tagore's views and deriding the Vedic Age without knowing anything about it. But the present-day highly specialised and mammoth economic institutions are not the only possible forms that organised human effort can assume, nor do they produce the highest possible human well-being. Production is not the only measure of social happiness. As a matter of fact, it is hardly any measure at all. And it is human happiness that human endeavour strives after and not fuller warehouses. We must remember • that

Human beings are both "ends in themselves" and instruments of Production. On the one hand, a man who is attuned to the beautiful in nature or in art, whose character is simple and sincere, whose passions are controlled and sympathies developed, is in himself an important element in the ethical value of the world, the way in which he feels and thinks actually constitutes a part of (social) Welfare. (Pigou, *Economics of Welfare*, p. 13).

So that it is not the acme of economic wisdom to consider human labour as a mere factor of production and employ it with only

maximum production in view. As Dickinson says in his *Letters of John Chinaman*, describing England as seen by an Oriental spectator :

By you works you may be known. Your triumphs in the mechanical arts are the obverse of your failure in all that calls for spiritual insight. Machines of every kind you can make and use to perfection, but you cannot build a house or write a poem or paint a picture. Still less can you worship or aspire... Everywhere means, nowhere an end. Society, a huge engine and that engine itself out of gear. Such is the picture your civilisation presents to my imagination.

So that it is not Tagore alone whose view of social life may displease the *Englishman*. Organisation which despoils man of his own excellence and production, which deprives man of the richest of emotions, cannot compensate him by giving him more food, clothing, housing, transport and so on and so forth, for man, to be really happy, must have a fuller grasp of the True, the Beautiful and the Good. This is Western Philosophy and the writer in the *Englishman* may have come across it in his youth. A cooperative organisation of industry and the retention of the family system of life intact are ideals not only of Eastern dreamers but also of Western economists. And Tagore has always supported such forms of organised life. His own educational farm at Surul, Bengal, has always attempted to foster co-operation in every department of life. He is against the large scale factory system and an exaggerated city life and in this he is supported by the most modern economic thinkers. With the development of electricity, economists everywhere are looking forward to the day when nobody will have to go out of one's home atmosphere to work. This will improve the general tone of man's life as factory work impairs the same.

The second point in the *Englishman's* criticism is that the breaking up of the existing system will render it impossible for Indians to raise huge armies. As Tagore is working also against militarism, we do not see why he should worry about this. If by doing away with intensive organisation, we can also do away with militarism by making it impossible to raise huge armies, should we complain?—though we do not think it an impossibility to raise armies for defensive purposes from among Indians who live in healthy villages and produce goods on a co-operative basis.

The development of India's village life with a view to greater self-containedness should reduce unemployment much more than the

development of mechanical production in factories. Why the *Englishman* thinks otherwise defies comprehension. The unemployment, rampant to-day in the villages in India, is due to the fact that agriculturists exchange their goods with goods produced by, let us say, Lancashire labourers and not by their own compatriots in the villages. In a scheme of society, in which the village (or at least Indian) workers will be enabled to exchange goods and services with the main body of India's productive workers, there would be less field for unemployment than there is to-day with society based on what amounts to a boycott of one's own countrymen in favour of foreigners. The *Englishman's* fear that "if commerce were restricted," a further crowd of Indians would be thrown on the land, is based on an ignorance of the ordinary principles of economics, and needs no comment.

Lastly, we are informed of the existence of a "common fallacy that men of business are entirely absorbed in money-making" and told that the activities of the money-makers "make life easier and richer." For whom? Themselves? The fact that wealthy men sometimes go in for cultural things proves nothing. Nobody ever denies that some great business men contribute largely to the advancement of culture. The fact that the *Englishman* brings forward this as an argument in favour of the money-makers only proves that even the *Englishman* values the quality of life higher than the quantity of money at one's disposal. But the point is not whether some business men are men of culture, but whether or not modern business fosters culture. The fact that Sir Rajendra or Mr. Rockefeller has contributed to the higher life of man has not made the employees of the same gentlemen "feel and think" in a way "which constitutes a part of (India's) Welfare."

A. C.

The Frontispiece

"On the Slopes of the Desolate River" is the artistic projection of a mood of life. Gloom and desolation and unknown possibilities that sway the soul with dark forebodings are well depicted with an impressive monotony of colour effect. The dress of the woman in the foreground, the looming shape of the distant trees and the haze beyond the river, which suggests motion but not towards the land of light—all go to heighten the dreariness of the situation. It is a difficult thing to express a purely subjective state in lines and patches of colour; but Mr. Roopkrishna of

Lahore has gone a long way towards success in his picture

'Calcutta University Convocation

Lord Lytton as Chancellor of the Calcutta University stated the pros and cons of making Bengali the vehicle of instruction in high schools pretty fairly. The arguments in favour of the step are irresistible. The difficulties of Assam are, no doubt, real difficulties. But Bengal ought not to suffer for Assam. In Great Britain there are still a good many persons who speak only Gaelic or Welsh. But schools in Great Britain do not on that account refrain from giving English its rightful place in educational institutions. In America, there are thousands of persons whose mother-tongue is not or was not English. Still, English is the medium of instruction there. Let Assam be accommodated as far as practicable, but let not the vital reform of making the vernacular of the province its medium of instruction be put off any longer. Assam was once successfully made the cat's paw for destroying the chances of University reform in Bengal. Let it not be allowed to be used again for a similar purpose.

Mr. Justice Greaves, the Vice-Chancellor, gave a long list of the researches made in the Post-graduate Departments of Science and Arts. The time and space devoted to the enumeration of any researches are, no doubt, not safe criteria of their quality and importance. Nevertheless, it must be said that in the Vice-Chancellor's lists the science department made a braver show. Therefore, we presume, it has all along got less money than the other department. We are really glad, however, that though the average amount of knowledge and intelligence required for passing Calcutta University examinations has become less than before, research continues to flourish. We do not claim any intellectual pre-eminence for Bengal. But it is an undeniable fact that, barring what the few plagiarists have done, both the quality and the volume of research carried on in the Calcutta University will stand favourable comparison with those of other Indian Universities.

We agree with the Vice-Chancellor that the proposed Secondary Education Board should be an independent body, that its creation should not affect the financial stability of the University and that the Matriculation examination should continue to be a University examination.

LEARN TO WRITE

—AND— Earn by your Pen

Successful Writers are earning enormous sums. All papers pay highly for the right kind of article. The only thing is, you must know how to write Saleable articles and where to sell them.

"COMPLETE GUIDE TO WRITING FOR THE PAPERS"

by R RAWFIELD, M.A., (Ready for Sale on 31st March) will give you exhaustive and expert guidance.

Price Rs. 5-8. Orders registered before 31st March at Rs 4 only

Temples, Churches, and Mosques by Mr Yakub Hasan. In this remarkable volume Mr Yakub Hasan has attempted to give a kaleidoscopic view of the world's architecture. He takes us through the Chaldean to Roman, Greek and Egyptian temples, to Buddhist Monuments and the temples of the Far East in all their variety and splendour : to Solomon's temple and the Kaaba at Mecca, to the coming of the Messiah and the magnificent Cathedrals of Medieval Europe, to the birth of Mahomed and the Mosque architecture of Egypt and Turkey and Spain and finally to the beautiful Moghul architecture of Hindustan. The reader finds himself face to face, now with the pyramids of Egypt or the Parthenon of Athens, now gazing at the dizzy domes of St. Marks or St. Peters, now passing through the corridor of the Rameswaram temple, or admiring the golden flooring of the Sheedagon Pagoda, now stupefied by the height and immensity of the Kutab or lulled into a beautiful vision by the delicate craftsmanship of the Taj. **Price Re 1-8**

YOGA-MIMANSA

—Edited by—

SHRIMAT KUVALAYANANDA (J. G. Gune.)

The journal is a quarterly organ of the *KAIVALYADHAMA* recording scientific researches in Psychophysiology, Spiritual and Physical Culture etc., with their application to Therapeutics. Each number covers 80 pages of the royal 8vo size including 16 full page illustrations. The matter is divided into four different sections so as to meet the needs of all types of readers. The journal appears in the middle of January, April, July and October. Second year begins with Jan 1926.

Annual Subscription per volume and single copy respectively, India, Rs. 7 and 2; America, \$ 3.50 and 1; other Foreign Countries s 15 & 4

N.B.—First volume complete, will sell for the original price to the end of April 1926. Afterwards it will cost—India Rs 9; America \$ 4.00, other Foreign Countries s. 17. Single copies not available.

A FEW APPRECIATIONS.

"The issue before us is a valuable and interesting production and fully justifies the unique place and importance of the journal in the realm of modern scientific and philosophical literature... The printing and get-up of the journal is fine, as befitting a scientific journal recording great truth."

—*Current Thought, Madras.*
"From its general appearance and get up of the journal and the matter it contains one can see that the work is in able hands and in time the institution will be as useful and popular as the New York Institute of Science."

—*United India and Indian States.*
"Yoga culture is looked upon as something mysterious and secret. This endeavour to bring it before the popular gaze and to interpret it in the light of modern sciences is altogether unprecedented in this country."

—*The Kesari, Poona.*
"Your attempt to explain Yogic physical culture in the light of modern sciences has my heart-felt sympathies."

—*Prof. Manikrao, Baroda.*
"I have gone through the book carefully and have found the researches very interesting."

—*Mahamahopadhyaya Kavraj Sen, M.A., L.M.S., Calcutta.*

"Your excellent journal is a new venture of its kind and I have read it with interest."

—*A. C. Bisnoid, M.R.A.S., London, Calcutta.*
"I have only had time just to glance at it, but I am already convinced that it will be of great service to serious students of Yoga in the West."

—*G. R. S. Mead, Editor of the Quest, London.*

Himalayan Remedies

Wonderful Discovery in the Medical World!!

For some Obstinate and "Incurable" Diseases

Secured from the hidden stores of Great Lamas and Yogis of Tibet, Burma and Himalayan Hills, by Mr. P. C. Mukerjee, B.C.E., M.I.S.C.E., F.T.S., Vidvabhusan: late Resident Engineer, Calcutta Corporation: during his tours and travels in the obscure regions of these mysterious lands while Engineer to P. W. D., of Burma and Personal Assistant to the Chief Engineer of Kashmir State.

The fruits of many years' hard researches in the Himalayas and 25 years' successful experiments by the founder and 12 eminent Physicians of Calcutta and elsewhere are now placed before the public for the relief of suffering humanity in general.

Since 1918 the founder has been practising in Calcutta as a SPECIALIST IN LEPROSY, LEUCODERMA and DIABETES and has cured a good many serious cases successfully.

THE HIMALAYAN REMEDIES GUARANTEE CURE OF

I. Leprosy, Leucoderma, Gangrenes and all incurable types of Sores, Skin-diseases, and of ulcers within or outside, also sinus, and fistula in ano etc.

II. Obstruction of urine and all urinary troubles due to Gravels, stone, &c. (a) Renal colic; (b) Gall-stone—No operation or catheter-passing is necessary.

III. (a) Diabetes of all stages, (b) Pulmonary Phthisis up to the stage when the patient has not been bed-ridden and reduced to skeleton but has vitality enough to digest our medicines.

Cure is effected by regular and scientific treatment with these unique medicines under the founder, assisted by an able Medical Board who help the founder so far as Diagnosis of any critical case is concerned.

For an experiment we request the sufferer to try any of the following cheap but wonderful medicines: for serious Malaria Special Preparation, painful Asthma and dreadful Dysentery of all stages, Rs. 1-8 each, Scorpion Bite as 8 Extreme Dyspepsia and hopeless Nervous Debility, Rs. 2-8 each, Gastric Colic, obstinate Eczema, all eye complaints except cataract, as well as long-ponding Rheumatism of all stages, Rs. 2 each.

Medicines are Free from any Injurious Substance.

All confidential Letters are to be addressed to Mr. A. Banerji M.D (Homeo)
Secretary to the Medical Board.

UNSOLICITED OPINIONS. A FEW OUT OF A LARGE NUMBER.

LEPROSY CURED. Dr. A. P. Bagchi, L.H.P.G., B.V.C.M., Calcutta, writes 5-7-18: "You have successfully cured a female relative of mine of her Leprosy. Her case was of 14 years' standing and was tried by most of the well-known Physicians and Kavirajes of Calcutta as well as of other places of India but with no effect. Prior to your treatment she used to suffer from severe attacks of fever. Her sensation of skin was paralyzed in many places and she had sores and swellings all over the body and finally lost three toes. But under your marvellous treatment for the last 9 months, she has been completely cured of all her ailments."

CURE OF EXTREME DYSPEPSIA. Mr. Nilambar Mukerji, M.A., B.L., C.I.E., the late renowned Prime Minister of Kashmir State and Vice-Chairman, Calcutta Corporation—writes 14-6-5: "I was suffering from a long and confirmed Dyspepsia, torpidity of the liver and extreme nervous debility, I did not expect to live long. But now under your excellent treatment I find that normal tone has been restored

to the alimentary canal and the peristaltic action so revived evacuates the bowels easily and twice every day and I feel stronger daily with the expectancy of a further lease of life."

Major-General A. W. HUGHES writes from Darjeeling 15-10-15: "I am an old man of 72, your medicine reminds me of my young age of 32."

Dr. S. K. LATHI, M.D., writes 15-8-07: "After sufficient trial I have found your (1) Himadrikalpa (Nervous Debility), (2) Himadri Sudha, and (3) "Zerula" colic to be excellent medicines and undoubtedly far above the known specifics for diseases in which your Remedies are applicable. I am sure they will do immense good to the public."

Mr. R. MUKHERJEE, late Chief Justice of the High Court, Kashmir State, writes 9-4-15: "The case of KALA-AZAR which occurred in my house and was declared as hopeless by all doctors, has been completely cured by your Fever-end, Himalayan Remedies."

Apply with history of your ailments to—
Manager.

New Books and Editions dealing with the East.

People of the Steppes

By Ralph Fox,

8s. 6d.

This is an account of the adventures of the author among Bolsheviks and herdsmen in Turkestan during 1922-23

A first-hand account of the country and people between the sea of Arab and the Afghanistan frontier of unique interest for inhabitants of India.

Japan.—The Rise of a Modern Power

By R P Porter,

7s. 6d.

This book gives the main facts of Japanese history from 660 B. C. to November, 1924, together with full chapters on social, economic, and international progress of outstanding interest.

China and the West—A Sketch of their Intercourse by W. E. Soothill, Professor of Chinese in the University of Oxford 10s. 6d.
A brilliant account of the relations between China on the one hand, and Europe and (later) America on the other, from the earliest times down to the Chinese Revolution. Indispensable to a correct understanding of the causes of the present disturbances

NEW WORLD'S MANUALS.

Handbooks on all subjects by recognized authorities

2s. 6d. Each.

Karl Marx's Capital—By A D Lindsay

A masterly interpretation of the great German's theory—the only theory that in modern times has uprooted an Empire

Our Minds & Their Bodies—By John Laird. Regius Professor of Moral Philosophy in the University of Aberdeen

A discussion conducted in terms intelligible to ordinary people of the fundamental questions of the Universe. Fascinating in the extreme.

Some Previous Books in this Series are—

Introduction to Modern Philosophy—by C. E. M. Joad.

Introduction to Modern Political Theory—by C. E. M. Joad.

Modern Russian Literature—by D S Mirsky.

Persian Literature—An Introduction by R Levy.

Population—by A. M. Carr-Saunders.

Electricity—by L. Southern.

Works by Prof. SANTOSH KUMAR DAS, M.A. (Hist. & Econ.)

1. THE ECONOMIC HISTORY OF ANCIENT INDIA

Recommended by The Calcutta University for the M. A.

Highly spoken of by Drs Jolly, Keith, Jacob, Winternitz, Glasenapp, Ferriere, Otto, Snock Hur Grunze, R. Sham Shastri and Prof. Garner.

311 pages, Price Rs. 3.

2. THE LEAGUE OF NATIONS. Price Rs 2.

SIR ERIC DRUMMOND, Secretary-General of the League of Nations writes from Geneva "It seems to me to contain a very clearly written and interesting account of the principles and work of the League and should be particularly welcome in India."

LORD MESTON says "Your work was badly wanted in India where the value of the League is not yet widely known. You give an admirable description of its purposes, its spirit and its achievements and I hope your book will be read by a very large public."

To be had of the Author, 5-2, Ananda Dutt Lane, HOWRAH P.O.

YOGA-MIMANSA

—Edited by—

SHRIMAT KUALAYANANDA (J. G. Gune.)

The journal is a quarterly organ of the *KAIVALYADHAMA* recording scientific researches in Psychophysiology, Spiritual and Physical Culture etc., with their application to Therapeutics. Each number covers 80 pages of the royal 8vo size including 16 full page illustrations. The matter is divided into four different sections so as to meet the needs of all types of readers. The journal appears in the middle of January, April, July and October. Second year begins with Jan 1926.

Annual Subscription per volume and single copy respectively, India, Rs. 7 and 2; America, \$ 3.50 and 1; other Foreign Countries \$ 15 & 4.

N.B.—First volume complete, will sell for the original price to the end of April 1926. Afterwards it will cost: India Rs 9; America \$ 4.00; other Foreign Countries \$ 17. Single copies not available.

A FEW APPRECIATIONS.

"The issue before us is a valuable and interesting production and fully justifies the unique place and importance of the journal in the realm of modern scientific and philosophical literature The printing and get-up of the journal is fine, as befitting a scientific journal recording great truth."

—Current Thought, Madras.

"From its general appearance and get-up of the journal and the matter it contains one can see that the work is in able hands and in time the institution will be as useful and popular as the New York Institute of Science."

—United India and Indian States

"Yogic culture is looked upon as something mysterious and secret. This endeavour to bring it into the popular gaze and to interpret it in the light of modern sciences is altogether unprecedented in this country."

—The Kesari, Poona.

"Your attempt to explain Yogic physical culture in the light of modern sciences has my heart-felt sympathies."

—Prof. Manikrao, Dnyanoda

"I have gone through the book carefully and have found the researches very interesting . . ."

—Mahamahopadhyaya Kaviraj Sen, M.A., L.M.S. Calcutta.

"Your excellent journal is a new venture of its kind and I have read it with interest . . ."

—A. C. Bishard, M.R.A.S., London, Calcutta.

"... I have only had time just to glance at it, but I am already convinced that it will be of great service to serious students of Yoga in the West."

G. R. S. Mead, Editor of the Quest, London.

Rigvedic Culture

By DR ABINASHCHANDRA DAS, M.A., PH.D.

Author of "Rigvedic India" and Lecturer in Ancient Indian History and Culture,
Calcutta University.

Demy 8vo. About 600 pages Well bound in Cloth, gilt. With Illustrations and Maps
Price Rs 10/- net

A FEW OPINIONS

Prof. A. Hillebrandt of Breslau University writes — "Your valuable work on Rigvedic culture I have much pleasure in reading it, and I am full of admiration of your knowledge of the subject which is an unusually difficult one. I think you have earned high merit by the detailed and well-founded description of the life of early Indians, and by the sound interpretation of many passages hitherto understood in a different way."

The Pioneer (28-2-26) — "This book is a critical and exhaustive contribution to the ancient Rigvedic culture of India. Admittedly it is the result of wide research and judicious use of all available historical informations. The era of Rigvedic civilisation is calculated by the author to be at a period of 25,000 or 20,000 years ago. The subject is a difficult one and it is pregnant with possibilities and probabilities. Dr. Das has made out a case for theory of Aryan cradle in the Punjab, based upon fresh data and critical examination of the (various) conflicting theories, and

his solution as such is commendable. In short this book depicts a vivid picture of the Rigvedic culture of Ancient India. It is a useful supplement to "Rigvedic India" published in January 1921."

Prof. Dr. A. Berriedale Keth writes — "I have read it (Rigvedic Culture) with care, and I think in its greater objectivity, it marks a distinct advance on your "Rigvedic India". There is much that is interesting and vivacity lends attraction to the presentation. I thank you for your interesting and instructive work which is provocative of thought, even when, as in the case of the Vedic war horse I think your contentions unfounded."

Prof. Dr. Sten Konow of Christiania University Norway, writes — "I like Indians to stand up for their glorious ancient civilization, and you have certainly done so with great learning and thorough conviction. And I cordially join you in admiring the achievements of the ancient Aryans and also I think in the belief that Aryans ideals also will be a priceless asset in future."

The Bhagavad Gita or The Lord's Lay

Principal S. Ray's New Sanskrit Works

1. Bhavabhuti's Uttaracharitam

PROF. A. BERRIEDALE KEITH, *Edinburgh University*, says—

"I have looked through your book in order to see whether there are any suggestions which I could usefully make to secure greater adaptation to its purpose. It seems, however, that the mode in which the work is performed is well adapted for its purpose, and I note with satisfaction the effort to render the text into effective English. The explanations seem well adapted to secure comprehension of the text, and certain new renderings deserve serious consideration"

PROF. E. J. RARSON, *Cambridge University*, says—

"I have read with great pleasure and interest. The commentary and notes are admirably clear."

WORKS OF PROF. JADUNATH SARKAR, B. A.

AURANGZIB

10 years' eventful history, and a life's task in research.

Complete in 5 vols. sold separately, Rs. 16.

Vols. I & II together (Second edition)

Reign of Shah Jahan and War of Succession, Rs. 5

Vol. III. Northern India, 1658-1681, 2nd ed. Rs. 3-8

Vol. IV. Southern India, 1646-1689, Rs. 3-8.

Vol. V. (1689-1707) Rs. 4.

Based mainly on original contemporary Persian sources, viz., the Mughal State Papers, daily bulletins of the Mughal Court, the letters of Aurangzib and his contemporaries, (more than 5,000), Marathi bakhars and letters and the Assamese burangas, besides contemporary Factory records of the English, French and Portuguese.

H. BEVERIDGE.—"Jadunath Sarkar may be called *Primus in Indis* as the user of Persian authorities for the history of India. He might also be styled the Bengalee Gibbon."

VINCENT A. SMITH.—"You are doing first-class work. I have the highest opinion of your learning, impartiality and critical ability."

W. FOSTER, C. I. E.—"It is easily the best authority on the period with which it deals."

Studies in Mughal India

320 Pages. Rs. 2.

Contains 22 Historical Essays on India in the 17th century and Mughal civilization in all branches.

ASIATIC QUARTERLY REVIEW—"A series of studies of the most entertaining description."

INDIAN ANTIQUARY—"All the essays are ably written and several contain information not hitherto available in English."

Mughal Administration

Second edition, size more than doubled.

Rs. 3.

A study of the administrative system of the Mughal Empire, the Departments, the functions of chief officials, the provincial administration, its influence on the peasants, the legacies of the Mughal Empire, the causes of its downfall,—Emperor's autocracy—State factories, farmans.

SHIVAJI

Second edition, revised & enlarged. Rs. 4.

PIONEER—"Probably the only really first-class piece of work in English on Maratha history published during the present century."

H. BEVERIDGE.—"Jadunath Sarkar.....All his works are good; but perhaps the best of them is Shivaji. It is full of research and gives a striking picture of the birth of the Marhatta nation." Based on an exhaustive use of all the available original materials—Persian, Marathi, Hindi, Dutch and English—most of which were unknown to Grant Duff. Shivaji's character and achievements, and the Maratha institutions and system of Government are discussed in two long chapters. 45 pages."

Anecdotes of Aurangzib

English translation, notes and a long life of Aurangzib

2nd. Ed. Re. 1-8.

The work is exceedingly interesting and valuable, as it throws much new light on Aurangzib and exhibits his pithy sayings, and his principles of government.

Ahkam-i-Alamgiri

Persian Text of Anecdotes, 2nd ed. Rs. 1.

Chaitanya

2nd ed., Greatly enlarged. Rs. 2.

Original life of the greatest Vaishnav saint of Bengal, with an old portrait.

C. F. ANDREWS.—"The book is of surpassing value.... The picture drawn of the saint is one of extraordinary beauty."

Economics of British India

4th edition, (1917), 384 Pages. Rs. 3.

The handiest and most accurate description of India's economic condition and problems. "An indispensable *vade mecum*." (MODERN REVIEW)

Later Mughals, 1707-1739

By William Irvine, I.C.S.

edited and continued by Prof. SARKAR.

2 thick vols., Rs. 8 each, sold separately.

Prof. P. E. ROBERTS—"A contribution of first-rate importance, certainly will always remain one of the chief authorities for the period. A piece of work done with amazing thoroughness."

K. R. Qanungo's

SHER SHAH, Rs. 4.

The Well-renowned Talisman, **Paramonanda Brahmachary's**

Nabagraha Kabacha

Do you wish to propitiate the nine planets which regulate and influence human fate? Use, then, Brahmachary's Nabagraha Kabacha. This Talisman has extraordinary power to undo the evil influences of all the planets and to bring you all success, peace and happiness in life. It is purely and sacredly made in the Shastric form. Thousands of unsolicited letters testify that this Talisman is wonderfully and verily efficacious for:—
Success in Business, Trade, Commerce, Agriculture, Examination and Litigation. Cure of all sorts of diseases. Aversion for worldly troubles, Premature death, Dangers at every step, Pecuniary distress, Quarrel with friends and relatives, Mental disquietude, Loss of wife and children, Increase of the number of enemies, Promotion, Increment of pay, Suitable marriage, Conjugal love, Honours from Government, Longevity of life; in a few words, Health, Wealth and Prosperity.
It acts marvellously on the body of men, women and children, either Hindu, Mussalman, Christian, Parsi or of any other faith. PRICE Rs. 3 AND 4. Postage Extra.

A FEW TESTIMONIALS.

1. Raja Sreenath Roy Bahadur, Bhagyakul, Dacca.—I have used your Talisman; its effects are undoubtedly wonderful.
2. Prof A. B Bhattacharya, M.A., Rayshahi Government College.—I had no faith in any talacha but Brahmachary's Kabacha's miraculous effects have astonished me.
3. Mr. P. C. De, Well-known Detective Novelist, Calcutta.—One of my relatives, suffering from chronic diseases, has achieved great benefit by wearing your Talisman.
4. Mr. R. C. Guha, Dacca.—Just after using your Talisman I have secured a good service. A prompt effect really reminds me of Aladdin's Wonderful Lamp.
5. Mr. Raicharan Mistri, Khulna.—Babu Harimohan Roy, a neighbour of mine, by using your talisman comes out successful in every Litigation. He instructs me to wear your Kabacha. Please send me one.
6. Mrs Kusunkumari, Dacca.—Wearing your Nabagraha Kabacha I have gained a new life am now out of diseases, mental disquietude and pecuniary difficulties.
7. Mr. M. P Pradhan, Craddock Town, Nagpur.—The Nabagraha Kabachas I ordered, were got on by myself, my brother and my daughter I got my increment, my brother also got increment and my daughter came out successful in Matric., quite unexpectedly.

General Index

Major Basu's "Rise of the Christian Power in India" Five Vols.

by Gangacharan Roy Choudhury, M A, B L

Cloth Gilt Letters Rs. 2

A very handy, convenient and useful book for those who have purchased Major Basu's monumental Work as well as for those who may do so hereafter

History of the British Occupation of India

By N Kasturi, B A

Cloth, Gilt Letters, Rs. 3.

This is a Summary of 'Rise of the Christian Power in India' by Major B D Basu, (retired) in five volumes. Those who may not be able to afford to buy the bigger work and others who wish to have some idea of its contents should purchase this book. It is furnished with an index & a list of references to the bigger work.

The Historical Works of

Major B. D. Basu, I. M. S. (retired)

1. Rise of the Christian Power in India.

Five volumes Rs 5 each, Postage Extra

The Author has explained in the preface why the British Power has been called the Christian Power

2. Story of Satara.

A true history of how Satara was annexed and its Raja deprived of his Sovereignty
Rs 10, Postage Extra

3. History of Education in India under the Rule of the East India Company.

The author has shown that English Education in India was first begun by the Christians themselves, and that when the Government took it up, it was done with selfish motives. These motives have been laid bare from official papers.

Rs. 2-8, Postage Extra

All public Libraries, All University Libraries, All College and School Libraries. All libraries of Educated Indians should possess these valuable works. They supply the corrective to our incorrect knowledge of Indian History. The Author supports his conclusions by copious extracts from official dispatches, Parliamentary papers and proceedings, and the works of British and other European Authors, which few Indian Libraries possess.

BEGAM SAMRU

Rs. 2-8

By **Brajendranath Banerji**With a foreword by **Prof. Jadunath Sarkar, C.I.E.**

Profusely illustrated

Begam Samru was a wonderful woman "A Kashmiri girl who from abject poverty rose to the command of a European-drilled brigade, the sovereignty of a territory as as two English counties, and the honoured position of a shield to the Delhi imperial family, and in the fulness of her years in the odour of sanctity as the honoured ally of the English rulers a saint of the Roman Catholic Church" (Sarkar)

This is the first attempt to write her biography on the basis of a critical study of all available historical materials in print or MS in English, Persian, Marathi and French, besides mass of old State papers in the Imperial Record Office, Calcutta

Sir Evan Cotton—"A most readable and valuable book." (*Bengal Past & Present*)

Pioneer—"A fascinating historical romance of the 18th century, the result of patient, laborious research. It is a successful biography of Begam Samru on the basis of a critical study, a judicious blending of a powerful romance with true and accurate historical information on the downfall of the Mogal Empire"

IL. Beveridge, 1898—"The author has written an

interesting account of the Begam, and has much valuable information about her"

Prof. P. E Roberts (Oxford)—"I have found extremely interesting and I congratulate you having found so good a subject and also on how treated it so ably and vividly"

G S Sardesai—"This work of Brajendra Banerji is very useful in helping (historical) students to understand the second half of the 18th century. There is a great need for such a research"

(*Chitra-maya Jagat*)

R B. RAMSBOTHAM, M.A., I.E.S. —

"Your book is an admirable type of scholastic work which I hope other Indian writers will copy

Durjodhan Herbal Home, Post Box No. 11416 Calcutta, India.

READ WHAT THEY SAY

THE PRACTICAL MEDICINES, DELHI The Mysteries of Nature is the best book of its kind. This is a Novel Book for one and all of any age, caste or creed and in any walk of life unravels the many and diverse MYSTERIES of NATURE and helps one to get all-round happiness in every respect, for instance, to get promotion in service and how to receive the favour of superiors how to win other's affection and to turn disobedient persons into obliging ones and many other valuable suggestions.

MR. A. K. LUKANSY, Palmgroves, Bingerville (Ivory Coast) writes, **THE HIDDEN TREASURE**, In my opinion, if there was time, when the marriage is called for vigilant surveillance, .. it is in these days .. the question therefore arises, what is the cause of so many failures, disappointments, separations and divorcements as the after-math of matrimonial alliances? Undoubtedly, the answer lies in a deep mine of immutable laws of Nature which I dare say, Prof B Patra has successfully excavated.

Altogether, it is an unique and excellent publication that cannot fail in attaining its object. **THE HIDDEN TREASURE** should find a corner in the wise man's library.

HIS LIFE & TEACHINGS

BY DHIRENDRA NATH PAL—A True Companion in every walk of Life

Social—Political Religious

His Life and His Teachings are the Beacon Light that guided and will ever guide humanity to the eternal Land of Bliss. Equally appreciated by the thinkers of Asia Europe Africa America. Highly spoken of by Max Muller, Wilson, Telang, Sir John Woodburn, Wilmherst, P. Bridge, C. R. Das and thousands of eminent persons. The only book which has ever been written systematically on a really historical basis. All sorts of Human-life emperor and slave, wise and fool, lover and hater, murderer and martyr, witty and dull, merry and sad, march ever onward through the pages of this book. Immortal references from start to finish. The book deals with about 10 subjects in two parts which will fascinate the readers like hypnotic influence.

A few contents.—Part I—The Kingdom of Mathura, The King of Mathura, The Plot against Krishna, The Birth of Krishna, Krishna as a Child, Krishna as a Boy, Krishna in the Brindavana, Fight with Kaliyas, Sports in the Forest, The Great Banyan Tree, The Indra Yagma, The Great Dance, Departure for Mathura, The Death of Kansa, Krishna as a Prince, The War with Jarasandha, Krishna in Dwar, Kuru Panchala, The Marriage of Draupadi, Indraprastha, The Marriage of Subhadra, The Great Assembly Hall, Proposal for Rajasuya, Arrival at Girivraja, The Death of Jarasandha, The First Worship, Sishupala's attack on Krishna, Bhishma's Reply to Sishupala, The Death of Sishupala, Krishna the Greatest of the Great. Part II—The Banishment of the Pandavas, Krishna as Charioteer, Sanjaya's Embassy, Krishna and Sanjay, Krishna and Pandavas, Krishna and Draupadi, Journey to Hastinapur, First day at Hastinapur, Krishna and Kuru, Krishna's Speeches, Duryodhana and Krishna, Plot against Krishna, Krishna and Karna, March to Kurukshetra, The Pandavas before the Battle, The Great Crisis, Deity and Duty, Action and Devotion, Knowledge and Work, Virtue and Sin, The Great Declaration, The Yag of Action, The Yogee of Devotion, The Supreme One, His Worship, His Emanations, The Great Manifestation, The Great Battle, The Death of Bhishma, The Death of Abhimanyu, The Death of Drona, The Death of Karna, The Death of Duryodhana, The Pandavas at Hastinapur, The Last days of Srikrishna

H. E. Lord Lytton, the Governor of Bengal says : "I was very interested to see this remarkable factory which owes its success to the energy and enthusiasm of its proprietor, Babu Mathura Mohan Chakravarty. The preparation of indigenous drugs on so large a scale is a very great achievement. The factory appeared to me to be exceedingly well managed and well equipped, and I hope that it may continue to prosper." 11-6-2

H. E. Lord Ronaldshay, ex-Governor of Bengal says : "I visited the Sakti Oushadhalaya (Dacca) on July the 17th, and was shown everything by the proprietor Babu Mathura Mohan Chakravarty, B. A. I was very much interested in all that I saw, and was astonished to find a factory at which the production of medicines was carried out on as great a scale. ... Babu Mathura Mohan Chakravarty seems to have brought the production of medicines in accordance with the prescriptions of the ancient Shastras to a high pitch of efficiency." 17-7-20.

H. E. Sir Henry Wheeler the Governor of Bihar and Orissa says : "I had no idea that the manufacture of indigenous drugs was carried on upon so large a scale. The whole thing bears marks of enterprise and success." 29-7-20

Beshebandhu S. C. R. Das says : "I desire to place on record my high appreciation of the work of this factory. The business is carried on in an orderly and organized manner. Supervision leaves nothing to be desired. I congratulate the Proprietor on the success which this business has already attained." 24-10-22.

WHOLE NO.
232

THE PADISHAH OF DELHI TO KING GEORGE THE FOURTH OF ENGLAND

By RAJAH RAMMOHUN ROY

A petition has been unearthed from the
Record Office by Mr. BRAHENDRANATH
SINGH whose prefatory remarks are printed
— Editor, *The Modern Review*

The following petition in the name of the
Padishah of Delhi to King George IV, was
sent by Rajah Rammohun Roy, who proceeded
to the Court of Great Britain with a copy of it
as a well reasoned document, hitherto unpublished.
It is here given to have a place amongst other writings of
Rajah by reason of its grace and clearness
of style."

1. Your Majesty the King of the British Empire
etc, etc, etc

Sire 'My Brother' It is with a mingled
feeling of humility and pride that I approach
your Majesty with the language of fraternal
equality at the very time that the occasion
of my addressing your Majesty compels me
to consider myself rather as a suppliant
at the footstool of your Majesty's throne
than as a Monarch entitled to assume the
style, and claim the privileges, of
equality.

2. Sire 'I do not forget who or what I
am. I cannot forget that I am a King only
in name and that I have nothing in common
with your Majesty and the other sovereigns
on the earth but a title conceded to me
with no other effect than to aggravate the
humiliation and unhappiness in which I
am involved. Yet low as is my condition,
I have not lost the feelings of humanity,
and I claim from your Majesty that justice
which is not denied to the meanest of your
Majesty's subjects.

3. I do not forget who and what your
Majesty is—that your Majesty is the rightful
and acknowledged sovereign of a powerful,

a wise and renowned people, and that, in
the plenitude of your Majesty's greatness,
even a small portion of your Majesty's
subjects are permitted to exercise the
government of these vast and populous
territories which it was the glory of many
of my ancestors to rule in person. But I
also remember that those very subjects,
although elevated to the dignity of empire, are
still amenable to your Majesty for every part
of their conduct, and I therefore confidently
rely that your Majesty will not permit them
wantonly to violate the solemn engagements
of their faith and honour pledged to the
once dreaded and illustrious, but now power-
less, House of Timur. In me that race is
deeply humbled, but the extensive conquests,
the noble actions, and the splendid
fame of the dynasty which I so unworthily
represent, remain imperishably written on
the faithful page of history. My ancestors
made a magnanimous use of the victories
and conquests which their sword, not perfidy
or intrigues—achieved. They disdained to
trample down on a vanquished foe, even
when they could crush him with impunity.
The voice of the whole world proclaims that
your Majesty is in an eminent degree distin-
guished by the same sublime and generous
virtues, and I repose therefore with entire
confidence in the innate nobleness of your
Majesty's mind and in your Majesty's refined
and exalted sense of National faith and
justice.

4. I hasten to specify the wrong of which
I complain and to substantiate my allegations
by the necessary proofs. In brief, then, I
beg to recall your Majesty's attention to the
accompanying articles of convention which

were transmitted to my august father from the Governor-General in Council in conformity with the promise made by Lord Lake and which were duly recognized on both sides as expressive of the mutual obligations of the contracting parties, but of which the first and most important clause is now injuriously evaded.

5 That article provides that "all the *mahals* to the west of the Jumna situated between the west and north of *mona* Kabil-poor shall be considered the crownlands of his Majesty." The second article provides that "the management of these *mahals* shall be continued according to custom in the hands of the Resident", but in proof that the entire revenues were to be placed at the Royal disposal, it is expressly provided in the third article that "for his Majesty's satisfaction, the Royal Mootsuddies (or civil officers) shall attend at the Cutchery to keep accounts of the receipts and disbursements and report the same to his Majesty." The memorandum referred to in the seventh article specifies a minimum of monthly stipends for the king and the Royal Household and that article provides that the sums so specified shall be paid monthly from the Public Treasury, "whether the whole of the amount is or is not collected from the *Khalsah* lands." The English article to which I solicit your Majesty's special attention contains the important provision that "should the collections from the above *mahals* increase in consequence of extending cultivation and the improved condition of the ryots a proportioned augmentation will take place in the king's *Pishwah* or Revenue" and, finally, to show that the royal stipend was to consist, not of the net, but of the gross produce without any deduction, the eleventh article provides that "the expense of the Troops, Police Corps, etc., employed in the *Khalsah* shall be defrayed by the Honourable Company." What could be more clear and explicit than these provisions? What words could have more strictly guarded against the possibility of perversion or misapprehension? Yet the first and most important point has been since rendered a dead letter, as if neither honour nor justice demanded their fulfilment.

6 In the recent communications which I have had with your Majesty's late representative in India, Lord Amherst, on this subject, there is the admission that "it was the original intention of Government to

have assigned certain *mahals* to the west of the Jumna for the support of His Majesty and the Royal family", but it is added, "The plan was never from unavoidable causes carried completely into effect." It now seems to be tacitly inferred that therefore it ought not ever to be carried into effect. To me and to my family, to my immediate dependents, and to the numerous individuals who cannot refuse their disinterested sympathy to my fallen House, it does not appear clearly to follow, because an act of justice has hitherto been denied that it could never be performed, nor when we consider what British power and influence have accomplished, can we bring ourselves to believe that any causes would have proved unavoidable, if a disposition really favourable to the accomplishment of the object had existed. The assertion, however, that "the plan was never carried completely into effect" is essentially erroneous, for while the revenues of the assigned *mahals* did not exceed the *minimum* of the Royal stipends and allowances, the Royal Mootsuddies were allowed to attend at the Cutchery in conformity with the third stipulation, for the express purpose of keeping accounts of the receipts and disbursements and reporting the same to my august father and to myself. The right and title of the Royal family to the entire revenues of the *mahals* were thus for a length of time distinctly and unequivocally acknowledged by the concession of the Royal Mootsuddies of the power of supervision and report, but when those revenues materially exceeded the *minimum* of the Royal stipends, then it was that it became inconvenient to carry the plan completely into effect, and the Royal Mootsuddies were in consequence directed to withdraw their attendance at the Cutchery. In like manner the practice of submitting by the Resident for my Royal decision the proceedings in cases where capital punishment was adjusted by the Criminal Court, has also long since been discontinued in neglect of the provision contained in the sixth article of agreement.

7 Even in the communication above-mentioned, insult in point of form was added to injustice. All the Governors-General who have preceded Lord Amherst in the government of the British territories in India have thought it no degradation to themselves to address me or my august father in the style that custom

has accorded to Royalty. Lord Amherst, however, thought proper to reduce me in his form of communication to the footing of an equal, and thereby to rob me even of the cheap gratification of the usual ceremonial of address so as to humble me as far as possible in the eyes of all ranks of people

8 Before, however, these derogatory steps were adopted, repeated, solemn, and public recognitions of the claims of my Royal family to the revenues of the assigned mahals had been recorded in the code of Regulations and Laws enacted by the Governor-General in Council for the civil government of the territories under the Presidency of Fort William in Bengal. Thus at section 4th of Regulation XI of 1801, it is clearly expressed that "the revenues of the territory on the right bank of the Jumna are assigned to His Majesty Shah Alam", and precisely the same language is repeated at sections 22nd and 35 of the same Regulation, at section 3rd of Regulation VI of 1805, and at sections 2nd and 4th of the Regulation VIII of the same year. At sections 1st and 2nd of Regulation V of 1807, and at section 1st of Regulation XI of the same year, the language is similar, although more general, for in these "the territory assigned for the support of the Royal family at Dehlee" is mentioned without specifying its locality as in the former instances, the very absence of this specification marking its notoriety and the distinctness of the purpose to which the revenues of that territory were exclusively applicable. These declarations cannot be disavowed, retracted or misapprehended. They are embodied in the code of Regulations by which this branch of the British Indian Empire is governed, and they incontrovertibly demonstrate that for a series of years the plan was carried completely into effect and the right of my family to the revenues of the districts in question was clearly and undisguisedly admitted.

9 Even the *minimum* of the Royal stipends was at one time arbitrarily and unjustly curtailed of several items, contrary to the express provisions contained in the stipulations and without consent of the contracting party whose rights were thereby violated, having been obtained or even sought. It was in this way that one of the items amounting to 10,000 Rupees for support of the Heir-apparent was reduced to 7000, a second of 5,000 Rupees for Mirza Ezzud Buxsh to 2000, and a third amounting to Sicca

Rs. 2,500 for Shah Newaz Khan, a connection of His Majesty, was entirely resumed at his death and his family thus left destitute. To crown these acts it has been pretended that an augmentation to the Royal stipend made in the year 1809 amounting, after several previous deductions, only to Sa. Rs. 13,200 per mensem was granted by way of commutation for the Royal claims on the improved revenues of the Khalsah lands—though so far was such an arrangement from receiving my sanction that the increase was only communicated to me as a resolution taken by the Government without the slightest reference to the pretended equivalent.

10 The original articles of agreement are either binding or they are not. If they are binding, then any alteration or commutation of any part of the Royal income made by one party without the consent of the other, to whom it is injurious, must be null and void. If they are not binding, this must be either because they were never entered into, which cannot be affirmed, or because some subsequent voluntary arrangement between the two contracting parties has superseded their obligation. But no arrangement tending to supersede the original articles of agreement has ever been voluntarily recognized by my Royal predecessor or myself, and therefore the numerous and unauthorized deviations from the provisions which they contain constitute a series of direct and systematic violations of truth, honour and justice.

11 A relation of the particulars connected with this pretended increase of Sa. Rs. 13,200 per mensem will show to your Majesty how little real was the value of the alleged concession. When the gross and palpable infringements by the local authorities on the stipulation entered into with Lord Wellesley's Government were brought to the notice of Lord Minto in the year 1809 and the Royal claims on the then improved revenues of the Khalsah mahal set forth, that nobleman virtually admitted the wrongs that had been inflicted and the total sum of the Royal stipends including the allowances on the Princes and Princesses and every contingency, which after several deductions, then amounted to only Sa. Rs. 86,000, was raised to one lakh, the real augmentation being however considerably less in amount than this apparent one. By Lord Wellesley's agreement the allowance to the Royal family was paid under the following heads.—

His Majesty's personal allowance	per
Rs 60,600	ensem
Presents at 7 festivals	
Rs. 10,000 each, equal	5,833 "
The Hair-apparent	10,000 "
His jagir in the Doab	3,000 "
Princes and Princesses	10,000 "
Mirza Ezzud Buxsh—personal allowance	2,000 "
do by his jagir in the Doab	1,000 "
Shah Newaz Khan	2,500 "
Total monthly allowance	Rs 91,333

o that the stipend established by Lord Minto in 1859, then considered as providing an increase of allowance to the extent of Rs 12,200 per mensem as above-stated, and also alleged to be in satisfaction of the terms of the treaty, in fact added no more than the paltry sum of Rs 5,667 to the original minimum provision. But even this augmentation was granted arbitrarily, without any reference to the amount actually due by stipulation and without my consent being asked or obtained and it was moreover accompanied by an insulting intimation that the "sovereignty I possess is only nominal" and that the Governor-General's recognition of it is merely "Complimentary." Does "the complimentary recognition of a nominal sovereignty authorize or justify the arbitrary infringement of direct and positive obligations, or denude myself and family of the common rights of men and society? Because the Governor-General in Council condescends to recognize in me an empty title, is it therefore that the solemn faith of the British nation and Government may be wantonly broken? Do I become less entitled to the performance of the contract that has been entered into with my family, because my ancestors were great and powerful and I am feeble and helpless, held down by those who make my weakness and degradation the excuse for their injustice? I cherish the confident persuasion that your Majesty will not sanction the principle that in my case a National contract ought not or need not to be fulfilled, because I am powerless to enforce its obligations. What king or subject will avow such a principle, except in India and to the injured and unhappy House of Taimur?

12 I have now briefly explained to your Majesty the wrongs I have suffered and the rights which I demand. I claim the entire revenues, whatever they may be, of the

mahals originally assigned for the support of the Royal family unjustly alienated from the rightful owner and appropriated to themselves by the Honourable Company. I claim restitution of the sums of which the Royal family have been deprived in past years, and I claim your Majesty's guarantee for the rigid fulfilment in future of the articles of convention by which a *minimum*, is fixed for the Royal stipend, by which the gross revenues of the mahals to the west of the Jumna are assigned to the Royal family should they exceed that *minimum* and by which the means and opportunity of obtaining a perfect knowledge of the actual revenues of those mahals are stipulated rights. I am not unaware of the practical evil that is likely to result, according to the known principles of human nature, by imposing upon one party all the toil of superintendence and all the expense of improvement, and bestowing upon another all the fruits of his labour and sacrifices. I am therefore willing to submit to any reasonable compromise of my rights, either by assuming for a fit compensation all the trouble and outlay attending the government, police, and cultivation of the territory in question, or by receiving a fixed monthly sum in lieu of all further claims. In the latter case the present gross annual revenues of the mahals would form a proper standard, and, if they do not fall short of 50 lakhs, I hereby offer to commute all my prospective claims under the articles of convention for that yearly stipend.

11 If I were to regard merely your Majesty's personal character, it might be sufficient to show, as I have done, that my claims are just. But your Majesty has also a public character to sustain and a public duty to discharge, and it behoves me therefore to satisfy your Majesty that the concession of my undoubted rights may be rendered perfectly consistent with sound policy and a just regard to the safety and permanence of the British rule in India. The largeness of the sum I have mentioned, considered by itself,—without any reference to the numerous regular, and increasing demands upon my exhausted treasury, might seem to indicate a wish to accumulate money for some concealed and hostile purpose. I utterly disavow every such object as alike dishonourable to the race from which I have sprung and inconsistent

with the open course which I have ever pursued. Some of my ancestors have fallen victims of the disloyalty of others, but they never betrayed those who confided in their honour, and in imitation of their noble examples, while I have not hesitated and will still continue to complain of the injustice I have suffered and vindicate the rights that belong to me, I will not disgrace them and myself by secret machinations against a Power which I dare not combat in the open field. As a complete security against any such attempt, I will cheerfully agree not to retain more than 12 lakhs of Rupees in my treasury at any one time to invest the surplus, should there be any, in the loans opened by the British Government, and to forfeit to the Honourable Company any sum found in my possession in excess of that amount not so invested. If any other check can be suggested which shall not subject me to a degrading inquisition in all the minutiae of my expenditure, I shall willingly accede to it.

15 But to a Prince of your Majesty's enlarged and magnanimous views it will be obvious that the most just and generous policy must also be the most wise and provident. For on what firmer bases can the duty and tranquillity of the subjects of a distant and conquered country be founded, or the confidence of surrounding States, naturally jealous of their independence, be established than on the irresistible evidence continually presented to them of good faith and moderation displayed in the strict observance of engagements even if burthen-some and although spontaneously entered into with one bereft of the power of dictating terms or of effectually resenting their violation.

16 Should, on the other hand, a conspicuous example subsist of broken compact on the part of your Majesty's Viceroy, towards me, because no longer in a condition to vindicate my rights by an appeal to arms—

if contempt and indignity be measured out to the representative of a once mighty monarchy in proportion as he is powerless to enforce respect, your Majesty's acquired subjects, once amongst those of my ancestors, now with anxious fears observing the conduct of their new rulers, the neighbouring Princes who have beheld with alarm the progress of your Majesty's arms, nay the whole civilized world, will assuredly sympathize with my griefs and look on my oppressors with the feelings and wishes which their conduct must infallibly inspire.

17 If I had any doubt of the justice of my claims, I might still rest them on an appeal to your Majesty's known generosity. I might remind your Majesty of the time when my ancestors ruled supreme over these countries, where their wretched descendant and the sole representative of their dynasty is compelled to drag on a dependent existence in a dilapidated palace, exposed to the contempt or receiving the sympathy of the different classes of society, both Europeans and Asiatics, who resort to Dehlee, with means utterly inadequate to support the dignity even of a nominal sovereignty or to afford a scanty subsistence to the numerous branches of his family who look to him as their only stay. But I will not resort to such a plea. I will not condescend to accept, and your Majesty will disdain to confer, as a favour, that which is due as a right. I rest my cause on your Majesty's high-minded sense of honour and justice. I cannot permit myself to suppose that your Majesty will lend a deaf ear to my complaints. I address by this letter not only your Majesty but the world at large and I anticipate the plaudits which present and future ages will bestow on your Majesty's benevolent and enlightened sympathy with the unworthy representative of the once great and illustrious, though now fallen, House of Taimur.

18 To your Majesty what need I say more?
(*Political Proceedings*, 13-3-1829, No 20)

PRAGUE—THE CITY OF THE CZECHS

By AGNES SMEDLEY

BEFORE you reach Prague you know that you are in the midst of a Slav civilisation. The people speak a language that sounds Russian and still isn't Russian. And the names of the streets, although written in Latin script, still are Slavie. Once in Prague, the capital of Czecho-Slovakia you hear only Czechish spoken, see it written on all streets, newspapers, and menus, and you feel it in the atmosphere. There are German newspapers and a large German population, but the culture is predominantly Czechish. The clean, ordered civilisation of Germany and the Scandinavian countries seems a million miles away. Here is disorderly creation the creative mind of the Slavs rearing itself in half-barbaric majesty.

In the newer part of Prague you do not notice this so much, but when you once reach old Prague, you are in another world. The streets are narrow and crooked and paved with cobblestones worn down smooth with the earth. You can pass under archways leading apparently right through somebody's front room. But they open instead onto a little square courtyard surrounded by old terraced houses, painted in many colours, glazing with flowers, and sometimes bending lovingly over the square, as if whispering secrets of a thousand years ago when Prague was founded by Czechish tribes wandering from the East. Then you can pass on through other archways leading toward the back and onto other squares. You twist and turn endlessly, old women watch you from their tiny dark cells under the archways where they sell old violins, dried fish, thread, or postal cards; and you find yourself eventually in another narrow little street,

and if you care to do so—and dare—you may walk in the middle of the street, hold out your arms and touch a row of houses on both sides.

Relics of the past rear their heads in crude majesty in both the Old and New Town ancient churches—dreams in stone, of the men of the Middle Ages, Gothic towers and archways, Gothic pillars, Saracenic domes and high over the ancient castle walls of the Hradcheny on the hill, the two

The Hradcheny or the ancient castle built on one of the seven hills on which Prague is built. This castle is of mythical origin it is so old. It is said to be over a thousand years old.

great spires of the Gothic cathedral of St. Vitus, surrounded by hundreds of tiny spires with carving as delicate as lace-work.

Prague, like Rome, is built on seven hills. The river Vltava flows leisurely through it displaying its marvellous bridges. Historians tell us that a chieftain called Chech came with his people from the East, saw the fertile primeval country of Bohemia, and settled there. Other historians say, instead, that many centuries before the Christian era, Bohemia was settled first by Celtic, and then by some branch or branches of the Slavonic race.

The magnificent St. Vitus Cathedral. It was founded in the 11th century and is one of the most beautiful examples of Gothic architecture in Europe. There are hundreds of marvellous little spires with carving as fine as lace. Inside are the giant Gothic pillars and arches, extending without one break to the roof.

Prague—or Praha as the Czechs call it—is of mythical antiquity. Certain it is that the highest hill over-looking the valley of the Vltava was chosen as its first sight, then encircled by the great stone walls still standing. Inside these walls stretch the endless castle walls, the Hradscheny, and inside the castle walls, not only other castles and churches, but also long narrow streets and little rows of tiny one-story houses where people still live and cook and wash their clothing. "Gold Street" one of them is called—for here the old alchemists once lived.

It is said that the Czech princess, Libusa founded Prague, whose a peasant Premysl as

her husband when she found him ploughing in his fields, and founded the oldest Czech dynasty that ruled until 1306. She ruled long and well, for she belonged to a vigorous race of free women who knew nothing of the degeneracy of the purdah system.

Some of the finest buildings still standing today in Prague date from the rule of King Vaclav, known in history as Charles IV. One of these is the University of Prague, founded in 1348, which was then the only University in Central Europe. Charles also built the famous bridge in the Old Town, known today as Charles Bridge, also the large squares and the broad streets in the New Town; he enlarged the Castle on the Hradscheny to its present size, and supervised the building of the St. Vitus Cathedral within its walls. He also built the beautiful castle of Karluv Tyn on the south-west of Prague, and numerous Gothic churches and monasteries in the surrounding country. He made Prague one of the greatest centres of learning of the Middle Ages.

After the Czechs came under the rule of the Austro-Hungarian Dynasty, the ancient castle on the hill was "renovated" and repainted, according to the ideas of the new rulers. People forgot that other architectural motives once existed there. But now, under the new Republic, strange discoveries have been made. It was only by accident that some one noticed that inside one of the huge

A View of The Old Historic Czech and German University in Prague

tournament halls of the castle, a door seemed to be awkwardly situated. They tore away the door and saw that a layer of stone and plaster covered a still older wall. They dug through this covering around other doors and discovered that old, vaulted Gothic archways had been completely covered. This discovery threw the Czechs into an excavation fever. Today the inside walls of the great hall and adjoining halls have been carefully torn away, revealing the magnificent Gothic architecture of the Middle Ages. They have dug through the floor and unearthed pillars and skeletons and strange relics. They are digging outside the castle and have discovered old burial grounds. They have only begun. But they expect to discover, in the older sections of the castle, architectural remains of ancient Prague. It is fortunate that the Czechs are not under British rule, else these relics would be shipped to the British Museum.

As you pass through Prague, many towers, churches and monuments call you to a halt by their grandeur or antiquity. History unfolds itself. There is the old Jewish syna-

The Statue of John Huss standing on the Public Square in the Centre of Prague
By the Sculptor Saloun

under the earth. The children of Israel had to worship their God in secret.

Not far from the Synagogue is the big public square, bordered by cathedrals, ancient buildings, and the old town hall of Gothic architecture before which twenty-seven Protestant Czechish leaders were beheaded after the Thirty Years War. An etching of this event may be seen in the Prague Museum. On the square itself stands one of the most

inspiring monuments in all Europe—it is a huge bronze of John Huss, standing as majestically as he stood before the Council of Catholic Clergy before he was burned as a heretic by them. Other groups of figures stand proudly and defiantly at one side. At the back and along the sides forms of peasants—men, women and children—almost burst from the bronze, huddling together and listening with inspired faces. This monument is history in itself, for John Huss is European history. He was the religious reformer and opponent of the Catholic Church in Central Europe. Born in 1370 he graduated from the University of Prague, and a few years later—in 1400—was ordained a priest.

He delivered sermons in the Czechish language (in itself an offense to the Church) in the Bethlehem Chapel in Prague. His own simplicity of life, his criticism of the Church, his democratic teachings, led the church authorities to prohibit his preaching, and at last to excommunicate him. He went

The Museum of Arts and Crafts Subsidized by the Ministry of Education and National Culture

gogue, the oldest synagogue in existence, surrounded by the Jewish cemetery of unknown antiquity, the dead buried one on top of another until the earth alone knows how many are buried there. For the Jews were confined to the narrow Ghetto in the past, and even the synagogue was built

to Southern Bohemia and there he found his real church—the great open meadows and the forests. He would stand on a hill with the gaze of ten thousand peasants fastened upon him. So convinced was he of his faith that when the General Council of the Catholic

the National Czech Museum. Apart from the historic collections of a hundred different kinds, there is the hall of memory to the great Czechish dead. I was in Prague on the day of the funeral of a well-known Czechish professor. The streets were crowded with throngs of people. In America I would have thought the Prince of Wales, Jack Dempsey, or Charlie Chaplain was coming that way. But in Prague the Czechs were honouring a great philosopher. His body lay in state in the National Czechish Museum.

Afterwards I walked through the hall of memory. All about the walls stood statues or busts of Czechish educators, musicians, poets, writers, philosophers, religious reformers, historians. There was Comenius, the scholar, poet and patriot of the Middle Ages, whose prophetic words were read by President

The Historic National Museum in Prague

Church was held in Constance, we secured a safe conduct from King Sigismund, and went there to defend his cause. We know from history that he was not even permitted to speak, and that, on July 6, 1415, he was taken outside the city and burned to death as a heretic and his ashes thrown on the Rhine. It took twenty years for the Catholic legions and the German nobles to crush the Hussites. Wars that flamed up and swept through the land where Huss had lived and preached.

Even to-day you can seldom ascend the steps leading to the base of this great monument in Prague without treading on flowers. Across from it, in the old historic town hall, hangs a colossal painting of Huss standing before the Council of Constance.

There are many other monuments and buildings that unroll the pages of history as you walk by them. But to tell of them all is impossible. Yet one cannot pass over

The Parliament Building of the Czechoslovak Republic

Masaryk before the first National Assembly of the New Republic in 1918. There were the poets and writers—Chech, Kollar, Palacky, Havlicek, Neruda, and dozens of others there were the composers to whom the western world owes so much—Smetana, Dvorak, Fibich. To name them all or to know them all is a task possible only for

Czechish historians. I stood before Dvorak—for he had come to America many years ago, had studied the music of the Negroes, built some of his great themes upon it—and said some strange things about Negro music and America that enraged our Negro-hating Southerners. In that hall of memory were women writers and poetesses also, for the Czechs have produced great women.

From the National Museum you can walk to the Ethnological Museum and

study the varied peasant customs and costumes of Czecho-Slovakia. And in the park outside stands the beautiful white marble statue of the young Czechish actress who died while still in her twenties, but who was known even then as the greatest Ibsen actress.

From there, you climb the terrace that overlooks the valley with the Vltava flowing through it. And in a great circle about it, the seven hills on which Prague, the city of the Czechs, is built.

SOCIAL LIFE IN THE ANIMAL WORLD

By S. C. VERMA, M. SC., D. B.

University Lecturer in Zoology, Allahabad

HUNTING AND SLAVE-MAKING

Slave-making

SEVERAL species of ants referable to four genera confined mostly to the north temperate zone, (*Formica*, *Polyergus*, *Strongylognathus*, and *Heptagoxenus*) indulge in this reprehensible practice. The habits of the last genus are imperfectly known, but the other genera form an interesting series, in which *Formica sanguinaria* represents the slave-making habit in the process of development, *Polyergus* its most specialised and *Strongylognathus* its involutionary or degenerate development.

The *Formica* are facultative slavemakers and regarded as one of the most belligerent. Their sorties occur in July and August, after the marriage flight of the slave species has been celebrated and when only workers and mother queens are left in their formicaries. The army leaves its nest in a straggling open phalanx sometimes a few metres broad and often in several companies or detachments. They take the most direct route possible to the nest of the slave species which, as is often the case, may be 50 or 100 metres distant. It appears certain that the colony acquires a knowledge of the precise location of the various nests of the slave species within an area of a hundred metres or more of its own nest probably

through single scouts sent out from time to time. This no doubt presupposes a high development of memory, and the capacity of some form of communication, for the nest attacked is usually one of the many lying in different directions from the sanguinaria nest.

When the first workers arrive at the nest to be pillaged they do not enter it at once, but await till the other detachments arrive. Then they lay deliberate siege to it, securing the entrances and exits. None of the inhabitants (*Isopoda* or *Isopodidae*) are allowed to pass if they carry pupae. In the meantime the besieged species scent their approaching foes and either prepare to defend their nest or seize their young and try to break through the cordon of sanguinea and escape. The sanguinary ants, however, intercept them, snatch away their charges and begin to pour into the entrances of the nest. Soon they issue forth one by one with the remaining larvae and pupae and start for home. The workers of the slave species are killed only when they offer resistance. The troop of *cocoon*-laden sanguinea struggle back to their nest while the bereft ants slowly enter their pillaged abode and take up the nurture of the remaining young or await the appearance of future broods.

The use to which these larvae are put is different according to the various observers.

Forel is of opinion that many of the young brought home are eaten. Wasmann believes that the forays take place for the specific purpose of obtaining young to rear, while Darwin interpreted the surviving and adopted workers as a kind of byproduct, representing food which the ants failed to eat at the proper time. Lastly Wheeler, while agreeing that the forays are, to some extent at least due to the promptings of hunger, is strongly of the opinion that the main purpose is to acquire desirable servants or intelligent assistants to share the labour of their masters. These slaves are carried along by the workers of sanguinea at the time of changing their nest just as they do their own. They are kept for indoor occupation and regarded by their masters as part of their goods and chattels.

This is the primitive form of slavery as it first existed among men. It was not until later that it became modified to become at last an institution against which the sentiments of justice arose.

The *Polyergus* of the *Amazons* are the obligatory slavemakers whose distribution parallels that of *F. sanguinea* (circumpolar). These are one of the most beautiful of ants but at the same time the most warlike. Being powerfully armed for triumphant raids they show great skill and courage in obtaining slaves. The worker and female are rich brownish-red in colour, while the male is coal-black with white wings. Perhaps cautious of their superior strength they do not lay deliberate siege to the attacked nest like the *sanguinea* but they move out in a compact column with feverish haste and as they come within the radius of their victims (*F. fusca* or *F. curculania*) pathways to and from their city, in hundreds they rush onwards. The nest reached and entered, soon the struggle becomes a furious battle, on the one hand to save on the other to carry off the larvae. The owners with their precious burdens fly up the neighbouring trees, for there the Amazons cannot follow being specialised to kill but not to climb. Others hang on the flanks of the retreating columns and harass the thieves bearing off the tender pupae. Many of the opponents of the slave species are pierced through their bodies or thoraces and left dead in considerable numbers. The return home of the warriors is usually more leisurely and in less hurried ranks.

These larvae when brought into the

ant-hill are placed in the jaws of slaves of their own species, which abound in every nest of the Amazons and care for the newly brought ones. Among the Amazons the slaves undertake every labour. They build and care for the larvae of their masters, as well as those carried away in expeditions. They also perform complicated personal services towards their indolent masters, who may well be compared to some of our ease-loving Nawabs of Oudh, and who have not only lost the taste and idea of work, but even the habit of feeding themselves, and would die of hunger beside a pile of honey or sugar if a grey ant was not there to put it into their mouths. The little slaves in addition to bringing food, lick off the dust from their master's hairs, clear them and carry them from one place to another if there is need to migrate. The masters by force of losing interest in work, it is said also lose their votes when it is a question of taking a resolution concerning the whole colony. The servants act on their own initiative and their own responsibility even directing constructions according to their own ideas.

It is a most curious fact that the slaves should submit to this precarious fate when their masters are absolutely dependent on them, perhaps the robust mandibles of the latter contribute to preserve the position they enjoy.

Strongylognathus are degenerate slavemakers, confined only to the palaearctic region i.e. Europe, Western Siberia, Asia Minor, and the southern shores of the Mediterranean. The workers are so much reduced in numbers that Forel is of opinion that they are on the verge of disappearing and leading to a condition in which the species is represented by males and females only. These workers no longer make spontaneous forays on alien colonies of *Tetramorium*, but when the latter are brought near a mixed colony a conflict ensues, the testaceous endeavour to kill the strange workers but are too feeble to pierce their armour, and it is more probable that the mixed colony is victorious owing to the efforts of the host workers.

The testaceous though able to excavate and to feed independently contribute little or nothing to the structure of the nest and probably obtain most of their food from the tongue of the *Tetramorium*. The breeds of both species are cared for by the host. The mixed colonies arise according to Wasmann,

through the alliance of testaceous and Tetramorium queens but it is more probable as Wheeler suggests that the former enters a colony of the latter after it has been established and become rather populous, since the founding of colonies even by pairs of queens of the same species is very rare. The females and males of Strongylognathus are smaller and less troublesome to nourish, and this induces the Tetramorium workers to rear them in place of their own large-sized queens and males, the larvae of which they, therefore, undoubtedly devour or neglect. Thus although the host and parasitic queens come to live side by side in the mixed colonies, the offspring of the latter are exclusively workers.

PASADENA, CALIF.

Honey Pot Ants. Before we come to actual darning ants, mention should be made here of a very peculiar type of ants known as *Honey Pots*, described from N. America, S. Africa, and Australia. The best known species is the Honey Ant *Myrmecocystus horridiorum* of the Garden

its sweet liquid. Now in these ants this habit has been developed until a class of

HONEY POT ANTS

1, 2, 3 Honey-bearers. 4 Repletes. 5 and 6 -- Male. 7 and 10 -- Virgin Queen. 8 -- Worker. 9 -- Worker.

of Gods, in Colorado (America). As is well-known, many ants are in the habit of collecting honey-dew and storing it in their crops, which become distended, and when they reach home they feed their brood and the rest of the colony by disgorging

ANTS AND HONEY-POTS. The ants have been found with the honey in their crops, and the honey is the result of the ants' work.

workers have been produced which are called *repletes*. Their bodies are enormously swollen because of the honey stored in their crops, and they literally look like "honey pots". The stored honey is not assimilated, neither does it form part of the animal's body and although placed inside it, cannot be compared to physiological reserves. It is utilized not only by the repletes but also by other members of the colony who are not able to form such reserves.

In addition to these repletes (modified workers) which are formed when they are callows, there are ordinary workers that collect the sweet, watery fluid from the oak-galls (caused by a small four-winged insect) of the neighbouring trees that exudes only at night. These nocturnal workers when they return home feed the honey pots with the contents of their crops, for the latter never leave the nest, and a guard is always left at the entrance when the workers go out to prevent other ants, or spiders etc., from forcing an entrance into the nest. The honey-

poets are thus living casks, or barrels of sweet stuff, kept often hanging to the roof of the subterranean chambers by the ant colony as a store in time of want. In the words of Professor Wheeler the celebrated American Myrmecologist — "Those who, in anthromorphic mood, are wont to extol the fervid industry and extraordinary feats of muscular endurance in ants, should not overlook the beatific patience and self-sacrifice displayed by the Replete Honey Ant as it hangs from the rafters of its nest, month in, month out for years, perhaps a reservoir of temperamental as well as liquid sweetness."

DAIRYING ANTS

In gaining a wide and intimate acquaintance with the vegetable world the ants have also become familiarised with a large number of insects that obtain their nutriment from plants, such as the plant lice (Aphids and Psyllids), Scale insects (Coccids), and true hoppers (Membracids) etc.

Here we shall confine ourselves only to Aphids, the relationships of which with the ants are most apparent and have been fully worked out. The Aphids on green-flies can suck the juices from plant tissues containing cane sugar, invert sugar, dextrin, and a small amount of albuminous substance. In the alimentary tract of the insects much of the cane sugar is split up to form invert sugar and a relatively small amount of all the substances is assimilated, so that the excrement voided by these insects in colourless drops is not only abundant but also contains more invert and less cane sugar than the juices of the plant. This excrement when it falls on the leaves of plants and dries in the ant is known as "honey dew," the "ros molleus," "melaerium" etc., of the ancient writers. Busgen (1891) has calculated that a single linden aphid excretes nineteen drops in twenty-four hours, while the maple aphid excretes as many as 48 drops during the same period. A source of nutriment at once so rich and so inexhaustible, could hardly remain unnoticed and unexploited by the ants in their interminable search for liquid food.

These aphids may be called "Ant cows" for ants both milk and breed them, keeping them in herds and building sheds and walls to protect them. Various species of ants show a remarkable gradation in their relations with these aphids.

Leptothorax sp., obtains the honey dew merely by licking the surface of leaves and stems on which it has fallen. But many others have actually learnt to milk their cows. They stroke the aphids with their antennae and this caressing induces them to void a droplet which is eagerly swallowed by the ant. Others again, still more intelligent have discovered a method of holding the aphids captive, while allowing them to enjoy their accustomed life, and to feed at will on the foods they like on their own favourite spots. This is done by establishing barriers around a group of cattle who have themselves fixed the place of their sojourn either by constructing cabins of fragments of wood (*Lasius brunneus*) or by building large earth huts (*Myrmica*). But *Lasius niger*, a skilful architect, constructs vaulted passages from his dwelling into the country for concealment as well as for shelter from the sun. Many of these lead to the pens of the aphids, reaching from the ant hill as far as the foot of a plant where these insects abound; and in order to have their milkers at their disposal, without removing them from pasture, the ants make tunnels along the stalk, and enclose within it all the aphides they meet. But to prevent too close a confinement they are wise enough to enlarge the galleries at places where their flock may disport themselves at ease.

There are some well-known underground species of these Ant-Cows living on fibrous roots of grasses and other plants, the well-known of which *forda formica*, as its name implies, is distinguished as the Ant-Aphis because it is often found in the nest of ants particularly of *Lasius flavus*. No fewer than seventeen distinct species of aphids have been recorded as living actually in the nest of various ants. It is this attachment between the ants and aphids that causes great annoyance to the gardener and the agriculturist for the green flies are found in enormous numbers in situations where they would seldom be if their distribution depended on their powers alone. The ants dig out underground dairies for their herds, and make a business of planting out colonies in all sorts of favourable situation. They care for the eggs of the aphides throughout the winter shifting them about as they do their own young to accommodate them to changes of weather and moisture. In spring the young as soon as they are hatched are transferred by the ant to the

roots of young grass etc., and from these they are often recolonised on the roots of young corn plants as soon as the latter begin to show above ground. In bad weather or on cold nights the young are carried back to the burrows of the ants.

Thus, while the ant gets in honey-dew from these Cows in return it extends to them the protection from other insect-eating animals, and its services to their youngs and eggs.

AGRICULTURAL ANTS CULTIVATION AND HARVESTING

Gardening. In this category falls that group of ants known as *Atta*, consisting of about 100 species and varieties referable

AN UNDERGROUND ANT DAIRY
See *Atta* putting their corpuscles on the floor of their nest and their food.

to five genera (*Myrmicoerypta*, *Cyphomyrmex*, *Apterostigma*, *Sericomyrmex*, and *Atta*), all of which grow fungus-gardens in their nests, and subsist mainly on them. The tribe ranges from 10 degree N to 40 degree S of the equator, but is least represented in the tropics and is a very conspicuous and distinctive insect of tropical America.

The best known is the Sub-genus *Atta*, comprising the leaf cutting or parasol ants, the largest and most powerful species of the tribe living in great colonies.

The well-known American Ants called the Sauba-ants or Cushie-ants belong to this Sub-genus. They climb the tree, station themselves on the edge of a leaf and make a circular incision with their Scissor-like jaws, and the piece of leaf, about the size of six pence held vertically between the jaws is then borne off to the formicarium. Naturalists have recorded long processions of these ants streaming down tree trunks along a definite tract through the forest to

their great nest heaps. The ants are almost hidden by these leaf umbrellas, and the procession looks more like a stream on whose surface the leaves are floating. These leaves according to the researches of Fritz, Muller, Belt and Wheeler are cut up into small bits in the formicarium and used as manure for the cultivation of a small fungus by being packed into the cellars of the nest and allowed to rot.

The underground galleries of most of these ants are very extensive and there are small or large chambers, often as large as the human head. In these are laid the fungus gardens which may be pendant. *Trachymyrmex septentrionalis* or lie on the floor. *Atta texana*. Numerous shafts lead from these fungus-gardens to the outer air, and the temperature and humidity of the gallery is regulated by opening or closing the shafts as circumstances may require. If a sudden shower comes on the leaves are left near the entrance and carried down when nearly dry, during very hot weather, on the other hand, when the leaves would be parched in a very short time the ants only work in the cool of the day and during the night.

In all species in which the garden is laid on the floor it takes the form of loose-sponge work of triturated leaf fragments, permeated with fungus hyphae which Tanner has described as follows:

"Over all portions of the surface of the garden with the exception of those most recently established are seen round white corpuscles .25 mm to .5 mm in diameter or masses of fused corpuscles, 1 mm across and of irregular form. These I call the 'kohlrabi clusters' of the ant's nest. They are small terminal dilations of the hyphae of a spherical or oval form and constitute the principal food of the species."

How careful these little gardeners are surpasses our understanding, when we realise the remarkable fact that the gardens are pure cultures although the hairy, rough-bodied workers must be continually bringing in all sorts of spores and bacteria. The careful weeding and pure manuring is a perfected art with these masters, for under the influence of the ants neither free aerial hyphae nor any form of 'fruit' are ever developed, and the "kohlrabi" heads are not developed when the mycelium is grown in artificial culture apart from the influence of ants.

It appears that to carry out these various functions successfully the workers of *Atta* have become modified into several grades

the large ones act as leaf-cutters, the medium ones (media) serve to comminute the leaves and build up the fungus-gardens, whereas the smallest (minims) weed the garden of spent-up leaf bits, and keep down the growth of spores of alien fungi.

One may be tempted to ask how these ants came by their fungi in the first place. This question has been settled by the researches of Sampaio, Von Iherin, Goeldi, and Huber. Virgin females of some species on leaving the nest for nuptial flight have been shown (Sampaio) to carry in their intra-buccal pocket a pellet of hyphae taken from the fungus garden of the maternal formicary, as unexpelled refuse of their last meals. After fecundation she digs a cavity in the soil, closes its opening and sets to found a colony. She spits out the pellet of hyphae and divides it into two masses, and cultivates it on a substratum of crushed eggs (according to Iherin and Goeldi), six to ten of which she begins to lay on the third day. Or as is more probable (as observed by Huber), the bits of hyphae are manned with a yellowish or brownish droplet which she emits over it from its vent. The tufts of hyphae so treated are attached to different parts of the chamber and allowed to grow. This work keeps the queen busy till about forty days when the first breed of workers hatches out. During this time it is said, that the queen may feed on its own eggs, as it is known, with certainty to feed her larvae on them. It is only when the queen, on alighting to the ground, happens to be adopted by some workers that she is saved the ordeal of feeding herself or her larvae on her own eggs.

Harvesting Ants. Under this head are considered the habits of certain ants that have largely abandoned entomophagy and have taken to a benignant vegetarian diet. As abundance of food is very necessary for maintenance of social life, it can be readily understood that in hot, arid countries, where insect food may be lacking or very scarce for many months in the year, and competition with other insect-eaters also keen, it would be a great advantage to ants to become, in part, vegetarians. Moreover the powerful mandibles of carnivorous ants can well serve in dealing with seed.

It has now been established beyond doubt that many ants do collect grain and store it. They bring the seeds outside their burrows to dry when damp, and prevent them from germinating. In case any seeds sprout they

gnaw away that part and return the dried seeds to the granary. Attention will be confined here to the habits of only two well-known species of such ants, namely *Atta barbara* and *Pogonomyrmex barbata* (the agricultural ant of Texas).

The ants of the species *A. barbara* utilise plants of various kinds but they principally depend on sumitry, oats and nettle. Towards the end of autumn they procure the grains of these plants from the soil, or they climb up the plants and gather them in position. These grains are carried to the nest and piled up in some hundred little rooms designed for

THE COLONIAL OR LEAF-CUTTING ANT
These ants, which are here shown in the natural size, swarm in the forests of Tropical America.

this purpose, each measuring from seven to ten centimetres in diameter and three or four in height, the average granary being about the size of a gentleman's gold watch. The total quantity of grain in these barns is estimated at about 500 to 600 grammes.

It is surprising that while all necessary conditions of heat and moisture offered by the interior of the ant-hill are favourable for germination, the stored seeds are prevented in some mysterious way, from doing so by the ants for weeks or till desired by them. If the access of the ants is prevented from one of these chambers it has been observed

that the grains germinate readily. When the moment arises for utilising these accumulated stores, the grains are allowed to follow the normal course of germination, but only to a certain stage. These clever insects appear to know that the little seedling in order to grow digest the starch of the seed but this can only be absorbed and assimilated after it has been transformed into sugar. As soon as this chemical change is effected the grain is in the condition in which the ants prefer it. So like a wine grower who catches over the fermentation in his vat and tops it before the wine turns sour, these ants stop the digestion of the starch at this stage by cutting off the radicle and the stalk. In order to preserve the provisions thus rendered palatable in the same condition, such seeds are exposed to the sun, dried and taken back to

FIG. 1. A cross-section of a South American ant nest, showing the chambers and the tunnels, and the chamber of the queen.

the barns. This sweetened flour furnishes food to them throughout the winter season.

The agricultural ant of Texas (*Pogonomyrmex barbatus*) not only restricts itself to the seeds of a single plant called *Acrida stricta* or "Ant-rice", but is credited with greater foresight than any other animal as it is said to look after its property while still growing and by some to actually plant and cultivate its crops.

The nest of this species is fully exposed to the sun, and varies in construction according to the nature of the ground. Around the nest a flat area or disc of about ten or twelve feet in diameter is cleared of all plants and if a tree happens to be growing near, either the nest is removed to another place or the tree is stripped off its foliage. Through the herbage growing in the vicinity

of the nest are made clean roads for hundreds of feet in all directions. These roads are about five inches broad near the nest, but narrower further from it and by constant weeding are maintained clear of plants like the disc itself. When the soil is of a gravelly nature a cone or crater is built in the centre of the disc by piling gravels one over the other. In front of the ant-hill lies the field where no other plant is allowed to grow except the Ant-rice, for all other plants which appear above the soil are, without waste of time, diligently weeded out by means of the jaws. Thus cared for, the culture flourishes, and at the epoch of maturity the grains are collected one by one and carried within the nest.

The nest is perforated beneath with flat chambers some of which lying more superficially than the others are converted into granaries. The chambers are connected by galleries which may reach a depth of fifteen feet, but the granaries are all situated within the upper two and a half feet, probably to keep the grain dry. As to the intentional planting of seeds by the ant *Lasius*, an assertion to that effect is neither borne out by McCook nor by the studies of Wheeler. The latter noted that in winter some of the chambers got literally stuffed with sprouted grain, which on account of their having become unfit for food, the ant remove on sunny days to refuse heaps at the periphery of the crater. Here these rejected seeds may often take root and in the spring form a regular or complete circle of growing plants around the nest, giving a casual observer the idea of willful planting.

The marriage flight of these ants takes place at the end of June or the beginning of July, and the female returning to the ground as usual digs down into the earth and closes up the opening. The first brood of some ten or twelve small, timid workers is brought up rather slowly. In the spring the workers open up the nest but are careful to conceal the opening with small pebbles, and bits of stick. It is not until the second year when the larger workers are produced, that the ants begin to cut down the vegetation around the nest, and establish the circular discs which are increased in size as more workers are produced. The grubs are fed with portions of crushed seed which the workers first coat with saliva to ensure conversion of the starch contained in the seed into sugar.

Generalising from our study of ants it

clearly discernable that the ants show stages corresponding to the first three out of the four stages in which the development of human societies has been divided. Leaving aside the awe-making ants as they represent an abnormal or rather a temporary state of things,

Diagram of a large *Termit* nest in strata of sand, blue and red clay

or slavery seems to tend in ants as in men to the degeneration of those by whom it is adopted, and may in time lead to their complete extinction. We have seen species such as *Formica fusca* that live principally on the produce of chase, for though they feed partially on the honey-dew of aphids they have not domesticated them. These may well be compared to the lower human races that subsist mainly by hunting, for like them they live in comparatively small communities having little developed instincts of collective action, and frequent wars and wilds. They fight singly and their battles have been aptly compared to single combats like those of Iomeric heroes. Other species such as *Lasius flavus* represent a distinctly higher type of social life, and show some architectural skill and the capacity of having domesticated certain species of plant-lice. These undoubtedly resemble the pastoral races of men which live on the products of their flocks and herds like our shepherds. Their communities are more numerous and they act much more in concert both in peace and in battle. The purely hunting species may be gradually exterminated by them just as the advent of more advanced races in the case of human beings leads to the disappearance of savage aboriginal races. Thirdly here are the gardening and harvesting ants that feed upon the produce of their gardens

and crops which they develop and cultivate with the care and efficiency of a highly trained agriculturist. These are like the agricultural nations of human society.

Granting the above resemblances between ant and human societies, some far-reaching ant differences between insect and human organisations are, nevertheless, apparent, as has been pointed out by several writers. Firstly, in human society all individuals begin with nearly the same natural endowment. This is not so in ants as members of different classes are visibly predestined to certain social activities to the exclusion of those of others, not, as in man, "through the education of some endowment common to all the members of the society, but through the exigencies of structure fixed at the time of hatching." Secondly, this pre-established structure and specialisation of functions enables the ants to live in a state of 'anarchistic socialism' "each individual instinctively fulfilling the demands of social life without 'guide, overseer, or ruler' as Solomon correctly observed, but not without the intimation and suggestion involved in an appreciation of the activities of its fellows."

CRATER OF THE NEST OF AGRICULTURAL ANTS

Lastly, ant societies are essentially female societies. The males take but an insignificant part in the activities of the colony, and in many species, are present in the nest only for a short time, just enough to insure the impregnation of the young queens. They do not share the labours of building, of provisioning or guarding the nest or feeding the workers. "They are in every sense the sexus sequor. Hence the ants resemble certain mythical human societies like the Amazons".

EVOLUTION OF SOCIAL LIFE

Both naturalists and sociologists are greatly indebted to Prof. Alfred Espinas for his careful discussion of the social life of animals. Let us consider in brief this problem of the evolution of sociality.

Every animal with a body, whether sponge or mammal, is a city of living units or cells. But there are far simpler animals than sponges, which we call Protozoa. These differ from all the rest in being themselves units, having no bodies, or in being non-cellular organisms as proposed by Dr. Clifford Dobell (a great authority on Protistology) or in being as some would say, "single cell organisms." The simplest animals are therefore units, or single cells, all other animals are combinations of units or cities of cells. Between these two is an apparent gulf. How is this gulf to be bridged? The possibility of higher life depends on the transition from a unit to a combination of units.

Every higher animal begins its individual life as a single cell, comparable to one of the Protozoa. This single cell (the egg cell) divides, so do most of the Protozoa. But when a Protozoan divides the results usually separate and live independent lives, when an egg cell divides the results of division cohere. Therefore the whole life of higher animals depends upon a coherence of units. But how did this begin? That the gulf between Protozoa and Metazoa has been bridged is certain else we should not exist, and part of the bridge is still left. There are a few of the simplest animals which form loose colonies of units which when they divide remain together. Whether it was through some weakness hindering complete division that the transition forms existed? "*Our first conclusion therefore is that the possibility of their being any higher animals depends, primarily on the coherence of units.*"

Our next step is this. When we study sponges, or zoophytes or most corals, or some types usually classed as "Worms," we see that the habit of forming colonies is common. Throughout the colony there is one life, all the individuals have a common origin. The unity is often increased, not diminished by the fact that the individuals are not all alike. There is division of labour among them.

Our second conclusion is that among many animals beginning with sponges and ending with

sea-anemones, the habit of forming colonies is common and that these colonies though organically continuous illustrate the essence of Society for in them many individuals of common descent and nature are united in mutual dependence and helpfulness.

The next step towards an understanding of social relations of animals is very different from the above. This factor which we have now to acknowledge is *the love of mates*. This also has its history, but we shall simply assume as a fact that among Crustaceans and insects first, in fishes and amphibians afterwards, in reptiles too, but most conspicuously among birds and mammals, the males are attracted to the females, and enter into varying degrees of harmonious relations of natural helpfulness. The relations and the attractions may be crude enough to begin with, but even man may learn from the heights of devotions to which their finest expressions attain. To mere physical fondness are added subtler attractions of sight and hearing and these are sublimed in birds and mammals to what we call love. *This love of mates broadens out, it laps the family in its fold and diffuses itself as a saturating influence through the societies of animals and men.* "Sociability," Espinas says, "is based on the friendliness of mates."

The fourth step is the evolution of the family. From monkeys and beavers and many kinds of birds to ants and bees and diverse insects and many animals illustrate family life. *"There is no longer the physical continuity characteristic of the colony, but there is a growing physical unity.* It is natural that the first ties of family life should be those between mother and young, and should be strongest when the number of offspring is not very large. But even in some beetles and more notably in certain fishes and amphibians, the males exhibit parental care and affection while in higher animals specially among birds, the parents often divide the labours of the family. "Children," Lucretius said, "Children with their caresses broke down the haughty temper of parents."

The fifth step is the combination of families into a society such as we find illustrated by monkeys and beavers, cranes and parrots, and in great perfection by ants. The members are less nearly related than in the family, but there may be even more unity of spirit.

"It is not easy to understand how coherence of units led to the formation of a body, how colonies became integrated and the labours of life more and more distributed, how love was evolved from

apparently crude attractions between the sexes, how the love of mates was broadened into parental and filial affection or how families well-knit together formed the sure foundation of society, but it seems quite clear that these are some of the great steps in a wonderful history. As regards the origin of society we have nothing to say, we must fall back on Aristotle's fundamental principle of evolution, that there is nothing in the end which was not also in kind in the beginning."

ADVANTAGE OF SOCIAL LIFE

Animals are social not only because they love one another, but also because sociability is justified of her children. "The world is the abode of the strong, "but it is also the home of the loving. "Contention is the vital force, but the struggle is modified and ennobled by sociability. Darwin observed that "the individuals which took the greatest pleasure in society would best escape various dangers, while those that cared in the least for their comrades and lived solitary would perish in greater numbers." He clearly recognised that in the struggle for existence another kind of response that pays, is some experiment in mutual aid, co-operation and parental care.

Against *Prof Huxley's* conclusions that

"Life was a continual free fight, and beyond, the limited and temporary relations of the family the Hobbesian war of each against all was the usual state of existence."

let us place that of Kropotkin according to whom

"Life in societies is no exception to the animal world. It is the rule, the law of nature, and it reaches its fullest development with the higher vertebrates. Those species which live solitary or in small families only are few and their members are limited. Life in societies enables the feeblest mammals to resist, or to protect themselves from the most terrible birds and beasts of prey. It permits longevity, it enables the species to rear its progeny with the least waste of energy and to maintain its numbers albeit with a very slow birth-rate it enables the gregarious animals to migrate in search of new abodes."

Therefore, while fully admitting that force, swiftness, protective colours, cunning and endurance of hunger and cold, mentioned by Darwin and Wallace, are so many qualities making the individual the fittest under certain circumstances, it is maintained that sociability is the greatest advantage in the struggle for life. The fittest are thus the most sociable animals and sociability appears as the chief factor of evolution both directly by securing the well-being of the species while diminishing the waste of energy, and indirectly by favouring the growth of intelligence.

"Therefore, it is our duty to combine and practise mutual aid. That is the surest means for giving to each and to all the greatest safety, the best guarantee of existence and progress bodily, intellectual and moral. That is what nature teaches."

RAJAH RAMMOHUN ROY'S MISSION TO ENGLAND

(Based on unpublished records)

By BRAJENDRANATH BANERJI

I have traced in the Imperial Record Office, Calcutta, several documents relating to the mission of Rajah Rammohun Roy to England. These letters, which passed between the East India Co on the one hand, and the King of Delhi and Rammohun Roy on the other, are for the first time printed here, with the kind permission of the Government of India, and may be of help to the Rajah's biographers.

Rammohun Roy served the Government chiefly at Rangpur for a decade and rose to be *Dewan*. On retirement (1814) he settled

in Calcutta, where he confined his activities to social, religious and educational reforms—the dear objects of his life. He now "felt a strong wish to visit Europe, and obtain by personal observation, a more thorough insight into its manners, customs, religion, and political institution." * Luckily, an unlooked-for opportunity helped the early fulfilment of his desire.

Abu-nasar Muin-ud-din Akbar—a nominal successor to the House of Taimur—was then

* Autobiographical Sketch of Rammohun Roy.

on the throne of Delhi. The powerless monarch considered himself unjustly treated by the new lords of India. The amount of the stipend granted to him by the East India Co. was neither in consonance with the treaty entered into by his father (Shah Alam II) with Lord Wellesley, nor sufficient for the growing needs of the royal household. Insults, moreover, were added to injustice. Lord Amherst, contrary to the custom observed by his predecessors, 'reduced him, in the form of communication, to the footing of an equal, and thereby robbed him even of the cheap gratification of the usual ceremonials of address, so as to humble him, as far as possible, in the eyes of all ranks of people'.^{*} The aggrieved potentate at last decided to represent his case to the King of Great Britain for redress. He was thus on the look out for an able and experienced man whom he could send as his envoy to the Court of Great Britain. It was Dabir-ud-daula, the agent to the King, who approached Rammohun while in residence in Calcutta, having possibly heard of his contemplated visit to England. Rammohun at once signified his consent in an *awaz* to the King, dated 2nd March 1828. This was answered by the King at the end of the same month, asking Rammohun to draw up a draft appeal, both in Persian and in English, to the King of Great Britain.

"Let our devoted servant know that his *awaz* dated 2nd March 1828 was forwarded to the Presence by Dabir-ud-daula and its contents were duly understood.

For a long time it has been our royal desire to refer this affair first to Calcutta and afterwards to England, in order that we might discover what degree of justice really obtains with this people.

For various reasons, however, the reference has not yet taken place, and we therefore write this to instruct our devoted servant to send for our perusal a correct draft in Persian, together with translation of the same in English.

Although on account of the good services rendered by your grandfather to His late Majesty, at the time of his residence in the Eastern Provinces, we had entire confidence in you now that we have learnt from the conversation of Dabir-ud-daula the extent of your zeal and fidelity, we have become more fully satisfied that the arrangement of the affair which we have at heart, will be entirely effected by you, and we expect that, as consistent with your duty, you will exert yourself to the best of your ability in this business and act agreeably to our orders.

Further we apprise you that Dabir-ud-daula has submitted several copies of English papers, and two or three recently, and has represented that these documents will most essentially further the

royal cause. We therefore send them to our servant and direct him to retain them in his possession if he considers that they will be useful."^{*}

Rammohun wanted to have copies of certain documents which should accompany the representation to the King of Great Britain against the Company's Government. The King accordingly sent his *wakil*, Mirza Afzal Beg, charging him with a letter addressed to A. Stirling, the Persian Secretary to Government, who replied on 7th June 1828 in the following terms:—

"With regard to the copies required by you I, your expectant, think that it would be better if you required them from the office of the Resident of Shahjahanabad [Delhi], where all the papers are in deposit, and I am certain that immediately upon requisition being made for the same by the officers of your eminence to the Resident Bahadur of Delhi, he will forthwith grant the same to them—beyond is the limit of respect" (*Pol. Proceedings* 7-11-1829, No. 82).

On 23rd October 1828 the Resident at Delhi—Sir Edward Colebrooke—received a *shukla* from the King with a list of English papers[†] of which he required copies, to which the Resident answered by pleading his inability to comply. Not satisfied with this, the King transmitted a letter in the beginning of February 1829 through the Resident at Delhi to the address of the Governor-General announcing his intention of appealing to the Sovereign of Great Britain on the subject of his claims to the whole revenue of the assigned territory and renewing in consequence his application for copies of all papers connected with that question.[‡]

The chance of securing copies of the documents being remote, it was thought advisable to forward the original letter of complaint to the King of Great Britain,—with a duplicate of which Rammohun was to proceed to England. Commanded by the King of Delhi, Rammohun submitted the contents of the document under cover of his letter, dated 23rd February 1829, to the Chief Secretary to Government.—

"As the subject of the enclosed packet^{**} concerns the conduct of the local Government, I am

commanded by His Majesty Abu-nasar Muin-ud-din Muhammad Akbar Badshah to submit its contents to you for the information of the Right Hon'ble the Governor-General in Council, that his Lordship may be prepared to meet its statements and complaints as may be deemed expedient. The original letter to His Britannic Majesty has been already forwarded to England and I am preparing at the request of His Majesty to proceed thither with a duplicate." (*Pol. Proceeds*, 13-3-1829, No 19)

The Government desired the Delhi Resident to intimate to the King of Delhi its surprise at the accusation advanced by him and wished to be informed whether the King acknowledged Rammohun Roy as his Agent.

"2 The Vice-President in Council deems it sufficient for the present to desire that you will intimate to His Majesty the surprise with which Government perused the above communication and more particularly its astonishment at the unmeasured and unfounded accusation which it advances against the Hon'ble Company of having violated its engagements with the Royal family. It is not considered necessary to deviate from the resolution before adopted regarding the papers which His Majesty demanded."

"3 Babu Rammohun Roy, an inhabitant of Calcutta, having announced to Government that he is about to proceed to England, under the King of Delhi's appointment, as the bearer of a letter of complaint from His Majesty to our gracious Sovereign King George IV on the subject of the royal stipend I am further directed to desire that you will ascertain from the King whether he acknowledges that person as his Agent."*

On receipt of this the Resident at Delhi requested an audience of the King, which in consequence of the *Ramzan* fast was delayed until the morning of 1st April 1829, when he attended His Majesty in his private apartments. The Resident reported the substance of his conference thus:

"2 His Majesty acknowledged the intention of deputing Babu Rammohun Roy to England as his Agent to present a letter to our gracious Sovereign and mentioned that the individual in question had been originally proposed for this service by Farid-ud-din Khan commonly styled Babu-ud-daula. His Majesty at the same time made his *munshi* read to me the draft of the letter which he proposes to transmit to England, a fair copy of which under seal he informed me is already in the hands of Rammohun Roy. I expressed a wish to possess a copy of the letter with a view to my laying before Government, instead of trusting to my own memory in quoting its purport, and I was told that Rammohun Roy was understood to have already presented a copy of it to you."

3. His Majesty expressed much regret that any expressions in his letter to the Rt. Hon'ble

the Governor-General should have been deemed objectionable, and added that nothing but extreme necessity could have driven him to such a course as the deputation of an Agent to England—that his former applications for an allowance, more adequate to his absolute wants, were occasionally met with a partial increase to the stipend but that from the state of his family, both indirect descendants and collateral relatives, those wants are daily aggravated—that in his solicitations to Earl Amherst he was content to have accepted as a boon any relief which might have been extended to his distress without reference to the amount of it as compared with what he conceives himself entitled to claim, and that despair alone under a peremptory refusal has induced him to make this appeal.

4 In exemplification of these distresses, he observed that 25 years ago a sum of Rs. 200 per mensem had been fixed for each of his brothers and sisters, which sum was now to be divided among their children and grandchildren and that even with such further assistance as it was in his power to render them, some of them had not more than Rs. 5 per mensem and some of them nothing at all."

This definite reply from the Resident at Delhi placed the Governor-General in a position to submit to the Court of Directors for their information, a copy of Rammohun Roy's letter, and that of the petition in the name of the King of Delhi, under cover of his Political letter dated 22nd May 1829.

Owing to his approaching departure for England Rammohun on behalf of his master once more tried, by making a representation to the Government, to secure copies of the official papers required by the King which the Resident at Delhi had refused to furnish. But he was again unsuccessful.

"I beg leave to acquaint you that entirely relying on the assurance conveyed in an address from Mr. Secretary Stirling His Majesty Abu-nasar Muin-ud-din Muhammad Akbar Badshah had requested the Resident at Delhi to furnish him with copies of certain official papers, but that to his great surprise His Majesty was informed that the Resident could not comply with the request. I now beg to be permitted to enclose a copy of the address alluded to with a translation in the hope that you may be pleased to lay them before the Right Hon'ble the Governor-General in Council and to obtain an order from His Lordship directing the Resident to grant the copies required."

My approaching departure for England on His Majesty's business will make the early accordance of this favour a particular enhancement of its value."

* Letter, dated 2nd April 1829 from the Resident at Delhi, to the Depy. Secretary to Government.—*Pol. Proceeds* 22-5-1829, No 2.

* Letter, dated 13 March 1829, from A. Stirling, Depy. Secretary to Government, to the Resident at Delhi.—*Pol. Proceeds*, 13-3-1829, No 21.

† Letter, dated Calcutta 26th October 1829, from Rammohun Roy, to the Chief Secretary to Government.—*Pol. Con.* 7-11-1829, No 81.

The legislation passed by the Bengal Government in December 1829 declaring *Sati*, or the practice of burning widows alive on the funeral pyres of their husbands, illegal was mainly responsible for further delay in the departure of Rammohun. He had proved—much to the indignation of the orthodox Hindus that the performance of this cruel rite was not enjoined by their religion as an imperative duty, and had even freely discussed with Governor-General Bentinck the best means that could be adopted for its suppression. No wonder that this enactment proved to be a source of infinite joy to Rammohun, who found in it the fulfilment of his desire to see his researches and agitation crowned with success. But the champions of the custom of *Sati* offered a strong opposition to its abolition, and as a last measure resolved to appeal to the King in Council. Rammohun was equal to the occasion. A counter-petition to the Memorial of the advocates of *Sati*, signed by some distinguished Indians, was got ready and this Rammohun wanted to take with him for presentation to the House of Commons while there. There was a further object, present in his mind, in his visit to England. "The discussion of the East India Company's Charter was expected to come on, by which the treatment of the natives of India, and its future government, would be determined for many years to come",¹ and Rammohun thought that with his practical knowledge and information regarding Indian questions, he might be of some assistance in promoting the cause of his countrymen, if he were present on the spot.

The time being propitious, Rammohun hastened to make preparations for his errand. The King of Delhi had invested him with the title of *Rajah*, in consideration of the respectability attached to the office of his envoy, and Rammohun thought it wise to get the adoption of this title sanctioned by the Paramount Power. He thus addressed the Governor-General on 8th January 1830s —

"I beg leave to submit to your Lordship that some months ago I was informed by His Majesty Abu-nasir Muin-ud-din Muhammad Akbar Badshah that His Majesty had apprized your Lordship of

my appointment as his *Elchi* (envoy) to the Court of Great Britain, and of his having been pleased to invest me as His Majesty's servant with the title of *Rajah* in consideration of the respectability attached to that situation, etc. Not being anxious for titular distinction, I have hitherto refrained from availing myself of the honour conferred on me by His Majesty.

His Majesty, however, being of opinion that it is essentially necessary for the dignity of his Royal House, that I as the representative thereof to the most powerful Monarch in Europe, and Agent for the settlement of His Majesty's affairs with the Honble East India Company, should be invested with the title above-mentioned, has graciously forwarded to me a seal engraved for the purpose at Delhi. I therefore take the liberty of laying the subject before your Lordship, hoping that you will be pleased to sanction my adoption of such title accordingly. This measure will, I believe, be found to be consistent with former usage as established by a resolution of Government on the subject in 1827 when at the recommendation of the then Resident Sir Charles Metcalfe in his report of 26th June of that year, His Majesty's power of conferring honorary titles on his own servants was fully recognized' (*Pol. Con.* 22-1-1830 No. 51).

This was answered by Secretary Stirling on 14th January 1830 —

Having submitted to the Right Honourable the Governor-General in Council your letter dated 8th instant, I am in reply directed to acquaint you that Government can neither recognize your appointment as Envoy on the part of the King of Delhi to the Court of Great Britain, nor acquiesce in His Majesty's grant of a title to you on the occasion of that appointment. (*Pol. Con.* 22-1-1830, No. 52).

Next we find Rammohun vindicating his character from certain charges and insinuations that had appeared in the *John Bull* newspaper of 25th February 1830, relative to some public documents on the subject of the royal stipend which, it was asserted by the newspaper, had been obtained by bribery from one of the public officers. In this connection he wrote to Secretary Stirling, on 7th March, 1830 —

"It having been brought to my notice by a friend that the *John Bull* newspaper of the 25th ultimo has amongst a tissue of other falsehoods and misrepresentations connected my name with the charge of having obtained certain papers by bribery, I think it but due to myself as well as to the individuals in the employment of Government who may be supposed implicated in such a charge, to deny the allegations.

All the papers alluded to were sent to me from His Majesty the King of Delhi—many of them he must have had in his own possession as having been

† Autobiographical Sketch of Rammohun Roy.

§ I find this letter has been printed on pages 165-66 of Miss Collet's *Life and Letters of Raja Rammohun Roy* (2nd edn. 1913).

*For full particulars as to the privilege of the King of Delhi to confer titles and addresses of honour, see *Punjab Govt. Records, Delhi Residency*, 1. 355-60.

publicly addressed to his predecessors or himself, and others may have been procured by private favour from functionaries who were above the reach of bribery. But however this may be, I beg distinctly to repeat my assertion that as far as I am either directly or indirectly concerned, the charge of bribery is absolutely false and unfounded.

I beg leave to submit for your satisfaction a letter of old date from His Majesty which will confirm what I have now stated. The handwriting you will readily recognize as that of the *munshi* usually employed by him, so as to leave on your mind no doubt of its authenticity' (*Pol Con* 26-4-1830, No 96)

Complaints against Rammohun had reached the Governor-General from another quarter also. Actuated by the desire of securing his future succession to the throne, the Heir-apparent of Delhi was very unwilling to give offence to the Government by making himself a party to the mission of Rammohun, and it was quite natural that he should write against the Rajah to the Governor-General, attributing artifice to him. In his letter, written in the first week of April 1830, to the Governor-General, the Prince remarked

"In these days certain low intriguing persons conspire together have, by unfounded assertions, gained over the King to their party and have brought about great mischief and confusion, and it is owing to them that certain improper things have taken place, from which, unless checked and rendered by the British Government and unless those false and intriguing persons receive the punishment due to their crimes, the most serious evils may ensue. On these grounds, considering your Lordship a just and wise ruler and both a faithful servant of the Hon'ble Company and a well-wisher to me I have therefore committed to writing under four heads the acts and misdeeds of which I complain.

Afzal Beg [*naik* to H.M.] on his arrival in Calcutta soon evinced the evil nature of his disposition and having formed an intimacy with one Rammohun Roy, a Bengali, represented to His Majesty that the latter had formerly been a friend of the late Dabir-ud-daula Khwaja Farid Khan. The fact is that during the time of the late Dabir-ud-daula I never once heard of this Rammohun Roy nor did I ever see any mention of him in any way that was presented by Dabir-ud-daula to His Majesty. Doubtless therefore that letter is a forged one which was produced by Afzal Beg as from Dabir-ud-daula in which the latter's acquaintance with the aforesaid Bengali is asserted. This forgery has been committed with the knowledge of Mirza Salim by Sohun Lal, Afzal Beg and Rammohun.

Thirdly—the said Afzal Beg has been endeavouring in collusion with Sohun Lal under the directions of Mirza Salim, and with the aid of Rammohun, to effect the abolition of the Company's *Adalat* at Delhi, and to introduce the

jurisdiction of the Supreme or King's Court in its place."

Rammohun was highly displeased when the Prince's behaviour came to his knowledge, but he refrained from making a suitable reply at the time. Anxious as he was to secure an early voyage to England, he became afraid lest the Indian Government should refuse him a passport, and the fear was strengthened by its flat refusal to recognize his embassy and title, which was followed in swift succession by the charges levelled against him in the *John Bull*, and the reflection on his conduct by the Heir-apparent of Delhi.

He was, however, shrewd enough to disarm official hostility by representing to the Governor-General that, on various considerations, he had decided to proceed to England as a *private individual*, divesting himself of all public character.

"From the kindness I have so often experienced from your Lordship, I trust to be pardoned for my present intrusion in a matter solely concerning myself but in which your Lordship's condescension has induced me to persuade myself that you are pleased to take some interest."

Having at length surmounted all the obstacles of a domestic nature that have hitherto opposed my long cherished intention of visiting England, I am now resolved to proceed to that land of liberty by one of the vessels that will sail in November, and from a due regard to the purport of the late Mr Secretary Stirling's letter of 15th January last, and other considerations, I have determined not to appear there as the Envoy of His Majesty Akbar the Second, but as a private individual.

I am satisfied that in thus divesting myself of all public character my zealous services in behalf of His Majesty need not be abated. I even trust that their chance of success may be improved by being thus exempted from all jealousy of a political nature to which they might by misapprehension be subjected.

As public report has fixed an early day in October for your Lordship's departure to examine personally into the condition of the inhabitants of the Upper Provinces, I take the present occasion as the last that may offer in this country for the expression of my sincere wishes for your Lordship's success in all your philanthropic designs for the improvement and benefit of my countrymen. I need not add that any commands for England with which your Lordship may honour me shall receive from me the most respectful

* Extract from the trans. of a Persian letter (recd 17th April 1830) from His Royal Highness the Heir-apparent at Delhi, to the Governor-General—forwarded by Mr T Metcalfe, in charge of the Palace Affairs under his covering letter dated 6th April, 1830—*Pol Proceeds* 23 July 1830, No 98.

attention, and I beg to subscribe myself your Lordship's most humble and grateful servant.*

Rammohun must have applied for passports, either at the end of September or in the first week of October 1830, as the following entries would show

"The Secretary reports that an order for the reception on board the *Illion* of a native Gentleman named Rammohun Roy proceeding to England was granted on the 7th instant on an application duly made by him for the purpose" (*Public Body Sheet*, 12 Oct. 1830, No 95)

"Orders for reception granted to Ramrutton Mookerjee, Hurchurn Doss and Sheik Buxoo + 15th November proceeding to England in attendance on Rammohun Roy on the *Illion*" (*Public Body Sheet*, 16 Nov. 1830)

Immediately before he left India, Rammohun wrote an *arz* to the Prince, dated 10th November 1830, boldly defending his conduct and expressing his indignation at the attitude recently adopted by the Hon'-apparent. This *arz* reached the Delhi Residency through the post office and was ultimately forwarded to its destination by the Resident. We quote the English translation of this highly interesting document below --

"My representation is that in obedience to the orders of His Majesty, having attentively perused the treaty between the Hon'ble Company and his late father with other papers relating thereto I found His Majesty's right to the revenue of the territories west of the Jumna amounting to upwards of 30 lakhs of Rupees clearly and incontestably established by those documents, notwithstanding which the Hon'ble Company pay him only 12 lakhs

As His Majesty after experiencing the frustration of his hopes from the Hon'ble Company in Calcutta was pleased to append his case to His Majesty the King of England and condescended to require my services, as one of the humblest of the subjects of his Britannic Majesty, and being impressed with the justice and dignity of the

* This letter, written perhaps in September 1830, is printed in Miss Collet's book, pp 168-69. I have not yet been able to trace it in the Imperial Record Office, Calcutta.

The Rajah was accompanied by a boy named Rajah Ram whom he had brought up as his son. But Rajah Ram's name does not appear in the orders for reception on board. Was Shaikh Bakhshu the original name of Rajah Ram, or was he the washerman who is said in *Some Anecdotes from the life of Rammohun Roy* (Bengali) by Nanda Mohun Chattarji, (Cal. 2nd ed., p 63), to have accompanied Rammohun to England? There cannot be any doubt that Rajah Ram was with Rammohun in England and that his name does not appear in the list of Rammohun's companions on board. It is inconceivable that this boy of about 12, an alleged offspring of the Rajah, went to England alone. The only solution of the riddle is to suppose that Rajah Ram sailed under the name of Shaikh Bakhshu.

British nation and living as I fearlessly do under the protecting influence of the British laws of justice, among the high and the low and in the hope of pleasing the great Creator and meeting the wishes of His Majesty, as well as from my own feelings of commiseration for the indigent condition of the illustrious House of Taimur, I accepted the service to the end that the rightful might obtain justice and that this august family might live in contentment in the enjoyment of an increased income. I accordingly prepared an address in Persian to His Britannic Majesty, which, with a translation thereof, I submitted to His Majesty (at Delhi) and which being approved of, I was ordered to forward it to its destination, and to remit no endeavour in my power towards obtaining justice for the Royal family. I have, however, since learned that your Highness has written a letter to His Lordship, wherein instead of favourable mention all report has been made of, and artifice attributed to me. If your Highness had reflected but for a moment you would not have acted thus. The honourable of all castes practise not artifices even for their own benefit, much less will they commit such an act of baseness for the good of others. I swear by the one and true God, that respect alone for your Royal house prevented my making a suitable communication to the Government, at the same time, allow me to conclude this representation with the following observation. Those who do not comprehend their own good or evil cannot comprehend the good or evil of others.

May your prosperity increase. (Pol. Proclays. 21-1-1831, No 16)

This letter of Rammohun was far from being palatable to the Prince, who expressed his dissatisfaction in a *shukha*, dated 19th December 1830 (3 Rajab 1246 H), addressed to the Resident at Delhi, an English translation of which is given below --

I have received the *arz* of Rammohun Roy, forwarded by you and am much annoyed at the haughty, petulant and audacious tone in which it has been penned. As the author of it has never had any concern with my family, nor have I ever before received an *arz* from or addressed a *shukha* to him, I have positively declined answering it. Candour and sincerity however required me to explain the grounds of my displeasure with Rammohun Roy, which are as follows --

1st. It became known to me that Rammohun Roy, in concert with Afzal Beg, the Agent of his Majesty, stated to the Government his acquaintance with His Majesty from the lifetime of the late Dabir-ud-daula Khwaja Farid Khan. This being a gross and barefaced falsehood, that was calculated to deceive, I was prompted by a regard to truth to bring it to the notice of Government and I did so accordingly.

2nd. Being satisfied that the said Rammohun wished, by misleading the King regarding an augmentation of the royal stipend, to create a difference between His Majesty and the Hon'ble Company, a circumstance that I could not tolerate, I stated the fact for the information of Government with a view to their adopting such measures in consequence as they might deem proper.

3rd. I repeatedly heard that Rammohun Roy

and Afzal Beg had thrown out base insinuations regarding me. These calumnies naturally excited my indignation to the highest pitch, but being unable to resent them, in the way that friends disclose their distresses to friends, I represented the circumstance to Government.

It would appear that Rammohun Roy on being informed of this, thought proper to address me on the subject, and in his own opinion he has perhaps apologized, but the style and purport of this *avaz* sufficiently vindicate the presumption and effrontery of the man. A copy of the *avaz* is herewith enclosed for your perusal.

Another motive which he had in sending the *avaz* in question was that he might intimidate me into returning a reply to it, which he would produce to Government as a proof that he was constituted Agent on the part of all and was proceeding accordingly in that capacity to London in order that the Government might not prevent his departure. It is therefore proper that you peruse this with attention and make a suitable report to the Government, forwarding with it copies of this and of Rammohun's *avaz*, to the end, that my great regard for the Government with my helplessness on the present occasion be thoroughly manifest. (*Pol. Prudgas* 21-1-1831, No 16)

Rammohun—then about 56—was the first Brahman and the first Hindu of eminence to cross the *Kalapani* (Black Water)—an insuperable barrier imposed by the Hindu custom and superstition for ages. He sailed* from Calcutta on 15th November 1830 by the *Albion*, bound for Liverpool, and reached England on 8th April 1831 after a voyage which was anything but peaceful.

(*To be concluded*)

* It was suspected in official quarters that the Gwalior Queen, Baiza Bai, had appointed Rammohun to represent her case in England.

"2 From a note from Mr Ross, received some days ago, it appears that Her Highness (Baiza Bai) has been advised by Bunsce Dhar, ex-Nazir of the Agra Court, to appoint Rammohun Roy her Ambassador in England and I suspect from Her Highness's being so urgent for a reply and sending her *khairat* through me that such is indeed her intention."—Letter, dated 8 Nov. 1831, from R. Cavendish, Resident at Gwalior, to the Secy to Government, Fort Wm (*Pol. Con* 21 Nov 1831, No 19)

LENDING MONEY TO NEEDY NATIONS: GROWING ANGLO-AMERICAN RIVALRY

By ST Nihal Singh

I

B RITISH bankers are making frantic efforts to win back for the City of London, the position of primacy in finance which it occupied at the outbreak of the great war. They are men of grim determination and tireless energy. They control the riches of a nation which, despite the enormous expenditure incurred upon crushing—for the time being at least—a powerful foe, remains immensely wealthy.

According to a statement issued by the Board of Inland Revenue—the authority which collects income and cognate taxes—134 persons in Britain had an income of £100,000 or over during the last financial year (1923-4). The income of 89,000 persons from among them totalled £310,000,000.

Those figures err, if anything, on the side of conservatism. The Income Tax regulations

permit deductions under several heads. The payers of Income Tax in Britain are moreover, no more avaricious to inflate the amount at which they declare their net income to the income tax authorities than Indians or any other nationals are in their relations with their respective governments.

Many of the British bankers possess, in addition to these financial advantages, influence derived from social position. In some cases that influence is due to the accident of birth in the ruling class. In a few cases it is acquired through judicious management of matrimonial affairs, or through elevation to the Knighthood, Baronetage or even Peerage.

Petty jealousies of course divide the British bankers—human nature is indeed frail, but they are too shrewd not to know the value of concerted action. There exists among them a sense of cohesion which no other organisation has been able to approach.

II

So powerful, indeed, are the bankers that the most courageous politician who manages to establish himself at the Treasury dare not offend them. The Socialist Chancellor of the exchequer—the Rt Hon Philip Snowden—preferred to forget the doctrines which he had preached before coming into office during the few months he presided over His Majesty's Treasury and put forward only such budget proposals as they could approve.

The Socialist Prime Minister—the Rt Hon J Ramsay MacDonald—acted otherwise, apparently deeming himself to be sufficiently wise to outwit the bankers—or at any rate sufficiently powerful to defy them. He made a bargain with the representatives of Soviet Russia which prejudiced the bankers' interests. At least the Treaty which Mr MacDonald sought to impose upon Britain at the flag end of a Parliamentary session did not comply with the dictum laid down by the bankers. They had told the Government that the new regime in Russia must acknowledge the debts which its predecessors had incurred and come to an arrangement for discharging liabilities as to interest and principal, before they would advise their clients to put down any more money in Russia. That was not done. Mr MacDonald may have believed that the formula governing future loans which he had inserted in the draft instrument would achieve the impossible and give both the Russians and the bankers what they insisted upon having, though what one demanded was antagonistic to that required by the other. He soon found out his mistake. Before he had the time to put into force the Treaty he had negotiated, he was flung out of office.

III

The Conservative regime did not lose any time in burying that still-born child. And it had the honesty to do so without permitting any delicacy of feeling to enter into the performance of the burial service. Mr Baldwin and his colleagues had no faith in Soviet Russia, which had attempted to get rid of the sacred rights of property and vested interests, and in so doing had not hesitated to dye its hands red with blood. They were nervous about the propaganda which it was carrying on in various parts of the empire—more particularly in India—to under-

mine the British influence. They therefore had not the least desire to nurse the viper in their breasts. They preferred openly to declare their determination to employ all the means at their command to crush it, instead of following the MacDonald tactics of trying to charm it first and then attempting to draw its fangs.

IV

Shortly after coming into power the Chancellor of the Exchequer, who began his political career as a Conservative, "ratted" to become a Radical and is back again among the Conservatives, won the bankers' goodwill by restoring the gold standard. He did not restore it in the sense in which it existed in the pre-war days, but in the sense in which the bankers could benefit the most by it. The inevitable has happened. Britons are still compelled to use notes—be they dirty or clean. Gold sovereigns and half sovereigns remain out of sight. The banks, however, are no longer prohibited from dealing in gold.

By that action the Rt Hon Winston Churchill has no doubt gained the goodwill of the banking community, but not without incurring the wrath of the industrial and commercial classes. It has naturally had the effect of shrinking the volume of money, available for purposes of financing industry and trade—made it more difficult to keep up the appearance of prosperity through abundant but depreciated currency.

The men in control of large manufacturing establishments were already hostile to the policy of rapid deflation pursued by the Treasury at the behest of the bankers and even more so to that of high taxation which successive Chancellors of the Exchequer have been pursuing. The rate at which income and super-tax was being levied, they declared, was so enormous as to starve industry of the capital which it needed for winning back the markets lost during the war and capturing new ones. The money which should have been left to enable them to improve and to extend their operations had been, they claimed, taken away by the State and squandered upon "social reform."

V

Sir Robert Horne, a Scottish businessman representing a Scottish industrial constituency, who was Chancellor of the

Exchequer in Mr. Baldwin's Government, but who for some reasons did not care to join the present administration, is particularly active in denouncing this "waste". In a speech which he recently made in the House of Commons he pointed out that contributions to "social services" such as poor rates, local rates, health and unemployment insurances, workmen's compensation and old age pensions had risen from £30,000,000 in 1911 to £169,000,000 at the present time. Health and unemployment insurance, alone, he declared, which now exact £76,000,000 annually, had increased by £70,000,000 (In 1911 they absorbed only £6,000,000).

The various social schemes enforced by the Legislature involved a burden of £3-18s per head of the British population. In Germany, according to Sir Robert Hone, it was only £1-12s, in France it was 16 shillings, in Belgium 4 shillings, and in Italy only 3 shillings. Calling attention to the fact that those countries were Britain's chief competitors, he asked how it was possible for a country staggering under such a heavy burden of taxation to compete with other lands where the load imposed upon industry in the way of taxation was comparatively so much less.

This attack was made in the effort to compel the Chancellor of the Exchequer to withdraw the proposals which he had included in his budget for giving pensions to widows to enable them to support their children, and also to assist children bereft of both parents. In so doing he was following the example set by the United States many years ago, but in a calculating rather than a large-hearted manner. Americans recognise the duty which the State owes to mothers robbed by fate of their bread-winners and pay them out of the Exchequer, an allowance sufficient to enable them to bring up their offspring. The British Conservatives, however, intend to force spinsters and married women in employ—as also their employers—to contribute weekly to assist the State to make such an allowance to widowed mothers and orphaned children.

Sir Robert Hone and his fellow employers are up in arms against the Chancellor of the Exchequer's attempt to impose a fresh burden on industry when it is least able to bear it. What would they have done had Mr. Churchill, who is half American in origin, had the courage to fol-

low the American example in the full-blooded American way?

There is also an outcry against lavishing money upon departments of State, especially the Civil Service. A few Britons, it may be added, do not hesitate to denounce the expenditure incurred upon the adventures which His Majesty's Government—be it Coalition, Conservative, or Socialist—pursues in Palestine and Mesopotamia.

The expenditure upon the naval, military, air, and civil services amounts to £800,000,000. The municipal authorities spend a further £200,000,000.

Economists of a conservative turn of mind and industrialists complain that Britain is unable to find £1,000,000,000 or more annually for such expenditure without showing the strain. They are, therefore, constantly urging the Government to cry a halt before it is too late.

Conservatives talked eloquently from the hustings during the recent general election about the economies which they were going to effect. Their budget, however, belies such promises. Their political opponents as also those Conservatives who have not been placated in one way or another—do not lose an opportunity to remind them of their failure to keep their pledges.

VI

This high taxation has, however, enabled the British to pay their way. They are, in consequence, the only solvent power in Europe. Their principal enemy and their allies alike have, on the contrary, preferred to print paper rather than dip their hands into their pockets and deliver up to their respective Governments a goodly percentage of the few coins which reposed there.

This process of inflation has already led to the collapse of the pre-war German currency. Even those European nations which regard that movement as inspired by the dishonest motives of extinguishing foreign obligations are not hesitating to resort to the practice of financing their States by means of inflating their currency, instead of imposing taxation adequate to meet the State expenditure. The French, Belgian, and Italian exchanges are becoming more and more adverse and unstable.

A Finance Minister, pledged to stop this process, came into power in France some time ago. So far, however, he has not

accomplished anything very remarkable. The Belgians and Italians are not even indulging in brave talk about revising their taxation policy and reforming their currency.

VII

Though deflation is regarded by certain British industrialists and others as having been too rapid, and as already noted, is held accountable for helping to depress British industry and trade, it has enabled the British exchange to right itself. The pound sterling has risen out of the slough of depression to its pre-war parity with the American dollar. Whereas at one time something like \$3.35 would fetch a pound, now it is worth \$4.85.

The gain is immense to wealthy Britons. They lent their paper pounds to the State at a time when those paper pounds represented 13 or 14 shillings. Now the same paper pounds represent 20 shillings each. The capital value of the stocks held largely by the rich Briton, has appreciated by one third. Britons in authority or otherwise, who have to make payments to the United States, are also gaining by the improvement of the exchange value of the pound. His Majesty's Treasury, which has to pay a large sum of money every six months on account of the money borrowed from America, benefits for instance British buyers of American food-stuffs and raw materials for import also derive a great advantage from the rise in the exchange value of the pound.

These financial operations are carried on through bankers. The Bank of England, which transacts the Government business, is owned and operated by a private company. Every now and again the Governor of that concern goes to New York. The newspapers, in announcing that fact, make a practice of stating that the Bank acts in Britain as the agent of the United States Federal Reserve Bank, as that American institution acts, as the agent, in the United States, of the Bank of England. It is not at all unusual, however, for a supplementary statement to appear on the eve of the termination of a visit, that the Governor of the Bank of England has managed to transact this or that business for the Treasury on terms advantageous to the nation.

The other banks are jealous of the monopoly of Government business which the Bank of England enjoys. They are much

too discreet, however, to make much fuss about it. The profits on international transactions are cut exceedingly fine—often no more than one-eighth or one-sixteenth or even one-thirty-second per cent. The volume of transactions is so large, however, that the principal banks derive a large profit from discounting bills and from exchange.

VIII

The appreciation of the pound sterling, the British bankers hoped, would, above everything, induce the nations in need of money to come to London, as they did before the war. Prior to August, 1914, not only did the units of the British Empire and the countries in alliance with Britain or under its political or commercial influence raise loans in the London market, but so also did lands in South America. That was the case with governments as well as with corporations (many of which, indeed, were dominated by Britons).

The City of London, in fact, held the whole world in pawn. Even the United States paid millions of dollars in interest, every year, to the Britons who invested their money in American railways and other American concerns.

The War let loose influences which steadily deteriorated Britain's financial position. It had to find large sums of money to finance its military, naval, aerial, and kindred operations—running into several million pounds a day, towards the end of the conflict. It also had to act as banker for its allies, and to lend, in the aggregate thousands of millions of pounds to the French, Belgians, Italians and Russians, and was compelled to borrow from the United States of America.

IX

The British, themselves devoid of sentiment in business matters, did not find the American bankers easy-going. I well remember that the Earl of Reading, who was sent across to negotiate the first American loan, was roundly abused for making a contract which was considered to be highly unfavourable to Britain. It was openly said at the time that he had proved no match for the American financiers with whom he had to deal. Some Britons thought that by the magic of his musical voice he would cast a spell over the Americans who controlled the money-bags.

and they would empty the coins at his feet. They were disillusioned when they found that the Americans were not as soft as they had been believed to be.

Even after the Americans came into the War, they were not willing to lend Britain money without backing Britain was, therefore, compelled to make her nationals give up American, South American and Canadian securities, which were sent across to the United States to serve as collateral for British borrowing. His Majesty's Government paid one-half per cent, to the owners of the bonds, and guaranteed them a minimum price, several points in excess of the price ruling in the market, in case it could not restore to them those (or similar) bonds.

The United States could absorb securities, in this and other ways, because, during the early years of the war, she was manufacturing

at top speed and exporting, while Britain had to give the best of her thought and energy to the prosecution of hostilities. The post-war industrial depression, due to the general impoverishment of the warring nations, did not affect it so severely as it did the European peoples. It lasted but a short time, and during recent years the balance of trade has been heavily in America's favour. Some of the surplus thus amassed has been going into the buying back of the American securities, and lending money to nations in need of financial aid.

The statistics recently issued by the United States Department of Commerce indicate how large these operations have, indeed been during recent years. The following table compiled by me shows, under separate heads, the use Americans have been making of some of their favourable trade balances.

	1922	1923	1924	Total for 3 years
Investments abroad	\$637,000,000	\$363,000,000	\$795,000,000	\$1,795,000,000
American Securities purchased	360,000,000	51,000,000	114,000,000	525,000,000
Total	\$997,000,000	\$417,000,000	\$909,000,000	\$2,323,000,000

In order to arrive at the net figures, it is necessary to deduct the amounts of loans paid off by other nations, and the

money invested by foreigners in American securities. The following table supplies the reader with such information.

	1922	1923	1924	Total for 3 years
Repayment of debts	\$109,000,000	\$111,000,000	\$68,000,000	\$288,000,000
Sales of U. S. Securities and money borrowed in other lands	250,000,000	412,000,000	319,000,000	981,000,000
Total	\$359,000,000	\$526,000,000	\$387,000,000	\$1,272,000,000

The American loans to foreign countries during the last three years, therefore, amount to \$1,051,000,000. This amount, be it noted, represents only fresh investments. Loans funded during the period, are not included.

extent, had they been sordid creatures. A considerable portion of the money which they saved as the result of favourable balances of trade was spent by them in Europe and Asia for pleasure, or was given away by them in charity, or as aid to dependents in European countries. The figures relating to American expenditure under these heads are so striking, that I subjoin a table compiled from the statistics issued under the authority of the Federal Government of the United States —

	1922	1923	1924	Total for 3 years
Spent on foreign travel	\$360,000,000	\$500,000,000	\$600,000,000	\$1,460,000,000
Given away in charity or sent to relations abroad	400,000,000	360,000,000	355,000,000	1,115,000,000
Total	\$760,000,000	\$860,000,000	\$955,000,000	\$2,575,000,000

It needs hardly to be added that Europeans did not remit money to their dependents in America to any appreciable extent, and that the same is true in respect of charity. Europeans and Asiatics sojourning in the United States, largely for purposes of business or study, however, spent \$260,000,000.

Deducting that amount from the money spent by the American tourists upon foreign travel, we get the figure of \$1200,000,000 as the net outgo of American capital under that head. Putting it together with the remittances made by American settlers to their dependents in the Old World and on charities in Europe Africa and Asia, in which Americans were interested, we find that \$2,317,000,000 went out of America for nonproductive purposes. In other words, Americans lavished upon charity or pleasure more than twice the amount of money than they lent to needy nations.

The figures showing the distribution of American gifts during the last year are of interest, as they show the drift of America-ward emigration of the poorer classes in various European countries.

Gifts to Italy	\$100,000,000
" " Germany	80,000,000
" " Poland	30,000,000
" " Russia	25,000,000
" " Ireland	20,000,000
" " Greece	20,000,000
Gifts to other countries	30,000,000
Total	\$305,000,000

Happy indeed is the country which can manage either to transplant some of its poor struggling population into the United States or to attract American visitors or to appeal to American charitable instincts. India, unfortunately, does not figure in the first two categories though she benefits to some extent by the benevolent work in which American missionaries in India engage. If the Britons who control our railways, whether in behalf of the non-Indian Government or in that of the non-Indian companies, knew their job and effectively advertised the beauty spots and artistic treasures of India, I have not the slightest doubt that we would get many times the amount of money that Americans spend year after year upon travel in our land.

XI

To return, however, to the subject of American investments in foreign countries

According to an authoritative estimate, the total American investments abroad had by the end of 1924 exceeded \$9,000,000,000. They were distributed as follows:

Latin America	\$4,040,000,000
Canada and Newfoundland	2,460,000,000
Europe	1,900,000,000
Asia and Oceania	690,000,000
Total	\$9,090,000,000

The average rate of interest was estimated at 5 per cent per annum. The yearly income derived from this source alone was \$181,800,000.

The American capacity to invest abroad is steadily increasing because much of that large amount of money derived in interest is not needed for expenditure, and, if not frittered away by the owners of the capital, is available for re-investment. In addition to it a much larger amount, representing the yearly balance of trade in favour of the country, is available for investment. During 1924, that balance, taking into account only the *visible* items of export and import, aggregated \$748,000,000.

XII

Britain, on the contrary, is beginning to be haunted by the nightmare of an adverse balance of trade. The excess of imports over exports during the early months of the present financial year has been so great that only a miracle can enable them to pay for the food stuffs and raw materials which they must obtain from other nations, without dipping into their savings.

A high economic authority, indeed, estimates that the balance of trade will be unfavourable to the tune of £29,000,000 sterling, even if the existing situation does not become worse. That calculation is made by the head of the Engineering and allied Industries.

Since the British employers are seeking to frighten and even to overawe the workers into giving up some of the advantages which those workers extorted during the war, it is possible that it has purposely been made pessimistic. Certain it is, however, that the balance of trade enjoyed by Britain has been steadily becoming less favourable. In 1920, it slightly exceeded £250,000,000. Politicians and their henchmen in the press shrieked to attract attention and to that accord, boasted that statesmanship had given Britain prosperity while

her unfortunate Allies on the Continent were sunk in the mire of despair. These persons were not so vocal when, in 1922, the surplus of exports over imports went down to £154,000,000. When, however, the balance of trade fell to £29,000,000 at the end of the last financial year, they found their tongues again and were voluble in abusing British Labour for pursuing tactics which had the effect of throttling industry. They are speechless at the prospect of an adverse trade balance estimated from the result of the first five months in 1925 to amount to £26,000,000 to £30,000,000, and even more against them, during the present year.

XIII

There is hardly an industry in Britain which does not show the effects of depression

Kingdom, at the end of April, owing to lack of work. In addition to these there were many others lying idle in foreign ports. Since then the numbers have greatly increased.

According to an official of the Chamber of Shipping of the United Kingdom, freights on all routes of the world have never been so bad since the institution of index figure nearly six years ago. Though ordinarily at mid-summer shipowners expect a seasonal increase of freight, this year there has been a further decline, attributed by experts to the collapse of the coal market.

The depression in coal-mining has led to the closing of many collieries. Others are ready to shut down.

Towards the end of June a firm of manufacturers in Birmingham with which the father of the Foreign Secretary (the late

A long queue of men waiting outside a London Labour Exchange to draw their weekly "dole"

Some, of course, are affected much worse than others.

Take, for instance, shipping—one of the industries which in one way and another, provides lucrative employment for a considerable percentage of the British population, and enables shipowners, brokers, insurance agents, importers and exporters and many species of middlemen, to amass wealth.

More than 300 British tramp steamers were laid up in the ports of the United

Kingdom (Joseph Chamberlain) was connected, published the statement that it was compelled to close down three collieries belonging to it. The normal yearly output of coal from them totalled 1,307,000 tons. Hundreds of miners who were employed in them are now idle.

XIV

This industrial stagnation is adding to the number of workless. The number of men, women and children in receipt of the 'dole'

hovers round about 1,300,000, week after week, increasing, at times, by as many as 100,000 in a single fortnight. The dole costs the taxpayer £1,000,000 a week.

In ruminating over these figures it must be remembered that the Conservatives, since coming into power, have been using the machinery of the Labour Exchanges to cut down, as much as possible, the number of persons on the "dole." In so doing they have been accused of employing mean devices. If a fraction of the insinuations which are made against them in the Labour press and in the speeches of the Labour leaders are true, they

"We are going to prevent you from taking photographs. We do not want our poverty to be paraded before your people".

"What if I were taking the photographs for one of the London papers?" I asked.

The man did not expect that sort of an answer. He tried to hide his confusion by repeating to me his former threat in a shriller voice accompanied by a more menacing gesture. My picture had been taken by then, and I could afford to laugh at him and dare him to do his worst.

A second attempt at photographing a queue of unemployed men lined up at another place

These men are waiting to draw their 'dole' and incidentally hoping to be able to learn of a vacant job for which they may apply.

by pursuing these tactics, must be driving many a needy person to the very verge of desperation.

The Conservative, and, to an extent, the Liberal, press has, furthermore, been taunting Britons in receipt of relief, making out that many of them are imposters. A series of incidents which might have proved unpleasant demonstrated to me, the other day, how the workless have taken these sneers and jeers to heart.

As I was making a photograph of a queue lined up in front of a Labour Exchange, a man who was addressing them got down from the step-ladder upon which he had been standing and shouted to me:

resulted in even more disagreeable experience. So alarmed became the Jew who owned the shop in front of which I was taking the photograph that he took hold of me and pushed me inside it. He called to two or three other men who were working at the back, to come near us in case they might be needed.

When I calmly walked out of the shop and reengaged in taking photographs, they all thought that I was foolhardy. But I knew the British psychology, and nothing happened other than a little grumbling and abuse, largely to do with the colour of my skin, to which, of course, I paid no attention.

The Labour Party which, during the short time it was in office, did nothing to ameliorate

the conditions of workers, is now accusing the Conservatives of failing to usher in prosperity. Mr. Ramsay MacDonald and several of his followers exhausted rhetoric in moving, the other day, a vote of censure. Knowing, as they did, the composition of the House, they might as well as have saved themselves the trouble. The Opposition can hope to frighten the Government about as much as a tiny child can browbeat a giant.

British Capital accuses British Labour of exacting such high wages and working such short hours as to make it impossible for British industry to compete with foreign industries. British Labour turns round and blames British Capital for lack of organising ability. Whether this wordy duel will end in a bitter struggle, or Labour will quietly submit to a cut in wages and lengthening of the hours of work remains to be seen.

XX

In the meantime, it is certain that the British are not accumulating fresh capital to lend to their Colonies and to foreign countries. The City of London, which, in pre-war years, netted a handsome profit from such operations, sees its former customers go more and more to the United States for accommodation.

The Republics of South America, which used to patronise the British bankers, are

taking to floating their loans in the American market. Japan and the European countries are following their example. Even Canada cannot resist the temptation. Indeed, American investments in the Dominion have been so heavy of late years as to cause grave concern to many a British Imperialist.

It is not at all unlikely that other units of the Empire, whose hands in respect of borrowing money, are not tied as ours are, might find it to their advantage to get American rather than British bankers to underwrite their issues. As for Britain itself, Sir Allan Smith (the head of the employers in engineering and allied industries) has expressed the opinion that the British have come to the point where they shall have to contemplate the liquidation of their national assets and live on their national capital.

In this circumstance it is to be doubted that the British bankers, despite the wealth under their control and the influence which they exert over Government, (especially the present Conservative regime), can achieve much success in pulling New York down from the position which it has acquired in world finance. Only gross incompetence on the part of American bankers—and wanton waste on that of the American community in general—can prevent Wall Street from making her position stronger and stronger.

July 16, 1925

THE PROPOSED TAMIL UNIVERSITY

By A. PONNIAH

THE cause of education is one of all-absorbing interest to-day in every nook and corner of India. The present craze for additional universities, regional and linguistic, is a glaring illustration of this fact. During the last 6 or 7 years, not less than half a dozen universities have already been ushered into existence in the various centres of British India, as also the Native States. It is gratifying to note that, in the general game of university inauguration, Native States vie with the British Indian Provinces, in that, in two of the most advanced Native States, two universities have already become accomplished

facts—Mysore and Hyderabad. There is no doubt that in the near future, two or more of the other Native States will follow suit in the said direction, especially Travancore and Baroda. So far as Travancore is concerned—Travancore which is acknowledged to be quite ahead of other parts of India in the matter of literacy, a special committee has already sat and considered the question of founding a university, called Kerala and submitted a formal report thereon.

As for Madras, besides the Presidency University of Madras, it has also given an impetus to the starting of an Andhra Uni-

versity in Bezvada by the passing of a bill called the Andhra University Bill. Up there in Mysore, which has to its credit a regional university of its own, all efforts are being enthusiastically put forth, for the purpose of organising a linguistic university, namely, Kannada University. In these days, when universities of the said descriptions are rapidly springing up in such centres as Andhra desa, Kannada-rajya, and Kerala-samsthana, where the prevailing languages are Telugu, Canarese, and Malayalam, it is regrettable that nowhere in Tamil Nadu, is it possible to see vivid signs of the display of similar enthusiastic endeavours in the matter of founding a Tamil University. It may, however, be pointed out here, as a sort of consolation, that certain feeble steps have been taken in the shape of proposals, resolutions, discussions, and declamation, on the subject of starting a Tamil University in Trichinopoly. At best, all this may amount to a state of things quite far short of the stage of progress attained by the three other university schemes. In the very nature of things, it is the Tamil University that ought to have taken precedence of the other three. "Charity begins at home" is a proverb, which has supreme applicability in regard to the present functionaries in whose hands the cycle of education in Madras moves. The Minister of Education and the Vice-Chancellor of the Madras University are Telugus. Nonetheless, all honour to them for having piloted the Andhra University Bill as early and expeditiously as possible. The question of founding a Kannada or Kerala University is none of the business of those at Madras, for the simple reason, that those at Mysore and Travancore have been evidently busying themselves in the matter. It must, therefore, be plain from this, that Tamil alone now remains behind, to engross the attention of the Madras authorities.

By the bye all credit and glory to Tamil, for she has in a unique manner already had an academical mother at Madura, called the Tamil Sangam, corresponding to a University, though in Madras, she has been treated apparently as a linguistic orphan. Whatever that may be, the alleged privilege, which Tamil has been enjoying for centuries—a privilege to which the other dialectic triad could not pretend at all, is one, of which she cannot easily be robbed by her modern step-mother, or step-sister, whoever and wherever she may be.

It may be, however, contended here with

some force that Tamil will be the last of the guests at the table of the present ministerial host of Madras, in the way of partaking of the courses of a university in the modern sense of the term—a university which is a blend of eastern and western ideals. At this juncture, it is for the sons of Tamil Nadu—the territorial aggregate of Pandya and Chola, the two ancient Tamil kingdoms of beloved memory, to bestir themselves, with a view to redeeming their honour, and work out their linguistic salvation by setting themselves forthwith to the task of starting the Tamil University—the University which should not be a copy of existing universities, but one adapted to the genius, tradition and requirements of the Tamil People. The Tamil University is expected to cater to the educational needs of the districts, such as, Tinnevely, Ramanad, Madura, Trichinopoly and Tanjore. All things considered, it is Trichinopoly that affords better facilities than others for the foundation of a University of the kind within its own limits. To enter into details, Trichinopoly is at present the unique seat of three best-equipped first-grade colleges—colleges representing properly the oriental and occidental elements, in the professorial and administrative staff thereof. It is literally the head-quarters, nay, the most prominent junction of the South Indian Railway, and it is a place which has the great benefit of the refreshing, perennial waters of the Kaveri—perhaps the Cam of the Tamil land, like the Cam of England.

Trichinopoly was the scene of the activities of two of the most eminent sages in the Tamil world, Thavumanavar, and Voer-amamunivar. The Tamil-padals of the former and the Thenpavany of the latter, are two of the best works, belonging to the Bhakti School, of which the Tamil muse can justly be proud. Was it not on the consecrated soil of the Chola kingdom, whose modern half is Trichinopoly, that the greatest Tamil poet trod and flourished as the immortal author of *Kamba Ramayanam*, under the then Royal patronage? Is it not clear, from the foregoing, that Trichinopoly is a place which has a tradition all its own, so as to commend itself as a worthy site for the Tamil University? What is more, Srirangam, with its loftiest Gopuram in all South India, is in the heart of Trichinopoly—an example of the great architectural skill and knowledge of the Tamil sons of the past. It is but meet and proper that in such

environs, that can boast of being the rendezvous of so much of past achievements, by the Tamil sons, and others devoted to the Tamil Muse, the future Tamil University should, by common consent, be honoured with a habitation.

As for other conveniences, Trichinopoly need not lag behind other parts, which may aspire after the first envied kiss of the Tamil Alma Mater. Even from the point of view of the personnel of the Senate and the Syndicate of the Trichinopoly University, nay, Chola-Pandya University, under contemplation, Trichinopoly can challenge comparison with Madras, in spite of the latter's seniority.

The question of questions is that of the means of war. If the Andhras could afford to find money, or if the Andhras could succeed in their attempt at financing the Andhra University, what is there in the way of the Tamils finding the wherewithal to found and maintain their Tamil University? Are the Tamils less patriotic, nay, less philanthropic than the Telugus? Is their thirst for knowledge less intense than that of the Andhras? Are they inferior to them in the matter of wealth, influence, and enterprise? Certainly not. For examples of wealth, influence, and enterprise, one need not go far, but it will be quite enough if we merely mention the names of Chettinadu, Sivaganga, Sivakasi, Virudhunagar, Srirangam and Kumbakonam. With a view to finding further manifestations in the said directions, one should go to Burmah, Ceylon, Singapore, Penang, Straits Settlements, and South Africa, where Tamil merchant-princes, planters, journalists, lawyers, and politicians abound. Are not the representatives of Tamils amongst the foreign communities functioning in Burmah and Ceylon, who have first had the honour to enter the legislative councils over there? What is more, even the first Indian Judge of the Burmah High Court is a son of the Tamil Nadu. Was not the contribution in men by the Tamils, greatest in connection with the struggle for the freedom of the indentured labourers in South Africa, as eloquently borne out by persons like Messrs Andrews, Gandhi and Polak? And whose sacrifice has been proclaimed to have been of the greatest amount? If we remember aright it was, again, that of the Tamils, as was reported in the columns of the Madras

journals like the *Hindu* and *Suadesamitran* at the time of the great crisis in South Africa. Whilst the Tamils have got such a noble record to their credit abroad, in connection with their social, political and economical struggles, will it be reasonable to suppose, or suspect that they cannot rise equal to a similar standard, in respect of what may be expected of them, in connection with an educational struggle like the one in question, and that too, near their hearths and homes? They are, in our humble opinion, as well-equipped to face intellectual issues, as economical and other issues. We are sure that the most intelligent of them need not be reminded that a big University each in America and Australia, was financed by two solitary individuals, whose respective contributions have been all the resources these seats of learning could call their own. Coming nearer home, we have got an inspiring instance of a University conceived, constructed, and practically controlled by a single Indian, in the person of Professor Karve, of Poona Women's University fame. What is a most encouraging point to be noted in this connection is that, whereas the said universities of America and Australia, were founded and financed by individuals of great wealth, the Poona Women's University was founded by an individual of no means whatsoever, except his name and fame, as a Professor of the Fergusson College, Poona. No doubt, the poet Tagore has founded an international University at Bolpur, namely, the Visva-bharati, to whose sanctum sanctorum have been resorting on lecturing mission learned doctors from foreign Universities, such as Paris, Prague, Oslo and Rome. His case is quite different from that of Professor Karve.

There are many Zemindars, Rajahs, and other landed gentry in the Tamil Nadu, whose resources can by no means be inferior to those of their brethren in Andhra-desa, Kannada, and Kerala. Is not Trichinopoly the birth-place of the late Diwan Bahadur Pethachi Chettiar, whose munificence in the cause of education was admirable? Now that the Diwan Bahadur is no more, are there not other Diwan Bahadurs to come forward and fill the void? Before closing, it may not be out of place, if it is pointed out here that Tamil should be the soul medium of instruction, in the said University and that English, Sanskrit, and Hindi should be included in the list of compulsory subjects

up to a certain standard. Now-a-days, the general complaint is, that in some of the existing Universities, the education is either soulless, or 'foodless.' The same should not, however, be the result of the labours of the

anticipated University, but on the contrary, it must be both soul-stirring and food-giving instruction that should be imparted within its walls

CULTURAL UNITY

Ethical Teachings of the Quran and the Upanishads

II

By WAHED HOSAIN, B.A., M.A.

IN my first article, published in the last issue, I quoted some parallel passages from the Holy Quran and the Upanishads to show how the Aryan mind arrived at the same conclusion regarding the existence of one infinite, incomprehensible, and eternal Supreme Being as the Semitic races did when they consistently declared the existence of one Supreme God without a second. In this paper I intend to quote more passages showing the Aryan and Semitic conceptions of a Supreme Being and illustrating the point that there is a thread of monotheistic ideas running through the earliest sacred books of the Aryan Hindus. I desire to point out that the learned Brahmins and educated Hindus have been conscious of the unity of the Godhead and the existence of a Supreme Being who alone is to be adored and worshipped. The following passages, taken as types, from *Al Quran* and the *Upanishads* will throw a flood of light on the Semitic and Aryan conceptions of God.

PASSAGES FROM AL-QURAN

1. He is God (Allah) besides whom there is none the knower of the seen and the unseen. He is the most merciful and compassionate. He is God besides whom there is no God, the Ruler, the Holy, the Bestower of peace, the Grantor of security, the Guardian over all, the mighty, the Possessor of every greatness. Far be God, (Allah) exalted above the idols. He is God the Maker of all things, the Creator of all existences, the fashioner of all images. His are the most excellent and beautiful attributes which man can imagine—everything which exists in the heavens and in the earth sings His glory and perfection. He is the mighty, the wise—Chap 39, 22-21 Rs.

2. There is one God (Allah). There is no God

but He, the living, the self-subsisting, neither slumber nor sleep seizes Him to Him belongs whatever is in heavens and earth. He knows that which is past and that which is to come, none shall comprehend anything of His knowledge but so far as He pleases. His throne is extended over the heavens and earth and the preservation of both is no burden to Him. He is the high, the mighty (Avat-kursi, Chap 3).

3. Your God is the God who is one in His person and without any participator in His attributes. He is God alone, for there is no being which is like him eternal and everlasting, nor has any being its attributes like his attributes.

4. He is *allah* the all-hearing, the all-seeing, the Deliverer from afflictions, the Generous, the Gracious, the Forgiving, the Near-at-hand, who loves good and hates evil, who will take account of all human actions.

Say, O God, possessor of all power. Thou givest power to whom Thou wilt and Thou takest it away from whom Thou wilt. Thou dost elevate whom Thou wilt and Thou dost abase whom Thou wilt. In thy hand is good, for Thou art over all things potent—Chap 3, 25.

He is *Allah*—He besides whom there is no deity, the most merciful and benevolent, the Bestower of beneficence, the Grantor of provisions, the distributor of pittance, the Giver of sustenance. He is the Restorer of the dead to life.

Re Divine attributes of Allah

He is the Owner, Possessor, and Lord (Rab) of the worlds, the Creator, Nourisher and Supporter of the universe, the Fashioner of all forms, shapes and images without a measure or model, the prime cause of creation, the cause of all causes, the Regulator of the universe, the Protector from difficulties, the Degradator of the disobedient, the Exalter of the obedient, the Doer of justice, the Forgiver of sins, the Awarder of punishment, the Acceptor of prayer, the Bestower of favour and blessings, the Grantor of honour and dignity, the Protector from injuries, the Guardian over all, the Acceptor of repentance, the Punisher of the dis-

edient. He is the mighty, the powerful, the exalted and the wise

He is of pure essence, free from all impurities, free from all defects, self-sufficient, self-subsisting, self-fulgent, light of all lights, possessing splendour and glory, self-dependant, ever-existing, ever-living Allah, omniscient and omnipresent, imperishable even when all comes to nought.

He is the beginning and the end, the infinity and the eternity, the manifest and the hidden, the absolute and the one indivisible whole, the great of the greatest, the most intelligent, the most patient, the most magnificent, the most exalted, the high of the highest. He is beyond all attributive description.

He is the truth and remains true to his promises, the just the righteous draws the righteous towards Himself out of compassion and repels the evil-doer from His presence. He is the friend of the good.

He pervades the universe and His knowledge extends over all it is He who breathes life into the body and it is He who takes it away. It is He who created at the beginning, and it is He who begins with subsequent creations. It is He who watches everything and keeps everything within His knowledge.

He is a loving friend and does good to his creatures out of love. He bestows mercy out of His unlimited compassion—*See translation of Isma'il-Husna*

The conception of a Divine Being and His attributes by Imam Ghazali is as follows:—

Know that you have a creator who is the creator of the whole universe. He is one universal whole and has no partner or equal. He has been in existence from eternity and will continue to exist to eternity. His existence has no beginning and will have no end. His existence is absolute. He has no form. He has need of nothing but everything has need of him. He has no form. He is not confined to body or matter. He does not resemble anything, nor does anything resemble him. The questions *how* and *what* and *where* have no reference to him. He cannot be subject of thought or imagination. The words great and small are not applicable to Him, as these are the qualities of created beings and things and of matters, and He is neither. He has no connection with body or matter. He has no dimensions. He is not over any place or in any place. He is nowhere and yet He is everywhere. He is not hable to change. His attributes are the same at present, as they have been in the past, and will remain the same in the future. Although He is not like anything, He is powerful over everything. His power is vast and perfect. There is no decrease and increase in it. He knows everything, His knowledge grasps the whole universe. The number of the particles of sands, of the leaves of trees, of the atoms of air and of the thought of man's mind are as much known to Him as the number of heavens and heavenly bodies. Whatever is in the universe is obedient to His will, nothing happens without His will. He sees and hears everything. The far and near are the same for His hearing. The light and darkness are the same for His sight. He does not see with eyes, nor does He hear with ears, as His wisdom does not require organs or apparent means. He speaks, but

not with a mouth, or a tongue or lips, not in words of a language. As an idea in the mind of a man is a dumb speech without form or language and cannot be heard by men, so is God's word known to those who can understand it.—Translated by K. D. Mirza for the Al-Chomy and Happiness.

PASSAGES FROM THE VEDAS AND THE UPANISHADS

1 'The Supreme Being has no feet, but extends everywhere, has no hands, yet holds everything, has no eyes, yet sees all that is, has no ears, yet hears everything that passes'—Veda

2 'He is the smallest of the small and the greatest of the great, yet is in fact neither small nor great'—Vedas

3 'The Supreme Being who is the subject of superior learning is beyond comprehension of the senses and out of reach of the corporeal organs of action, is without origin, colour or magnitude, and has neither eye, nor ear, nor has he hand or foot. He is ever-lasting, all-pervading, omnipresent, absolutely incorporeal, unchangeable, and it is he whom wise men consider as the origin of the universe'—Mundaka Up. of Atharva Veda—1 2

4 'He, the Supreme Being, seems to move everywhere, although he in reality has no motion. He seems to be distant from those who have no wish to attain a knowledge respecting him, and he seems to be near to those who feel a wish to know him but in fact, he pervades the internal and external parts of this universe'—Isha Up. of Yajur Veda see 5

5 'The Supreme Being is but one and he has the whole world under his control, for he is the operating soul in all objects. He through his omniscience makes his sole existence appear in the form of the universe'—Katha Up. of Yajur Veda 2 3

6 'Nothing is more exalted than God, he is, therefore, superior to all existences and is the supreme object of all. God exists obscurely throughout the universe, consequently is not perceived, but he is known through the acute intellect, constantly directed towards him by wise men of penetrating understanding. The Supreme Being is not organised with the faculties of hearing, feeling, vision, taste, or smell. He is unchangeable and eternal, without beginning or end and is beyond that particle which is the origin of the intellect, man knowing him thus, is relieved from the grasp of death'—Katha Up. of the Yajur Veda, 1 3 3

7 'The omnipresent spirit extending over the space of the heart which is the size of a finger resides within the body, and persons knowing him the Lord of the past and future events will not again attempt to conceal his nature. The omnipresent spirit which extends over the space of the heart which is the size of a finger is the most pure light. He is the Lord of the past and future events, he alone pervades the universe now and ever, He is that existence which thou desirest to know (This was addressed by Yama to Nachiketa) - Katha Up. of the Yajur Veda, 2 1 4

8 'The Supreme Being is one and unchangeable. He proceeds more rapidly than the comprehending power of the mind. Him no external senses comprehend, for a knowledge of him out-runs even the internal sense. He, though free from motion, seems to advance leaving behind the human intellect, which strives to attain a knowledge respecting

Him. He being the eternal ruler, the atmosphere regulates under Him the whole system of the world."—Isa U'pa. of Yajur Veda See 4

9 "He overspreads all creatures, is merely spirit without form either of any minute body, or of any extended one which is liable to impression or organisation. He is pure, perfect, omniscient, the ruler of the intellect, omnipresent and self-existent. He has from eternity been assigning to all creatures their respective purposes."—Isa U'pa of Yajur Veda See 8

10 "He is great and incomprehensible by the senses, and consequently His nature is beyond human conception. He, though more subtle than

vacuum itself, shines in various ways.—From those who do not know Him, he is at a greater distance than the limits of space, and to those who acquire a knowledge of Him, He is more proximate, and while residing in animate creatures, He is perceived obscurely by those who apply their thoughts to Him. He is not perceptible by vision, nor is He discernible by means of speech, neither can He be the object of any of the other organs of sense nor can He be conceived by the help of austerities or religious rites, but a person whose mind is purified by the light of true knowledge, through incessant contemplation, perceives Him, the most pure God. — Mundaka U'p of the Atharva Veda 13.

REVIEWS AND NOTICES OF BOOKS

[Books in the following languages will be noticed Assamese, Bengali, English, Gujarati, Hindi, Kanarese, Malayalam, Marathi, Nepali, Oriya, Punjabi, Sindhi, Tamil, Telugu and Urdu Newspapers, periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazine articles, addresses, etc., will not be noticed. ENGLISH

THE LAKE OF THE CROSS. AN INQUIRY INTO THE CLAIMS OF CHRISTIANITY. By S. Haldar, Member, R. P. Association, Calcutta. The Mahabodhi Society, 1A, College Square Calcutta. Pp 132

Christian missionaries present to non-Christians the best side of the Christian dogmas and doctrines and of the doings of Christians. But to be able to form a correct estimate of a religion and the character and conduct of its followers, it is necessary to know the other side also. This other side Mr S. Haldar has presented to the public in this book mainly by quoting passages from the works of standard European writers, mostly of Christian parentage and many of whom were adherents of Christianity.

The author has done his work very well. We strongly recommend it to all non-Christians and also to all Indian converts to Christianity.

R. C.

THE OXFORD BOOK OF ENGLISH PROSE. Chosen and edited by Sir Arthur Quiller-Couch. Published by the Oxford University Press, price 8 shillings 6 pence (India paper edition 10 sh 6d)

To those who have had the pleasure of going through the Oxford Book of English Verse, a selection of English prose by Q. was a possibility to be looked forward to. The reading public has at last been presented with an unique volume of over one thousand pages, containing not a mere classified jumble of quotations, but the choicest bits from the colossal mass of English Prose that has accumulated since the birth of English literature

brought together to convey to the reader an impression of what England has been and aspires to be in the world of culture. Turning over the pages of this anthology one is struck with the wide range that English thought has covered during the centuries that it has been preserved in writing and apart from all other considerations this book should find a place in every library as a picture of the Englishman's mind.

Making a selection of bits of prose is a job which requires a genius to execute successfully. A prose composition is like a painting and it is just as difficult to choose a little representative bit out of a prose work to show the charm of the whole as it is to cut a section out of a painting and demonstrate with that the beauty of the complete thing. Sir Arthur Quiller-Couch has proved himself a person of exceptional ability and intuition by carving out this work with great success.

THE TREASURE ISLAND. By R. L. Stevenson. Published by the Oxford University Press. Price Rs. 12

This is No. 295 of Oxford's famous series "The World's Classics", and is in every way a valuable addition to it. A dainty edition of this well-known work of R. L. S. should be welcomed by all. A. C.

THE FINAL COUNT (A NOVEL) By "Sapper" (Giles M. Neil), published by Hodder and Stoughton Ltd, Warwick Square, London E. C. 4. Price 7 sh 6d, 319 pages.

This is an interesting novel, one of the Bulldog Drummond series, by the well-known author

'sapper' whose genius in creating stirring situations is not unknown to the reading public. The book is well printed on good quality paper and bound in cloth with an illustrated jacket. It should provide good holiday reading for those who suffer from an over dose of dream-land literature.

THE VANISHING INDIAN (A Novel) By Zane Grey. Published by Hodder and Stoughton Ltd., Warwick Square, London E.C.4. Price 7sh. 6d. 120 pages.

The plot of this novel centres round the story of a disappearing race and is developed in a way which keeps the readers' interest ever unflagging. The book is well got-up and fully worth its price.

K

ETHICS OF INDIA By Prof. E. Washburn Hopkins. Yale University Press.

On the above subject there have now appeared two books by two European scholars, viz. *Hindu Ethics* by Prof. McKenzie of Bombay and the present volume of Prof. Hopkins, *Ethics of India*, the former being published only a few months before the latter. How different are the angles of vision of men is clearly shown by these two works. Prof. McKenzie finds the ethics of India defective, illogical, antisocial, lacking any philanthropical foundation, nullified by abhorrent ideas of asceticism and ritual and altogether inferior to the 'higher spirituality' of Europe. Prof. Hopkins's book, on the other hand, presents quite the opposite view. It is not that he has written it by way of criticism of the work of Prof. McKenzie. His object is different. 'Although,' says he in his preface, 'the West discovered mental India years ago... yet apart from some erroneous familiarity with India's religions there is little known in this country (America) of what the Hindus have thought and said as for the field of Hindu ethics, it is *terra incognita* to Europe and America. The author would be loath to state how often, across the water and here at home, he has dejectedly listened to sermons in which well-meaning pastors have soothed their sheep with the comforting assurance that no other religion than Christianity ever inculcated purity of heart and sympathy for the suffering.' The author then began to make an investigation and the result is now before us in the form of his new volume, *Ethics of India*. He has here gathered together a large number of passages beginning from the Rig Veda downwards from which the moral injunctions and ethical appeals may be conveniently studied. He has written his little book, not to sustain any logical, philosophical, or religious dogma, but to exhibit the ethical teachings of the ancient Hindus, feeling confident that it will be a pleasure to many and a grief to none to know that truthfulness, generosity, kindness of heart, purity of soul, forgiveness, and compassion were taught in India as every-day precepts long before the Christian era.

Prof. Hopkins has written the book for his countrymen but we have not the least doubt in saying that the Hindus themselves will find much to know from it of their own ethics. Indeed there is no work on the subject known to us that could be compared with it. The author has shown both good and bad, and it will make the Hindus think over many things which they may not have

noticed before. They will also see many points interpreted in a new light and in most cases these interpretations are right. But in a work such as this, one, and specially those whose ethics are discussed here, cannot be expected to agree on all the points. But we are glad to note that the points of disagreement are far less than those of agreement. As regards the ethical aberrations pointed out by the author, it is quite true that they exist in some sects, but here is a question. Are the founders themselves responsible for them in all cases? For instance, can Chaitanya or Vallabha be held responsible for the aberrations found in their respective sects? Is the Buddha himself to be blamed for the vicious doctrine expounded in his name in books such as the *Tathagata-guliyaka* and *Ekalluma Candamaha-issanatanha*?

VIDYUSSEKHARA BHATTACHARYA

THE HAFT PAUKAR (THE SEVEN BEACHES), CONTAINING THE LIFE AND ADVENTURES OF KING BAHRAM GUR AND THE SEVEN STORIES TOLD HIM BY HIS SEVEN QUEENS. Author—Nizami of Ganja. Translated from Persian with commentary by C.E. Wilson, B.A. (London). Vol. (I)—Translation (pp. 288-318). Vol. (II)—Commentary (pp. 212). Published by Arthur Probsthain (Late Probsthain & Co.) 11, Great Russell Street, London W.C.

Persia boasts of no less than four poets and writers who assumed the nom-de-plume of Nizami and the author of *Haft Paikar* was the last of them. He was born about 1140 A.D. and died about 1200 or a little later. He is known as the Nizami of Ganja, a town now known as Elizavetpol. He is the author of 5 poems, collectively known as 'Khamse' (quintet) or 'Panjganj' (five treasures), of which *Makhzan-ul-Asrar* was his first composition at the age of about 26 and the book, *Haft Paikar*, his last production, was finished at the age of 63 (lunar years). This book was written at the request of Nasir-ud-din, the provincial king of Azerbaijan. *Haft Paikar*, also known as *Bahramnama* deals with the legendary history of one of the renowned Sasanian kings of Persia named Bahram Gur, who was famous alike for his knightly deeds and marvellous skill at the chase. The story runs that Bahram, then a prince, discovered a secret chamber in a neglected royal palace in which he finds effigies of himself and seven princesses of seven climes (India, China, Khwarezm, Byzantine, Persia, Countries inhabited by the Slavs and 'the West'). After his father's death Bahram sends ambassadors to these monarchs and marries the princesses, for whom he builds seven domes of different colors after the seven planets. These princesses entertain him (as in the Arabian Nights) with seven stories. The stories are mixed with tales of Bahram's valour in chase and other anecdotes.

Nizami, though not a rich man himself, was unlike other poets who courted rich men and kings. It was his poetic fame and genius that attracted crowned heads towards him. His patrons appear to be the Atabeks or rulers of Azerbaijan. He was once invited by the Atabeks of Mosul and of Shirwan, and once by the rulers of Persia, to whom he dedicated a revised edition of his second volume, *Khusro-Shereen*. His high rank as a poet is admitted by both Persians and non-Persians, by biographers and other eminent poets as Sadi,

Hafiz and Jami His lofty genius was combined with his blameless character, and probably stands highest among poets, whose lives have been the subject of careful and critical study of European scholars.

The Emperor Akbar was so charmed with the works of this poet that he ordered his court-poet Faizi to compose five works in imitation but dealing with Indian characters. For instance, the story of Laila Majnoon (the third of the five treasures) had its imitation in the story of Nal Damayanti, a story of 4000 verses and Akbarnama was written in imitation of Sikandarnama (the fourth treasure) imitating *Haft Paykon* (the fifth treasure) Akbar wanted *Haft Kishwar* to be written in a poem of 5000 verses. Though other poems exist *Haft Kishwar* is not available. Very likely this book was never written owing to the untimely and almost sudden death of Faizi.

The translation though literal and verse by verse, is written in such a style that the reader enjoys the story as well as the beauties of the original. Of course some of the metaphors, especially those alluding to Astronomy, are foreign to European tastes and ideas but are admired in Persia and to understand these the student must consult the accompanying commentary which contains no less than 2000 explanations and in which not only these intricate metaphors but almost all allusions are clearly explained, sometimes quoting similar passages from other poets. The book, therefore will be very useful and interesting to the European admirers of Persian poetry and will be a great boon to the Indian students of the Persian Language.

AMRIT LAL SHI

BEGUM SAMRU. By Bananindranath Tagore published by M. C. Sarkar & Sons, Calcutta. 8 pages + pages 226 price Rs. 2-5.

Begum Samru is a welcome addition to the fast growing literature embodying researches in that confusing period the latter half of the 18th century i.e. up to the time when the Indian politics settled peacefully under British Sovereignty. A national history of India is thus being slowly but surely built upon the solid foundation of authentic evidence. Towards the middle of the 18th century the crumbling edifice of the Mogul Empire gave a unique opportunity to local chieftains and foreign adventurers for acquiring wealth and territory. The reverse of Panipat had all but shattered the rising fortunes of the Marathas and gave scope to the ambitions of Haidar and his son Tipu in the south, to those of the Jats and the Rohillas round about Delhi, and of the Sikhs in the Panjab. But they all badly lacked the essential means of gaining their object, i.e., a well equipped and disciplined army. The struggle between the French and the English had clearly proved the superiority of the western scientific methods of warfare over the old and worn-out guerilla tactics of the Marathas and set a high price on European soldiers of fortune, quite a crop of whom comes into evidence as one studies the literature of the Panipat period.—De Bogue, Perron, Paul, Bourquin, George Thomas, Walter, Reinhardt, Rene Madec, Levassault and others who need not all be mentioned here. Having received some military training in Europe and hearing of the fabulous fortunes that could be acquired in India, they came out almost with

empty pockets and getting together a few mercenaries from any Indian Society, accepted employment with one or other of the needy Indian Rajas. If the first trials of strength in which they engaged proved successful, the value of their service necessarily increased enabling them to acquire high positions of lucre, trust and honor and an extensive field for their military activities. No feeling of Nationality or patriotism existed anywhere in India at the time, everyone cared for today, no one thinking of the morrow. Utter disorganisation of life and work, of kinship, family religion and of all that could make life worth living, marked this latter half of the 18th century making the advent of the British a most welcome relief from the necessary chaos and unrest. The task of the historian of these times has consequently become all the more difficult so long as the activities of these foreign adventurers as of those who employed these are shrouded in mystery. The *Begum Samru* of Mr. Banerji unravels one such mystery, dealing as it does with an important personality, a German named Walter Reinhardt and of his Mussalman wife known in history as Begum Samru.

Reinhardt came to India about 1757 and accepted employment in the French camp at Chandernagore upon the fall of which he took service with Mir Qasim, executing for his master what has been since known as the massacre of 51 British captives at Patna, on October 5th 1763. Being of a grave and sombre nature he received the nickname which was turned in local parlance into *Samru*. Thereupon, he often changed masters, and at last in 1771 he obtained a lucrative job in the service of the Moghul Emperor with Rs. 80,000 a month and a territorial assignment of 6 lacs a year for the upkeep of his regiments and a pack of artillery in the district of Meerut in the Doab, since known as the jagu of Sardhana, where he married a beautiful young wife of Mahommedan persuasion. Unfortunately he was soon cut off by death on 14th May 1778, leaving the management of his corps and jagu to his young wife who in memory of her husband accepted Christianity in 1781.

We have no room here to detail the picturesque adventures of the Begum in her ardent desire to serve the Emperor, who lost his sovereignty by the capture of Delhi by Lord Lake in 1803. With characteristic foresight, the Begum took early measures to be a friend of the British, upon a promise of the jagu of Sardhana being continued to her for life. Here she lived afterwards a peaceful life up to a ripe old age, wisely managing her landed estate and spending her large income on buildings and charity devoted mostly to the Christian religion. Upon her death in 1836, the jagu was annexed to the British dominions. The author has utilised all available materials in Persian, French, English and Marathi, and has produced in the work under notice an authentic biography of the General and Begum Samru which the historians of India cannot neglect in unravelling the necessarily confused accounts of the period.

G. S. SARDESAI

CHATTERJEE'S PICTURE ALBUMS NUMBER 17
R. Chatterjee, Calcutta, Rs. 2.

This new Number of *Chatterjee's Picture Albums* contains reproductions in colours of sixteen water colour paintings by Abanindranath Tagore, Nandalal

Base, Gaganendranath Tagore, Samarendranath Gupta, Srimati Pratima Devi, Srimati Santa Debi, Srimati Sabita Devi, Deviprasad Ray Chaudhuri, Ranada Charan Ukil, Pulinbehari Dutt, Ramendranath Chakrabarti, Satyendranath Bisi, T. Kesava Rao, Binodebehari Mukherjee, Purna Chandra Sinha, Bipin Chandra Dey.

HISTORY OF THE BRITISH OCCUPATION OF INDIA, By N. KASTUR, B. A., being a Summary of "Rise of the Christian Power in India" by Major B. D. BISI I. M. S. (Retired) in five volumes R. Chatterjee, Calcutta Cloth Gilt Letters Rs. 3

Major Bisi's "Rise of the Christian Power in India" in five volumes is indispensable for an accurate knowledge of the British period of Indian history. But some readers may not be able to afford to buy that work, and others may wish to have some idea of its contents before purchasing it. There are also those who may not have time to go through its five volumes. Mr. N. Kastur's book will suit all these classes of readers. It is furnished with an index and a list of references to the original work.

GENERAL INDEX TO MAJOR BISI'S "RISE OF THE CHRISTIAN POWER IN INDIA" prepared by Ganapati Charan Ray Chaudhuri, M. A., B. L., R. Chatterjee, Calcutta Cloth Gilt Letters Rs. 2

Those who have purchased Major Bisi's work as well as those who may do so hereafter will find this index to the five volumes handy, convenient and useful.

X.

GERMAN

INDISCH GEDICHT AUS VIER JAHRHUNDERTEN—Herausgegeben von Dr. G. Glasenapp, Berlin 1927, G. Grote'sche Verlagshandlung

In recent years the interest in Indian lyrics has been aroused in Germany by the translation of Tagore's poems. These translations were not made from the original Bengali, but from the English renderings of Tagore. In the present volume the author has given us an anthology of Indian lyrics which have been composed during the last four thousand years viz., from the early Vedic period up to the recent times. In making his translations the author has gone to the original Indian texts, and he has tried to reproduce the original rhythm as far as possible. In this work he has been helped by his son Dr. Helmuth von Glasenapp, the well-known Indologist of the Berlin University. Dr. Glasenapp also supplies an introduction, in which is sketched the development of the Indian lyric from the earliest age up to the modern times.

The selected poems are grouped under the following heads I. Selections from the ancient religious texts, II. Classical Sanskrit poems, III. Prakrit lyrics, IV. Hindi and Bengali religious poems V. Modern poems. Naturally in an anthology of 141 pages it has not been possible to give a representative selection of ancient and modern lyrics. The Vedic and other ancient religious poems which are familiar to the German public from the translations by Deussen and others have only been lightly touched. To us it appears that the group of poems in section IV have been most

satisfactorily rendered. In them are included selections from Jayadeva, Ramananda, Chandidas, Mirabai, Tulsidas, Dadu, Ramnohan Roy and others. The last section of modern poems which contain seven from D. L. Roy, five from Md. Iqbal, one each from Bankim Chandra, Satyendranath Dutta and Tagore cannot be called in any sense representative.

D. B.

SANSKRIT

SUBODHA SAMSKRITAM OR EASY STEPS TO SANSKRIT (FIRST PART) By B. L. Kamat, 118, Robeson Road, Karachi, Sind

"This little book" which is meant only for children aims at making the study of Sanskrit easier than what it has been hitherto. The special feature which deserves to be commended of this primer is that the lessons from the beginning form a continued story—the story of the *Ramayana*. The plan, however, does not appear to serve the purpose of the author. Sanskrit Readers written on the line adopted for those of continental languages are still badly wanted in our country.

VIJAY KUMARA BHATTACHARYA

MARATHI

"THE ART AND PROFESSION OF WRITING," (1926), by Mr. V. G. Apte, Editor, the "Anand", Poona City Soc. 14 x 7 1/2, pp. 336, Price Rs. 2-8

Readers of Marathi literature are familiar with the name of Mr. Vasudeo Govind Apte for over two decades as a writer of chaste and classical Marathi—although it is a household word with young children for his delightful, simple and instructive books. His new publication "The Art and Profession of Writing" is a welcome addition to the Marathi literature as a whole, being the first authoritative and exhaustive treatise of its kind. It has supplied a long-felt want in that it is mainly intended for the benefit of young persons with literary ambitions, whether they take to writing as a hobby or as a profession.

The twenty-one chapters in the book may be roughly classified into three main groups (1) Preparation for writing (2) Branches of literature and points to be borne in mind when writing, and (3) relationship between a writer and a printer or publisher, and other cognate matters. In the chapters falling under group (1) the author warns the young aspirant against the dangers of going about his craft without first equipping himself for it by close observation, deep study, a knowledge of grammar, an acquaintance with the literature and a studied choice of appropriate words and phrases. The introductory portion of group (2) contains a brief review of the genesis and development of literature in both of its branches—poetry and prose. After giving an idea of the different sub-heads into which poetry is classified, the author has offered some practical hints on composition which may be studied with advantage both by those who are torn under rhyming planets and by those who are not. Coming to 'prose writing' the author has with great credit dealt thoroughly with all kinds of writings—novels, short stories, dramas

(including stories for cinemas), witty and humorous writings, history, biography, autobiography, essays, writings on technical and scientific subjects, translations, and other kinds of miscellaneous writings such as reviews, travels, and books specially meant for ladies and young children. People have ordinarily greater charm for fiction, and the number of fiction-writers is comparatively large. The author has therefore rightly devoted more space to 'novel and drama writing,' and has made many valuable suggestions. The portion regarding other kinds of prose-writing also deserves to be read and digested by young and ambitious litterateurs. The practical utility of the book has been enhanced by the fact that the author has, wherever necessary, presented a comparative view of the literary art and Profession as understood and followed in western countries and in India.

The chapters falling under group (3) relate generally to a writing after it is ready for the Press or the Publisher. These chapters also contain useful information regarding the sizes of paper, the sizes of types, proof-reading, printing, binding and publishing. The author has done well including some information regarding the copy-right act. We are tempted to suggest that an appendix giving in brief information about the Press Law and the laws of Sedition and defamation in so far as they concern the profession of writing would be a useful addition.

Mr. Apte deserves our congratulations for the thorough manner in which he has dealt with the subject within the compass of 336 pages. The book promises to be a useful companion and guide to all young writers. It richly deserves to be introduced as a text book in the Vernacular Training Colleges and in the higher standards of secondary schools.

The get-up of the book leaves nothing to be desired, and merits a word of praise

"K"

URDU

FRAHANG-E-ISTILAHAT-I-ILMLA, compiled and published by Anjuman Taraqqi Urdu, Aurangabad Deccan pp 12+312+15 (Cloth bound, price Rs 6/-)

The need for a compendious Urdu dictionary of scientific terms and technicalities has been felt for very long and a book supplying this great want has been over-due. The book under review, the very first of its kind, supplies this desideratum and is published by the premier Urdu literary association, the Anjuman Taraqqi Urdu of Aurangabad Deccan. The book is divided into the following twenty sections—astronomy, botany, economics, British administration in India, constitutional history, history of Greece, logic, algebra, geometrical conics, solid geometry, trigonometry, differential equations, statics, metaphysics, psychology, physics, political science, archaeology, and biology. It is difficult to comprehend the basis of this curious division. A saner and more logical arrangement could easily have been made. Each section gives Urdu equivalents and synonyms of English words and phrases pertaining to that particular section. All sections do not seem to have received equal care and attention, some being only scrappy and sketchy, while others are fairly copious

and comprehensive. The most fortunate sections are those of Astronomy and Botany comprising between them not less than two-fifth of the entire book, and astronomical terms being mostly supplemented with long explanatory notes. The publisher certainly deserve credit and congratulation on what they have been able to produce, but the book is in need of considerable improvement,—and that in more directions than one,—and the publishers would be well-advised in having the book thoroughly revised and re-cast before they think of bringing out its second edition. The get-up is neat and commendable, but the mis-prints are horrible, many of which remain uncorrected inspite of a very formidable and tiresome corrigenda of full fourteen pages.

ROSH-E-TAQID, by Syed Ghulam Mohiuddin Qadri Zoon BA Publisher Zoon, Nizamul Munzil, King Kothu Road, Hyderabad. Dn Pp 285. Price Re. 1 as 12

This neat little book is an essay on the principles of literary criticism by a promising post-graduate student of the Osmania University of Hyderabad. Part I deals with the principles and methods of criticism in abstract, while part II traces its development in ancient Greece, in Rome, and in modern Europe. The author is evidently a serious and discerning student of Urdu literature,—page after page of his treatise reveal his close familiarity with, and deep insight into the work of each and every Urdu writer, past and present, who is at all worth knowing. His study of the comparative merits of such masters as Sir Syed, Azad, Hali, and Shibli is very nearly perfect. The only criticism that an old and "chronic" critic like the present writer can offer is that the youthful author has dwelt rather too much on the merits of the English and other foreign writers and critics. They had no right to occupy such a prominent and dominating position in a work of Urdu literature, written by a Urdu scholar designed for the benefit of Urdu students. Barring this one serious drawback, the essay is on the whole a very useful and much needed addition to the treasure-chest of Urdu literature, instructive and illuminating, and refreshing from start to finish.

NISHAT ROSE, Collected poems of Asghar. Printed by Maarif Press, Azadpura (C.P.). Pp 69+44, written with a portrait of the author No mention of price and publisher

Among that small band of the living Urdu poets who are real poets not poetasters, or versifiers, the name of Asghar Husain Asghar of Gonda stands out prominent. Modest and unassuming, he is not very widely known, yet to those who have the privilege of acquaintance with him or his muse his name is one to conjure with. This small collection of his poems might have the effect of introducing him to a larger circle of readers. The book opens with a 'preface', and is followed by a prolix 'introduction' by a admirer, and this in its turn is followed by a long yet lucid and interesting discourse on Asghar's poetry by Maulvi Iqbal Suhail Azamgarh—himself a literary artist of no mean order. Then begins the book itself, which covers no more than 44 pages. Yet in this small compass are to be found some real gems of poetical genius. The book would amply repay perusal to anybody who cares to go through it. The sweet diction, the lofty sentiments, and the arresting imagery do not allow the reader to notice the entire absence

of arrangement among the various pieces. Asghar is undoubtedly an acquisition to Urdu poetry, and his transparent merits are sure to get recognition in due course. The get-up is excellent.

A. M.

TARIKHUL UMMAT By Hafiz Maulana Mohamed Islam of Firropur, Professor of Islamic History at the National Muslim University of Aligarh

The work is being published by the University in volumes, of which the last up to date is the fifth. The whole work is expected to be completed in eight volumes. The price of each volume is Rs 2

In this work the author has attempted to give the history of the Musalmans on a more comprehensive scale than it had yet appeared in Urdu. But the more important feature of the work lies in the critical method of its treatment, and for that reason the work now occupies a unique position in the whole of Urdu historical literature. The author has been successful in his attempt.

In the last volume the learned author treats of the last Khalifa of the Abbasside dynasty, beginning with the reign of Mutawakkal to the final sweeping devastation of the Empire by Halakul Khan. The author summarises in the end, under the heading of 'a general view', the principal causes of the decline of the Abbasside Khilafat and its tragic fall, the main cause assigned by him being the anti-national character of the Khilafat itself.

M. ZIAUDDIN.

GUJARATI

KATHIAWADI SONGS By Jhaner Chand Meghani, printed at the Saurashtra Printing Press, Rajpur. Paper cover. Pp. 178 Price Re. 1-0-0 (1926)

This collection of songs indigenous to Kathiawad, the second of its kind, if anything excels the first. The songs are very popular and presented with the background of the illuminating introduction written by Mr Meghani, the very soul of Kathiawad's domesticity, peeps out from them. Their charm is manifested in almost every line, and we cannot give enough praise to the talented compiler for the service he is doing to his province and our literature by such publications.

HINDNA-KARANTU-ADHUNIK ARTHA-SHASTRA By M. P. Gandhi, M. A. (Benares) printed at the Bharat Vijay Printing Press, Baroda. Paper cover. Pp. 160, Price Re. 1-0-0 (1925).

At best books on Economics, taxation and other similar subjects are not many in the Gujarati literature, and good books are few. The present book is a prize essay, in the name of Sir Manubhai Nandshankar, the Diwan of Baroda, and it treats of the present economic state of Indian taxation from an understandable point of view, understandable because even laymen would be able to follow its interesting exposition without any difficulty. The rising young writer has a thorough grasp of his subject, with a promise of better work in future.

MANU AND BHANU, PARTS 1 & 11 By Manibhai Narayani Desai, printed at the Natwar Printing

Press, Bombay. Pp. 561, 372. Cloth bound. Price Rs 2-0-0 each (1925)

This novel depicts in a very interesting way the pitfalls in the life of a wealthy young man. It also gives all the good points of a young Hindu wife, although educated on modern lines; it paints the picture of the normal domestic life of a Hindu family in Bombay. These features are enough to make it popular.

MASTVILAS By Bavaji Tulsidasaji and Vadlal Motul Shah, Printed at the Diamond Jubilee Printing Press, Ahmedabad. Pp. 415. Cloth bound. Price Rs 3-0-0, 1925

"To thine own self be true": The whole of the contents of this large volume rings changes on this text. It is a mixture of Tatwagnan and practical advice, illustrated with stories, told in the vigorous and effective style which Mr Vadlal adopts both in writing and speaking. He is able to communicate his enthusiasm to his readers, and the book will repay perusal and inspire thought.

THE TRIUMPH OF VALMIKI by Nilkanth Ishwardas Mashruvala, printed at the Navivan Printing Press, Ahmedabad, Paper Cover. Pp. 96. Price Re 0-5-0. (1925)

The charming allegory woven round the three Puranic celebrities Vashishta, Vishwamitra and Valmiki, by Mahamopadhyay Harprasad Shastri in his book in Bengali is a masterpiece; it produces the three lines of precept and practice peculiar to each one of them and for which each of them stood out. Valmiki's propaganda triumphed: it set no store by physical force or mental vigour, for harmony in world forces; soul force, purity of heart could alone bring peace to one's mind and happiness into the world. This book is a translation from a Marathi version of the Bengali work, but for all practical purposes it takes the place of an original book and is very impressive.

गर्हागीता गरवा, By N.M. Damani and V.V. Padhear, printed at the Diamond Jubilee Printing Press, Ahmedabad. Pp. 80. Paper cover: Price Re 0-5-0 (1925).

The Garha or songs collected here, although said to be extremely local, i.e. sung in a place called Chorwad (in Kathiawad), bear all the common traits of those which are heard in other parts of the province in praise of the Mataji (goddess) during the first nine nights of Ashwin. These popular songs embody an account of folklore, and never lack interest.

सति सदासचरने सुकन्यागो कोटी By Mrs. Vimala Gauri Maganlal Pandya, printed at the Manek Printing Press, Girgaon, Bombay Paper cover. Pp. 68, 69. Price Re 1-0-0 (1925)

These two stories are written, specially for women to impress upon them the ideals of chastity and purity of married life. The authoress has done her task well, specially as the subjects lend themselves to a good treatment.

TRI RATNA GITA AND SARVA PUJAN VIDHI, by Mrs. Lahta Gauri Shamrao. Second edition, printed at the Jnanodaya Printing Press, Broach. Paper cover. Pp. 288. Price Re. 1-8-0 (1925).

The Bhagvat Gita, the Vishnu Sahasra Nam and the Anusmriti, are the three gems collected by the writer from the Mahabharat and offered to her readers. The Gayatri Stotra and other prayers form a supplement to the three gems

PRASANNA KATHA KUNI by *Prasanna Vadan Chhabilaram Dikshit* printed at the *Deshi Mitra Press*, *Surat* paper cover Pp 70 Price Rs 0-8-0 (1925)

Two short stories of *Sriput Pradhat Kumar Mukherji* *Purnanban* and *Pragun Ponthe* are translated in this small book. The stories are worth reading specially as they illustrate the every day affairs in the life of a present day Indian

BHAKTA CHARITRA Part I by *Munshi Hardikshan Mehta*, printed at and published by the Society for encouragement of cheap literature at their own Press, *Mumababad* Cloth bound Pp. 156 Price Rs 1-8-0 (1925)

Twenty nine lives of some of the best saints of India, translated from the Bhakter Jay of Atul Krishna Goswami furnish a sample of what the remaining parts would contain. Tulsidas, Randa and the tailor saint of Delhi, Parmeshthi, are some of the saints whose biographies are given here. The reading is both enlightening and chastening

झाँझनी बाण, Vol I Parts 1 to 1 by *Bhikshu Akhandanand*, printed & published as above, cloth bound Pp 211 Price Rs 1-0-0 (1925)

The verses of Chhotam are popular in Gujarat, and a collection such as is published by Swami would greatly help those who are in want of such religious reading

HEAVEN'S LIGHT, (स्वर्ग की प्रकाश) by the late *Anantlal Sundarip Padhuo*, printed and published as above Cloth bound pp 318 Price Rs. 1-2-0 (1925)

The different ways in which Heaven Happiness—can be attained are set out here in the late Mr

Padhiar's attractive style. The ways are the way of the truthful, trusting devotee of God, and with the writer as the Guide in those ways, the seeker after happiness is sure to get it.

THE IDEAL BOOK OF EXEMPLARY TALES: by *Parur Shripasad Dalpatram* printed and published as above cloth bound Pp 336. Price Rs 0-11-0 (1925)

Instances of truthfulness, simplicity and other human virtues, culled from all literatures of the world figure in this collection. Exemplary traits in the character of Julius Caesar, Khalif Umar, George Washington, Guru Gobind Singh, and numerous other celebrities, are to be found here. It is a representative and useful collection

Yogatattva By *Narmadashankar Baboshankar Pandya*, Printed and published as above Cloth bound Pp 381 Price Rs. 1-0-0 (1925)

An American Scientist, William Walker Atkinson has under the nom-de-plume of Yogi Ramacharak published several works on Yoga. Mr Pandya though he has based his book on those works has been at great pains to expose the many incorrect ideas and statements of the foreign writer, who though very intimate with the system as prevailing in India, still lacks the intimacy which a native of the country possesses. Those interested in the science would find much to engage them here

THE HISTORY OF RAJASTHAN Vols I & II by the late *Ratnasinh Dipsinh Parmar* Printed and published as above, Cloth bound, Pp 776 (each) Price Rs 5-0-0 each (1925) Second Edition.

These two substantial volumes with admirable illustrations, being a translation of Col. Todd's *Annals of Rajputana*, priced rupees five each are cheap enough. The translation contains footnotes comprising observations in the light of recent research. That a second edition has been called for in eleven years is significant of the popularity the work has secured

K. M. L.

REPORT ON VISVABHARATI

By PROFESSOR CARLO FORMICHI

Of the University of Rome

WHEN Rabindranath Tagore was staying last year in Venice he spoke to the people there about his institution of Visvabharati, and he had occasion to say that it had as its aim quite the reverse of the sad dictum, "East is East and West is West and never the twain shall meet." Visvabharati's motto is, rather, "East is East

and West is West, and therefore, they MUST meet." Since last November I have been in Santiniketan, living the life of the people of the Asram, and experiencing that, indeed, no national prejudice, no religious intolerance, no barriers of customs ever make a European feel far from home. European visitors are constantly flocking

to the place; and I think there is not in the whole world a more truly international resort for men of good will and common ideals to meet for an exchange of mutual spiritual help and sympathy. One sensibly feels the spirit of the Poet hovering over the place, of the Poet of love and of peace as he has been styled by my countrymen. I hardly think there can be anything more valuable on this earth, than love and peace!

But love and peace go hand in hand with freedom. Unconsciously the Poet, (true poets are always utterly unconscious of their creations,) has granted freedom on the largest possible scale to everybody who surrounds him, from the old teachers who co-operate with him in the tuition of the students, down to the youngest boy living in the Asram.

From the age, let us say, of eleven years onwards to twenty-five, a boy or a girl has the opportunity of receiving an education in Santiniketan in whatever branch of learning he or she chooses, whether in science or in literature, in religion, in arts, in manual crafts. The teachers are, for the most part Indians, but some of them have completed their education in Europe, and there is no want of non-Indian teachers as well. I have to mention only the names of Professor Collins, Benoit, Lam and Bache, who respectively impart lessons in Dravidian languages, in French and German, in Chinese and in music. Professor Tucci and myself, as visiting professors, are teaching, respectively Italian literature, Chinese, Tibetan, and Sanskrit to advanced students. The blending of European and Hindu culture is, thus, a living reality which finds also the most efficient support in a splendid and rich library fit both for Oriental and Western studies. The lessons are held partly in Bengali, partly in English, mostly in the open air, under the trees. Constriction, red-tapism, routine, pedantry are unknown at Santiniketan. What the Poet most wants is that the soul of the disciple may find its free and largest scope for expansion. Rabindranath Tagore as a boy suffered the keenest tortures from compulsory teaching. He says that most of what he has learned, he learned by himself, not from others. Out of love therefore, he tries to rescue boys and girls in Santiniketan from the tyranny of constriction and pedantry. Our great Italian poet, Leopardi, says that generally men who have worked themselves up to a high position through very hard

struggles and sacrifices, do not allow others to reach the same position before they have gone through quite the same hardships. In some monkish communities, dignities are bestowed on those monks who endure the hardest fastings and penances. As soon as a monk attains to that dignity, he becomes inflexible and almost cruel in refusing to spare only a single one of those terrible austerities he has bravely borne, to any other monk who shows a desire to raise himself up to the same dignity. It is human to object to seeing others obtain easily what one has got only after many an effort, many a rebuke, and many a pang.

But there are also men who in their own suffering find the principal reason for rescuing other men from the same suffering. To this very limited number of men Rabindranath Tagore belongs. Compulsory tuition was a torture to him, therefore, free tuition is what he eagerly offers to Indian youths.

Tagore's supreme wish is that while the lesson is going on, the attention of the pupil should be kept alive owing to the interest the teacher must know how to rouse in him for the subject of the lesson. Dozing pupils are the doom of a teacher. There must be electricity in the atmosphere of a school. Some days ago the Poet unexpectedly went on an inspection to realize if the degree of electricity in the air of the primary schools, was just that which he finds necessary for the real profit of the class. He at once thought he perceived that a certain dullness and doziness was in the atmosphere, and perhaps he does not know that I know that he was quite in despair for two days owing to this fact. I can tell him now that on that day and at that hour the weather was so heavy and sultry in Santiniketan, that I myself was dozing! He can be quite confident, therefore, that as long as his presence is there at Santiniketan an inexhaustible source of intellectual and spiritual life will never be lacking for teachers and disciples to draw from. I am at Santiniketan for the scientific philological training of advanced students in Sanskrit. For my part I can assert that, so far as Sanskrit studies are concerned, there is every likelihood that Santiniketan should become one of the greatest centres of research. Every opportunity is there, in fact, for gaining the object, namely students thoroughly masters of Sanskrit, as Mr. Ghose, Mr. Gokhale, Mr. Patil, Dr. Raja and others; Indian teachers

who are among the most learned and cleverest pandits of modern India, as Vidhusekhara Shastri Kshitimohan Sen, Hari Charan Bandyopadhyaya, etc. visiting scholars from Europe as famous as Sylvain Levi of Paris, Maurice Winternitz of Prague, Sten Konow of Christiania; a wonderful library rich also of precious manuscripts, the simplest and most hygienical possible life, the disposal of as much time as one wants in the fittest spot for meditation owing to the perfect silence one can enjoy and to the suggestiveness of the unlimited plain.

The art-section under the inspiring direction of the great Indian painter, Nandalal Bose, is determining quite a revival of Indian painting, while the school of agriculture in Surul at a mile's distance from Santiniketan is showing India the path of substituting fertility, abundance, wealth and brightness for barrenness, scarcity, poverty and gloom.

That only one man and this man a Poet should have conceived and carried out such a complicated and perfect educational plan is almost a miracle, one of those miracles that only love, a great love can accomplish, the love of Rabindranath Tagore for India. And you, Indians, are right in loving and honouring your great hero with the stupendous enthusiasm that I have witnessed and am witnessing here in Dacca, you are right in honouring him who gives you the loftiest joys through his poetical genius and the highest example through his life made holy by a truly heroic exertion. I know now what the life of Rabindranath Tagore is—he is a saint whose austerities do not consist in fastings and in penances but in work that knows no boundary, work in the best modern sense of the word, work by which humanity may profit from the spiritual, the intellectual, the scientific, the moral, the practical standpoint. You well remember what Carlyle says as long as nations have got a voice through a hero let this be a poet or a prophet, they may rely on a bright future. He, then pointing to Italy and Russia, foresaw for the former what by no means he could anticipate for the latter, only because Italy had got her voice. Dante; and Russia was mute, had no voice, namely no hero. India has got her voice through Rabindranath Tagore. Though I am citing to you facts from the objective point of view of an impartial observer, come from a far away shore, I am bound to add that no description, no faithful report can ever

make up for a direct observation of Santiniketan Asram. There is something that place which must be felt and which cannot be reported.

How shall I, for instance, be able to speak about its wonderful suggestive religious influence? It was chosen as a resort for meditation by the Poet's father, the great Maharshi, and the very name Santiniketan announces that out of the turmoil of the world one gets peace (*Santi*) there, one feels nearer God.

Perhaps the most interesting and important side of the Visvabharati institution is the religious education. The Poet's notion is that religion cannot be taught; it must spring up from the depth of our souls spontaneously; it must be considered as natural in the life of our spirit as respiration is in the life of our body. All that we can do is to foster and favour religious tendencies by setting man in the fittest conditions for the awakening of his aspiration to God. The communion with Nature, solitude and silence are the best allies of religious contemplation. The sight of a glorious sunrise or of a gorgeous sunset speaks for God better than any sermon. Yet, every Wednesday, in the morning, all inmates of the Asram gather in a *mandir* located in the grove. The girls assemble in a group, the boys in another, and alternately they sing a song of the Poet who listens to his own poem and to his own music as to something new to him. The song is chosen by the girls or the boys, and its first verse has to give the Poet the hints for the sermon he extemporarily delivers. On verse, for instance, says "when thou gavest thy banner to man, thou gavest him also the power of bearing its burden." Another verse says "Thou bringest us to the border of death only in order to lift us to thee." The Poet speaks nearly half-an-hour quite in rapture and as inspired, while the birds outside sing sometimes so loud that his voice becomes hardly audible. The loftiest thoughts, the broadest religious conceptions give to the sermon of the Poet a power of fascination that seems destined to let men professing the most different creeds agree on the substantial principles of morals and religion. I give an example. The Poet maintains that emancipation from pain is given by love, namely, by forgetting our own self, which is the only real burden that weighs on us and impairs our strength of endurance. Whenever we have some great truth, some

great cause to serve, it becomes easy for us to go through all kinds of suffering. In our ordinary daily life we have often noticed how easy it is for a lover to accept the burden of pain for the sake of his beloved, how easy it is for a mother to undergo sacrifice for the sake of her children. The only reason is that in all these cases there is love completely devoted, that is to say, there is separation, emancipation from our own self, the great burden, the destroyer of our spiritual and moral forces. Love accomplishes the miracle of rescuing us from pain in undergoing pain.

Will not a Christian, a Mahomedan, a Parsi, or a Buddhist, readily admit this truth that is one of the bases of religious life? It

is hardly possible, being a man, to disagree with the Poet's religious tenets that are those of humanity freed from the bonds of one-sidedness and superstition.

Tagore's task in life is essentially that of unification, of sowing seeds of harmony and peace among men, of brightening the horizon of our life through the charm of poetry, of truth and of goodness.

To understand what Visvabharati, his institution, is, one has first to understand the man, and the man, you all know, is a Poet of world-wide reputation and the greatest and best living specimen of the blending of all Western and Eastern qualifications and virtues.

Dacca, February 9th, 1926

THE EVOLUTION OF PROVINCIAL FINANCE IN BRITISH INDIA

By DR PRAPHULLACHANDRA BASU

Indore.

The subject of finance in India has not so far been as scientifically studied as its importance deserves. Hence I may be permitted to draw special attention to a book which has just been published. It is "The Evolution of Provincial Finance in British India" by Dr. B. R. Ambedkar, D. Sc. (Lond.), Barrister-at-Law, Bombay.

The scientific study of finance requires a preliminary division of the subject into central, provincial, and local. Its technical character demands this separation for better study. Far too many attempts have led to confusion because of the absence of this separation. There is an advantage in studying finance as a whole, viz., to grasp the fundamental principles as applying to all branches. But no scientific and detailed study,—far less a historical study,—is possible without this separation. Dr. Ambedkar successfully attempts such a study, and what promises to be the first of a series of three companion volumes is before the public now.

The Imperial system of Government in

India dates from 1833. The previous multiplicity of systems were sought to be replaced by a uniform one. Thus the Imperial system of finance also came into being. But it proved unequal to the strain as can be seen from the fact that during a period of twenty five years, 1834-58, seventeen years showed deficits, the net deficit, deducting the surpluses of eight years, being about £23 millions. The main reason was the unsound fiscal policy, attempting to raise more revenue without having any increase in the wealth of the country. Also the mode of raising it was bad inasmuch as it took little account of the incidence. For example, under the influence of the Physiocratic doctrine of *produit net* the land tax was the heaviest impost. The customs taxes were also heavy and unequal. There were internal and external customs, the former hindering the movement of goods within the country and seriously affecting the market of Indian products of the localities with natural advantages; and the latter, both import and export, discriminating against Indian

products in favour of British goods. This system blockaded trade and smothered industry. Incidentally it ruined the finances by reducing the income. Thus from 1792-3 to 1855-6, a period of sixty-four years the percentage of customs revenue to the total revenue was only 6.2. During the same period the land revenue formed 74 per cent, of the total, while the salt revenue was as high as 11 per cent. But the expenditure might recoup to the people by fostering and helping economic and social progress. This, however, was not to be found. Of the total expenditure military and quasi-military expenditure formed about 75 per cent, while that on buildings, etc., was about 15 per cent, and that on education was practically nil. Thus the bulk of the money raised by injurious taxes was spent in unproductive ways. At the same time there could not be any economy in expenditure. In fact, there was incentive for extravagance. The Central Government was responsible for revenue and gave dotes to the Provincial Governments. The budgets of the latter were thus framed as extravagantly as possible since they were not responsible for raising revenue but for spending it. To crown all the Central Government had no distribution of portfolios, and therefore, no Chancellor of the Exchequer; there was no centralized system of audit and account, and no appropriation budget.

When conditions were in such a pass and when the finances were further muddled by the cost of the Mutiny, attention was drawn to the supreme defect of the system, viz., the irresponsible extravagance it engendered in the Provincial Governments. The reformers were, however, not agreed as to the remedy. There arose two divided schools, the supporters of the system of Imperialism, that is, of centralized finance, and those of the system of Federalism, that is, of decentralized finance. The Federalists claimed that (1) the separation of the revenues and services would lead the ways and means of the Central as well as of the Provincial Governments to be clearly defined, so that each one of them would be responsible for administering its affairs within the funds allotted to it; (2) Such a system would ultimately lead to progress as the sources of revenue could be greatly increased if properly developed in each local area; and (3) it will be more equitable as the existing system resulted in an iniquitous treatment of the different Provinces. But the Imperia-

lists won the day claiming that (1) in practice it would be impossible to separate the sources of revenue between the Central and Provincial as also between the different Provincial Governments; and that (2) from the point of expediency federalism would be bad because (i) the efficiency, that is, the survival value of the Imperial system had been proved during the Mutiny when the full resources of the whole of India were concentrated in the Central Government, (ii) the credit of a Government depended on its income, and as the federal system would divide the revenue the credit or the borrowing power of India would diminish, and (iii) the prestige of the Central Government would diminish if it were made a pensioner of the Provincial Governments, and prestige was the keynote of the code for Asian governance.

The net result of the controversy was a compromise by which there was Imperial finance without Imperial management, based purely on convention. Some of the most radical defects were removed. Thus many oppressive taxes were given up, internal customs duties were abolished, an element of protection was introduced in the import tariff, many export duties were dropped, efforts were made to improve the cultivation and pressing of cotton, tea, and other staples, which commanded a good market in Europe and elsewhere. The administrative machinery was changed by assigning to each member of the Viceroy's Council the charge of a separate department of administration. Thus was created for India a Chancellor of the Exchequer, James Wilson being the first incumbent. But the deficits continued to be heavy. Wilson said in 1860 that "we have a deficit in the last three years of £30,547, 188, we have a prospective deficit in the the next year of £6,500,000, we have already added to our debt £38,410,755." Therefore he had to increase stamp duties, external customs, and impose a new tax, that on income. But these were of no avail because the demands for the amenities of civilized life increased fast and compelled the Government to provide them in the form of roads, railways, posts and telegraphs, buildings, and good pay for Government officials. The last was really a scandal. According to Sir John Strachey "the great majority received from £12 to £24 a year, sums less than those earned in many parts of India by common bricklayers and carpenters". At the same

time economy in expenditure became difficult without providing the Provincial Governments with a separate purse and throwing on them the responsibility of framing their budgets within their means. Thus the compromise was attained by which the rigid constitutional separation of Imperial and Provincial sources of revenue was avoided, and the same apparently obtained by convention. The scheme of decentralization, thus proposed by Wilson, was elaborated by Laing, and finally very much extended by Massey. But Massey's scheme was too large for the Imperialists to swallow, among whom were Lord Lawrence, the Viceroy, and Lord Napier, the Governor of Madras. So, it failed. In the meantime the budget system so broke down that in the years 1866-70 the actual deficits were £ 7 millions whereas the budget provided for a surplus of about £4 millions — a difference of £ 11 millions between the budgets and the actuals. Lord Mayo was so convinced of the rottenness of the system that he courageously inaugurated the compromise set forth above but turned down by the Imperialists.

The development of Provincial finance, thus begun, can be traced through three clearly marked periods. They are (1) budget by assignments, 1871-77 ; (2) budget by assigned revenues, 1877-82 ; and (3) budget by shared revenues, 1882-1921. The period since 1921 is so entirely different that it ought to be dealt with separately.

Taking the first of the above periods, viz, that of budget by assignments, 1871-77. The genesis of the change was a small thing. The Central Government found it difficult to manage the construction of roads, and it mooted to hand over the task to the Provincial Governments. But the plan was extended while the discussion was going on. The method of throwing the burden on the Provincial Governments consisted in making over to them the charges of certain departments of the administration more or less local in character with a net grant. Thus in 1871-72 the charges for the following Imperial services were handed over ; jails, registration, police, education, medical services, printing, roads, civil buildings, miscellaneous. The revenues from these were also handed over. Also permanent assignments were made to the Provincial Governments amounting to more than £4.6 millions. Besides, a special donation was also made by the Central Government. The principle adopted was that such

matters which the Central Government could not effectively control should be transferred. The methods adopted were (1) to hand over the revenue from the assigned charges ; this was proper on the principle that tax administration and tax appropriation should go together, and (2) to give a lump assignment from the Imperial treasury. The transfer of Imperial sources of revenue was not considered proper inasmuch as the Government of India, by its constitutional position, remained the sole authority to manage and appropriate the revenues of India. The assignments for 1871-72 were declared fixed and recurring ; recurring they were but fixed they were not. For the Imperial assignments were very properly reduced or augmented as necessity dictated. They were always made for specific purposes, from which the Provincial Governments could not deviate.

To judge whether the scheme was a success or not we should know how the parties concerned were affected. Three parties were concerned, viz, the Government of India, the Provincial Governments, and the people of the Provinces. Provision for ascertaining the opinion of the last party was declared to be illegal under the Indian Councils Act of 1861 (Section 38) ; otherwise proposals were officially made in 1871 — and the fight carried on in their behalf by the Government of Madras — which would have given the people a voice in framing the budget which they obtained only in 1921. The Provincial Governments were greatly benefited by the system as can be seen from the surpluses in their budgets during 1871-77 the period during which it operated. The gain to the Central Government was obvious. There was, however, one unwelcome feature, viz, the large increase in the rates and cesses for purposes of local improvement ; the receipts from new resources of income and cesses having been enhanced from £492,000 in 1870-71 to £981,000 in 1875-76. Also the incidence of the levy was iniquitous in its distribution.

But the results so far exceeded the hopes expressed by the Finance Member in 1870, and Provincial management of certain departments was so proved to be more economical than Imperial management that the Government of India proceeded to incorporate additional services into the Provincial budgets. At the same time, it was realized that the system of budget by assignment had the great defect of rigidity. The Provincial

Governments disliked it because the assignments remained fixed while the outlay on the services in their charge continued to expand. On the other hand, it was found that the Provincial Governments managed the services more economically than the Central Government and also realized greater revenues at old rates. Thus for the double purpose of augmenting the revenues and of introducing elasticity in Provincial finance, the Central Government substituted in 1877 assigned revenues for assignments as a mode of supply to the Provinces. This plan had been mooted but turned down in 1870. But experience since then justified it now.

Thus was inaugurated the second period in the development of Provincial finance, viz., budget by assigned revenues, 1877-82. Assignment was still retained but only as an adjusting measure. Thus the total resources of the Provincial Governments consisted of (1) the receipts from the incorporated services (2) the yield of the revenues assigned, and (3) the adjusting assignment. A normal rate of growth was calculated from the past yield from the delegated sources, and in order to avoid the unpleasant controversy which was going on between the Central and Provincial Governments in regard to "normal rate", the Central Government participated with the Provincial Governments in respect of all surplus and deficit beyond the calculated normal revenue in the proportion of half and half. This was highly complicated but very ingenious. For the fear of shouldering half of the deficit impelled the Provincial Governments to greater exertion and the hope of receiving half of the surplus stimulated them to develop their resources beyond the normal. The assigned revenues were different for different Provinces. The result of this scheme was very encouraging. During the period, 1877-82, when it was in operation, all the Provinces except Bombay had, on the whole, big surpluses. These were kept with the Central Government as Provincial balances which the latter rather unceremoniously appropriated in 1879-81 during the difficult period of the Afghan War. The justification, however, lay in the fact that the solvency of India was more sacred than the sanctity of the terms of Provincial finance, after all, a domestic affair. Later on the contributions were repaid.

Thus, the scheme of Provincial finance on the basis of assigned revenues was proved to be successful both from the standpoint of the

Central and Provincial Governments. But there was yet left the demoralizing effect of the supplementary assignments which were really doles from the Central Government. From the experience of Burma and Assam it was realized that elasticity in revenue was a vital condition for the success of Provincial finance. There elasticity had been attained by a third category of revenue item, viz., jointly Imperial and Provincial, besides the two existing categories in the other Provinces viz., (1) wholly Imperial and (2) wholly Provincial. With minor variations the scheme on the revenue side stood thus: (1) Wholly Imperial Land Revenue, Tributes, Customs, Salt, Opium, Marine, Interest, Railways, Irrigation and Navigation, Gain by Exchange (2) Wholly Provincial Rates: Post Office, Law and Justice, Police, Education, Medical, Stationery and Printing (3) Jointly Imperial and Provincial divided into half and half Forest, Excise, Assessed Taxes, Stamps, Registration, also the following divided into unequal proportions Pensions, Other Public Works, Miscellaneous. On the expenditure side the division was thus: (1) Wholly Imperial. Interest, Opium, Ecclesiastical, Political, Allowances and Assignments, Civil Furlough and Absentee Allowances, Railways, Irrigation, Loss by Exchange (2) Wholly Provincial Provincial Rates, Customs, Post Office, Telegraph, Law and Justice, Medical. (3) Jointly Imperial and Provincial divided into half and half, Forest, Excise, Assessed Taxes, Stamps, Registration, also the following divided into unequal proportions. Refunds and Drawbacks, Land Revenue, Salt, Administration, Minor Departments, Police, Marine Education, Stationery and Printing, Allowances and Assignments, Superannuations, Miscellaneous, Famine Relief, Other Public Works.

The settlements entered into with the Provincial Governments in 1882 differed from the previous settlements in the replacement of fixed assignments by shares as also in their duration. Now they were made for a term of five years. The annual settlements were advantageous to the Central Government inasmuch as it could profit by an early revision of the revenue side of the contract. On the other hand, it was a serious drawback for the Provincial Governments inasmuch as they could not adopt a definite financial policy covering a long period of time. This defect was partially removed by the quinquennial settlements. The revision went on

every five years, and its nature depended mainly upon the exigencies of the Imperial treasury. By 1904 it was felt that the quinquennial budget system was not sufficient. The Provincial Governments used to be very parsimonious in the first few years lest their expenditure should prove too much for their revenues, and extravagant in the last few years lest their expenditure should shrink below the standard and leave margins to be concealed by the Central Government on the revision of their settlements at the end of the quinquennium. To obviate these evils of alternate parsimony and extravagance the Government of India courageously undertook to do away with the principle of quinquennial revision and move towards permanent settlements. Between the year 1904 and 1907 the quasi-permanent settlements were completed with all the Provinces. They were quasi-permanent because they were liable to revision in future on one condition, viz, when it was found that the financial results were unfair to a Province or to others by comparison, or to the Government of India when it was confronted by an extraordinary calamity. The expectations were abundantly fulfilled, for in the years 1909-12 all the Provinces had huge net surpluses whereas most of them were having deficits during the previous five years.

The Royal Commission on Decentralization reported in 1909. Following the recommendations the Government of India proceeded in 1912 to make permanent the quasi-permanent settlements. These varied with the provinces. The fixed adjusting assignments were partially replaced by increased shares in the following heads of revenue and expenditure. Land Revenue, Excise, Assessed Taxes, Forest, Irrigation. The special grants in aid of specific services were continued on a retrogressive scale commensurate with the calculated increase in the revenues thus in 1912-13 they were Rs 82 crores, in 1918-19 Rs 35 crores. The result of the permanent settlements cannot be properly essayed, for the War intervened before the settlements really started their work, and on April 1, 1921, Provincial finance in British India entered on an entirely new phase. Yet during the seven years ending with 1918-19, only one year, 1914-15, was one of deficit for all the Provinces, and two others, 1913-14 and 1915-16, bad on the whole.

Before entering into the study of Provincial finance since 1921 it will be pro-

fitable to study its nature and scope before that period, that is, the period covered by the above study. It is evident that Provincial finance so far had no constitutional basis. It was based solely on convention. The Government of India brought it in by Rules in 1871 and could therefore revoke it. Also Provincial finance should be distinguished from Local finance which had its genesis in 1855. The Rules put the limitations on Provincial finance. These were many and various, promulgated from 1870 to 1912. They may be classified thus: (1) Rules relating to administrative powers, that is, (i) rules of inter-Provincial services, and (ii) rules pertaining to the staff; (2) Rules defining the financial powers, that is, (i) general rules, (ii) revenue rules, (iii) rules of expenditure, (iv) budgetary rules, and (v) rules of audit and account. These Rules most rigidly regulated the exercise of the powers vested in the Provincial Governments. This can be explained by the fact that Provincial finance had no constitutional basis and that the Government of India was ultimately responsible for the governance of India. Thus the criticism of many witnesses before the Indian Expenditure Commission and the Decentralization Commission, on the ground of too much restriction on Provincial finance, was constitutionally defective. For the transfer to the Provincial Governments was merely of the usufruct of certain revenues and not the revenues themselves. The revenues were to be deposited in the treasury maintained and administered by the Central Government. Thus the possession of the funds vested in the latter. No expenditure could be incurred except with the sanction of the Accountant-General who was an official of the Central Government. Thus in 1897 when a member of the Viceroy's Legislative Council raised the question of the rights of the Provinces, the Government of India correctly replied, "By Act of Parliament the revenues of India are the revenues of the Government of India and of that Government alone. Every action that the Local (Provincial) Governments take in respect of them must be justified by a specific order of the Government of India; the Local (Provincial) Governments derive their powers entirely from the Government of India, and apart from that Government they exercise no financial powers

whatsoever". Thus no legal responsibility attached to the Province for any of the services, not even for those provincialized.

It is, therefore, obvious that the view which affirmed that the relationship between the Central and Provincial Government in British India was one of separation of sources and contributions from the yield was an untenable view. In federal countries the State Governments are the law-giving polities, and the Federal Government their creature. But in India the Imperial system of government was introduced by the Act of 1833 and remained so till the Government of India Act of 1919 came into operation. Here the Provincial Governments were nothing but the regional aspects of the Central Government. The Rules limiting Provincial finance prove that the system of Imperial government remained intact after 1870 as it did before that date. Thus the only theory of financial relationship between the Central and Provincial Governments which accorded with facts and agreed with law was that of aggregation of the sources and distribution of the yield. The weak point of the old situation had been that the administrative and financial responsibility did not rest on one and the same authority as should have been the case. To avoid this defect Provincial finance was introduced under which the Government of India distributed some of its funds among the Provinces and the Provinces undertook to manage some of the services on behalf of the Government of India within the sums thus allocated.

Therefore, the criticism that the distribution as between the Provinces was not equitable is inapplicable, for the distribution was not according to the Provinces but according to the departments, and Provincial finance was really of the nature of Departmental finance. Notwithstanding Provincial finance, nothing was provincial in status. Provincial finance was only a matter of accounts, the operations on the debit and credit sides of which were subject to stringent control by the Government of India. Provincial finance brought on only two changes, viz., (1) before 1870 balances on all services lapsed to the Central Government, now the unspent balances on some, that is, the delegated, services accrued to next year. (2) Before 1870 budget estimates on all the services were sanctioned by the Central

Government. After 1870 the Provincial Governments could expend on delegated services as they wished subject to the limitations of fund and the Rules for provincial finance. Yet we must say that provincial finance was worth striving for and has conferred great benefits upon India by delegating to the Provinces what are really matters of detail and therefore can be economically handled by the Provincial Governments.

To relax the Rules the Provincial Governments carried on a vigorous fight with the Government of India. The controversy and the arguments are interesting study and can be gathered from the evidence of Mr. J. S. (now Lord) Meston before the Royal Commission on Decentralization and the various Resolutions of the Finance Department of the Government of India, especially No. 27 of 1912. Certainly the scope of provincial finance was unduly restricted by a too narrow and too legalistic interpretation of the constitutional obligations of the Government of India. But we need not go into those details, for the time had arrived when the financial arrangements could no longer be looked upon as a matter which concerned the Central and Provincial Governments only. There arose a third party the proposal to take whose counsel had been rejected in 1870, but which now insisted on having a voice in the disposition of the financial resources of the country. It was the Indian taxpayer who obtained a constitutional and legal status by the Government of India Act of 1919.

The necessity for a change in the form of Government arose out of the political discontent. As happens usually under government by an irresponsible executive, the Indian Executive sacrificed progress to order. The reasons were: (1) the Indian Executive was inimical to the aspirations of India because, being composed of aliens, it was out of sympathy with the living forces in Indian society as it was not charged with its wants, its pains, its cravings, and its desires. Hence measures of progress were seldom undertaken. (2) There were other things which it would do but dare not do for the fear of provoking resistance to authority, thus it would not abolish the caste system, prescribe monogamy, alter the law of succession, legalize intermarriage of castes, or tax the *zamindars* or the tea planters. But progress invol-

yes interference with the existing code of social life, and interference is likely to cause resistance. The irresponsible Executive in India was paralyzed between these two limitations, and much of what went to make life good was held up. That there was great advancement in material progress is undeniable. But that is greatly due to modernism and would have come under any government that functioned in the last one hundred years. Moreover, no people in the world can long remain contented with the benefits of peace and order. It is foolish to suppose that a people will indefinitely favour a bureaucracy because it has improved their roads, constructed canals on more scientific principles, effected their transportation by rail, carried their letters by *annapost*, flashed their messages by lighting, improved their currency, regulated their weights and measures, corrected their notions of geography, astronomy, and medicine, and stopped their internal quarrels. Any people, however patient will sooner or later demand a government that will be more than a mere engine of efficiency. The demand came sooner with English education and the example of British parliamentary government. In face of the insistent popular demand the alternative basis of government was force or consent. The first was tried and probably is even now being tried. In the result the Indian Executive besmeared the Indian Statute Book with a set of repressive laws hardly paralleled in any other part of the world. A few instances are Act XIV of 1908, use of Bengal Regulation III of 1818, Madras Regulation II of 1819, and Bombay Regulation XXV of 1827; Act XXIV of 1857; Act III of 1858, the Press Act of 1910 the Public Meetings Act of 1908, the unwarranted or indiscriminate use of sections 108 and 144 of the Criminal Procedure Code, and sections 120A and B, 124A, and 153A of the Indian Penal Code. The rigour of this regime of *letter de cachet* and the *Bastille* was untempered by any fear of responsibility on the part of the Executive, for provisions were made to bar all action in a civil court without the sanction of the Executive, e. g., the Police Acts, the Press Act, and Chapter IX, sections 128, 130, and 132 of the Code of Criminal Procedure, Act V of 1898.

Then came the halting reforms of 1909. Election was introduced but only by bodies recognized by the Executive. But the principle was wholly altered in 1919 by restricting the powers of the Central Government

over the Provincial Governments and delegating some powers of the latter to the care of the popular representatives. The former subordination of the Provincial Governments to the Central Government consisted of three aspects, viz legislative, administrative, and financial. Although the three aspects are interconnected and interdependent, we are directly concerned with the financial aspect. In finance the Central Government dominated fully in taxation, in expenditure, and in the power of borrowing. Thus the new reform first of all brought about the necessary division of functions, and some charges were, by the Constitution, made Provincial, the others remained Imperial. Of the former again, some were "reserved", others "transferred,"—expressions which must be familiar with the readers. The next task was to allocate the revenue resources between the Central and Provincial Governments, and between the "reserved" and "transferred" departments. The divided heads between the Central and Provincial Governments were abolished although that was not essential for the new system, but there was a good deal of popular sentiment against the division because of its past history. The deficit of the Central Government was made up by initial contributions with retrogressive effect and standard contributions fixed in percentage of the spending capacity of the Provinces.

In criticizing the present arrangement two questions arise (1) Can the new financial arrangement be said to be administratively workable? (2) Has it proved itself to be financially adequate? To deal with the first question. A good deal of criticism has been levelled, both by the Provincial Governments and by the popular leaders, against the contributions by the Provinces. This is clearly unreasonable. Contribution has taken the place of the divided heads of revenue, and it is only on the principle of "heads I win and tails you lose" that a demand for abolishing both can be sustained. Nor is it inequitable to apportion the contributions according to the expenditure of the Provinces, for that really shows the ability to pay, an important factor in all financial responsibility, at least more than a division on the basis of area or of population. Turning to the second question, viz. has the arrangement proved financially adequate, we find that the years 1921-2 and 1922-3 were deficit years in all the Provinces, in Bengal and the Central Provinces the deficits were wiped

out by other means. This was inspite of big additions to the revenues by new taxation.

In this connection it is worthy of note that the Central Government failed to organize and marshal the national resources for fiscal purposes, an important function of all governments. This was especially so in regard to two sources of revenue, (1) Land revenue. The Permanent Settlement cut off the roots of the growth of an important source of expanding revenue, upon which the Indian polity has depended from time immemorial. Thus the land-owners with enormously increased incomes enjoyed under the protection of the State, contribute nothing to the increasing financial burdens of the same State. The Government's policy here was dictated, as of old, by its preference of peace and order to progress. (2) Customs revenue. A big income could come from this source if the fear of Indian industries being protected against British industries did not frighten the Government of India and the Secretary of State. This elastic resource has not been properly tapped under the influence of extra-fiscal pressure which does not conduce to the betterment of Indian interests.

Thus a deficit in the budget of the Central Government is inevitable. Therefore, in the present circumstances contributions from the Provinces may be taken as a settled issue. In 1922-3 all the Provinces had huge deficits. If we inquire into the cause we find that the standard calculated revenue in the Provinces was, in each case except Madras, very much exceeded by the actual revenue both in 1921-22 and in 1922-23. On the expenditure side however, the standard expenditure was exceeded so much that, even after the excess in revenue, the Provinces showed huge deficits. The Secretary of State was, therefore, right when he said, as a result of the financial Conference of 1922, that the financial stability must be restored by retrenchment in the Provincial budgets. This was of course, resented both by the Provincial Governments and by the popular representatives.

The careful students would enquire into the reason of this increased expenditure. The reason lies in the absurd governmental system, called diarchy, in which there is one fund but really two governments responsible to two different bodies. The Montagu-Chelmsford report realized this absurdity. So when it recommended for the certifying power of the Governor, it also recommended for a

Proviso by which no taxation even in the interest of the "reserved" subjects should be imposed in any Province without the consent of the ministry (Para. 256). The Proviso provided the only condition of sound finance in diarchy, viz., joint fund for the different departments of the same government and taxation with the consent of the popular representatives. But the Extremist politicians decried the Proviso as a means of making the minister a scape-goat for the executive extravagance. The Moderates, now "Liberals", by their tactless jubilation, frightened the bureaucracy which now bore down all its influence to delete the Proviso. It succeeded as it has in so many other things. Yet the certifying power was retained. Thus the Governor can now (1) make allocation of funds between the "reserved" and the "transferred" departments, which is binding on both, (2) restore the "reserved" budget by certificate, and (3) permit the minister to raise new taxation or loans. Therefore, the "reserved" side has little interest in economy and little fear of the odium of new taxation. New taxation is always unpopular, it is more so in a poor country like India. And the odium falls on the minister. Also the popular criticism so long was that the Government was neglecting the measures of progress for the sake of the measures for order. The "reserved" subjects are mainly those pertaining to peace and order as the "transferred" subjects are mainly those pertaining to progress. So, the minister is anxious to translate his ideal into action. He has naturally hesitated to propose new taxation because (1) it is rightly unpopular, and (2) he was criticizing the old Government as too costly and does not want to act against what he had been proclaiming as feasible. An additional difficulty is his own position. He is responsible to the legislature, but holds office at the pleasure of the Governor. If deadlocks did not arise in such circumstances the situation would have been unnatural. Yet the deadlocks have been very few. The reasons are (1) The legislature is weak because of political dissensions, and (2) the ministry can afford to stand on one or two minor parties in the legislature and the official block. The latter however, is against the whole spirit of the new system.

Hybrid executives, divided responsibility, division of functions, reservation of powers, cannot make for a good system of government, and where there is no good system of govern-

ment, there can be little hope for a sound system of finance. The primary solution is to have an undivided government with collective responsibility. This can be achieved only when the whole of government derives its mandate from a common source. The obvious implication of this is provincial autonomy.

Although the question is political but as the solution affects sound finance, it may be permitted to raise here the question of that autonomy. Against its inauguration is argued that the power will go to the classes and not to the masses. In spite of the painful story of the harsh, cruel, and inhuman treatment which the classes in India have accorded to the masses, such a transfer is neither unprecedented nor unjust. In every country there have been

downtrodden communities suffering from social oppression and social injustice—to wit the Negroes in America and the Hitas in Japan,—and yet no country has had to be without political power on that account. But that has been so because of those countries having been in possession of military power. Military force and moral force are the two chief means to political freedom, and a country which cannot generate the former must cultivate the latter. Thus in India the political problem, upon the solution of which depends the fate of sound finance, is entirely a social problem, and a postponement of its solution virtually postpones the day when India can have a free government subject to the mandate of none but her own people.

ENGLAND AND THE ENGLISH AS VIEWED BY MILL

By ABDUL MAJID B. A.

J S Mill, the author of '*On Liberty*' and '*System of Logic*', has been one of the greatest minds that England has produced in the nineteenth century. It would surely be interesting as well as instructive to learn what that great mind thinks of his country and countrymen. Here are a few gems culled from his various writings—chiefly from his *Letters*. The italics are throughout mine.

Speaking of his early youth, Mill depicts English life and society in the glowing terms

"Having so little experience of English life, .. I was ignorant of the low moral tone of what, in England, is called society, the habit of, not indeed professing, but taking for granted in every mode of implication, that conduct is of course always directed towards low and petty objects, the absence of high feelings which manifests itself by sneering depreciation of all demonstrations of them I could not then know or estimate the difference between this manner of existence and that of a people like the French."

(*Autobiography*. Page 33, Watts & Co. 1909).

Speaking of Austin, the celebrated lawyer and professor of jurisprudence in the London University, Mill observes :—

"He had a strong distaste for the general manners of English life, the absence of enlarged thoughts and unselfish desires, the low objects

on which the faculties of all classes of the English are intent .. He thought that there was infinitely more care for the education and mental improvement of all ranks of the people under the Russian monarchy than under the English representative government. (*Ibid*. P. 101-102).

Here are Mill's own impressions in his mature age :—

"General society, as now carried on in England, is so insipid an affair, even to the persons who make it what it is, that it is kept up for any reason rather than the pleasure it affords. All serious discussions, on matters on which opinions differ, being considered ill-bred, and the national deficiency in liveliness and sociability having prevented the cultivation of the art of talking agreeably on trifles in which the French of the last century so much excelled, the sole attraction of what is called society to those who are not at the top of the tree is the hope of being aided to climb a little higher in it, while to those who are not already at the top, it is chiefly a compliance with custom, and with the supposed requirements of their station." (*Ibid* p. 130.)

Summing up the futility of his attempts at reforming the English ways and manners, this English philosopher is led to reflect —

"The English public, for example, are quite as raw and undiscerning on subjects of political economy since the nation has been converted to free trade, as they were before, and are still further from having acquired better habits of thought or feeling, or being in any way better fortified against

error on subjects of a more elevated character." (*Ibid.* p. 137)

Dr. Alexander Bain, illustrating Mill's "habitual way of speaking of England, the English people and English society", quotes the following none too flattering description of the English from *Mill's Claims of Labour* :—

"It is a just charge against the English nation considered generally, that they do not know how to be kind, courteous and considerate of the feelings of others. It is their character throughout Europe. They have much to learn from other nations in the arts not only of being serviceable and amiable with grace, but of being so at all." (Bain's *J.S. Mill*, p. 161. Longmans, Green & Co 1882)

Here is a delicious piece of the delineation of English character —

"The English of all classes are far less accessible to any large idea or generous sentiment than either Germans, French, or Italians. They are so ignorant, too, as to pride themselves on their defect as if it were a virtue, and give it complimentary names such as good sense, sobriety, practicalness, which are common names for selfishness, short-sightedness and contented acquiescence in commonplace". (*Letters of J. S. Mill* Vol. I Pp 172-173. Longmans, Green & Co. 1910)

In acknowledging Sir Charles Dilke's book, *Greater Britain*, Mill is tempted to remark —

"Not only do I most cordially sympathise with all you say about the insolence of the English, even in India, to the native population, which has now become not only a disgrace, but as you have so usefully shown, a danger to our dominion there..." (*Ibid.* Vol. II. P 187)

The following generalisation may not be very palatable to the generality of Mill's countrymen :—

"The English, looked at in one point of view are certainly a remarkably stupid people. Looked at in another point of view they are continually striking one as a people among whom talent, of a certain sort, abounds. This strikes me often, for example, in reading Indian official documents, or in going through a number of a review or a magazine. The fact seems to be that there is a great amount of ability shown in the application of doctrines, while mere stolidity presides over the choice of the doctrines themselves." (*Ibid.* Pp 357-358.)

Here is an excellent testimony to the greatness of the English intellect —

"The characteristic of Germany is knowledge without thought, of France, thought without knowledge, of England, neither knowledge, nor thought. The Germans, indeed attempt thought; but their thought is worse than none. The English, with rare exceptions, never attempt it." (*Ibid.* P. 377.)

Another unsolicited testimonial —

"It is remarkable how invariably the instinct of the English people is on the side of the status quo. In all foreign wars, revolutions, &c., English opi-

nion is sure to be against the side, be it King or people, that seems to be attempting to alter the existing order of things. All other nations admit that great political changes may be made, and governments forcibly subverted, in order to prove as well as in order to preserve. The English allow this in theory, but their feelings never allow with it in any particular case." (*Ibid.* p. 31)

Continuation of the above :—

"Perhaps the English are the fittest people rule over barbarous or semi-barbarous nations than those of the East, precisely because they are the stiffest, and most wedded to their own customs, all civilised people. All former conquerors of the East have been absorbed into it, and have adopted its ways, instead of communicating to it their own. So did the Portuguese; so would the French have done. Not so John Bull, if he has one foot in India, he will always have another on the English shore." (*Ibid.* P. 363) *

A testimonial by Carlyle, endorsed by Mill. —

"Carlyle says of the English that they act more rationally than most other people, but a more stupid than almost any other people in giving their reasons for it. The second of these propositions sets a very narrow limit to the first. To act well without being able to say why one acts is to act well only accidentally." (*Ibid.* p. 37)

Further,

"It is characteristic of the English that they have no trust in the attainment of an end by directly aiming at it. They think that if ends are ever attained, it is by some indirectness or accident, in some way in which nobody would have expected it." (*Ibid.* p. 384.)

And finally —

"Compromise and halting half-way are so native to the English mind, that if an English mathematician had to argue his case in an assembly of his countrymen, one would expect him to say that theory the three angles of a triangle may be equal to two right angles, but that in practice they are only equal to one". (*Ibid.* p. 378)

This brief study of the English character may fittingly be brought to close with a passage

* It would be mightily interesting, at this juncture, to know what a modern British psychologist has to say on this intense conservativeness of people. —

"In more primitive communities such as we find among savages, the general stock of ideas assimilated by each individual and all are equally its guardians. Thus the pressure of society upon the individual is incomparably more coercive.... Thus primitive societies are intensely conservative and remarkably unanimous in their modes of thought. Each thinks as the rest think, and dare not persevere in any innovation which does not find general acceptance." (Stout, *Manual of Psychology*, p. 334.)

What! Are then the super-civilised and super-cultured rulers of India intellectually no higher than primitive savages? That cannot be.

describing the extreme artificiality of English life in another of Mill's writings:—

"There is no place where humannature shows so little of its original lineaments [as England] *The English are farther from a state of nature than any other modern people* England is the country in which social discipline has most succeeded, not so much in conquering as in suppressing whatever is liable to conflict with it. The English, more than any other people, not only act but feel according to rule. In other countries, the taught opinion, or the requirement of society, may be the stronger

power, but the promptings of the individual nature are always visible under it, and often resisting it; rule may be stronger than nature, but nature is still there. In England, rule has to a great degree substituted itself for nature. The greater part of life is carried on, not by following inclination under the control of rule, but by having no inclination but that of following a rule". (Mill's *Subjection of Women*, p. 95, Longmans, Green and Co. 1909).

It is to be hoped that great improvement has taken place in English life and character since the days of John Stuart Mill.

THE CONDITION OF INDIAN RAILWAYMEN

By RAI SAHEB CHANDRIKA PRASADA

GENERAL CONDITIONS

NEARLY five years ago I had the privilege of addressing the delegates assembled at the First All-India Railwaymen's Conference at Bombay in February, 1921. The unsatisfactory conditions of railway servants in India then described remain much the same, though a few changes have been made. On the whole the position of the subordinate employees is no better, while the position and emoluments of the higher officials have been unduly raised beyond all reasonable limits. The excess allowed to higher officials is to curtail the dues of the subordinate employees, which are therefore subject to the former. Autocracy has been tightened and the men are left to the tender mercy of those under whom they have to work. Were the superior officers sympathetic to Indian aspirations, it would not have made matters so unsatisfactory as they are today; but as almost all the high officials are non-Indians, bent upon maintaining the supremacy of their own community, what sympathy could Indians expect from such a bureaucracy?

The condition of Indians is deplorable. Wherever we go we find Indians in humiliating circumstances which force them to yield to injustice and to content themselves with what the bureaucracy pleases to give. The prevailing unemployment in the country and the imperfect organisation of the railway employees largely contribute to their helplessness.

RAILWAY UNIONS

Unfortunately many of our countrymen have not realised the necessity of combined bargaining. And the bureaucracy is not slack in keeping the men disunited. Those of the subordinates who are in better positions than their comrades will not muster courage to take the lead in forming a Union or even to join a Union already formed. Railway subordinates are especially wanting in this courage. Our comrades of the Post and Telegraph

Department have done much better in organising their Unions. Should not the Railwaymen follow the example of this sister service?

What keeps the railwaymen from organising themselves properly? As far as I can gather, the men labour under the impression that they would incur the displeasure of their superiors if they formed or joined a Union. It is difficult to drive this fear out of their minds. The higher officials advise the men to join the staff-Councils dominated over by the superiors, where no individual can freely express his opinions. If those Councils be constituted like the "Joint Industrial Councils" in England, consisting of railway officers and elected representatives of the men, backed up by a Central Wages Board and a National Wages Board constituted of independent gentlemen, according to the *English Railway Act of 1921*, we should certainly welcome the Councils. In any case the men should have their Trade Unions besides the Joint Councils. In a resolution passed at the Second Conference of All-India Railwaymen in 1922, we have asked the Government of India to amend the Indian Railways Act so as to embody the provisions of the *English Railways Act of 1921* for the Joint Industrial Councils, the Central Wages Board and the National Wages Board. We should repeat this request now and push on the Unions of Railwaymen. The railway administrations have their own union, the Indian Railway Conference Association, and there is no valid objection to Railwaymen forming their Unions. The right of Association has been accorded to workers by the highest authorities. It is perfectly legitimate for men to have their Unions for their own good and for the good of the railway service and of the whole country.

REPRESENTATION IN LEGISLATIVE ASSEMBLY

In order to get the necessary legislation passed and to watch their interests, the Railwaymen should have their elected representatives in the Legislative Assembly of India, while the clerks and

Other workers should have their elected representatives in the provincial Councils. The Railwaymen have now a fair organisation of their own, with local Unions on almost all the principal railways throughout India and a central body—the All-India Railwaymen's Unions Federation. For want of such organisations in 1919-20, the Railwaymen did not get their representation on the Legislative Assembly when the present rules for the Councils were framed. The time is now ripe and Government should establish constituencies for the representation of railwaymen without unnecessary delay.

As the railways are under the Government of India, representation of Railwaymen should be in the Central Legislature. The total number of railwaymen on the 31st March, 1924, according to the latest statistics published by the Railway Board was 727,093. Allotting the railways to the Provinces in which the railways have their headquarters, the number of railwaymen by Provinces works out as follows—

Bengal	1,76,411	E B, E I, D S, D H, B D
Bombay	1,77,013	B B, G I P, Barsi, Kathiawad Rlys
Madras	81,686	M A S M, S I, Mysore
United Provinces	60,304	B A N W, O A R, R & K
Punjab	1,03,093	N W R
Central Provinces	76,359	B N R, Nizam's
Rajputana	8,988	J B R & others
Burma	23,418	Burma Rly
Assam	11,976	A B R
Total	7,27,093	

POSITION OF INDIANS IN RAILWAY SERVICE

In Volume I of the Administration Report on Indian Railways for 1923-24, the Railway Board for the first time have given statistics showing the total number of officers and upper-subordinates employed on the 1st April, 1923, and 1924, on the thirteen state-owned railways. These statistics are very important and furnish a large part of the statistics we have been asking for since a long time. The Board at long last have listened to the request but have given the number only and not the actual salaries drawn by the members of the different communities, still the statistics published largely reveal the unsatisfactory position of Indians in the two upper classes of railway servants.

The total number of railway employees at the end of the financial year 1923-24 of all classes was 7,27,093, as compared with 7,49,680, for the previous year. The total number of European, Anglo-Indian, and Indian employees on all railways compared as shown below—

	European	Anglo-Indian	Indian	Total
1923-24	6,612	11,509	7,08,942	7,27,093
1922-23	6,883	12,129	7,30,668	7,49,680
	-241	-620	-21,726	-22,587

The total cost of the staff employed on fifteen 1st class railways was Rs. 29,02,09,607 in 1922-23 and Rs. 28,18,45,740 in 1923-24. The percentages of this cost on the total working expenses of the same railways were 43.99 and 42.74 respectively. There were increases in the cost on the Assam, Bengal, Nagpur B and N. W., Burma, East

Indian and Nizam's Guaranteed Railway; while there were decreases on the B. B. and C. I., E. B. G. I. P., J. B. M. and S. M., N. W., O. and R., R. and K., and S. I. Railways.

Taking increases in Europeans and decreases in Indians, employed on the individual railways, there were increases in the number of Europeans on the B. B. and C. I., M. and S. M., and J. B. Railways, whilst these lines excepting the A. B., B. B. and C. I. Railway reduced the number of Indians and Anglo-Indians. The three state-worked railways showed reduction in the number of all these races, except the O. and R., which had an increase of 7 per cent, among the Anglo-Indians.

OFFICERS AND UPPER SUBORDINATES

The statistics relating to the superior officers and the subordinates drawing Rs. 250 per mensem and above on the thirteen state-owned railways, require very serious attention. The total number of these classes were 1862 and 7,378 respectively in 1921 distributed as under—

	Officers		Upper Subordinates	
	Number	Percentage	Number	Percentage
Europeans	1,488	79.92	2,813	38.09
Anglo-Indians	87	4.67	2,782	37.77
Muslims	41	2.36	210	2.85
Non-Muslims	243	13.05	1,573	21.29
Total	1,862	100.00	7,378	100.00

Similar statistics of appointment of above Rs. 100 and below Rs. 250 per month will be equally interesting. I hope the Railway Board will arrange to publish them as well. Among the officers, Europeans were 4 to 6 of all others, taking all the railways together, but the percentage of Europeans was still higher on the A. B. (86 per cent), B. and N. W. (92 per cent), B. B. and S. I. (81 per cent), G. I. P. (85 per cent), M. and S. M. (83 per cent), R. and K. (85 per cent), S. I. (85 per cent). As stated above, the tendency of the companies is towards increasing the numbers of European officers. This is economically wrong. And the position of Anglo-Indians among the railway-officers is hardly any better than that of pure Indians. Among the officers there was no Indian in the Agency Department of the A. B., B. and N. W., B. B. and C. I., Burma, E. B., G. I. P., O. and R., and R. and K. Railways. In the Engineering Department the R. and N. W. and the R. and K. Railways had no Indian officers in the Traffic either.

In the Loco and C. W. Departments, there were only 9 Indians out of the 295 officers, viz., one on the B. B. and C. I., A. B., 2 on the E. B., 4 on the E. I., and 2 on the G. I. P. Railway. In the Stores Department, out of 69 officers, only six were Indians, one on B. N., one on Burma, one on E. B., two on N. W., and one on O. and R. Railway.

INDIANISATION

Paragraph 84 of the Volume I of the Railway Boards' Administration Report for 1923-24 gives the following numbers of new appointments made to the superior establishment of state railways during the three years:—

	European	Anglo-Indian	Indian	Total
1921-22 ...	11	10	11	32
1922-23 ...	12	3	8	23
1923-24 ...	10	3	8	21
Total ...	33	16	27	76

Out of the total of 76 appointments, 33, i.e. 43 per cent, were given to Europeans, 16 appointments, i.e. 21.09 per cent to Anglo-Indians, and 27 appointments, i.e. 35.53 to Indians. On what basis or method those appointments were made is not stated. The appointments at least in the Traffic Department are not distributed properly and proportionately according to proper tests of merit. Sixteen of these appointments were in the Traffic Department, eight were given to Anglo-Indians and the same number to Indians. Thirty-one were in the Engineering Department, 9 Europeans, 5 Anglo-Indians, and 17 Indians. Twenty-nine were in other departments, of which 21 were given to Europeans, three to Anglo-Indians, and only two to Indians. Of these 24 European appointments 10 were in the Locomotive and Carriage and Wagons Departments, for which it is stated suitable Indian candidates were not available. How could the candidates be available since arrangements for their training have not been made by the Railway Board? Immediate provision of these opportunities were recommended by the Royal Commission on Indian Public Services in 1916. The Railway Board have been putting this matter off and the promise for better facilities made in paragraph 89 of the Administration Report for 1923-24 is not even definite.

In his speech to the I. R. C. A. on 9th October, 1924, His Excellency the Viceroy said that in accordance with the general policy of His Majesty's Government as expressed in the preamble of the Government of India Act and before the debate on railway finance in the Assembly, the Government of India had decided to accept the recommendations of the Lee Commission which have the effect of pressing forward as rapidly as possible the extension of the existing facilities in order that the recruitment of Indians be advanced. We desire that all appointments to the Engineering and Traffic Departments should be made among the candidates on the results of University or College examinations and the recruitment of apprentices by competitive examinations conducted by Selection Boards to be constituted of representative gentlemen of all communities concerned.

The position of Indians among the Upper-Subordinates is equally unsatisfactory, because a marked partiality is shown to Europeans and Anglo-Indians in the recruitment and subsequent promotions and privileges of various kinds, as is evident from the above table. The percentage of Indians on the grand total was 24.13, but on the whole the individual railways varied from 11 to 38 per cent. The B. B. & C. I. Railway stands best with 38 per cent, next to it is the N. W. Ry with 34 per cent. Then the Burma railway with 34, O. & R. and A. B. with 30, E. B. with 29, S. I. with 24, R. & K. 21, G. I. P. 20, B. N. 18, B. & N. W. 13, and E. I. and M. & S. M. are the worst with 11 per cent only of Indian Upper subordinates. A more detailed analysis will

be still more interesting, but I content myself with these observations. Indians have no desire to envy the lot of their European and Anglo-Indian comrades. What is desired is justice to all and no favouritism. Indians should not be denied bare justice. It cannot be said that the preponderance of Europeans and Anglo-Indians is due to dearth of qualified Indians. The racial discriminations of which Indians have been complaining for generations is clearly revealed by the statistics now published for the first time.

We stand for justice and fair play. Let our European and Anglo-Indian co-workers have their due shares, but not at the cost of Indians. Let us see what their shares work out to on the population basis. According to the Census of 1921, the population figures are:—

	Number	Percentage.
Indians and Burmans	315,766,453	99.52
Europeans	175,737	.05
Anglo-Indians	113,041	0.03
TOTAL	316,050,231	100.00

Taking for granted that all Europeans and Anglo-Indians were literate, the figures stood as follows:—

	Number	Percentage
Indians & Burmans	22,334,873	98.72
Europeans	175,737	.78
Anglo-Indians	113,140	.50
Total literates	22,623,651	100.00

As most of the subordinates on the railways are required to possess a knowledge of the English language, the population figures of literacy in English were as under:—

	Number	Percentage
Indians & Burmans	22,238,572	81.57
Europeans	175,737	6.95
Anglo-Indians	113,041	4.47
Total	2,727,350	99.99

If statistics were given of those possessing university qualifications, Indians will show a still higher percentage. Even taking the above percentages, we find Europeans and Anglo-Indians, who were 6.95 and 4.47 percent. of the total literates in English, held 38.09 and 37.77 per cent respectively of the Upper subordinate posts whilst pure Indians who were 88.57 per cent among the English literates had only 24.14 per cent. of the appointments. This is clear injustice and loudly calls for effective remedies.

The remedies I suggest are:—

1. That recruits for these appointments be taken on the result of competitive examinations.
2. That the highest officials who direct the railway policy and hold charge of individual railways should be Indianized.
3. That the Boards who may conduct competitive examinations should have due proportions of representative gentlemen of all communities concerned.

For the first time in the history of Indian railways, His Excellency the Viceroy, Lord Reading, took an unusual step and attended the 1924 Session of the I. R. Conference Association, in which not one Indian was a member. There the Viceroy said that the "Anglo Indian community

may rest assured that in the extension of this policy of increasing Indianisation, their interests will receive the most careful consideration and stand in no danger of being overlooked." No body grudges due consideration being given to any community and we take it that His Excellency meant simply justice being done. He could not mean to allow any undue advantages being continued at the expense of the pure Indians.

His Excellency was pleased to say, "I desire to make it clear that I fully recognise that the Anglo-Indian community have played a very considerable part in the working of the railways in the past" and for this reason he gave the assurance. Have not pure Indians played a much greater part in the construction and working of the railways? Pure Indians form 97.50 per cent of the total railway servants against 1.58 per cent of Anglo-Indians and 91 per cent of Europeans. As such this claim of Indians for just treatment is quite strong and valid. It is well known that Colonel H. J. Gidney, representative of the Anglo-Indian community, in his speech on Mr Acharya's resolution regarding the enquiry into the grievances of railway subordinate employees, himself said "I am in entire sympathy with the principle of the resolution. I believe that every labourer given the same work, carrying the same responsibility and requiring the same efficiency, should be given the same wages provided it is a living wage according to his standard of living—a principle to be found in every Government Department except railways." The Royal Commission on Public Services in paragraph 55 of this Report of 1926 laid down equal pay for all officers who do the same work. The All-India Railwaymen's Conference also demands equal pay for equal work.

But Col. Gidney's proviso about the standard of living practically contradicts the main principle he himself has given. Under the cloak of standard of living a serious injustice is being practised upon pure Indians, who are treated as inferior to both Europeans and Anglo-Indians, even where Indians exhibit better work and better qualifications. That is the chief cause of discontent among the Indians. Indians have to live economically because they are poorly paid. The standard of their living is low through sheer poverty and large responsibilities on account of their families and relations. Those among the Indians who are better paid have a decent standard of living.

Surprising was the view taken by Mr. R. N. Maclean. He was misreading the phrase, Indianisation. People have put various constructions upon R. Maclean's words, but I give him credit for emphasising the great need for rapid Indianisation of the higher grades of railway officers and upper subordinates. I refer especially to the posts of the upper subordinates, because there are many practical restrictions against Indians getting into these posts, though in theory all racial discriminations have been moved.

I assure officials like Mr. Maclean that Indians will sooner or later be working the railways not only in the best interests of India itself but also with justice to all including Europeans and Anglo-Indians, just like the Japanese, who work their own railways with equal if not greater efficiency than the European officials of the present day, and surely Indians will work with a greatly reduced

percentage of working expenses and lower rate and fares for the public.

HIGH COST OF EUROPEAN SERVANTS

As far back as the year 1870 the eminent Railway expert at the India office in England Mr. (subsequently Sir) Juland Danver, wrote in the Parliamentary Report on the Indian Railways (1839-70).

"One of the chief expenses connected with the working of the railways in India is the high cost of European Agency and the time should now have arrived when the result of the instruction given to natives and Eurasians in the mechanical departments of a railway should be shewn. On the Madras Railway the system of apprenticing Indian born youths as firemen, engine-drivers and mechanical workmen in the Locomotive shops has succeeded admirably and the aim of all should be gradually to allow natives to take the place of highly paid European skill and labour."

He further wrote "There is no reason also why the more educated class of natives and Eurasians should not fill the superior positions of engineers and assistants," who are more essential today than they were in 1870. The present high cost of working expenses on the state railways in India is entirely due to the European Agency employed at the top of the administration.

The salaries of railway officers were raised in 1921 beyond the recommendations of the Royal Commission on Indian Public Services. From 1922 they have been further increased under the recommendations of the Lee Commission. The salaries and allowances of the higher officials are very high and need cutting down, while the pay and allowances of the lowest employees are too low and should be raised to enable the men to have a living wage for themselves and their families.

TRAINING OF INDIANS FOR MECHANICAL DEPARTMENT.

Upon Sir Juland Danver's advice the Secretary of State for India took up the matter especially, which resulted in a circular from the Government of India dated the 29th June, 1870, impressing upon the railway officers the great advantage of training the natives of the country in all those branches of handicraft that are necessary to the construction and maintenance of railways.

These instructions were issued in 1870, fifty-six years ago, and not even in this year of grace 1926, are full facilities allowed to the natives of the soil, especially to the educated youths, to receive training in mechanical engineering, and the high officials in charge of the Railway administration are bent upon keeping up the costly agency of Europeans. The orders of the Secretary of State for India were defied in India. I cannot do better than quote the finding of the Indian Industrial Commission of 1918:—

"151. Above the skilled workmen is the mistry, or foreman and the provision for training such men is hopelessly insufficient. We were forcibly struck, when visiting the large railways and private workshops throughout India, with the almost complete absence of Indians from the ranks of foremen and chargemen, the non-commissioned

officers of the great army of engineering artisans. At present these posts are filled almost entirely by men imported from abroad. The railway companies are endeavouring to supply this deficiency by training European and Anglo-Indian youths."

TRAINING FOR THE POSTS OF FOREMEN

As regards the training of apprentices for the posts of foremen, the answers given by Government to question No 80 on the 10th September, 1921 and No. 161 of September 1925 are not quite satisfactory. The matter has been thrown partly upon the Local Governments who have no interest or powers in the Railways and partly it has been left to the sweet will of Railway officials who are unwilling to advance the interests of Indians.

In April 1920, the Government of India issued a resolution giving a brief account of the part played by the railways in providing artisans and foremen and expressing their confidence "that the managements of the various railways are sufficiently alive to the needs of the time, to do everything possible to create a system which will give middle class Indian youths an efficient system of training and fit them to take their share in the great work of equipping India with skilled mechanics, the sinews that actuate the industrial frame". At the same time they pointed out "that the railways cannot be expected to bear the cost of training apprentices in their shops in excess of their own requirements and the help of local Governments may reasonably be asked to enable expenditure on further developments to be met." Finally the Government of India trusted that the question of the improvement of the apprentice system will be approached by the Railways and Local Governments in full co-operation and with the determination to open widely in the interests of the industrial advancement of the country the excellent training ground presented by the Railway workshops and that the shop management and staff will bring to the task the same spirit of energy and progress which has raised the railway shops to their high level of efficiency.

In placing the above resolution on the table of the Legislative Assembly on the 10th September, 1921, (Question No 80) Colonel W D Waghorn added that "Railways generally are enlarging the scope of the training and improving facilities at the shops, as it is fully recognised that the better training of Indians for these posts is a most important consideration; that the rules regarding age, qualifications, numerical strength and stipends to be allowed to apprentices will be drawn up by the provincial Governments and the Railway administrations in collaboration when the schemes are sufficiently advanced," and that "Indian apprentices equally with European apprentices are eligible for admission to Technical Schools and for training in workshops."

After 1921 a few Indian mistries have been promoted to the rank of chargemen nominally, but their positions remain the same as before. In reply to an interpellation put in the Assembly in September, 1925, the Government member stated that "in Bengal and the Punjab the Local Government have institutions for imparting

training to apprentice mechanics, which is supplemented by a practical training in the shops of the E. B. and N. W. Railways at Kanchrapara and Lahore. The E. I. A. B., B. N., B. & N. W., B. B. & C. I., Burma, G. I. P., M. & S. M., and S. I. Railways also provide in their workshops facilities for the training of mechanics supplemented by theoretical instruction".

The resolution issued by the Government of India in 1920 is lukewarm and half-hearted and consequently we find no or very little progress in the employment of Indians as foremen.

TRAINING FOR SUPERIOR OFFICERS

In 1916, the Royal Commission on Public Services recommended that "A determined and immediate effort should be made to provide better educational opportunities in India, so that it may become increasingly possible to recruit in that country (India) the staff needed to meet all normal requirements."

Again in 1920 the Acworth Railway Committee laid great stress upon the importance of providing opportunity for technical training of Indians for all branches of railway service and thought that the Railway Board will make substantial grants of money for the purpose of developing such instruction (Paragraph 184 of the Report). In 1922 the Hon'ble member for commerce and Railways promised to the Legislative Assembly that a part of the special grant of 150 crores for capital expenditure would be spent on providing facilities for the training of Indians. But very little has been done so far to give practical effect to the recommendation of the Royal Commission of 1916.

UNWILLINGNESS OF INDIAN GOVERNMENT TO TRAIN INDIANS FOR SUPERIOR POSTS

In answer to question No 79 on 10th September, 1921 Col W D Waghorn on behalf of the Government in the Legislative Assembly said the Government of India had advised the Secretary of State that it was difficult to obtain in India recruits for the superior Locomotive and C & W departments and that no substantial change in the immediate future could be looked for. Again in September, 1925, in answer to question No 161 Mr. G. C. Sime said that "Mechanics for specialist purposes will continue to be recruited from England." In the administration Report for 1923-24, the Railway Board, however have admitted that the facilities for the training of mechanical engineers in India can be developed and that in this way there would be possibility of further Indian recruitment for the Locomotive and C. and W. Departments. This admission is not enough. Arrangements for the training should be put in operation without further delay. There is no dearth of suitable candidates among Indians. On the contrary capable young men from our universities do not find an opportunity.

MR. COLE'S SCHEME

In 1923, a scheme for the training of railway officers and subordinates was prepared by Mr. H. L. Cole, Secretary to the Railway Board. The scheme is excellent and should prove useful.

Great credit is due to Mr. Cole for preparing it, but the controlling organisation that includes the Selection Boards for the appointment of officers and engagement of apprentices is composed entirely of European officials. We need due representation of Indians on all the controlling bodies of that scheme. The Public Services Commission have expressly laid down that the Committee for selection of recruits to all the four different departments of the Railway Revenue establishment should consist of three official and two non-officials, including two Indians. We have not been informed that such Selection Committees have been appointed for the Loco and C. W. recruits. Nor has the scheme been brought into force except perhaps in establishing the Railway School of Transportation at Chandausi. As I have already suggested, selection of recruits should be made by competitive examinations.

RAILWAY SCHOOL OF TRANSPORTATION

The Government member also stated that the Railway School of Transportation at Chandausi is open only to men already in railway employ. The scheme of training there varies for different classes of employees. The first course of three weeks commenced on the first of March, 1925, and training was imparted to the following classes of railway employees—Junior Officers, Probationary Officers, Upper Subordinates, Lower Subordinates.

Similar courses have been held with short breaks from the 9th of April, 1925. The total number of employees who can be received at the school at one time is

Officers	10
Upper-subordinates	20
Lower subordinates	75

Outside candidates are not admitted. A similar school for transportation has been in existence for some years at Asansole on the E. I. Railway.

ENQUIRY INTO GRIEVANCES

The resolution for a Committee to enquire into the grievances of railway subordinate employees, moved by Mr. M. K. Acharya, M. L. A., on the 27th January and adopted as amended by the Assembly on the 5th February, 1925 still remains a dead letter, because of the opposition of the Hon'ble the Commerce Member, Sir Charles Innes, who will not allow any hearing to railway subordinates but will compel them either to submit to the high-handedness of the officials or to leave the service of the railways. His argument is that if appeals from aggrieved men be listened to or entertained, the railway officials would not be able to control the staff, that the efficiency of the railway would be lost, trade and commerce would be thrown back, working expenses would go up, necessitating enhancements of Rates and Fares, and accidents would occur on the line. In the course of the debate he also said "That is a point of principle which I hold very strongly, and all questions of discipline and staff must be left to the Railway administration, and I feel that no employer worth the name can agree that one should be put in a position of intervening between him and his staff." Further on he added "I am constantly asked questions regarding individual cases on railways. I feel it strongly my duty not to pur-

sue those questions, nor to refer them to the agent and I give the house an answer which I know must disappoint the House". (Pages 780, and 804 of the debates). Mr. G. G. Sim Financial Adviser to the Railway Board, added that the course of action proposed in Mr. Acharya's resolution and in the speeches of the Honourable members who supported it is bound to introduce chaos in the working of the railways all over India and to bring state management to a sudden end.

There was no chaos when the Lee Commission enquired into the unjust, unreal, groundless claims for additional salaries and allowances to the officials who were already drawing salaries higher than in any other country in the world. This gentleman quoted chapter and verse from the Report of the Railway Committee (Acworth), thereby attempting to show that it was the intention of that Committee to give arbitrary powers to railway officials over the employees when the Committee recommended state management in the place of the Working Companies. But one of the sentences quoted by him from the Committee's Report required that the Railway Commission or the Railway Board itself should fix the scales of salaries and conditions of services for its own staff and be free to engage and dismiss them as it thinks proper (Page 770 of the debate). Has the Railway Board done this? Not that we are aware of. True the Acworth Committee meant that the Agent or other officer of a railway should have "the same amount of freedom in dealing with his staff as would be left to a corresponding official under ordinary Company management." But the Committee did not mean that the agents of railway should deal with the men in an unreasonable or a high-handed manner as were the cases of injustice to employees brought to the notice of the Assembly, which the Hon'ble the Commerce Member ignored and did not even care to enquire into. His action is directly opposed to the long standing rules and orders laid down by the Government of India for the protection of Government servants.

The Railway Committee did not give due consideration to the anti-Indian attitude of the foreign bureaucracy that holds sway over the Indian Railways. These officials have utterly selfish motives, draw fat salaries and allowances for themselves, and keep their subordinate employees down and down, and if any of the subordinates has the courage to raise a voice against the injustice, he is summarily dismissed and sent away, causing terror among the rest of the staff. Did the Railway Committee intend such justice to the lower staff? Certainly not. Whenever the men raise any of their grievances, the officials immediately raise the objection of working expenses going up. But no such question was or is raised when increasing the pay and allowances of the higher officials. The working expenses cannot but be high because of the disproportionately high salaries and allowances of the higher officials. If these high salaries be cut down, lower employees would certainly get their just dues without unduly raising the working expenses. Because the officials are already drawing too much for themselves, they are keeping down the poor subordinates. In European countries, the question is labour *versus* capital. Here in India on the state railways, where

there is no capitalist directly concerned, the question is higher officials *versus* subordinate employees.

If the officials are allowed, as the Hon'ble the Commerce Member and his colleagues mean to do, to continue their autocratic powers without any check for appeal, the position of Indians on the railways would never improve. They would be kept down perpetually. Certainly this was not the intention of the Acworth Committee. The Government members in their zeal misrepresent facts to the Assembly to the detriment of helpless railway employees.

Mr Acharya was perfectly right in asking the Government members, "Is there to be only departmental discipline and no departmental justice?" As described by Col. Gidney, M. L. A., the representative of the Anglo-Indian community, a railway employee gets no redress even when he has a genuine grievance. The order of the junior official is seldom or never upset by his senior or agent. The subordinate appeals to the Railway Board which has stereotyped a reply refusing to interfere with the orders of the Agent. The attitude of the Hon'ble the Commerce member leaves no chance for redress by constitutional means, but I would not advise the helpless workers to resort to any direct action. The matter needs combined representation and continued agitation.

The officials who have secured for themselves Parliamentary guarantees for their huge salaries, allowances, security of employment, pensions, &c., for which there is no precedent or parallel in any civilised country in the world, will not allow even bare justice to their subordinates, which the ordinary rules allow to every servant of Government, however humble he may be. Who will say that such treatment of a hard working class of public servants is reasonable? No Indian agrees to it. The Legislative Assembly have voted for the enquiry in the face of the strenuous opposition of the Government members and of the European Non-official exploiters of India. The Anglo-Indian community, though treated a little better than pure Indians, has many grievances and it is satisfactory to note that its representative voted with the Indians on the resolution under reference. It now remains for the railway servants to show by completing their own organisations whether they are satisfied with the treatment they are receiving from their superiors, whether the railway service on the whole is popular as put forth by Mr E. R. Sykes of the Bombay European community, or whether the men resort to railway service and stick to it under necessity through the stress of the prevailing unemployment and for want of other occupations in the country.

By their refusal to receive appeals from aggrieved members of the subordinate railway service or to carry out the wishes of the Legislative Assembly for an open enquiry, the officials have given a challenge to the workers unknown in the history of public servants in India.

On behalf of the men, the majority of the Legislative Assembly who voted for the resolution claimed with very good reasons for the men, in return for their hard work, an adequate remuneration, proper treatment, satisfactory service conditions, a constitutional tribunal to ensure all this

from time to time, along with periodical enquiries into the condition of the employees. Khan Bahadur W. M. Hussanally pointed out that the Chief Mechanical Engineer of the N. W. Railway was a fitter when he started life and was getting now something like two or three thousand rupees a month. Has any Indian, he asked, any chance of rising to become a Loco Superintendent? No. There lies the racial discrimination. Such racial discrimination is at the bottom of most of the grievances of the railway staff. The discriminations are kept alive on the railways in the face of the Royal Proclamation and repeated assurances from the Government of India, the Secretary of State and the Public Services Commission that there can be no trace and must be no trace of racial inequality under the fundamental principles of British rule in India. The statistics of railway officers and subordinates published in the administrative Report for 1923-24 clearly demonstrates the racial discrimination of which Indians have been complaining for many decades.

Commercial principles are often cited in connection with the Indian railways, merely to keep down the just claims of Indians or to mislead Indian politicians. Have even the non-strategic state railways been constructed and worked on true commercial principles during the last 75 years or so? Have all the charges incurred thereon been accounted for on commercial principles? Have not crores of deficits of working expenses and interest charges been cleared off from the general revenues of India? Can any commercial concern draw so largely from such public funds? Is any inventory kept and maintained of the assets and liabilities on account of the state railways in a recognised commercial system and form? Answers to these and cognate suggestions will reveal the real truth.

A comprehensive account of receipts and charges incurred on account of the Indian Railways shows a net loss of 322.8 crores of rupees to the Indian Treasury from 1870-51 to 1923-24 and the losses are still growing. How many commercial concerns could bear such losses? But these losses on account of the Indian railways have been borne by the people of India, who are being unjustly treated at their own expense, by the officials who have been placed in charge of the Indian Railways.

Sir Charles Innes said that democratic institutions should not have the power of interference with the executive, but gave no answer when Sir Purushotamdas Thakurdas asked the Hon'ble member whether he looked upon the Legislative Assembly as a democratic institution full-fledged and with all the powers which a democratic institution should have. Sir Charles Innes spoke of bitter experience of state management of railways in some democratic countries, but he ignored the excellent results of the state management of railways in our own country, during the seventies and eighties of the last century, when state management fully justified itself both in efficiency and economical working. (Page 809)

Sir Charles Innes has been labouring under a serious misapprehension. He said generally, the railway servants are happy and contented, that the enquiry if instituted would start labour unrest, resulting in strikes on every railway. "Once you get," he said, "your railwaymen to believe that if they want to raise their pay, they have merely to

apply to this House, then good-bye to any chance of running your railways, in an efficient and economical manner" (Page 33). Surely the Honourable member is totally unaware of the serious discontent prevailing among Indian officers as well as subordinates, otherwise he would not have used such language or regarded the resolution as thoroughly dangerous. He could not, however, be unaware of the unjustly discriminative treatment accorded to Indians. From my personal experience during a period of 48 years, and from that I hear every now and then from railwaymen, I can say that the behaviour of higher officials, with some honourable exceptions, is generally arrogant and over-bearing. Even Indians occupying positions in the superior grades are treated roughly and unfairly and they feel the humiliation and injustice to which they are subjected by the officials. It is only the adverse conditions prevailing in India which compel these people to bear such treatment.

Indians have been practically drawn in the railway service, beyond which Indians are not allowed to go, for no shortcoming on their part except that they are Indians. Cases do happen where men become desperate and assert their rights. Such men are got rid of on the flimsiest excuse. There is a sort of combination among the upper officials who carry on semi-official correspondence relating to the secret policy concerning the staff. There can, therefore, be no improvement in the railway services unless and until there is Indianization from the top. There are many Indians capable of taking charge of the highest appointments in the Railway Commission, but the official class will not allow its stronghold to pass out of its hands.

The officials will not listen to individual representations of aggrieved subordinates nor will they allow them to form their unions, while their own combinations carry on all the secret policy to maintain their supremacy. For their own combined and concerted notions, the Railway Administrations have formed the Indian Railway Conference Association by means of which constant consultations are made between the Railway Administrations before any line of policy or procedure is changed or adopted.

The representative of Bombay Europeans, Mr. E. F. Sykes, argued that on the whole the railway service is remarkably popular, that the people who once get into it do not wish to get out of it. This is true, because the men find no other occupation or means of subsistence, since the indigenous industries of India have been killed by the imports of foreign cloths and other articles. This has been greatly facilitated by the introduction of the railroad in India. If the people could find other occupations, they would not stick to railway service. For service in the railway workshops they leave their homes early in the morning at about 6 o'clock and do not return to their homes before 6 or 7 P. M. They seldom find time for a bath, while they have to eat cold meals in the noon outside the railway workshops. Nobody ordinarily lives such a life day after day throughout the year. To call it remarkably popular is absurd. Then take the life of the train staff, who have to expose themselves to the inclemencies of the weather and work day and night on running trains, abandoning natural hours of sleep and rest. Likewise the men employed at stations have also

to work day and night, office clerks have to t bundles of papers for calculations they have make at home at night and early in the morning. These men also sacrifice their health and comfort for the sake of their livelihood. Those of the railway servants who enjoy life are some of the superior officers, who usually sign papers prepared by the office staff. The remarks of Mr. Sykes are true so far as these officers are concerned. But they are totally wrong with regard to subordinate employees.

In the natural order of the universe, the gift of God are distributed equally and evenly among all creatures. But through selfishness many men have misappropriated to themselves many undue shares of these gifts to themselves and this injustice is practised by the strong over the weak. This has been carried to the extreme by the present bureaucracy in India. The Officials who are on the top of the Administration get high salaries, large allowances, extensive privileges in privilege leave, sick leave, furlough, leave or private affairs, etc., with comfortable work and big pensions or gratuities after retirement from the work, while the lower a man stands in position the lower are his salaries, allowances and privileges. The lowest of public servants usually styled as menials, who are called upon to do hard work, are kept on starvation pay meagre allowances, little or no leave or pension. The whole of the Civil Service Regulations and the rulings and orders of the Railway Companies tell this tale to the surprise of one who gets a chance to read the rules and regulations attentively. Poor men who, being ill-nourished, ill-housed, are more susceptible to sickness and disease than the better paid officials ought to get reasonable leave and allowance, but are denied consideration, while those who have plenty are allowed more and more. What is the explanation of this? Mere weakness and humble submission of the weak men. These men are realizing this injustice on the part of those who have managed to secure high positions for themselves. This is no doubt opposed to reason, and justice must be done. The men are now claiming better pay, better allowances, due leave, and other privileges, better dwellings, and better conditions of life generally. The higher officials are sitting tight, pulling the rope to their own side. They get commissions and some members of the British Parliament to back up their unjust claims for new additions to their already huge piles, time after time, without regard to the poverty of the masses in India, who are made to pay the high salaries and allowances of the officials by taxes direct and indirect.

Some of our own countrymen have joined the officials and claim special privileges for themselves or for their communities, creating communal bitterness, and the whole country is bitterly divided in its own house, to the delight of the bureaucracy. If some individuals or communities are to get special privileges with greater allowances of wealth than their due share, where are these to come from? Therefore the mass of the population gets less than its due share. I do not think our friends would ask for special privileges if they realize the injustice to others. I trust our countrymen will seriously consider this matter. I know a very large

majority of our people love justice, whereas special privileges are contrary to justice. We must stand up for and assert our rights as citizens and children of the soil. We cannot do it individually. We must unite and assert our rights unitedly. United we stand, divided we fall. In union alone is our strength. United action in a peaceful manner is sure to secure us justice, though

it may take some time. It is a big struggle, but it must be carried to victory.

BRITISH EXPANSION IN TIBET

By DR TARAKNATH DAS

CHAPTER III

Anglo-Japanese Alliance, Russo-Japanese War, and Younghusband's Expedition to Tibet

THE Anglo-Japanese Alliance was signed on January 30th, 1902. The spirit and the motive of the Alliance are to be found in the preamble of the famous document

"The Governments of Great Britain and Japan actuated solely by a desire to maintain the status quo and general peace of the extreme East, being moreover specially interested in maintaining the independence and territorial integrity of the Empire of China and the Empire of Korea, and in securing equal opportunities in those countries for commerce and industry in all nations, hereby agree", etc.

This shows that the prime motive of the Alliance is to keep Russia out of Korea and at the same time not allowing Russia to secure any further foothold in any part of the Empire of China. Indeed the possibility of Russian occupation of Manchuria, after the Boxer trouble, was one of the most important factors of the Russo-Japanese trouble, and Great Britain and America also were most vitally interested in trade there. The German Government, through the pronouncement of Prince Von Bulow, made it clear that she was not anxious to uphold the hand of Great Britain in Manchuria against Russia. Indeed Great Britain herself made an agreement with Russia in 1899 by which parts of Manchuria and Mongolia fell in as spheres of influence of Russia. The Russo-Chinese agreement conferring on Russia the right of building railroads in that very region, gave her certain privileges. It is also to be remembered that Mr. Hay's Open Door

Policy, as enunciated in his famous declaration (July 3 1900), did recognise the spheres of influence¹ and it is fully evident also that in pursuance of the very policy, the United States never made a formal protest against any special spheres of influence of any nation. Thus preservation of the territorial integrity of the Chinese Empire meant opposition to further encroachment by Russia; and that encroachment in the British mind had certainly some reference to Tibet, where Russia was attempting to secure some foothold through the Sino-Russian commercial treaty mentioned before.

The most important provision of the Anglo-Japanese Alliance was that if any of the contracting parties be at war with a third party and the third party be aided by any other nation then the other contracting party of the alliance would come to the aid of the ally and they would not conclude peace until both parties agreed to it.

From Chamberlain and even King Edward VII we have it² that France was willing to settle all outstanding disputes on colonial matters, even before the conclusion of the Anglo-Japanese Alliance. Britain was indifferent to this; for she was not at all afraid of fighting France single-handed. In case of necessity Russia could be taken care of by Japan. It was also certain that Germany was not going to aid Russia against England in case of a war. If she had that intention she could have accepted the partnership in the Anglo-Japanese-

German Alliance which was definitely proposed in 1901. Thus Britain's position became more secure.

On January 8th 1903, Lord Curzon sent a lengthy despatch to the Secretary of State for India, and only a few extracts of this clear statement of policy is in the published papers on Tibet, and the following quotation from this document will clearly explain the factors involved in the situation

"If we (Government of India) therefore now enter upon negotiations with no other vantage ground than the successful reassertion of our authority on a very inconspicuous section of the border, it does not appear that there is much reason for anticipating a more favorable solution of the Tibetan problem than has attended our previous efforts, unless, indeed, we are prepared to assume a minatory tone and to threaten Tibet with further advance if the political and commercial relations between us are allowed any longer to be reduced to a nullity by her policy of obstinate inaction. The second combination of circumstances that has materially affected the situation is the rumored conclusion of a secret agreement by which the Russian Government has acquired certain powers of interference in Tibet. We have ourselves reported to your Lordship circumstantial evidence derived from a variety of quarters all pointing to the same direction and tending to show the existence of an arrangement of some sort between Russia and Tibet. This then is the situation with which we are confronted at the moment when we are asked by your Lordship to advise as to the answer that should be returned to the Chinese proposals for the reopening of negotiations with our Political Officer on the Tibetan frontier. It is obvious that any such negotiations are thereby invested with a far more than local importance, and that what we are concerned to examine is not the mere settlement of border dispute or even the amelioration of our future trading relations with Tibet but the question of our entire future political relations with that country, and with the degree to which we can permit the influence of another great Power to be exercised for the first time in Tibetan affairs. It is unnecessary for us to remind your Lordship that the Russian border nowhere even touches that of Tibet, and the nearest point of the Russian territory is considerably more than a thousand miles short of the Tibetan capital, which is situated in the extreme south and close proximity to the northern frontier of the Indian Empire. Neither need we point to the historical fact that no other States or Powers have, during the time that the British Dominion has been established in India, had any connection with Tibet, but firstly China, who possesses a nominal suzerainty over the country; secondly Nepal, a State in close political connection with India, and, thirdly, the British Government itself. The policy of exclusiveness to which the Tibetan Government has during the last century become increasingly addicted has only been tolerated by us, because anomalous and unfriendly as it has been, it carried with it no element of political or military danger. At no time during that century do we imagine

that Great Britain would have permitted the creation of a rival and hostile influence in position so close to the Indian border and so pregnant with possibilities of mischief. We are of the opinion that the only way in which we can counteract the danger by which we regard that British interest is directly threatened in Tibet, is to assume the initiative ourselves, and we regard the Chinese proposals for a conference as affording an excellent opportunity for pressing forward and carrying out this policy. We are in favour, subject to qualifications that we shall presently mention, not only of acceptance of the Chinese proposals, but of attaching to them the condition that the conference shall take place not upon our frontier, but at Lhasa, and it shall be attended by a representative of the Tibetan Government, who will participate in the proceedings. In our view, the attempt to come to terms with Tibet through the agency of China has invariably proved a failure in the past, because of the intervention of this third party between Tibet and ourselves. We regard the so-called suzerainty of China over Tibet as a constitutional fiction, a political affectation which has been maintained because of its convenience to both parties. Our views, as his Majesty is aware, have been for some time in favour of dealing with Tibet alone; and it is upon these lines that we have proceeded with the consent of his Majesty's government, in attempting to open up direct communication with the Dalai Lama. In our view, any country or Government, or Empire has a right to protect its own interests, and if those interests are seriously imperilled, as we hold ours to be in Tibet, we hold that the first law of national existence, which is self-preservation, compels us to take such steps as will avert those dangers and place our security upon an assured and impregnable footing. In view of the contingency, of opposition, we think that the mission, if decided upon, should be accompanied by an armed escort, sufficient to overawe any opposition that might be encountered on the way, to ensure its safety while in Lhasa. The military strength of the Tibetans is beneath contempt, and serious resistance is not to be contemplated. At the same time the most emphatic assurance might be given to the Chinese and Tibetan Governments that the mission was of an exclusively commercial character, that we repudiate all designs of a political nature upon Tibet, that we have no desire either to declare a protectorate or permanently to occupy any portion of the country, but that our intentions were confined to the removing of the embargo that at present rests upon all trade between Tibet and India, and to establishing those amicable relations and means of communication that ought to subsist between adjacent and friendly Powers. We believe that the policy of frank discussion and cooperation with the Nepalese Durbar would find them prepared to take part in our mission. If some such steps be not taken as we have advocated, a serious danger will grow up in Tibet, which may in one day, and perhaps at no very distant date, attain to menacing dimensions. We believe that our territorial position and our indubitable rights, enhanced as they are by complete disrespect shown by the Tibetans for existing stipulations, place it in our power to nip any such danger in the bud before it has developed; and

we earnestly hope that the opportunity be not lost. We regard the situation as one affecting the frontiers, which we are called upon to defend with Indian resources, which is entitled to carry weight with His Majesty's Government; and we entertain a sincere alarm that if nothing is done and matters are allowed to slide, we may before long have occasion gravely to regret that action was not taken while it was still relatively free from difficulty..."

The above despatch, which became the cornerstone of the British policy towards Tibet, makes clear a good many things, and those that are worth consideration are;—(1) So far as the British Government was concerned, the question of Chinese suzerainty was merely a "constitutional fiction and political affectation;" (2) For the sake of India, Great Britain would never allow any powerful nation to have political influence in Tibet. The British Government did not interfere in Tibet aggressively because there was no such menace. As soon as Russia appeared on the scene the British attitude changed. (3) Although the whole motive of the British Government was to carry on negotiations to bring Tibet within the political influence of Britain, it was made clear to the Tibetan and Chinese Governments that there was no political motive, thus revealing the true nature of British diplomacy. (4) Tibet must be controlled as soon as possible so that Russian influence be nipped in the bud. (5) The policy was even to use Nepal against Tibet.

Although a forward policy towards Tibet had been decided upon, the Secretary of State for India was very cautious about the move recommended by the Governor-General in Council. On February 27th, 1903, the Secretary of State for India, among other things, instructed Lord Curzon in the following way—

"Your Excellency's proposal to send an armed mission to enter Lhasa, by force if necessary and establish a Resident, might no doubt, if the issue were simply one between India and Tibet, be justified as a legitimate reply to the action of the Tibetan Government. But His Majesty's Government cannot regard the question as one concerning India and Tibet alone. The position of China, in its relations to the powers of Europe, has been so modified in recent years that it is necessary to take into account those altered conditions in deciding on action affecting what must still be regarded as a province of China. It is true as stated in your Excellency's letter that we have no desire either to declare a Protectorate or permanently to occupy any part of the country. Measures of this kind might, however, become inevitable if we were once to find ourselves committed to armed intervention in Tibet,

and it is almost certain that were the British Mission to encounter opposition, questions would be raised which would have to be considered, not as local ones concerning Tibet and India exclusively but from an international point of view, as involving the status of the Chinese Empire. For these reasons His Majesty's Government thinks it necessary, before sanctioning a course which might be regarded as an attack on the integrity of the Chinese Empire, to be sure that each action can be justified by the previous action of Tibet, and they have accordingly come to the conclusion that it would be premature to adopt measures so likely to precipitate a crisis in the affairs of Tibet as those which your Excellency has proposed. In their opinion it would have been unwise not to use the Russian memorandum of the 2nd of February as an occasion for pressing the Russian Government to make a distinct statement of their policy and for warning them of our intention to meet any action on their part by more than counter-balancing measures of our own. After the explanations of the Russian Government have been received, His Majesty's Government will be in a better position to decide the scope to be given to the negotiations with China, and on the steps to be taken to protect India against any danger from the establishment of foreign influence in Tibet."

The Anglo-Russian controversy regarding Tibet from now on took the shape of giving an excuse for British action, and a few extracts from the dispatches exchanged between the various parties will give an adequate idea of the development. In a despatch from the Marquis of Lansdowne to Sir G. Scott, dated February 18, the British Government's position has been made absolutely clear. The despatch in part reads.—

"During my conversation with the Russian Ambassador to-day I referred to the question of Tibet, which we had discussed on the 11th instant. The interest of India in Tibet was, I said, of a very special character. With the map of Central Asia before me, I pointed out to His Excellency that Lhasa was within a comparatively short distance of the northern frontier of India. It was, on the other hand, considerably over 1,000 miles distant from the Asiatic possessions of Russia, and any sudden display of Russian interest or activity in the regions immediately adjoining the possessions of Great Britain would scarcely fail to have a disturbing effect upon the population or to create the impression that British influence was receding and that of Russia making rapid advances into regions which had hitherto been regarded as altogether outside of her sphere of influence. Should there be any display of Russian activity in that country we should be obliged to reply by a display of activity, not only equivalent to but exceeding that made by Russia. If they sent a Mission or an expedition we should have to do the same but in greater strength..."

The attitude of the Russian Government can be measured from the Marquis of Lansdowne to Sir G. Scott covering the substance

of the conversation between the Marquis of Lansdowne and the Russian Ambassador Count Benkendorff;

"Count Benkendorff went on to say that although the Russian Government had no designs whatever upon Tibet, they could not remain indifferent to any serious disturbance of the status quo in that country. Such a disturbance might render it necessary for them to safeguard their interests in Asia, not that, even in this case, they would desire to interfere in the affairs of Tibet as their

policy "Ne viserait le Thibet en aucun cas" but they might be obliged to take measures elsewhere. They regarded Tibet as forming a part of the Chinese Empire in the integrity of which they took an interest. His Excellency went on to say that he hoped that there was no question of any action on our part in regard to Tibet which might have the effect of raising questions of this kind."

(Chapter III to be concluded)

1. The following extract from the circular telegram sent to the Powers by John Hay shows conclusively that he recognised the "sphere of influence" of other nations. "The policy of the United States is to seek a solution which may bring about permanent safety and peace to China, preserve Chinese territorial and administrative unity, protect all rights guaranteed to friendly powers by treaty and international law and safeguard for the world the principle of equal and impartial trade with all parts of the Chinese empire (Italics are mine) (a)

INDIA AND THE EMPIRE

By PROF. B. RAMACHANDRA RAU

BUT for the recent Anglo-German war the economic development of the Empire with the view of making each self-governing part supplement the economic needs of the other parts of the Empire and making the Empire as a whole an independent self-sufficing economic unit would never have been brought to the region of practical politics. It was true that some sort of Imperial Preference scheme first worked out by Canada and followed by the other self-governing Dominions was existing prior to the war. It was by virtue of this preference that Great Britain was able to maintain the supreme hold of the Colonial and Dominion markets even though industrial rivals like Germany and America were successfully competing with it. Firstly, England became the workshop of the world through her mechanical inventions, use of capital, a steady supply of raw materials and exclusion of rivals from this supply and the commercial policy of the English Statesmen promoting

the growth of the Colonial Empire. By virtue of the inherited skill of her workers and special organisers, the brilliance of her inventors, the possession of raw materials particularly, iron and coal, the geographical situation and favourable climate, the shelter of her patents, the virtual monopoly of the carrying trade of the world and her freedom from Civil Wars or other domestic calamities England was able to maintain the lead in the race for industrial supremacy till the end of the Victorian Era* but other countries notably Japan, Germany† and the United States of America were fast developing their wealth-producing energy behind protective tariffs and successfully competing with industrial Britain. England soon lost her industrial supremacy and became one among

* For the qualities that enabled Great Britain to assume the Industrial Leadership see Dr. A. Marshall—Industry and Trade p. 35 etc.

† See E. E. Williams—"Made in Germany", p. 166.

many competing countries—*primus inter pares*—chiefly on account of the neglect of scientific research and technical training, the conservatism of her manufacturers, the canny policy of the trade unions, the hesitation of

the capitalists to expand production in face of industrial unrest and a combination of other causes. The following table shows how England gradually lost her pride of place as the world's manufacturer :

Country	1871-80	1881-90	1901-10	1911-13	1923
Russia	87.5 p.c.	82.5 p.c.	80.5 p.c.	59.8 p.c.	68 p.c.
Sweden	78.0	74.5	51.0	51.0	61.4
Denmark	68.5	66.0	57.0	54.0	59.0
Germany	86.0	80.0	73.0	68.7	40.0
France	81.5	81.0	66.0	63.0	43.0
Spain	81.5	76.5	59.5	66.5	75.5
Italy	81.5	76.0	50.6	45.0	40.0
China and Hongkong	98.0	97.5	93.5	90.0	93.0
The U. S. A.	90.5	90.5	81.0	76.2	79.0
Argentina	97.0	93.5	89.0	83.0	85.5
India	94.5	96.0	95.5	95.0	95.5
Australia	91.5	95.6	91.0	90.5	93.9
New Zealand	95.5	92.0	90.5	87.5	87.5
Canada	91.0	92.0	89.2	84.7	84.0

While the above table shows the decline of the proportion of British manufactured goods sent to foreign countries the following table shows the advance of the industrial rivals of Great Britain.

	The U. S. A.		61'0	65'0	67'5
	Germany		4'77	2'12	0'34

The chief lesson from the above table* is the fact that industrial Britain was gradually losing its hold on the foreign countries and the European markets. Though deprived of these markets it has been able to continue as the leading supplier to the Dominions by virtue of the Preferential clause coming happily to her aid. During the war-period when food-supplies and raw-materials and manufactures were urgently required the possibility of tapping the Empire resources was realised and the real move towards Empire development was made in the year 1917 at the Imperial Conference. Reciprocal trading advantages were considered as the necessary means to bring about this cherished consummation of Imperial Development. Steady complementary trade between the mother country and the Empire countries was the ideal aimed at. But as the necessary means to bring about this desirable end were not thoroughly developed the scheme could not accomplish much. As soon as the stress of the war was removed the ardour of the Dominions cooled down appreciably and nothing tangible was done except the facilitating of migration from Great Britain to the Dominions to a limited extent.

The world-wide trade depression in the triennium 1921-23 has once more drawn the attention of the British public to this matter and in order to solve the twin problems of unemployment and overpopulation the development of the Empire trade and resources is

proposed as the only practicable measure.* The army of the unemployed persons has been estimated at 1,300,000 persons. The population of Great Britain is on the increase. It is calculated that the natural excess of births over deaths is 10 per thousand and at this rate of growth the natural increase of population would be 430,000 annually. As the stream of emigration is much reduced than before, the net annual increase is about 300,000 much greater than it used to be prior to the war i.e. 100,000. A few of the economists propose the control of credit as a remedy for unemployment and for regulating trade on a stable basis. There is a consensus of public opinion however as regards the efficiency of the new remedy viz. empire development and its ability to solve the problem is being discussed with warmth at the present time. As the foreign countries are gradually raising their tariffs† against British goods it would be suicidal if Britain were to rely solely on the intelligence and initiative of its manufacturers to cope with the problem of foreign industrial competition. Germany might not in the near future prove a formidable competitor. As one writer points out "Germany can no longer play the bold game and her spasmodic efforts to remedy her economic distress by deliberate destruction of her currency may be considered the death of Germany's economic Imperialism. Not only is Germany's financial

† See Basil Williams—"Cecil Rhodes", pp 55-56.

position hopeless but she has no colonies and practically no merchant fleet and the whole spirit of the German nation has changed. The arrogant and passionate spirit of nationalism and Imperialism which drove German production to the front before the War has on the whole yielded to a sinister and meeker spirit and the older order of the day "Deutschland über alles" has been converted to the modest one of "Deutschland ist die Deutschen". But America is bound to become Britain's strong industrial rival. According to Secretary Hoover "America is no longer faced with difficulties arising out of war" In the matter of mass production American industrialists are "nearly twenty-five years ahead of other nations" They are making a bold bid for the Asiatic trade. Both in China and India American firms are on the increase. America's foreign trade in the last fiscal year has increased by 10 per cent and amounted to 4531 million dollars and the import trade declined by about 5 per cent and amounted to 3611 million dollars. There was an increase of manufactures in its export trade. Merchandise exports increased and exceeded imports by 980 dollars. Some of the allies like France and Italy have been extending their foreign trade. Italy has been competing with Britain in the case of textile manufactures. Switzerland and Czechoslovakia are becoming industrialised to a great extent. A rejuvenated Central Europe as contemplated by the Dawes Committee would mean a complete loss of trade with the European markets. Hence the importance of the Dominion markets is receiving much stress. While formerly the Empire problem was purely a political one and the interest being solely confined to the Imperial Conference and the idea of Imperial Federation, at present the economic side of the problem receives much emphasis. A failure to forge a lasting political link between the different parts of the Empire and the mother country might not produce disastrous consequences, but the failure to cement the ties between the Empire countries by strong economic links would mean a serious blow to the prosperity of the United Kingdom. Economic decadence would be the result if the world refuses to support raw materials to Britain and purchase her manufactured products. Great Britain has always been unwisely aspiring to be the world's manufacturer and if the latter fails to take back her goods a self-sufficient Britain would be reduced to the position of

a fifth rate power. Political unity is not so essential for the existence of the Empire and the Dominions have already gained independent national status with the right to negotiate independently with the foreign powers. They form members of the Imperial Union and the role of Great Britain is no more significant than that of a managing director in a joint-stock concern.

To avert the impending doom the solution of the Empire development is proposed by the Imperialists as the only remedy. While Great Britain has to provide men, money and markets, the duty of the Dominions and the other parts of the Empire is to purchase the manufactured products of Great Britain and supply the needed raw materials for England's manufacturers as they have done in the last century. This would find increasing employment for the British workers for the processes of completing the finished stage of the manufactured goods would mean more benefit to the industrialists than sending partly manufactured goods out of the country. The *raison d'être* of the British Trade Facilities Act has been the very same object and although the principle involved is rather unsound still the Empire development scheme is free from any defect because the people of Great Britain who settle in the Dominions, would naturally prefer British manufactures. The silken ties of sentiment and the mystic sympathy of the identity in race would act in the favour of the industrialists of Great Britain. Thus the duty of Great Britain is to facilitate the migration of the able-bodied workers to the Empire parts and bring about a redistribution of the White race in the Empire as a whole. The Empire Settlement Act was evidently meant to encourage the Empire migration scheme. From May 31, 1922 to Dec 31 1923 some 40,000 emigrants had been assisted according to this Act. But as the costs of the settlement have been ignored complete success has not attended on this particular proposal. The new Empire emigration policy of the Dominions reckons this item and as Great Britain undertakes to bear part of the interest involved in the fund set apart for developmental purposes the question of men is solved and that of money and markets alone remains. The Dominions have been requesting the British purchasers to consume their products provided their cost compares favourably with the foreign produce and the quality is

in no way inferior to it. The British Labour party has recently passed a resolution to restrict the flow of the sweated products of the industries from outside into Great Britain. The preferential buying of the Empire goods is advocated by Mr. MacDougall. Even inter-empire banking is resorted to to link one colony with another and all of them with London. The old Colonial Bank is being reorganised into Barclay's Bank (Dominion, Colonial and Overseas) to secure cheap inter-empire finance.

If the British purchasers are animated with sentimentalism towards the Empire idea the necessary sacrifice would be made cheerfully. Just a few days back we read in the Times of London of a big demonstration in Hyde Park in favour of Empire goods and the Wembley Exhibition has familiarised the British people with the Empire products and if only a proper system of merchandise marking were to be perfected it would solve the problem of differentiating the Empire products from those of out side. A system of constructive advertisement in the United Kingdom on the part of the Empire Export Produce Associations would popularise their goods and the necessity of finding markets for their goods can be solved easily.

But there are several impediments in the path as regards the complete realisation of this well thought-out scheme. Firstly the interests of the consumers and the producers are not identical except in a very remote sense. The economic sophists might preach the alluring doctrine of identity of interests between the consumers and the producers. The consumers require a steady supply at a constant price and the producers require the very same conditions. Hence, both are interested in the volume of production. Though this is broadly speaking a correctly worded statement still it is true only when the whole world of producers and consumers are taken into account. It is also true in the sense that society cannot be roughly labelled into classes called consumers and producers and a set of measures devised to benefit each class without prejudice to the other class very often the superiority of producers' interest is considered a decisive one and statesmen undertake measures to benefit the producers, but these have tended to lead more to economic retrogression than progress. Indiscriminate tariff raising is an instance of this unwise legislation. The consumers required

goods and as the scale of the cost of production of the industrialists varies, the consumers would go in for the cheapest and if the Empire producers are unable to bear this in mind it would be detrimental to the success of the scheme. Secondly the evolution of a common economic trade policy for the British Commonwealth would confer immediate benefit to all the different parts, but as it consists of many different lands and peoples under different stages of industrial and economic advancement the uniform policy selected would fail to take those differences into account. The spirit of narrow egotistic and self-sufficing nationalism has been intensified during the war and is tending to sway the higher economic thought of these countries. These tend to become industrially self-sufficing.* The basic necessity for economic progress is a wide-spread industrial economy finding scope for continuous economic activity on the part of its workers. Agriculture denies this scope specially if it is dependent on monsoon rainfall and is less paying from the material standpoint than manufacturing industries. The Dominions and other parts of the Empire which possess the raw materials would aspire towards the creation of the industrial economy stage. This by itself would restrict the scope of some of the manufacturers of the United Kingdom—specially those who produce the lower kind of goods.

Thirdly the change of policy and preferring Empire-goods to Allies' goods, say of Belgium, France, America and Italy, would create resentment and a suspicion among them. Now that the stress of the war is minimised they need not care much for the sentiment of the allies. But if any preferential buying and raising of tariff against foreign goods is contemplated there would be a keen struggle for markets and the advocates of the British Empire should not be unwise enough to provoke the anger of other countries. It can exist best as a free trade Empire.†

Taxing food supplies would be resented by the British working classes who are threatening already the very existence of capitalism and if the cost of living is enhanced the struggle between Labour and Capital would be bitter. Even the doughty champion of Imperial Preference, Joseph Chamberlain

* See the recent raising of the Australian Tariff.

† See Harold Cox, Economic Liberty.

had to explicitly state that if food-supplies would be subject to enhanced duties it would be compensated by lowering the duties on tea coffee and sugar. So this new preferential buying plan has to keep this in view.

Again the British people wish to improve their own agricultural conditions. They are making heroic efforts to make agriculture a paying proposition. The splitting up of the big acres into small but economic holdings is recommended and the state has to shoulder the financial responsibility of this rearrangement. (See Ashley Committee's Report) "Defence is better than opulence" said Adam Smith long ago and the British Government has realised that agriculture is a necessary part of the economic structure of the country if it were to be self-sufficing. During the Napoleonic War, the Boer War and the late Anglo-German War alarmist campaigns urging the importance of landed interests were conducted but nothing very marked has been achieved so far as wheat-raising is concerned. This might seriously affect the scheme of Empire development.

The Empire migration scheme is disliked by the Labour Party in England* as it is understood to be an attempt to indirectly weaken the Trade Unions by sending away the undesirable labour agitators. The British Labour Party views perversely all the problems of Empire and the Empire Day celebrations are disliked by the Labourites. The Dominions specially Australia where the Labour Unions are all-powerful desire only farmers and a very large number of the workers would lower the level of wages if unrestricted immigration into the country is allowed. Hence it would take a long time, at least ten or twenty years, before a large number of British workers can find suitable work for themselves in Australia. Hence the Empire Emigration scheme alone cannot prove an efficacious remedy for the present economic conditions of the country (United Kingdom). The Dominions require farmers of the right type who would undertake to make the land their permanent abode; hence Great Britain is now insisting on de-urbanising the emigrant before he leaves British shores. Commercial, financial and exporting interests are decidedly against the Empirist policy. They place their faith on the doctrine of three cornered commerce and

are bent upon realising economic internationalism instead of the narrower conception of Empire development.

Lastly there is the possibility of evasion of duties levied on the foreign countries.* Scandinavian timber would be exported from Canada as Canadian timber. Brazilian coffee would be imported from the Cape Colony of South Africa. Any elaborate system of certificates of origin and such like devices only give an infinite source of trouble and would not check evasion of this description. (See Lord Cromer in *The After War Problems*, p. 26 and 27.)

This much of preliminary introduction is needed to state the present attitude of the Mother Country with the members of the Empire and the relation between the United Kingdom i.e., the mother country and the rest of the Empire not included in the Dominions would be dependent on the scope, freedom and facilities for the employment of its capital wealth, and provisions for the employment of its middle class people, and the unrestricted hold of the Empire markets. As these tend to become restricted by the industrial development of the Dominions or the entry of foreign powers the tendency would be to fall back upon the Crown Colonies, India and other backward tracts peopled by the black or brown and the uncivilised races. The duty of the mother country to the Dominions has been definitely stated to be the one of providing men, money and markets. The main object of the Imperialists is to raise the standard of living of the other half of the Empire so that the industrialists of both the mother country and the Dominions might find the necessary market for their manufactures. The retention of these markets for their industrialists is the object of the advocates of the Imperial Development idea. This policy is never likely to succeed as the Dominions have restricted the rights of the Indian immigrants and as the policy of reserving their country to the White races alone would not meet with approval on the part of the Indian

* The continental manufacturers generally send their goods to England to receive a veneer of British workmanship and send these goods to the colonies to take advantage of the Colonial Preference. Hence the colonies are forced to change the conditions of Preference and insist on the increase of British Labour or material in the goods from the 25 p.c. limit to a higher figure so as to prevent the Anglo-Continental goods from obtaining Preference.

* See Lord Milner "The Questions of the Hour" pp. 94, 103.

people. Without a frank and explicit recognition of race-equality and the throwing open of rightful opportunities for an all-round development the conception of the Empire is a misnomer. Empire development would be construed as a clever device and mask for the profit of the white race alone. It might have faith in the arrogant belief that it alone is socially efficient to carry out the trusteeship idea of the undeveloped black and brown races of the earth. It might pursue the White Australia Policy* and the White South Africa Policy. But they have essentially misunderstood the objects of the Indian people who have settled there. Neither Great Britain nor the Dominions have realised the correct attitude of the Indian mind in the matter of Indian immigration. Indian people do not desire political control in Kenya or in any other part of the Dominions. It is racial and legal inequality which they consider as injustice.

The Indian people have a strong suspicion that this policy of Imperial development would disable the indigenous industrial system to adjust itself to the complex conditions that would prevail if British manufactures were to be sold in India. The dispossessed industrialists would be forced to return to the land and grow the necessary food-stuffs for satisfying the Imperial demands. This is the reason why there is an undue emphasis of late in the matter of co-ordination of agricultural research in the different provinces. Since the time of Lord Mayo the Indian government knew pretty well that Indian interests lie solely in the development of agricultural potentialities but their half-hearted attempts in this line have not proved to be of much benefit. Just at a time when the provincial governments have been doing their best for the improvement of their industrial condition the policy of developing agriculture is considered to be an all-important matter. Even for the selection of the right person for the Viceregal Chair agricultural knowledge has become an indispensable qualification. India would be really grateful if even at this late hour the real handicaps on our agricultural situation are understood aright and the lancet applied

at the proper place to heal the disease. Scientific Research is not the only thing required to benefit the present lot of our agriculturists. The over emphasis on research to the comparative neglect of the important problems of credit and marketing facilities would make their laudable attempts an absolute failure.

The revival of the Imperial development idea might have indirect effect on the Indian finance policy. Every time the fervour of imperialistic expansion catches hold of the Tory party Indian finances are bound to suffer to a certain extent. Whenever the Russian bogey was trotted out the strengthening of our frontier policy was resorted to. Imperial ambitions in Asia are more disastrous for us than our own famines and other epidemics. The currency shortage and the railway waggon shortage that we experienced during the recent war was no doubt due to the drain of both to the Mesopotamian region in Southern Asia. So long as Indian Defences and foreign relations are not handled by Indian Statesmen there would be the danger of our resources being used for the furthering of Imperialistic ambitions say British Navalism in the Pacific. The present illiteracy and the great burden of disease would remain unattacked for lack of funds. Old age pensions, prison reform, and other useful activities of the Body Politic would be held up for want of money. Thus the real economic interests would be sacrificed on the altar of Empire patriotism. Tariff protection, scientific research, transport facilities, bounties, rebates, control of exchange and local purchase of government stores would be defeated and given up if they run counter to the Empire interests. Empire development must never be allowed to influence our policy which should be guided by Indian interests first, Indian interests second, and Indian interests throughout. Otherwise Indian resources would be considered as sufficient compensation for the loss of America, South Africa and the Dominions and exploitation would go on unchecked as before. The present tariff policy does not make due provision for the safeguarding of the Indian interests. Protection is granted to firms irrespective of the fact whether they undertake to train our people or not.

Empire development as understood in the above sense would lead to the improper utilisation of Indian resources and if the Indian Legislature were to champion Indian inter-

* A good account of the White Australia Policy can be had in Myra Willards "History of the White Australia Policy"—pp. 188-193—See also Arnold Wright "Population"—p. 122. This author criticises this policy "White Australia Policy" as sheer international injustice.

ests the Tory party which is bent on this policy would attempt to take away the political power granted to the Indian Legislature. The reversal of the policy outlined in the Montford Scheme would surely result if we ran counter to this Imperialistic expansion policy. * There would be an attempt to prolong the theory of the ruling race supremacy and the legitimate aspiration of every Indian to guide his own country's policy would be defeated. The hampering and cramping regulations introduced by the bureaucracy would naturally result in hindering the people from growing to their full height and stature.

Imperial statesmen have been asking for real signs of genuine co-operation with the bureaucracy. But if India is to become an active and wholehearted partner of the British Commonwealth of Nations the Britishers must display their courage and imagination towards the improvement of the economic, political and social conditions of the people in India as well as outside. The suppression of the cotton excise duty has quietened one source of irritation and if

* See The English Review—Article entitled—Govern or Go—p. 6, 8 Jan 1925.

other causes for national irritation are removed the Indian people would not lag behind in matters of Imperial cooperation. There is no strong body harbouring anti-Imperial sentiment in India. The repeal of the oppressive laws suppressing political action, the abolition of racial discrimination in criminal trials, the new policy of reducing opium export from India, a sincere carrying out of the Indianisation of the Army, the creation of a squadron as a modest beginning of a Royal Indian Navy, the initiation of new policies in Railway Administration and traffic control, the appointment of a Royal Commission on Agriculture are all instances which prove the influence of the Legislature over the Executive. A small white bureaucracy cannot control for ever the political destiny of a vast population rapidly attaining national consciousness. Armed strength alone would perpetuate their rule for some time longer but how long would this domination survive? National faith and national will is becoming sufficiently strong and resolute. It behoves then that serious attempts should be made to fuse the British and Indian elements in ties of everlasting strength.

MEDIAEVAL INDIA *

BOOKS on mediæval Indian history are very rare. Elphinstone's survey, in spite of its substantial quality, is out of date in many respects and Lane Poole's sketch, splendid as it is, appears insufficient to-day. Prof. Jadunath Sarkar is a real pioneer in reopening the whole field of research and his monumental works have become indispensable guides to the Museum of Mughal history. Now another Hindu scholar, Mr. Ishwari Prasad, has come forward to illumine the dark recesses of the pre-Mughal period and promises to extend his researches into the Mughal period as well. One feels that he has spared no pains to make his survey as comprehensive as possible. Specialists in the handling of Arabic and Persian sources may find faults here and there and his flourish of Turgot and Burke, of Mommsen and Croce may strike as a little academic and out of context, yet his book would be welcomed as a very useful

and up-to-date handbook by the teachers and the students of our colleges.

There is another good point which recommends the book to our attention. The history of *Mediæval India* is generally considered to be synonymous with the history of *Moslem India*. This positive distortion of historical notions is due simply to the fact that very few historians of Moslem India were competent to handle or even conscious of the existence of the Hindu sources of contemporary Indian history. Mr. Ishwari Prasad may legitimately take pride in the fact that he has broken through that unhistorical self-complacency of the Islamists and to unfold before our eyes the tableaux of Indo-Moslem history in which the *vanquished* Hindus play as important a part as the *victorious* Moslems. Be it recorded to the credit of the author that he renders full justice to the Islamic conquerors of Hindu India.

"The Islamic conquest did not prove an un-mixed evil. It established imperial unity in place of the system of hostile states and taught the people to respect a single authority in the country. It added a new element of youthful vigour to our

* *Mediæval India From 647 A. D. to the Mughal Conquest*, by Ishwari Prasad, M. A., LL. B., pp. XXXIX+602, Published by the Indian Press, Allahabad.

national stock and introduced a new culture which deserves to be appreciated. The Muslim manners and customs leavened the habits of the upper class Hindus and much of the polish and refinement that we find in modern society is due to them. The Muslims introduced a new language into the country with a wonderful literature of its own and by constructing noble edifices they brought about the renaissance of the Indian Art."

As a general stock-taking of Moslem contribution to Indian history, the above statement is all right. But when Mr. Ishwari Prasad adduces the above as proofs against the finding of Prof. Jadunath Sarkar he overshoots the mark Mr. Sarkar states:

"When a class are publicly depressed and harassed by law and executive caprice alike, they merely content themselves with dragging on an animal existence. With every generous instinct of the soul crushed out of them, with intellectual culture merely adding a keen edge to their sense of humiliation, the Hindus could not be expected to produce the utmost of which they were capable.....The barrenness of the Hindu intellect and the meanness of spirit of the Hindu upper classes are the greatest condemnation of Muhamadan rule in India. The Islamic political tree judged by its fruit was an utter failure."

Mr. Ishwari Prasad contests the above statement of Prof. Sarkar by asserting that the condemnation "cannot be predicated of Muslim rule as a whole" (p. 513). But the author seemed to have forgotten that in his statements, a few lines ahead (p. 512), he had substantially agreed with Prof. Sarkar when he said "The Hindus were overtaxed...They were excluded from high offices and in such circumstances of distrust and humiliation native talent became dwarfed and stunted and never got an opportunity of showing itself." So we

cannot understand how the author could make the "Islamic rule" responsible for the appearance of "men like Ramananda, Chaitanya, Tulsi Das and Todor Mal." This seems to be a palpable confusion of historical issues. That the Hindu mind "soared to the highest pitch and gave expression to the noblest truths" is not so much *because* of the Islamic rule but *inspite* of it. The Islamic empire, like many other empires, failed because of the incapacity to evolve a higher order of political ethics which could reconcile the claims of the government and the governed on a lasting and equitable basis. We grant, however, that the desert of imperialistic caprices and communal intolerance was redeemed by the superb oasis of the regime of Akbar the Great. But this noble exception only proves the rule. As an exception, however, it is unique in that age and we are thankful to Islam for giving to world history the portrait of such a great soul. It was Akbar's policy of tolerance and confidence, continued more or less under Jehangir and Shah Jehan that bore the noblest fruits in the tree of Indo-Islamic culture. That is why Sikandra, Delhi and Agra have become veritable places of pilgrimage for the art-lovers all the world over. In architecture and *beaux-arts*, in music and mystical literature, Hindu India has been enriched sumptuously by the Muslim collaborators and all gratitude is due to them. But it cannot be disputed that Islam as a political experiment in India is a failure.

We are thankful to Prof. Ishwari Prasad for presenting this comprehensive and thought-provoking study and we expect his future volumes with eagerness.

The publishers, the Indian Press Ltd. of Allahabad, deserve full praise for showing how printing in India may be both accurate and artistic. We wish the author and the publishers every success.

INDIAN PERIODICALS

Missionary Education in a Free India

Rai Sahib L. S. Jha M. A. writes on the above subject in the March number of the *National Christian Council Review*. He is aware that the people of India intensely dislike the idea of foreigners dominating any branch of the Indian educational system, but still hopes for a future for the Missionary educational institution, provided these institutions give up the practice of imparting religious instruction and concentrate only on the following:

(i) To train pupils in understanding the value of time, in developing aesthetic taste, and in the practical aspects of life.

(ii) To continue to train pupils, but even more intensively than before, in social service.

(iii) To continue more intensively than before the physical training of the rising generation.

(iv) To give particular help in the education of girls and women.

(v) To provide for the education of pupils who particularly want to master the English language and phonetics and literature, also for those who want to learn the modern European languages.

(vi) To provide for the education of minorities.

(vii) And last, but not the least, to demonstrate the latest methods of education and training, which may have been successfully introduced in Europe and America, e.g., the Montessori method, the Dalton plan, methods of physical and moral instruction adopted by such bodies as Young Men's and Young Women's Christian Associations, education through work as tried at the Tuskuje Ins-

titute or the various ways for the measurement of intelligence or moral development which are being tried in the West.

Christian vs Moslem Missionaries

In the same journal Mr. John A. Subhan writes on the Challenge of Islam to Christianity and exhorts Christians to take up the challenge. He begins by giving an account of early rivalries between the two religions. Then he says:

Since the nineteenth century there is a change in the methods of its proselytising. What is no longer possible now by direct or indirect persuasion is accomplished by preaching and organizing their forces and by multiplying literature, magazines and papers. Several institutions have been started for the training of controversialists and of propagandists of the Muslim faith. In 1914 leading Muhammadans opened an association in Delhi, under the title of Naziat-ul-Maariful-Qorania for the training of Muhammadan missionaries intimately acquainted with their own religion, and equipped with the knowledge of English and other modern languages. Another Theological College Nadwatul Ulama, the Al Azhar of India, is going to be extended, and an appeal has recently been made (and has been generously responded to by Muslims) for new hostels having separate blocks for students from each province in India. The Theological College at Deoband is assuming a missionary aspect. In 1915, in Bengal, the 'Society of Learned Men' started the 'Muslim Mission,' which represents and controls the aggressive propaganda of Militant Islam. Another association 'Ishaat Islam' (the propagation of Islam) has sent a mission to England, where, with Woking as their centre, they are carrying on their propaganda fairly successfully, and have also opened stations in America and Africa. Never was Islam so aggressive in the days of its temporal decline as it is to day.

If the whole of the account is true it proves two things. Firstly, that the Christians are fairly up against it and, secondly, that those Moslems who blame other religionists for organising against them are not justified in so doing. The writer continues:

Never have Muslim writers devoted so much time and energy to producing anti-Christian literature in English, Urdu and Bengali as today. Never were men and money devoted to such an extent to spreading Islam and opposing Christianity as now. Muslim physicians, engineers, traders, readers, teachers, professors, even shop-keepers, are enlisted as missionaries to devote their leisure hours to preaching Islam or to writing anti-Christian pamphlets. Paid missionaries on salaries, ranging from Rs. 25 to Rs. 50, are enrolled to carry on proselytising activities.

As an illustration of the great progress that Islam has made during recent times the writer points out that

Islam has penetrated even to Tibet and numbers

almost 29,000 souls who believe in Muhammad. In Africa where the spread of Islam is surprisingly rapid and where when the Christian Church succeeds in gaining one convert Muslims boast of fifty proselytes, Muhammadans number about 43 millions. It is still more surprising to find them numbering 200,000 in America and 20,000 in Australia, lands which were not known to the early pioneers of Islam. In Europe they number almost 2,400,000. So vast is the spread of Islam. Is a nation with such a formidable population, scattered all over the world, to be neglected by the Church? Is such negligence consistent with the command of the Master, 'Go you unto all the world and preach the Gospel'? How many missionaries are devoted in India to the conversion of 69 million Muslims? What methods are being employed? What steps are being taken to make an approach to them who sit in the darkness of Islam?

The writer does not convince one why with its "darkness" Islam should present such an attractive front to would-be converts. It is evident that people are attracted by Islam because of certain innate excellences and not by mere "darkness." He then works himself up into the highest pitch of fanatical zeal and cries:

Islam, like Goliath, armed with low morality and carnal teaching, has proclaimed its challenge in a voice that is heard even in the camp of the soldiers of the Cross, and has cast from its hand a huge iron gauntlet of blasphemous literature in the sight of the Church, and with the act has cried aloud, 'I defy the soldiers of the Cross this day.' Send forth your champion that he may fight with me.' Now should it be said, as it is today the boast of Islam, 'The whole heart had gone out of the men?' Who of the soldiers of the Cross will go and meet the challenge and say, 'Thou comest to me with the sword of blasphemy, and with the spear of persecution, and with the shield of low morality, but I come to thee in the name of the Father whom thou hast grieved?' And to him who is determined to fight like David, it may be with only five stones in his sling, the promise of the Lord is with him, 'My grace is sufficient for thee, for my strength is made perfect in weakness.' Who, therefore, will respond, 'I will go in the strength of the Lord God, I will make mention of Thy righteousness, even of Thine only,' for 'The Gospel of Christ is the power of God unto salvation'.

Wanted; Indian Propaganda in England

Major Graham Pole emphasises the need for carrying out effective propaganda in England by Indians in the *Indian Review* for February. He opens his article with the following words:

Freedom is the birth-right of every human being and of every nation. Believing that, some of us in England have taken upon ourselves the

task of trying to convert our fellow countrymen to the idea that Indians and not Englishmen are the right persons to decide whether India is fit for self-government, and what the nature of that self-government should be. The argument that we are trustees for the down-trodden masses has been exploded by the fact that the masses are no less down-trodden after one hundred and fifty years of our rule and a good deal less well-educated than again one finds in some Indian States, under Indian rule, education on a much higher level than obtains under the British Raj. The die-hard element in England has to a great extent given up the "trustee" argument and frankly states that we are in India for our own benefit and intend to stay there for the same purpose.

In his opinion England is overflowing with sympathy for those who are fighting for Indian *Swaraj*, only the sympathy is potential and needs a few years' intensive propaganda to be given an active shape. The Englishmen are only ignorant of Indian conditions and that is why they are delaying the granting of *Swaraj* to India. Says the writer

This lack of knowledge can only be overcome by propaganda, by lectures, debates, pamphlets, books and newspaper articles. If we could keep up a constant stream of these throughout the whole country for even two or three years the battle of Indian *Swaraj* would be won. But there are only a few of us to do it, and we get little or no help to speak of from India. Indian *Swaraj* can only come by one of two methods, either by a Bill passed by the British Parliament or by revolution in India. The second method is untimely and in any event would result in untold suffering for the masses. The only alternative then is a Bill in the British Parliament. Such a Bill has been produced with a fair measure of backing from members of all parties in India. The Commonwealth of India Bill has had its first reading in Parliament and that or any other Bill would be sure of success provided there were a fair measure of unity behind it in India. But the Indian parties are divided.

But whoever told Major Graham Pole that the Commonwealth of India Bill sort of Freedom was the aim of the Indians? Is it merely party spirit that has kept it from getting universal support in India? We have had enough of English made things. Will our freedom too be branded "Made in England."

Postal Efficiency of India Compared

Mr. K. D. Ghose B. A. (Oxon) Bar-at-Law writes in *Labour* regarding the efficiency of the Indian postal system as compared with that of other lands. He says

While India compares favourably with certain

European countries as regards facilities for postal delivery, she is certainly decidedly inferior to England and America in this matter. Let us take the big towns as our standard of comparison. In Calcutta we have got seven rounds of postal delivery beginning with 7-30 or 8 A. M. in the morning and ending with 7-30 in the evening. In London the Postman comes and knocks at your door 8 or 9 times a day, his last welcome visit being about 10 or 10-30 at night. This delivery late at night is no doubt very highly convenient as letters that arrive in the afternoon or evening, from the provinces, do not lie overnight at the Post office but reach their destination at the quickest possible opportunity. Then again, England probably scores off better than any other country as regards swift transmission of letters. A letter posted before 9 O'clock at night in any ordinary post box will reach you in any part of England the very first thing in the morning. If one is fortunate enough to receive pleasant letters, his or her day begins well with a savoury breakfast and epistles that never fail to put one in good humour. America being too vast, does not enjoy this supreme boon. France, Germany, Switzerland and Italy are distinctly worse off in this respect.

As regards ordinary postal delivery, the Continental Countries do not compare favourably with India, the rounds of the Postman in Paris, Brussels, Rome, Berlin etc., being only 5 or 6 times and the last post being at 6 or 6-30 p.m. And I think it would not be too unkind to say that Italy and Belgium really bear a good deal to learn from India. Things are in such a hopeless condition in Italy that it sometimes takes a couple of days for a letter to reach its destination within the same Country. But there cannot be the faintest shadow of a doubt that India still lags behind so far as very swift means of transmission (of letters) are concerned. In London, Paris, Berlin etc., there are special facilities for delivery quickly of a letter or Card from any part of the town to any other—say, in an hour's time, at a little extra cost. In London it is known as the Despatch or Express System and in Paris, the "Tube" System, as the letters or Cards are rolled up and put inside tubes and transmitted underground (by electricity) to their destination in a very short space of time. Then in England, letters and Cards can also be sent from one place to another viz. Oxford to London, Oxford to Cambridge and so on, through the Express Post if one is ready to spend only 2 or 3 pence extra. India certainly should make honest efforts to follow up other Countries as regards these swift means of communication.

Good Conditions for Women Weavers

Stri-Dharama gives us the following information

The conditions of labour for its 400 women-employees in the Trichur Weaving Mills, Cochin State are very fair. Payment is made by piecework and the same for women and men. Women, however, work for nine hours while men go on for ten, which results in the men making more money than the women. When an employee is going to have a baby she is given

three months' full pay without work to cover the period when she and the baby need care and rest. The health of the thousand workers in that mill is exceptionally good as a result of the fine ventilation and the good planning of the buildings. Beauty also has not been overlooked as the montage of the mills has been carried out in the artistic style of architecture characteristic of Cochin houses and it is a pleasure to look at the place. There are plenty of trees in its compound and some of the tall coconut-palm tops seem to be peering into the upper work rooms co-operating in the busy life within. It is impressive to see the Cochin women so expert in handling the immense electrical power which turns 10,000 spindles.

Spanish Girl Wonder

Eleven-year-old Hildegarda-Fernandez Carbalera who matriculated at the University at the age of seven, has now finished three of the necessary courses for the Bachelor of Arts degree and is receiving the applause of court and country for her precocity.

Hildegarda is credited with having learned to read at the phenomenal age of eleven months. Her latest triumph was a special session of the Federated Society for the Protection of Animals and Plants, convoked to award her individual honors. The Royal Princesses Beatriz and Cristina presided, and delivered to the child prodigy a special prize for attainments in literature.

At this meeting, Hildegarda drew enthusiastic plaudits from the audience with an address. She is an accomplished linguist, and has devoted much of her talent to the piano.

Text Books of History

A Sauri Rajulu Naidu B. A., I. T. writes "The Educationist" on the teaching of history and says:

So far, the text books for Indian History which have been published and are being used in schools deal overfondly only with military and political transactions. History is the story of a nation and its development and progress through the centuries. As such political and military aspects are not the only aspects of a nation's history which deserve notice and study. The life of a nation is wide and deep and has many and various aspects; so, they have all to be studied. The barometer of the real progress of a nation is the condition of the people at large, and history, to be true and faithful, should try and portray that condition. Therefore, not merely should the political and military transactions in the life of a nation be treated of, but the social, religious and cultural aspects should also come in for adequate attention and treatment. Teachers of Indian History therefore should not merely give the political and military facts of Indian History but should try and portray the life of the people

at large, their strivings and aspirations in all branches of their existence.

A Women's International in India

Sri Dharma gives the following news

A historic women's meeting took place in January in Adyar, Madras when women representatives of 25 nations met together to exchange greetings in the great cause of the progress of women and to give news of the chief characteristics of the women's movements in their respective lands. The meeting was arranged by the Women's Indian Association, whose President, Mrs. Jinarajadasa, presided, and who felicitously christened it the first International Conference of Women in India. The occasion was auspicious for such a gathering owing to the hundreds of delegates who had come from all ends of the earth to attend the Jubilee of the Theosophical Convention, and the list of countries alone will show how varied was the interest of the speeches.—Russia, Sweden, Norway, Holland, Germany, France, Egypt, England, Poland, Yugo-Slavia, The United States of America, South America, Australia, Japan and India. From the problem of the geisha life of slavery for prostitution in Japan, through the problem of purdah in India, and of ignorance and dirt in Egypt, the aftermath burdens of war and the political possibilities of women in Europe, to the pressing need for economic equality in industrial America, there is a ring round the world of great causes relating to the happiness of women which is like a ring of Saturn, the Hinderer, hindering women's freedom and self-expression, but the meeting disclosed that there is also a great band of women dedicated to the release of their sisters in all lands. Together they were gaining strength for a good fight through happy friendship, through increase of knowledge, and through spiritual union consecrated to the service of the humanity of the whole world.

A Lead from an Indian State

While the chief Indian Legislatures have been debating and debating whether they will raise the Age of Consent to 13 or 14 years of age and finally could bring themselves only to raising it one year, from 12 to 13, an Indian State has forged ahead and the Ruler of the Morvi State and his people have taken the bold step of raising the Age of Consent to 16 years by the promulgation of a new law. Morvi is a small State in Gujerat near the Gulf of Cutch and not far from that other progressive State of Rajkot which was the first to open its Legislative Council to women and which now has several women members of its Parliament. We congratulate the Ruler of Morvi on having accomplished this much needed reform and in having set a fine example to the bureaucracy. His action carried through in spite of the orthodox people shows the Indian Government what Indians would do if left to themselves. The present system of Government in British India is really a great hindrance to Social Reform, for al-

most invariably it is afraid to incur any unpopularity not necessary for its own purposes, it weighs down the scales on the side of conservative and reactionary elements

Fundamentals of good Education

The Indian Educator publishes an article on "what is meant by National Education" by Mr. T. V. Appasundaram M. Ed. (Leeds) in which the writer points out the following as essential features of national education. The article evidently was not written with a view to enlighten Sir Abdur Rahim, but it would provide salutary reading to the fiery knight who traces back everything in the Bengali Mahomedans' brain to the cultural traditions of Bagdad and Damascus.

(1) A fundamental thing in a scheme of national education is that the organ of education should be the pupil's mother tongue. To be educated in a language other than one's vehicle of thought must cramp intellectual development in all kinds of ways. In our judgment, if the pupil is educated in his mother tongue, there will be a spontaneity of mental unfolding passing in sympathy into larger areas of interests and activity.

(2) Again, the content of the educational thought must be largely Indian. Historical traditions must not be eliminated, and our teachers and students should know what is our share in the heritage of the customs of the race. Indian history must be taught with the precision of a scholar and with the passion of an Indian patriot. If we are to teach arithmetic, the sums must deal largely with the Indian concepts. If Botany is taught, the beginning must be made with Indian botany and not with the Botany of a foreign land. The same idea can be worked out in the field of Poetry, Drama and Art.

Late Professor Harold Maxwell-Lefroy

M. Afzal Husain gives a short account of the life of Prof. Maxwell-Lefroy in *The Agricultural Journal of India* as follows

The news of the tragic death of Professor Harold Maxwell-Lefroy was received with a feeling of keen personal loss by all his old colleagues, his many pupils and his numerous friends in India, where he was so well known and so much respected.

Harold Maxwell-Lefroy was born on 20th January, 1877. He received his education at Marlborough College and King's College Cambridge, and in 1898 graduated with a First Class in the Natural Sciences Tripos. It was at the University of Cambridge that he came in contact with the great entomologist Dr. Sharp, on whose suggestion he went to the West Indies and joined the Imperial Department of Agriculture. There he started

his career as an applied entomologist and laid the foundation of his future reputation. In the West Indies he served from 1899-1903, and did much valuable work.

In April 1903, he was appointed to the India Agricultural Service as Entomologist to the Government of India (Imperial Entomologist) and joined at Surat. His Headquarters were transferred to Muzaffarpur in October 1904 and to Pusa in May 1905. The present Entomological Section of the Phipps Laboratories was organized under his supervision. He worked in this country for nine years and during this period contributed numerous papers on Indian Entomology and wrote his most useful book "Indian Insect Pests" (1906), and produced his monumental work "Indian Insect Life" (1910). In 1910 his first son died at Pusa, and this sad bereavement was the main cause of his leaving this country. He resigned his post on 30th November, 1912.

On his return to England Maxwell-Lefroy was appointed the first Professor of Entomology at the Imperial College of Science and Technology, where he created a centre of entomological education and research which attracted students from all over the Empire and sent out trained entomologists to every corner of the world.

During 1915-16, Maxwell-Lefroy revisited India as Imperial Silk Specialist and presented a report on the development of sericulture which will for ever remain a source of help and inspiration to those engaged on the extension of this industry.

His services were secured by the Military Department in 1916 and with the rank of a Temporary Lieut-Colonel he was attached to the Mesopotamia Expeditionary Force, and put in charge of the fly problem.

During 1917-18, he was attached as Entomologist to the Royal Commission on Wheat Supplies. He was the Honorary Curator of the Insect House, Zoological Gardens, London, for the last 12 years.

Professor H. Maxwell-Lefroy had a very vast and varied experience of entomological work and possessed an enormous store of knowledge based on personal observations, and his death has made a breach in the rank of applied entomologists which it will be difficult to fill.

His magnetic personality affected all who came in contact with him, and he infused in his co-workers and pupils the same enthusiasm for work which he himself possessed. Generations of students at the Imperial College of Science and Technology will hear of his zeal and enthusiasm for Entomology, his sympathy for his pupils and his anxiety to render every possible assistance to those who deserved it. In India, he will be long remembered by his co-workers as a generous officer and a perfect gentleman.

The treacherous darkness of the unknown has claimed many victims from amongst the ranks of scientists and one more name has now been added to the roll of honour. To a warrior death on the battle front is the greatest glory, and what death is more glorious than that of a warrior who, in pursuit of knowledge, falls fighting against the most terrible enemy of mankind—ignorance, and Harold Maxwell-Lefroy was killed in action on 14th October, 1925.

Progress in Agriculture in India

The same journal also publishes an account of recent progress made in India's agriculture with special reference to the work done by the Government Department of Agriculture. Regarding the improvement effected in the principal crops we are told

The improvement of wheat which is the main food crop of the people of Upper India, and which was grown in an area of over 31 million acres last year, has been carried out mainly on agricultural stations in the Indo-Gangetic plains of Northern India. The work done in evolving heavy yielding rust-resistant types of good milling and baking qualities, similar in class to Manitoba wheats, suitable both for internal consumption and export is one of the finest achievements of the department. No variety of any other crop is so well-known in India to-day as the wheats commonly known as Pusa 4 and Pusa 12. These were evolved at the Imperial Agricultural Research Institute at Pusa, and are now being grown in an area of about 1½ million acres the area is gradually increasing not only in the United Provinces and the Punjab, but also in the Peshawar Valley, North Sind, Kathiawar, the Central Provinces, the Nilgiri Hills, the Southern Shan States and the Simla Hills. They have, too, made for themselves a home even in far distant Australia where they were at several agricultural shows, carried off first prizes. In the Punjab, 8A and Punjab II are the two varieties which find most favour. In the United Provinces, the Pusa selections and Cawnpore 13 are widely grown. In the North-West Frontier Province, Pusa 1 has completely established its superiority over the local wheats. In every wheat-growing province the improved departmental wheats are slowly ousting local varieties.

The premier crop of India both as regards area and outturn is rice. On the average it occupies nearly 30 per cent. of the total cultivated area in India, this amounted last year to over 78 million acres. In the rice-growing provinces different varieties have been isolated and tested under varying soil and climatic conditions, the most promising varieties have been propagated on government or on private seed farms, and large quantities of the improved seed given out to cultivators. The area sown last year with improved seed supplied by Agricultural Departments amounted to over 600,000 acres, but this is only a part of the total area now cropped with improved seed, for cultivators are themselves slowly propagating and distributing these improved paddies. The improved Indrasail, Katakara and Dudshar varieties of Bengal, the Bhundu and Gurnati selections of the Central Provinces and the Dahai of Bihar and Orissa are now household words in their respective rice tracts.

Another crop of great importance in India is cotton, the area under which rose to 23 million acres last year. Of late years the Indian crop has been extremely important in the world's markets owing to the fact that the yield of American cotton has been below normal. The export demand for Indian cotton has risen in consequence, English spinners' takings rose from 67,000 bales in 1922 to 176,000 in 1923 and 257,000 bales in 1924.

Much of this cotton was of superior staple. As the world's demand for this fibre is increasing faster than the supply a period of high prices would appear to be inevitable.

The area under improved varieties evolved by Agricultural Departments amounted last year to over 2½ million acres, of which the greater part was sown with long staple cotton of the American type. In the Punjab the area under Punjab-American type is now reported to be well over two-thirds of a million acres. The area under Cambodia—a somewhat similar type of exotic cotton grown in Madras—exceeded 200,000 acres last year. In Bombay and the Central Provinces, too, the area being sown with seed of improved varieties is rapidly increasing.

Great progress is claimed to have been made in the breed of sugarcane. We are told

Twenty years ago it was supposed that sugarcane in India did not produce fertile seed and that there was little scope therefore for improving the crop by selection. Dr. Barber, a member of the Indian Agricultural Service, dispelled this idea by raising thousands of seedlings from cane seed at Coimbatore—a discovery which has enabled the department to breed a very large number of entirely new types, for when grown the seed resultant plant shows wide variations in botanical, agricultural and chemical characters. The promising types evolved at Coimbatore are, after a preliminary test there, sent to Pusa and the provinces for further trial. Co 205, Co 210, Co 213 and Co 214 are four of the most promising kinds evolved up-to-date. In the Punjab and the United Provinces Co 205 is doing exceptionally well, while Co 210 and Co 213, after having been tested at Pusa, are now being grown on a large scale in North Bihar where they are giving from 50 to 100 per cent. more juice per unit area than the local varieties common to this tract. Their introduction, in fact, promises to revolutionize the whole sugar industry in this part of India, where white sugar is manufactured in large factories on a scale not equalled in any other part of India.

In regard to jute we are informed that :

Two main species of jute, namely, *Corchorus capsularis* and *C. olitorius* are cultivated in India. One of the most successful pieces of work of the Bengal Agricultural Department is the isolation of superior yielding strains of both these species, and the distribution of seed of these strains to the cultivators.

Much progress has also been made, we are told, in the cultivation of *juar*, linseed, tobacco, oil seeds, fruit, potato, fodder crops, coconut tea, coffee, beans and pulses. Cattle breeding and rearing must occupy an important place in any picture of agricultural progress. The journal says.

As regards the improvement of cattle generally India is passing through a phase similar to that which prevailed in England about the middle of the eighteenth century, but with this difference:

in England the improvement of cattle by selective breeding was initiated at that time by "gentlemen" farmers, while in India it is being done by Government. The foundation of distinct breeds is now being laid by Agricultural Departments, and improvement is being effected in those breeds by selective breeding, crossing, better feeding and housing. In this way the milk yield of the herd of Sahiwal or Montgomery cows on the Pusa farm has been doubled within the last 15 years. Several of these cows have given over 6,000 lb. of milk in a lactation period, while one of the cross-bred Ayrshire-Sahiwal cows in the herd has given 12,000 lbs which is about 12 times the yield ordinarily obtained from cows of draught breeds of this country. In years to come cattle breeders will trace with pride the origin of their pedigree herds to the Pusa and other Government herds which are to be found in India to-day for from these herds bulls of good pedigree are already being supplied to cattle-owners for stud purposes. In this work of cattle improvement the Veterinary Department is rendering valuable assistance. The excellent results obtained by the Imperial Veterinary Research Institute at Muktesar in the immunization of herds against rinderpest by the simultaneous method of inoculation is worthy of special mention.

But this deals only with the *breeding* of good cattle. They suffer from a want of proper food, as

In India generally there are no pastures worthy of the name, and fodder crops as such are not commonly grown. In most parts of the country moreover, many useless cattle are kept which get their share of the very limited supply of fodder available, to the detriment of those that are deserving of better treatment. Under these circumstances no great improvement can be effected by better breeding without first improving food supply. Better feeding is as important as better breeding, in short. On Government cattle breeding farms new fodder crops such as berseem (Egyptian clover) are therefore being grown, and different methods of storing fodders tested. Accurate information regarding the digestibility and feeding value of different cattle foodstuffs is being collected, and facilities for a thorough training in animal husbandry and dairying provided by the opening of the Imperial Institute of Animal Husbandry and Dairying at Bangalore.

Tolstoy on Freedom of the East

The *Current Thought* publishes some hitherto unpublished letters of Count Tolstoy in its February number. One deals with the freedom of the East. We reproduce it below:

I know that in China there exists a teaching implying that the chief ruler, the "Bogdikhán," should be the wisest and most virtuous man, and that if he be not such, then the subjects may and should cease to obey him. But I think that such a teaching is merely a justification of power, and as unsound as the teaching of Paul circulated amongst

the European nations, which affirm that the power are of God. The Chinese people cannot know whether their emperor is wise and virtuous, just as the Christian nations could not know whether our power was granted by God to this ruler and not to that other one who taught against him.

These justifications of power could stand when the evil of power was not much felt by the people but now that the majority of men feel all the disadvantages and injustice of power, of the power of one, or a few, over many, these justifications are not effective, and nations have to alter one way or another their attitude to authority. And the Western nations have long ago made this alteration. It is now the turn of the East. It is, I think, in such a position that Russia and Persia, Turkey and China now find themselves. All these nations have attained the period when they can no longer remain in their former attitude towards their rulers. As was correctly remarked by the Russian writer Gertzen, a Genghis Khan with telegraphs and electric motors is impossible. If Genghis Khans or men similar to them still exist in the East, it is clear that their hour has come and that they are the last. They cannot continue to exist both because owing to telegraphs and all that is called civilisation their power is becoming too oppressive and because the nations, owing to the same civilisation, feel and recognise with especial keenness that the existence or non-existence of these Genghis Khans is for them not a matter of indifference as it used to be of old, but that almost all the calamities from which they suffer, are produced precisely by this power to which they submit without any advantage to themselves but merely by habit.

In Russia this is certainly the case. I think that the same is true also of Turkey and Persia and China.

For China this is especially true, owing to the peaceful disposition of its population and the bad organisation of its army, which gives the European the pretext of robbing with impunity Chinese lands under the pretext of collisions and difference with the Chinese Government.

The Chinese people cannot but feel the necessity of changing its relation to power.

Islam and Christianity

The Islamic World says

Islam and Christianity are engaged at present in a life-and-death struggle. The Gospel preachers are doing their best to win over a greater part of humanity to Christ. They are bent upon recruiting their evangelistic efforts. Although they work in all creeds and persuasions, Islam is their special target. Rev C F Saywell writing in the *Church Missionary Review* makes a strong appeal to work among Muslims. He says—

The Moslem world is accessible to the Gospel as never before. Of the total Moslem population of 234,000,000, no fewer than four-fifths are now accessible to every method of missionary approach and movements towards Christianity are reported from Abyssinia (where there are now about 7000 converts from Islam,) Persia, and elsewhere. In Java there are 37,000 converts and in Sumatra over 8,000.

Take again the *Mass Movements* of Africa and India. Every year thousands are entering the Church by baptism in Nigeria, particularly Southern Nigeria. Last year in connection with C. M. S. alone there were 12,700 baptism in that part of Africa.....in India we have a similar story. In the Telugo mission of South India the number of the Christians has doubled in the last five years—it now stands at something over 68000 for our own church, and in all Churches over 320,000

The Romance of the Druse Revolt

In the same journal we find an interesting account of how the Druses were led to revolt against the French in Syria. We give it below in part

It all happened about a year ago. Adhan, a famous Bedouin Sheik, was suspected by the French of plotting against them and they ordered his arrest. Adhan had once given Soltan, leader of the Druses, refuge with his tribe in the desert, and so upon hearing of the intentions of the French he fled into the mountains of the Druses, toward Crea, where Soltan's castle is situated. Several of Soltan's men were with him.

They were already in Druse territory some four miles from the castle, when the French soldiers overtook them and arrested Adhan. As they were leading him away he shouted to the Soltan's men—

"I am in the mountains of the Druses as the guest of Soltan Pasha Atrash, and I am on my way to his house."

The Druses hurried on to Crea, to the Atrash Castle. When the Soltan heard what had happened he burst into tears. Then he went into his chamber and prayed for many hours. The next morning he sent a letter to the commander of the French garrison at the citadel at Soueda, which read: "This man, though he has not set foot in my house, came as my guest. I beg you, by our sacred laws of hospitality, to give him provisional freedom on my personal honour until his case may be heard. There was no answer. That night Soltan called his two brothers and five of his bravest warriors. When they arrived at Soueda they found the jail empty. The French, anticipating Soltan's attack, had taken Adhan into the citadel, where they had barricaded themselves.

Soltan returned to Atrash. He declared war on the French. After sending out the general for mobilization, which brought to Atrash within twenty-four hours 10,000 superb troops, fully equipped, Soltan called out 400 men of his personal bodyguard and headed Soueda. He intended to forestall any attempt by the French to remove Adhan to Damascus.

As they came to the top of a little hill on the way to the city they saw on the plains below three tanks crawling their way to the citadel. Soltan instantly divined their purpose—they had been sent to take Adhan from the fortress to Damascus.

As he saw the tanks lumbering over the plain Soltan seemed to go mad. Then, with a terrible roar, he sent his horse flying down the hillside. As he rode at a frantic speed towards the tanks he threw his rifle aside. The tanks—two-men affairs—opened fire. The bullets whistled by him. On he rode. So fleet was his white horse that his men were almost 400 yards behind him.

Full tilt alongside one of the ambling iron fortresses he drove his horse. With one leap he was atop the tank. The men inside, because of the heat and because they had feared no attack, had left the hatch open, he tore his scimitar from his belt and dropped inside. With furious sweeps of blade he slew both men.

In the meantime his men had captured the two other tanks and killed their crews.

But the retaliation of the French was swift. They sent a message to Soltan the next day telling him they were going to destroy his castle, and gave him time to remove his most valuable possessions. Then aeroplanes came, dropped tons and tons of bombs on the castles. Soon it was only a heap of tumbled stones.

Three months later the French, for political reasons, made peace with Soltan. He exercised great influence throughout Syria, moreover, the French themselves really admired him a great deal. General Sarrail offered to rebuild the castle at the expense of the French Government. In an eloquent letter Soltan refused. A house that was not able to protect its guests ought not to be allowed to stand, he declared. The French had been right in destroying it.

This is the man who has led proud Druses into another fierce revolt against the French.

"He is the bravest man in the East," says William Seabrook, traveller and writer, who with his wife, recently returned from a visit to Soltan and his cousin, Hussain Pasha Atrash. He is absolutely fearless in battle. And yet the most curious part of it all is that when he is not in battle he is as kind and gentle as a woman. The man is almost Christlike in his holiness. He is an ascetic and prays continually.

"Throughout Arabia he is noted for his goodness and kindness. He was coming home one day from the desert on his white mare. It had been a very hard day for him and he was worn out. He met an old wanderer on the road, who asked him the road to Soueda. Tired as he was, Soltan dismounted, placed the old man on his horse, and walked alongside all the way to Soueda. It's small wonder that songs are sung to him all over Arabia."

Calcutta University Criticised

The Educational Review says

It is a great pity that the University has yet done very little in the two directions in which reform is urgently needed, the raising of its academic standards and the improvement of its schools. Its degrees have now become a bye-word in the educational world of India, though there are some persons of outstanding merit hailing from the province of Bengal. Its products are being beaten hollow by

graduates of other Universities in all competitive examinations and the average is ridiculously low. Secondary education in Bengal is easily at a lower level of efficiency than in any other province of India and the University cannot free itself altogether of all responsibility in the matter. It will pay no attention to the nine hundred schools which send up candidates for its Matriculation examination though it is not ashamed to lead a parasitic existence by living more or less on their examination fees. The Government has been anxious to start a Board of High School and Intermediate Education but the main obstruction is the University of Calcutta which wants control over the Matriculation examination and wants to appropriate all the money of the ill-leaked boys who apply for the examination. We hope the University will soon turn a new leaf now that it has won its main point of getting money for the post-graduate department of the University.

Indian Forest Service and Naval Training

The same journal also says

In spite of the great forests available in India, it has till now been the practice to send members appointed to the Imperial Forest Service to England for special training. This ridiculous state of affairs will now stop and arrangements will be made to further expand the Forest Research Institute at Dehra Dun to enable the highest training in the subject to be given in this country. Together with the formation of an Indian Navy about which His Excellency the Viceroy made an announcement the other day, there is to be provision for the training of Indian cadets for service as naval officers.

The "Blue Stocking"

The following unkind lines appear in *The Sind Collegiate Miscellany*

Have you never seen an old young woman, forbidding, with monster goggles which remind you of the glasses which the men in Mars are supposed to wear—bony, angular, lean with her clothes hanging on her person as from a clothes' peg—a woman who is a walking library and a mine of useful knowledge? Have you never met with a woman who had found her books but had, in the process, lost her looks? I am sure you have, for Blue Stockings in colleges are as common as Blue Bottles in the season.

The Blue Stocking has heart-breaking habits. She is up even earlier than the lark, and applies herself to her books with a zeal which ultimately gives her a stoop. She disdains such prosaic things as regular hours of food and sleep. To her, man does not read to live, but lives to read. She makes examinations and a first class the end and object of her life.

No doubt, the Blue Stocking comes out from the College a veritable encyclopedia. But in the process the price which she pays for this doubt-

ful gain is terrible. She loses her peace of mind, she loses her health; she loses all pretensions to good looks. She comes out from college a veritable wreck and a fright. And what is the education for which she has paid this stunning price? She knows Bacteriology, but cannot look after her own health. She is acquainted with the Vernier, the Coefficient of friction, the refraction of light and the angle of incidence, but she does not know enough of the law of motion to move out of the way when a car threatens to run her down. She knows that cutlery can be had from Sheffield, but she cannot sharpen her pencil without slicing her finger. She is acquainted with the latest theories of Eugenics, Psycho-analysis, Freudism, and Relativity, but she is herself incapable of becoming a mother or of nursing a baby. She knows that figs can be had from California, sausages from Chicago, and vodka from Russia, but she cannot turn her hand to make an omelet, or cook a plain dish of rice. In short the Blue Stocking knows everything but can do nothing.

And what a world of beauty, and what a sense of life the Blue Stocking misses! What if she knows the parts of a flower, the stem, the stamen, the pistil, does she appreciate the marvel of a bed of Chrysanthemums? What if she knows her Dickens, her Shakespeare, and her Tennyson by rote, has she ever lived one single hour of crowded life?

The youth who has written the above had evidently forgotten at the time of writing that not all (as a matter of fact only a few) girl students who are good at study are "Blue Stockings." Many first-class girl graduates retain their good looks and make excellent mothers. And very many of them cook as well as and perhaps better than ignorant women. The "Blue Stocking" is a fast disappearing species and most modern girls value health and looks as well as knowledge. Moreover, there are numerous young students of the male variety from whose shoulders shawls flutter as flags from a flag-staff, whose goggles and general appearance would send shudders through the Martian man, and such male members of universities are commoner even than "blue bottles in the season." These males go on adding to the convolutions in their brain at the cost of their muscles and very soon they begin to rival the match-stick in thinness of body and inflammability of head. They stoop till one fears that they would trip themselves up by their own head and look not at all as if they would have been accepted as models by the Greek sculptors. They mug up the labours of Hercules but pant and gasp to lift half a maund; they recite tales of bravery and courage but funk the street dogs; they know how easy it is to produce every kind of goods at home but clothe themselves from shoe-nails to the thread used in sewing

their cap, in foreign stuff; they know all about fighting from *Kurukshetra* to the breaking of the Hindenburg Line but end up every friction with "I beg your pardon"; they know every bit of art, æsthetics and good living but go about defacing furniture, disfiguring books, spitting and howling like savages; and the ideas they have of "hours of crowded life" make honest citizens pray that their lives be packed with eternal loneliness

Hinduism and Buddhism

Pandit Shyam Shankar MA (Lond) writes in the *Maha-Bodhi*

It is erroneous to speak of Hinduism and Buddhism as two distinct religions. The relation of Buddhism to Hinduism is that of Puritanism to Christianity, *i.e.*, of a part to a whole. Hinduism is broad-based enough to contain within it Buddhism, Jainism, Vedic ritualism, Vedantism, Varshnavism, Shaktism, Shaivism, Ganapthyism, Saurism, Smarthyism, Sikhism, Brahmoism, Aryaism, Animism and many other ISMS *i.e.*, sects and subjects. If we consider the term "Hinduism" with strict logic we cannot but conclude that it is a miscellany of all the Indian systems of religion derived from the Indo-Aryan parental stock as well as from its interpenetration with the Indo-Non-Aryan systems of religion

Early Marriage

The following quotation from an article by Dr T Bowen Partington in *Health and Strength* as reproduced in *The Health* will be found interesting.

I would warn young men and women against marrying too soon and thus becoming immature parents. All leading physiologists place man's maturity at about twenty-four and a woman's at twenty. If continence in thought and life controlled our social relations, it would be best for the human family if marriage did not take place until maturity. Under present conditions they often marry before, but for sixteen, seventeen and eighteen year old girls and twenty year old boys to marry is a decided physiological and psychological mistake. Children cannot parent normal children.

A great sociologist says that four to six per cent more children will die in their first year who are born of mothers who married at eighteen than children whose mothers married at twenty, and that six to ten per cent more children whose fathers married at twenty will die in their first year than children whose fathers married at twenty-four.

In conclusion, I appeal to every one of my readers. Do not rob your children of their birthright. If the initial moment of every child born into this world were intelligently planned, its parental rights respected, its advent warmly welcomed, its environments wisely chosen, we should see the next generation greatly superior to this.

The Hard Lot of Teachers

Satya Kumar Ghosal writes in *The Teachers' Journal* on the hard lot of the present day school master. The beginning of his articles which we quote below, is bitter but the writer shows later on that the bitterness is not unprovoked.

There was a time when those upon whom devolved the charge of education—the gurus of the ancient times—occupied a respectable, and perhaps an enviable position in society, being held in high esteem by all, high or low, rich or poor. But O the times! O the manners! From what a height the teachers of the present times seem to have fallen, fallen on evil times and evil tongues too! They seem to have been born to be drifting listlessly on the current of life, there being no one on earth to look to their interest and welfare, even to keep them from starvation in these days of hard struggle for existence. They seem to be treated like the most worthless and useless beings on earth—the scum, as it were, of society. Yet it is they who have been entrusted with the most sacred and the most onerous task of educating the little children for whose future it is the teachers alone who are accountable to the guardians and the educational authorities

The Milk Supply of Calcutta

The Bengal Co-operative Journal gives an account of the above. The contributor is Mr S K Ganguly, Assistant Registrar of Co-operative Societies, Bengal. We are told

The milk supply of Calcutta is obtained from three sources—

- (1) From mofussil,
- (2) From the town itself, that is, from local cowsheds,

- (3) From the suburbs of Calcutta

It is estimated that about 3,000 maunds or 240,000 lbs are consumed daily in Calcutta. About 800 maunds of milk are brought daily *viz* Sealdah Station and about 50 maunds *viz* the Howrah Station—the farthest station from which milk is brought being about 25 miles. There are about 15,000 milch cows and about 1,100 milch buffaloes in Calcutta (Mr J R Blackwood's Survey and Census of Cattle of Bengal). The total quantity of milk derived from the cowsheds within the present municipal boundaries of Calcutta is about 1,000 mds. Lt-Col Matson's figure in 1918 was about 500 mds and this was for the old boundaries of the city. The quantity of milk which is derived from the suburbs of Calcutta is also about 1000 mds.

The population of Calcutta is 10,77,264 and the daily supply of milk in Calcutta is estimated to be 3,000 mds. So the average supply per head of

population is 17 chittacks. The average supply available per head of the population in the city is thus much lower than what it ought to be. Allowing half a seer per head—an estimate which is by no means excessive or extravagant—there should be a supply of 13,465 mds. The present supply is thus deficient in quantity.

Of course this statement does not take into account the facts regarding whether or not there is a demand for further supplies of milk. The poverty of the majority of Calcutta's 10,77,264 men, women and children stands in the way of their consuming half a seer of milk a day. We are further told that

The milk trade is mostly in the hands of the coolies who have no idea of the principles of economic dairying and who are indifferent to the laws of sanitation. The live stock has been deteriorating in consequence of unscientific breeding and want of proper feeding, tending, housing, etc. The price of milk has doubled within the last ten years and is likely to go up still further unless there is a considerable improvement in the present method of production and distribution of milk. This, in brief, is the nature of the problem with which the city of Calcutta is faced.

Co-operation has developed to a considerable extent in the milk trade. The writer says:

The Co-operative milk organization as it exists at present is composed of two parts:—(1) the *Jural Societies* which are the producing centres and (2) the *Milk Union* or the distributing centre.

The society is the unit of the organization and this unit generally covers a village and its members are the *bona fide* milk producers whose primary occupation is agriculture, with milk production as their secondary occupation.

The Union does useful work for

The Union takes delivery of milk at certain stations or collecting depots from societies. The Union maintains group depot managers who transport the collection by rail direct to Calcutta. In Calcutta a responsible officer of the Union takes delivery of the consignments and distributes it among consumers.

The Union has got in its office a pasteurizing plant and a boiler. All distributing cans are properly sterilized. Milk is generally distributed raw to individual customers but the supply to the hospitals is pasteurized. The Union has got a motor lorry and has also introduced the cycle lorry system of delivery. The milk is also carried by hand carts and coolies for delivery to customers. The Union is at present supplying milk to 5 hospitals, 4 hotels and a large number of individual customers through a number of depots.

This co-operative organisation has been fairly successful as can be seen from the following figures.

Profits of the Milk Union.

Year.		Profit.	Loss.
1919-20	5,515
1920-21	...	2,173	...
1921-22	...	8,590	...
1922-23	...	13,524	...
1923-24	...	15,472	...
1924-25	...	20,146	...

Other details

Year	No. of Societies	No. of men	Maximum daily yield which is obtained during February to July	Minimum daily yield which is obtained during August to January	Average output per member
1921-22	47	2,168	32 mds	19 mds	56 seers

Indian Religion, Ram Mohan and Rabindranath

Dr Sten Konow writing in *The Visva Bharati Quarterly* on Indian Religion of To-day, says that whenever in ancient times outside impulses and ideas entered India they were so thoroughly Indianised that we could not now distinguish them from purely Indian thought of those days. Mahomedan thought, though partly utilised by Hindu religious reformers such as Kabir and Nanak, failed to exert any great influence on the religious life of India and showed more of conflict than co-operation and interpenetration with Hinduism. Then

The Portuguese came with the double aim of winning riches and of preaching the gospel of Christ. The result was some Indian converts and a small ethnic element of mixed descent. But it is hardly possible to point to any interchange of religious ideas, or indeed of any perceptible result of this Christian propaganda. It is easy to understand why such was the case. In Indian civilisation religion has always played a prominent part, and the leaders of Indian thought have not been inclined to allow themselves to be influenced by ideas and conceptions which were avowedly in conflict with their own, especially when they were backed by physical power. The Indian thinker is open to conviction, but not to force.

Then came the English who displayed an extreme religious toleration and spirit of non-interference. This brought the English and the Hindus to approach one another in a friendly spirit and led to developments in the 19th century which may well be considered as the beginning of the Modern Era in India. Says Dr. Konow

There are not many names in modern History which more deserve to be remembered with gratitude than that of Rammohan Roy (1772-1833). Already as a child he showed that to him religion was a reality and not a form of outward worship. He had to leave his home, because he could not reconcile the numerous ceremonies of orthodox Brahmanism with the craving of his spirit. He became homeless, and during his wandering he tried to grasp the truth of all religion in intercourse with the particular religious conceptions of Buddhism, Hinduism and Christianity.

Ram Mohan Roy studied Christianity and found in it, not the religion for a new India, but an inspiration to infuse new life into the petrified remains of what was India's spiritual glory in the past and present it to the nation which was fast degenerating because of the absence of a truly spiritual life. Of Ram Mohan Dr. Konow says

Rammohan Roy's attitude is, in a way, a revolt against the worship of authority, which has so often framed the religious mentality, not only in India but all over the world. The Buddha in his teaching also refused to recognise the authority of the Vedas. But then his case is entirely different. He believed that truth had revealed itself to him, in its purity, for immediate intuition has in India been considered, since the oldest times, as the highest realisation,—and he simply proceeded to expound the truth as he had seen it, and thus founded a new religion. Rammohan did not lay claim to direct revelation. He was a man of the modern age, who used his own intelligence and his own heart as tests of the ancient scriptures, and in so doing he showed to his compatriots how the beliefs of their ancestors could be reflected in the modern mind and thereby be reborn, how the superstitions and later unworthy accretions could be eliminated therefrom, and yet the old fundamental notions held firm.

Every religious tradition abounds in things which the modern man cannot accept, nevertheless only the superficial critic will draw therefrom the conclusion that the religion itself is at fault. In the East as in the West there have been many who have made this mistake, and it is well for India that a man like Rammohan became the leader of the modern development, when the influence of the West began to make itself felt in Indian thinking. He was too great a personality to be blinded by appearances, and he was too deeply imbued with Indian religiosity to become dazzled by the apparently more modern tenets of Christianity as preached in the 19th century. *I am not sure that Rammohan's importance has always been realised in India.* I have been told that some people have found fault with him because he had come under the influence of European thought. Such critics, however, overlook the fact that religious ideas are not mathematical formulae, with a meaning which has the same value at all times. There is progress and development in human civilisation, in which progress all the civilised peoples of the world have their share. And religious ideas have also their life and their growth. The same formula does not mean the same thing to us as to our ancestors. Modern man is a child

of his time and his mental horizon can no longer be entirely shaped by the development within one single country.

Two alternatives open to Rammohan were, either to accept the tradition as it was together with everything in it against which his inner self revolted, or to throw it overboard entirely. He could not do the former and he was wise enough not to do the latter. He knew that a religious belief is not like a dress which can be worn or changed at will. With a thousand threads is the religious belief of today connected with inherited notions, which cannot be thrown away without injury to the deepest human feelings. Rammohan, therefore, showed the way to a renewal of ancient Indian religiosity in a shape which is not repugnant to the modern mind and though the precepts of Jesus may have brought more than one Indian over to the Christian camp, there are many more who have learnt from him to find rest and hope in the belief of their fathers.

Rammohan was as you all know, the founder of the Brahma Samaj, which has not it is true, many enrolled members, but which has nevertheless exercised an unexampled influence in Modern India. It has become one of the most important centres of those efforts which aim at creating a modern India, without severing connection with the past. Rammohan's successor, the noble and unselfish Debendranath Tagore (1817-1905), carried on the work begun by the founder and won new friends for the young movement. The purity of his life and the nobility of his character secured him a firm place in the estimation of his people, who still speak of him as the Maharshi. His religious mentality was of the same kind as Rammohan's, and his conception of God, Who should only be worshipped in the spirit, was unitarian in its wideness. But he was none the less thoroughly Indian, and he saw in the Upanishads the purest source of religious truth. He was still more convinced than his predecessor that Christianity could not give India what it needed, and on the whole his leadership meant a distinct strengthening of the national base of the Samaj.

It is of interest to take note of this, because it is typical of the whole development. Foreign elements may be assimilated, and there may be visible traces of a strong impulse from outside, but the Indian framework is so substantial that it overshadows the whole.

Dr. Konow draws important conclusions from his study of the history of the Brahma Samaj. He says

The development of the Brahma Samaj, as this was evolved out of the intercrossing of Eastern and Western notions in the 19th Century, seems to me to teach us two different things.

In the first place a unitarian creed will naturally take its colouring from the spiritual atmosphere of the individual nation within which it gets a footing and I would like to add that it can never become a living faith unless it does so, because it will otherwise remain a mere formula, without the living contents which the emotional growth of a people brings about. I therefore think that every attempt at creating a really universal creed through a fusion of the religious ideals of the different peoples and civilisations will always result in failure.

In the second place I believe that we can draw the inference that a people like the Indian, with a poor and rich spiritual development, has nothing to fear from the influence of foreign civilisations, and need not shut the door against Western ideas. They will not overgrow the national substratum, but may become like a looking glass, reflecting it in its purity, free from the impermanent accretions which have grown up through the vicissitudes of its historical development. It conduces only to the good of men to be rubbed against other men.

Besides, the policy of the closed door is not any more possible in the modern world. No nation can shut its eyes to the fact that there are other nations, with their different interests and ideals. Seclusion will lead to starvation, not only physically, but also spiritually. Just as we have to import foreign goods and adopt foreign inventions, we must also accept such thoughts and ideas as are useful for us. We must all the while, however, take care to maintain a certain equilibrium between exports and imports. A too great excess of the former is a sure sign of poverty.

The question presents itself whether we should accept as final the conclusions that there is little or no hope of uniting the ideals of the East and West in a common creed, which may lead them on to exert themselves for the sake of higher and universal aims:

He does not find much to hope for in the religious zeal of Christians, Buddhists and Mahomedans as manifested through missionary activity. For

In all these movements we often see a tendency to adopt the methods in vogue in the past century, competition and struggle for supremacy. The immediate aim may not be, in this case, to acquire power and prosperity, but the main endeavour nevertheless is to win over as many people as possible to one special faith. And the question naturally presents itself will not this spiritual competition repeat itself in the struggle for wealth and influence, as happened in the past century?

Then Dr Konow says

There is another way. Each people, each civilisation can make an attempt to purify its highest ideals, in the light of the spiritual aspirations of the others, and then all of them can join together in the promotion of such aims as are common to all. There must be no abandonment of individuality, nor must any individual be missing, because then the harmony would be incomplete, and for the same reason there must not be any patronage of one by another, but a free co-operation of civilisations and nations, where each is able and willing to give of its best. Each must be allowed to do so with all the weight of its individuality, a reservation which it becomes necessary to emphasise because we have become so accustomed to neglect those who cannot hold their own. This is the way pointed out by *Visva-bharati*, Rabindranath Tagore's gift to his nation and to humanity.

Visva-bharati has been described as an international university, but it is not meant to be an ordinary centre of research, like the old universities of Europe. Research is to be carried on with a human interest and without bias or prejudice. And the aim is partly of a practical kind: to train

Indians to greater efficiency in agriculture and handicrafts, to teach them how to prevent and to combat diseases, etc. I should like to say in this place that I have been much impressed with the excellent work carried out in connexion with the *Visva-bharati* in its department of rural reconstruction, called Sriniketan, in Surul.

But this is only a part of the whole, and the leading idea is a much wider one. It has been evolved under the impression of the world-wide disaster brought about by the great war and the mentality which led to it, and it is the result of a fervent wish to create a new atmosphere in the world, as the only means of avoiding a repetition of the disaster. Power and might cannot remain the highest aims of the peoples of the world. Man will never cease to strive for material prosperity, it is true, and his endeavours for such purposes will lead to material progress and further the development of human civilisation, as they have done at all times. But man must learn to understand that his own interests are intimately bound up with those of other human beings, and also that riches and wealth can never satisfy the innermost cravings of the heart. Its ultimate longing goes beyond them, towards the universal sphere of harmony and bliss, towards transcendence. And it is only this higher realisation which is able to sanctify life itself, and to make man feel that he has done justice to his innermost self, because he is not only an individual but also a man, with higher ideals and broader aims.

Respect for his fellow-beings and sympathy with their highest longings is the necessary condition of the Indian conception of divinity. *Visva-bharati* therefore tries to extend the mentality which meets us in Indian *bhakti* so as to comprise the whole human world. It invites men from all parts of the globe to come together, in mutual respect and good-will, in order to learn to know each other, as human beings whose ideals may differ, but who all belong to one higher Unity.

But, as its Founder knows, this aim cannot be achieved unless each civilisation, each nation, is able to present its highest ideals with all the strength and power of its individuality. The immediate aim of *Visva-bharati* must therefore be to strengthen the spiritual force of Asia and especially of India, so that its high value may become apparent to the whole world. That is necessary for the sake of India, as for that of the world which has shown a tendency to overlook what is weak. While, therefore, I cannot help looking on the *Visva-bharati* as connected with the movement, which can at the present day be observed everywhere, for making India strong and powerful, it must not be lost sight of that the means aimed at is not to develop a spirit of contention and competition, but one of co-operation in order to widen man's horizon and teach him to look beyond the interests of the moment, and even those of the individual person and nation, towards the higher sphere where all men can meet, in mutual respect and good-will, for the promotion of the happiness of the whole world.

India, where the idea of *Ahimsa* had its home, has her mission in the world, but cannot fulfil this unless she puts her own ideals, undiluted and unmixed,—such as are purely Indian—into the scales. She must remain *herself*, for the sake of the world, as well as for her own sake. For she

must make certain that, in the harmonious concert of the world to which we look forward, her own tune is not missing.

It is a small beginning which has been made,—we who have worked in the *Visva-bharati* know that only too well. But we also know that spiritual ideas cannot die, if they are filled with truth. They will live and sprout, and when the powerful political constellations of the present day

have crumbled to pieces, they will survive and shape the future. We confidently hope and we firmly believe that Rabindranath Tagore's ideal is an eternal truth, and not only a dream, that the day will come when the world will speak of him, not only as a poet, but still more as a prophet, and above all as a healer, who has laid the world under deep obligation in showing the way towards good will, towards harmony, towards peace.

FOREIGN PERIODICALS

Eternal Mosul

The *Literary Digest* furnishes the public with the Turkish view of the Mosul "decision." It is quite evident from the following that the Turks seriously dislike the recent arrangement.

An official Turkish view is that of Towfik Rushdi Bey, the Turkish Minister for Foreign Affairs, who in an interview given to a Serbian newspaper, the *Belgrade Vreme*, declared:

"We cannot waive our rights on Mosul. I do not mean 'we do not wish to waive them', but that we cannot waive them.' There are means by which the dispute may be solved and our sovereignty maintained. Our proposition for a plebiscite was refused. Then let them find some other solution; but we want it well understood that we never will waive our rights of sovereignty on Mosul. The only unsolved question existing between Great Britain and Turkey is the question of Mosul. Therefore, advantage must be taken of this fact and this dispute must be solved peacefully."

The "British plaything, called the League of Nations," irately remarks the Constantinople *Journalist*, has unanimously given Mosul to Irak, "that is Great Britain," and it declares its belief that the British have "vowed never to come out of Mesopotamia." In the view of this newspaper—

"This decision is a proof that the institution called the League of Nations does not in the least respect the ideals of justice and right. It proves once more that the League of Nations is the servant of the strongest, namely, Great Britain, and is far from being an international institution of justice, which respects the rights of nations. Only in medieval ages do we encounter such unjust and tyrannical decisions.

"So long as the plaything called the League of Nations can neither give Turkey her rights nor deprive her of them, its decision is quite worthless to us. As the case was during our campaign of nationhood, so now the rights of the Turk are safe under the sharp bayonets of the Turks, and we know perfectly well how to take back with our own hands 'Turkish Mosul'—given to Great Britain by the League of Nations just as we saved Adana, Broussa, Smyrna, and Constantinople. So we will neither recognise this decision nor obey it."

The Constantinople newspaper goes on to say ironically that the whole affair is a comedy, but it may yet bring the Turks and the British face to face, and then the comedy may be changed to tragedy, and it adds a Turkish friendly warning to Britons.

"If the British public are not on the alert and blindly follow their statesmen, sooner or later they will be witnesses of a slaughter-house. It will be a real pity for humanity if the British nation be deceived, because, we may say, they are still slaves to the intrigues of their statesmen."

And with the Russo-Turkish treaty behind them the Turks will not stop at anything to retain their prestige intact. They think that

The British plan is to develop negotiations on the one hand and on the other to create disturbances on the Mosul front. Naturally, the British with their usual alertness will see that the blame is thrown on the Turks. It is not improbable that some day a fierce and bloody battle will take place in the East.

"We should not be surprised if Britain continues her provocative actions. She will send mercenary armed brigands to our borders, and quite naturally the Turkish forces will march against them. The next day the British Foreign Secretary will make outcry in order to raise the rest of the world against us. In as much as this is the situation, Turkey will naturally have to make all provisions for her safety."

In view of the fact that a treaty of friendship and mutual benevolent neutrality has been signed by Russia and Turkey, it is of interest to note a statement given by Russia's Foreign Minister Tchitcherin, to the *Berliner Tageblatt*. Mr. Tchitcherin is quoted as saying that after the Locarno Treaty the international situation became acute, but the Mosul decision made it even perilous, according to him and he added

"Naturally, Turkey does not desire war, but, no doubt, the Turks are prepared for any sacrifice for the most vital question of Mosul. Instead of solving the controversy the League of Nations has created a new crisis. Russia will not join the League of Nations because it is not an institute for peace, but, on the contrary, serves to brew intrigues.

The Russo-Turkish Treaty must not astonish any one. It was quite natural that the Eastern nations should sign, a treaty for their safety as the Western nations signed one for theirs at Locarno."

The useful White Ant

The following account appears in the *Literary Digest* and may console those who have suffered from the white ant's destructive inroads

The name of the white ant, or termite, has so long been a synonym for destructiveness that it is surprising to learn that it has its good points. Franz Spelling states as a result of his observations during ten years in the former German colony of East Africa, that these creatures play an important role in the economy of nature. He gives an interesting data in *Kovmos* (Stuttgart) concerning these creatures, particularly the species *Termitis bellicosus*, the one most frequently found in his vicinity, beginning by the statement that to the white ants the natives of the immense and barren plateau of Uuyamwezi are largely indebted for their crops of maize and millet. He writes in substance:

"The ground, mostly a coarse soil derived from the weathering of granite rocks, has but little fertility, and the art of improving it by fertilization is unknown to the negroes. But the termites crumble the layer of humus much as earthworms do in our own latitudes. Furthermore the fertility of the ground is improved above all by their habit of building their moundlike nests, which consist chiefly of a rich and fertile loam. It is almost incredible what enormous amounts of earth are thus brought from the interior to the outer surface of the land. The natives have good reason to treasure these nests, which rise to a height of six to ten feet upon a base 25 feet in diameter. I have often seen a hot fight for possession of such a mound. The only way of settling the combat was to divide the fields of the two sets of combatants by a line drawn through the middle of the mound. The mounds are scattered like oases, dark green and thickly overgrown, in the otherwise semi-barren fields."

The crops specially raised on these fertile mounds are beans, onions and tobacco, and the author tells us that if the Africans were not so lazy and indifferent to their own welfare, they might soon possess rich fields by the mere process of scattering the soil in the nests over the rest of the field during the rainy season. Another important use of the nests is the employment of their material for building. It makes excellent stuff for walls and for the floors of the native huts. When the millet crop is ripe an excellent threshing floor is obtained by razing the mound, pouring on water, and stamping it down with the feet. We read:

"By hollowing out the termite mound, the native smiths make themselves a sort of furnace, in which they smelt copper in a primitive manner."

"Even Europeans have learned to value the termite loam, since mixed in the right proportions

with sand it furnishes an excellent material for making bricks and tiles."

"The natives are great lovers of the fungi which the ants raise, and each year in January and February they excitedly await the day when suddenly the entire surface of the termite mounds is covered with a yellowish granular deposit which contains thousands upon thousands of fungi spores. The termites have brought them forth overnight from the interior. The layer covering the mound consists of the same light porous masses of fungi which are found in clumps of varying size in the fungus gardens inside the nest. The entire mound is at once covered with grass and green twigs in order to protect the fungi from the rays of the sun, which are injurious to their growth. After another four and twenty hours the harvest is ripe. The mound is now covered with countless small cap fungi or 'mushrooms' about two inches in length and about half an inch in diameter. The mushrooms are quickly gathered and dried in the sun, being utilized the year round as a favourite dainty in the form of a stew or broth. One morning to our great astonishment we found the walls of our kitchen thickly covered inside and out up to the roof with these little mushrooms—for us a gift of doubtful value under the circumstances."

Another delicacy provided by the termites consists of their own bodies and those of their larvae, both much prized by the native tribes.

The Religion of the Modern Japanese

The *Literary Digest* gives us the following interesting account of the religious quest of a Japanese intellectual and of what he found at the end of his quest:

To be compelled to choose among a variety of religions and, in the end, to weld them all into one religious faith is the experience of a Japanese writer, which is interestingly set down in the New York *Herald Tribune*. Yusuke Tsurumi, a well-known contributor to American magazines, was brought up amid the formalities of Buddhism and Shintoism but it was not until the invasion of Christianity that he began his quest for God. He was seriously troubled by some of the teaching he heard from missionaries. He could not believe that his mother, who had given him her all, would be wiped out of existence because she had not known the Christian faith, he could not believe that immortality was denied his ancestors, who had not had the opportunity of hearing the Christian Gospel. He could not accept the theory of original sin, nor could he believe that his soul's salvation hinged upon baptism. But he continued his quest for a faith or religious philosophy to which he could attach himself and in the end he found one. But he does not give it a label, and he does not put his creed in words.

The rest is in the words of Mr. Tsurumi:

"The flood of Western science and Christianity that invaded the country after 1898 stirred the conscience of the whole nation. The vague loneliness of my early boyhood gradually changed into

a strong religious quest. I was rather precocious and read a great deal. The books that came my way were, of course, different from those that would come the way of an American boy. In the case of the latter, Christianity is the religion. In my case I was thrown into the formidable problem of the conflict of religions.

"The religious and philosophical books that come the way of a Japanese boy or girl are of four different kinds—Buddhism, Shintoism, Confucianism and Christianity. Your aching conscience and inquisitive mind have to grapple with this stupendous problem of comparative religion. But as a nation we are not strong on speculative philosophy. We have a nature that craves for action and not speculation. Therefore, we look at religion not so much to see how it philosophizes as to discover how it functions. We look at the manifestations of religion in human conduct. Of course, I was not conscious of these things when I was going through the first conscious quest of religion."

"When I tried to approach religion through the question of eternity, I failed. When I was told that the right approach to religion was the recognition of original sin, I could not accept it. Yet there was something that made me constantly pray. It gradually dawned on me that I believed in a sublime scheme in the universe. I could not go on living without believing that there was a meaning in all our apparently independent actions and deeds. The Japanese have a passion for harmony. We do not think in terms of individuals. We intuitively turn to the oneness of all the surroundings. Our individual self is important only in its relation to the whole scheme of the family, the village, the State, the world, and the whole universe. Look at the Japanese garden. It is never an independent garden. It is always fitted into the distant mountains or the surrounding woods. It is harmony with the surroundings that we are trying to accomplish. The same with religion. My intuitive reaction was not so much concerned with the eternity of my own soul. It was the conception of the sublime scheme of the universe that thrilled me. It was again the existence of a great will that guided the unfolding of the scheme that was inspiring to me."

"It might run into the danger of the Oriental fatalism. The mentality of fatalism is to submit. The faith of the sublime scheme is to contribute. Here I feel the unconscious influence of Buddhism. I never studied Buddhism seriously until quite recently. In going through this great teaching I was astonished to find in me so much imprint of this. It was indeed, a grand scheme of the world that the great thinkers of India thought out centuries ago. However, the greatest driving power of my own religion was not the mere conception of the sublime scheme of the universe. There was another thing that gave a driving force to the faith in the sublime scheme of life. That was the intense love of my own mother. I could not bear the thought that she was wiped out of existence. I gradually realized that the loneliness I felt in my boyhood was the unconscious quest of the soul for eternity. Here I now see my subconscious Shintoism. The ancestor worship is the dominant note in the Japanese life. Being constantly under the influence of Christianity, I thought that I was free from the power of Shintoism. In my religious

reverence toward my mother I now see the unseen power of the ancestral cult, although in a different way from the old Shintoism. That is why I refuse to be labeled. The complex life we live makes it impossible to say definitely under what influences we have arrived at a certain kind of faith. In me I clearly see the mixing influences of Christianity, Buddhism, Shintoism and Confucianism. And that is the religious and intellectual life of a modern Japanese."

The Italo-German Friction

Regarding the Tyrol affair the *Living Age* says

Mussolini's temperamental outburst against Germany in the Italian Parliament on account of that country's alleged aggressive intentions in Tyrol is the culmination of a strained situation that has existed since the Peace Treaty but that has been aggravated by a number of events during the past three months. It is a somewhat broader question than the present incident indicates for it involves Switzerland, and also, though much more remotely, France.

In the first place, Italy has proceeded with a somewhat rough hand to Italianize the German-speaking Tyrolese transferred to her by the Treaty. Under the new educational law, the use of their native tongue in the public schools, which for the most part is guaranteed to minority nationalities under the Peace Treaty, is gradually being taken away from them. The Italian authorities naturally try to prevent the formation of societies designed to perpetuate Irredentism among the quarter of a million Germans in their annexed territories, a royal decree has prescribed under heavy penalties that all families of Italian or Latin descent that have adopted German names shall resume Italian names and that all place names shall be Italianized. According to the German papers, the requirement as to family names applies also to those of pure German descent, and in fact it is almost impossible to distinguish between the two groups. Another measure greatly resented is the action of the Italian Government in refusing Tyrolese suspected of unfriendliness to the Italianization programme their right under the Peace Treaty to elect Italian citizenship, thus threatening them with the prospect of forcible deportation. These and similar measures have naturally begotten exaggerated reports north of the border of still other arbitrary acts. For example, a false rumor was circulated that the monument of Walther von der Vogelweide, the great Tyrolese Minnesinger, had been removed from Bolzano and that the monument of the Empress Elizabeth at Meran had been mutilated or destroyed.

Last summer an unusual number of Italian peddlers entered Northern Tyrol, which still belongs to Austria, and aroused the distrust of the already excited population. A report spread that they were Fascist spies sent to study the ground preliminary to an invasion by Mussolini's partisan bands. Some of them were perhaps political agents, for the Italians in their turn had conceived the idea that German Nationalists from Tyrol to Bavaria were organizing to recover the

'lost territories' south of the Brenner Pass. In any case several arrests were made, and, although explanations satisfactory to both Governments appear to have cleared up these incidents they left their seeds behind and among measures of retaliation mooted in Germany is a tourist boycott of Italy and a campaign against the purchase of Italian goods.

In a large way the Fascisti are the aggressors, although there are plenty of belligerent militants on the other side of the border. The Fascist movement is also the more comprehensive. A very busy committee is said to be working in Milan under the supervision of Gabriel d'Annunzio for liberating North Tyrol and Ticino--The Italian-speaking canton of Switzerland. This committee and its sympathizers are endeavoring to have Ticino children educated in Italy in order that they may grow up Italian patriots. They are said to be employing subsidized agents in Ticino to stir up hostility there against the German-Swiss cantons. This has naturally provoked a sharp reaction in Ticino itself, where a Pro-Ticino Union has been organised to fight Italy's agitation.

Here Italian ambition comes directly into conflict with French interests, for France cannot tolerate Switzerland's being reduced to a bilingual republic with a weakened Latin element. Moreover, France is already watching with distrustful eyes the growth of Italian annexationist sentiment on her own southeastern frontier, where the Italians under her own flag are already very numerous. On the other hand, a section of the French press, especially that leaning toward Fascism in France itself, stands with Italy in its controversy with Germany. Even as moderate a daily as *Le Temps* traces the present friction back to Italy's opposition to Germany's design of absorbing Austria. Italian Tyrol, it should be borne in mind, has four Members in the Italian Parliament, all of whom are German-speaking. German in sentiment, and anti-Fascist in politics. *Le Temps* points out that Italy's measures in Tyrol, ill-advised as they may be, only parallel Prussia's methods in her Polish-speaking territories before the war.

academy angrily and nowillingly and took up an active military career. I served for three years in the artillery at Krakow, my native city, where I was born on October 20, 1882. Then the Russo-Japanese War came along. General Hubner volunteered to make a study of the siege of Port Arthur. I went as his adjutant at my own expense. We spent two months in Peking. Port Arthur had fallen, so our mission came to naught. I personally requested to be detailed as military attache with the Russian army. This was granted me on condition that I take upon myself all responsibility for reaching that army.

The Russian forces were already retiring behind Mukden. I had to get through the Japanese lines to reach them. Supplied with letters from an English liquor house, I smuggled myself through the Japanese lines as its agent and reached the Russian cavalry corps of Mishchenko at Pukumen. I was with these troops during the last phase of the campaign, and was captured near Mukden. The Japanese treated me very well and let me go. I left on a Norwegian freighter for Japan. We ran into a typhoon. The captain and I had ourselves chained to the bridge, and lived on champagne and coffee. We were stopped by Admiral Togo's fleet a few hours before he fought the battle of Tsushima.

From Japan I went to the United States via Honolulu. I looked around the country a little, from top to bottom. In New York I fell into a den of thieves in a slum saloon and had to shoot a mulatto. As a consequence I spent the night in jail with prisoners and street women.

I have been an ardent hunter. I hunted lions in Africa twice. In Sudan I met Slatin Pasha. He spoke Arabic with a perfect Viennese accent. Finally I returned to Hungary and had myself transferred from the artillery to the Sixteenth Hussars. I also married Marie Szechenyi. During all these adventures my property had run through my fingers. I began to manage my estates. I owned big Tokay vineyards, and so I founded a stock company, recalled my experiences in Manchuria, and now and then worked as my own wine agent. In that way I restored my fortunes.

Mussolini advised to be Good

Mussolini, the strongman of Italy, is today the most hated man in the world. Hated outside Italy and adored within it. The Anglo-saxon people seem to have taken his success rather badly; for if he were to set up Italy as a great "power," it would take the bottom out of Nordic Superiority. *The New Republic* of America seems to think that Italy should, even for the sake of gratitude, if not wisdom, cease to be self-assertive and practise the gentle art of sitting at the feet of the *gurus* of the world--the Anglo-saxons. It says

Among all the larger nations in Europe, Italy should be most conscious, not of the irresponsible independence of her national power, but of its de-

The Forger Prince of Hungary

Prince Ludwig Windisch-Gratz was at the head of the Hungarian Plot to forgo French Bank Notes which stirred the European press for a considerable time. The following romantic account of his early adventures from his memoirs appears in the *Living Age*.

My grandfather was Field-Marshal Alfred Windisch-Gratz, who crushed the revolution of 1848 at Vienna, Prague, and Budapest. My father was also a general. He fought in every one of our wars after 1848. He was one of the last soldiers of the old army.

I wanted to go to sea. My father forbade it. That settled the question. I entered the military

pendence on the goodwill and the assistance of other nations. France, Spain, Russia and Germany—all of them threw off a foreign yoke and earned by their own efforts their right to national self-assertion. But Italian national expansion was the child of a sympathetic environment. In 1818 the Italians were defeated in their armed efforts to throw off the Austrian yoke. They owed the acquisition of Lombardy to the assistance of France. They owed the acquisition of Venetia to the victory of the Prussian army at Königgratz. They owed Trieste and the recovery of the Trentino to the combination of diplomacy, propaganda, French heroism, British tenacity and American economic power and credulity which won the World War. The British and American peoples will be obliged to pay over \$150,000,000 a year for scores of years for the privilege of assisting Italy in emancipating the last remnant of Italians from the Austrian yoke. In the light of this reiterated dependence on foreigners for their own national emancipation and expansion Italians should recognize a peculiar obligation to treat national minorities within their borders justly and to place a modest and equitable interpretation on the Italian national mission. A great Italian during the days of Italy's humiliation and need gave the first eloquent and luminous expression to the national idea as the antithesis of imperialism and the blood brother of democratic self-government and international institutions. Mussolini's philosophy is the opposite of Mazzini's but Mazzini's is the more workable, as Italy will learn to her cost.

Whether the British and the Americans helped Italy to win the war or *vice versa* should be judged in the light of the profits the various nations made as a result of the war. Italians will certainly not top the list of winners. Moreover some people think that the Americans fought the war from an other than philanthropic motive and the British to save their skin. None of them risked anything "for the privilege of assisting Italy." Mussolini is asked to remember how in the past other nations helped Italy to be free and modify his conduct accordingly. Mussolini might with equal logic ask these other nations to pay Italy an annual tribute for services rendered in the past in the way of giving them a civilisation. He might also ask the Americans to write off the British debt to them as a return to robbing the "Indians" by the latter and handing over the loot to the former's ancestors, and the British to make an annual payment to the Germans for sending Blücher to Waterloo. We do not know if Mussolini's philosophy is the opposite of Mazzini's; but we have a suspicion that Sir Austen Chamberlain does not always carry Bentham and Mill in his pocket nor does president Coolidge refer every action to whoever is America's favourite philosopher.

J. M. Keynes on the French Franc

The New Republic publishes an open letter, from Mr J. M. Keynes, addressed to the French Minister of Finance (whoever he is or may be). In this letter Mr Keynes analyses the French currency problem and offers some valuable suggestions. He says

More than two years ago I wrote: "The level of the franc is going to be settled in the long run, not by speculation or the balance of trade, or even the outcome of the Ruhr adventure, but by the proportion of his earned income which the French taxpayer will permit to be taken from him to pay the claims of the French rentier." I still think that this is the root idea from which your plans ought to develop.

Now it is obvious that there are two methods of attaining the desired equilibrium. You can increase the burdens on the taxpayer, or you can diminish the claims of the rentier. If you choose the first alternative, taxation will absorb nearly a quarter of the national income of France. Is this feasible? If it is ever safe to speak about the political atmosphere of another country, I should judge from recent indications that the French public will certainly refuse to submit to the imposition of a burden of additional taxation sufficient to satisfy the claims of the rentier at their present level.

If, therefore, I were in your place, I should not as a politician, give another minute's thought to new taxes, but would concentrate, so far as concerned the fiscal part of my office, on consolidating and administering the taxes already voted.

Since this by itself is not enough, your next business—provided you accept my conclusion as to the mind of the French public—is to consider coolly how best to reduce the claims of the rentier. Three methods offer themselves: first, a general capital levy; second, a forced reduction of the rate of interest on the public debt; third, a rise of prices which would reduce the real value of the rentier's money claims. Unquestionably, the first is preferable on grounds of virtue, justice and theory.

But it is not practicable as it would not be received well by the French public.

The second method is attractive, if only because it offers no administrative difficulties. I believe that some authorities in France have favored it. Nevertheless, I should decline this expedient also, if I were in your place, because, unlike a general capital levy or a depreciation of money, this species of discrimination is truly named repudiation, and repudiation of the national debt is a departure from financial virtue so extreme and so dangerous as not to be undertaken but in the last emergency.

We are left, therefore, by a process of the exclusion of alternative, with one exit only—a rise of internal prices, which leads us away from the fiscal field to the price-level, the foreign exchanges, the gold in the Bank of France, the volume of foreign investment, and the balance of trade. Here I must invite your attention to an interesting paradox.

The successive French Ministers of Finance have done their best to inflate the currency. They have brought down the gold-value of the franc considerably, but

The great army of your predecessors have failed, in spite of all their efforts, to depreciate adequately the internal purchasing power of the franc. Your present difficulties are due, not to the inflation of the notes or to the fall of the exchange (for these events are tending all the time to help you out of your troubles), but to the failure of these factors to diminish proportionately the internal purchasing power of the rentier's money claims.

Mr. Keynes explains his contention with the following facts

In December, 1925, the gold value of the franc on the foreign exchanges was 19 percent of its pre-war parity, world gold prices were about 158 percent of their pre-war level therefore on the pre-war basis a note-circulation and a franc-price level amounting to 830 percent (for 158 ÷ 19 = 8.3) of their pre-war figures would be justified.

Wholesale food prices in November, 1925 were 490 percent of pre-war, retail prices in Paris (thirteen items) were 433 percent, and in the third quarter of 1924 the cost-of-living index for Paris stood at 401 percent. These figures may understate the real rise of prices, but it certainly seems that French domestic costs are not above five times their pre-war figure. This means that the prices of purely home produce, converted at the present rate of exchange, are not much more than half world prices, and are actually below their pre-war level in terms of gold. Thus the inflation of the currency has produced its full effect on the exchanges, and consequently on the prices of imported commodities, but has largely failed to do so on the prices of home produce.

He concludes

That, whilst the solution of your fiscal difficulties can come about in no other way than by a rise in the internal price level, it is not so clear that this need be accompanied either by further inflation or by a further fall in the exchange.

Then how are the French to lower the internal purchasing power of the franc? Mr. Keynes says

All you have to do is to stabilize the note circulation and the franc-exchange at near their present level and to allow time for internal prices to rise correspondingly.

He supports his view by giving the following reasons

What are the explanations of the present low level of franc prices? I think that they are (1) time element—internal prices move slowly but will move as they should in time (2) the hoarding of bank-notes on an even greater scale than formerly, leading to a sluggish circulation of the available currency; (3) excessive foreign investment by Frenchmen, due to lack of confidence, which drives the exchange down below the figure

appropriate to the trading position, and (4) the legal restrictions on rents, etc.

These influences should be remediable as regards (1) by the mere lapse of time, and as regards (2) and (3) by the restoration of internal confidence. The right strategy, therefore, is to restore confidence and then just wait.

For the stabilization of the exchange he recommends the fixing of a minimum dollar rate and sticking to it even at the cost of parting with some of the gold in the vaults of the Bank of France. In his own words

There are two matters on which the government of France needs to exercise an iron resolve—to fix the franc exchange at a minimum figure even if it costs gold to do so, and collect the taxes in full. These are the indispensable measures. Heroic efforts to increase the rates of taxation are at this stage, efforts in a wrong direction, and will not be successful.

The fineness of the ethical considerations which stand against partial repudiation of National Debt but in favour of inflating internal prices with a view to rendering National Debt Bonds relatively valueless is truly microscopic.

"Oriental Nerves," A New Species of Madness

James Lincoln McCartney M.D. writes in the *China Journal of Science and Arts* describing a state of mind found among single Westerners living in the Orient. He deals with this mental state, which we would call exasperation, in a half serious vein which none the less will provide useful reading for those restless reforming spirits in India who complain about everything and tackle systematically nothing. The writer says

These psychoneuroses or "Oriental Nerves" are one and all the result of a conflict in the patient's mind. This conflict according to Freud is carried on between the desires created by the repressed libido or subconscious urges, and the demands of the cultural environment of the individual.

Prison neuroses, for example, are invariably due to the mental conflict between the ego urge of the prisoner who desires release and the pressure of the cultural standards which resulted in his incarceration. The ensuing neurosis or, if severe, psychosis, is a flight from reality and an endeavour on the part of the individual to substitute a self-produced product of psychic phantasy for the unbearable reality that he is actually a convict and confined.

War neuroses, otherwise known as "shell shock" are due to the conflict between the self-preservation urge in the soldier and the self-immolation urge. The resulting neurosis, or "shell-shock," is again a

flight from reality. The soldier unconsciously fears that he may develop into a coward, and the flight into sickness, with the resulting symptom of a phobia, is developed with the aim of removing him from the front, where his fear of betraying cowardice might overpower him, to a position of safety in the rear, where his fear of cowardice would not be put to so severe a test.

The environment provokes the sufferer in many ways viz—

Business in China is not conducted on the same systematic (we might say efficient) lines as it is in Western lands. If business were conducted in China on the same efficient lines as in America there probably would be no cause for Occidentals going to the Far East. There are numerous hindrances and delays and vexations, which many unwise Occidentals criticize and find fault with. This results in a definite dampening of morale, for these methods which have been in vogue for some two or three thousand years cannot or will not be changed just because the new arrival finds fault with them. The Oriental, and especially the Chinese attitude, is (more or less) never to do to-day what can be put off until the morrow. Chinese are accustomed to taking time to come to decisions, in fact, business is done over the teacup rather than 'he telephone as in America, and friendship plays an important part all of which is extremely taxing to the nerves of the modern rushing Occidentals.

The feeling of being under constant observation and the desire to maintain the prestige that the Occidentals feel their position or their nationality demands are important factors in helping to bring about the psychological condition conducive of Oriental Nerves.

In regard to this matter of being under constant observation anyone who is at all familiar with Oriental habits, well knows that almost his every act is discussed by the natives about him, and his character and temperament are gauged to a nicety. It would be an eye-opener to many foreigners if they could see themselves as their Chinese neighbors see them. Although the foreigners may never learn the natives' real opinion about them, they always have the feeling that they are living in the public eye, and most Occidentals are not accustomed to this, it naturally produces a strain on the nerves which at first they are not likely to realize.

As to the remedy the writer says

The man or woman who succeeds in China and avoids getting Oriental Nerves is the person who approaches the new environment with a spirit of cheerfulness and a charitable attitude towards the people with whom he or she plans to live and associate, which attitude is only gained through an understanding of the people. Men who have succeeded in China, and women who have remained in the social attraction they are, are those who have worked with the current, while at the same time lending the full strength of their personalities and characters in helping to bring about better conditions.

A true understanding of a foreign people can only be gained through the personal contact of the native languages. The knowledge of the language of a people carries with it far more than many seem to realize. It affords a deeper understanding

of the customs and institutions of the people and more important still a sympathy towards these customs and institutions, which it seems is difficult to acquire in any other way. Few Occidentals in China who speak Chinese express dissatisfaction or show symptoms of Oriental Nerves from living in China, in fact, most of them are real Chinese "boosters," even to the extent of being enthusiastic over the Chinese dietary. Furthermore, with a knowledge of the language, it is easier to appreciate the otherman's viewpoint. Few, if any are there who can interpret the enthusiasm and feeling on which one depends for genuine interest and sympathetic appreciation.

A School of International Relations

The Woman Citizen says

Plans for the Walter Hines Page School of International Relations are rapidly going forward this winter, it is expected that the school will open next fall at Johns Hopkins University with an initial endowment of a million dollars. This school will be the first attempt of its kind to further sound international relations by approaching international problems scientifically. About two years ago an eminent group of editors, business men and educators launched the idea of the school, to be established as a memorial to Walter Hines Page, our ambassador to Great Britain in the period of the World War. The idea has drawn to it many other prominent men and women, and heading the movement, as chairman of the trustees for the endowment fund, is Owen D. Young, internationally known for his services on the Committee of Experts that formulated the Dawes plan. Mr Young explaining the Page school, says

"A great body of information must be created and mobilized in some single place about all the questions which affect international relations. Some of these problems are economic, some are embedded in racial psychology, some historical, geographical, military, and some partake of two or more of these origins. There are experts in all of these fields, but it is doubtful if there exists a man whose business it is to interrelate them. There are schools that teach many aspects of international relations, but none that is comprehensive, devoted solely to this vast subject. And certainly, there is no such place in the world where anybody can go and learn all there is to be known of these fundamental facts and interrelations. The Page School, as I see it, will become such a place. It will have a three-fold purpose: (1) to develop a science of international relations, (2) to ascertain the facts as far as they can be found on any particular problem, and (3) to produce a continually growing body of individuals trained in that science and available for service in government, business or education. If we are to make our aspirations for peace effective, we must supply a science, a systematic body of things known."

Among those associated with Mr Young are Franklin Roosevelt, Julius Barnes, Edward L. Bok, John Finley, William Allen White, George Wickham. Among the women who have been most active are Mrs. Herbert Hoover, Mrs. Samuel C.

Henning, Mrs. Mary C. B. Munford, Mrs. H. O. Wittpenn, Mrs. Irwin Laughlin, etc. And women's organizations have been helpful in furthering the effort. Johns Hopkins has announced that women will be admitted, as they are always admitted to graduate work at that institution.

The Page School Fellow appointed by the Commission for the Relief of Belgium Educational Foundation, is now at Johns Hopkins studying labor problems. He is Hubert Carton de Wiart, a graduate of the University of Louvain, the son of Count Henri Carton de Wiart, former Premier of Belgium, who, as minister of justice in 1914, drew up the Belgian reply to the German ultimatum demanding free passage to German armies. He is working along the lines that will probably be pursued by the school next fall.

The Breadwinning Woman

The New Republic says

For woman to work is of course no new phenomenon. Since the Cro-Magnon days and probably longer, she has always done her fair share and frequently more. Of whatever was necessary—including a great many things for which, according to the experts of the present generation, women are physically and mentally incapacitated.

Under the old theory, which is still assumed by most people to fit the facts, the typical family group was supposed to be centered about one breadwinner, the husband and father. It was the duty of the wife in all except the favored upper classes to do the physical work of the home and to share with her husband the moral responsibility for the proper rearing of the children.

If this theory ever fitted the facts, it no longer does so. Today 8,500,000 women are gainfully employed in the United States. They constitute one-fifth of all the workers in the country and both numbers and proportion are steadily increasing. The latter has grown from 11.7 percent in 1880 to 21.1 percent in 1920. Today women are 64.2 percent of all domestic workers, 47.4 percent of professional persons, 15.6 of clerical employees. In a group of four representative but dissimilar cities where the status of 40,000 working women was intensively studied by the Women's Bureau of the U. S. Department of Labor, women gainfully employed were nearly two-fifths (38 percent) of the total number of females over fourteen years of age.

There is a popular theory that women who work are mostly girls filling in a few years before they marry, but the facts accumulated by the Census Bureau and the Department of Labor leave this theory without even a wooden leg to stand on. It is true that there are 3,500,000 women gainfully employed who are under the age of twenty-five, a large proportion of whom presumably are unmarried; but these constitute only two-fifths of the total number. Of the 8,500,000 nearly two million are married.

Indian and Chinese Civilisations Compared

K. Shiratori gives us an interesting survey of the two civilisations in *The Young East*. We quote in parts from his article

India and China were the two main founts of Oriental civilization, but in their character Indian culture and thought are almost the exact opposite of Chinese culture and thought. It is very interesting problem for students of Oriental history to see how the characteristics of these two different civilizations grew and developed.

RELIGION AS CENTRE OF INDIAN CIVILIZATION

Indian civilization is constituted with religion as core and centre, the distinctive feature of it thought being found in the greatest importance attached to a future world transcending realities of mundane life. Needless to say, Indian civilization has many phases, is quite complex in thought and is expressed in various forms and sects of religion. It may, therefore, appear to be too rash to generalize its characteristic in this sweeping way, but in my opinion this view of Indian civilization is in the main correct.

In other words, Indian literature, arts and science have sprung from religion and the social organization, manners and customs of the Indian people have also been built on the foundation of religion. The contribution made by Indians to world civilization was religion with attendant philosophy, literature and arts. The philosophy and view of life, which are found in the Upanishads were expressions of thoughts and ideas peculiar and exclusive to Indians, the like of which can not be seen in religious thoughts of any other races. It is from this philosophy that a world religion has appeared in the form of Buddhism. The religion and the civilization it produced have spread all over the greater part of Asia from very early times and are now gradually extending to Western countries.

On the other hand Chinese civilization had its centre in politics and Chinese thought was confined to the sphere of real life. To the Chinese people politics were all and everything, all racial life and all cultural activities being regarded by them as things subordinate to politics both spiritually and materially. Politics were the object of their highest aim and ambition, there being nothing else they desired more to attain than a political Utopia. The Chinese, of course, had religions, but these were of a very primitive kind. In fact, religious rites were recognized by them only when they were made rites possessing political significance. This was in striking contrast with India, where the Brahmans occupied the highest social position and religion ruled politics. In India it was religion that ruled supreme, while in China it was politics that constituted the pivot around which the national life revolved.

A comparison of the social condition of China with that of India presents an interesting contrast. While in the latter a rigid system of racial and tribal discrimination came into existence, in the former all men were equal in social standing. As a well known and frequently quoted Chinese saying puts it, in China "kings, princes, generals and ministers come from no particular stocks; and

a plebeian of to-day might be a king to-morrow while a king of yesterday might fall to the position of a plebeian to-day.

But what was the result of the contact of Indian and Chinese thoughts in Japan? The influence which Buddhism had in Japan over literature and the daily life of the people was exceedingly great. On the other hand Confucianism also exercised a great influence upon the thought and life of the Japanese people but produced no such evil effects in Japan as it did in China.

From a comprehensive observation of the history of Japan it is seen that the Japanese possessed aptitudes to adopt both Indian and Chinese thoughts to a certain extent and that while making both of them their own they did not allow themselves to be overwhelmed and dominated by either. In other words, the Japanese had the advantage of being in a circumstance in which mundane and supermundane thoughts existing side by side could harmonize or restrain each the other.

Discovery of America by Buddhists

S. Watanabe writes in *The Young East* on the doubtful hypothesis which claims the discovery of America by Buddhists. Besides other traces of Buddhism among the antiquities of America there are

Images and sculptured tablets, ornaments, temples, etc., abound, that cannot well be ascribed to any other source with any show of reason. Among these may be mentioned the following:

An image of Buddha found at Palenque, sitting cross-legged on a seat formed of two lions placed back to back, closely resembles similar images found in India, China, and Japan. A large image found in Campeachy represents accurately a Buddhist priest in his robes. An elaborate elephant-faced god found among the Aztecs is evidently an imitation of the Indian image of Ganesha. A Buddhist altar of stone was also found in Palenque. Figures of Buddha sitting cross-legged with an aureole around his head, and placed in niches in the walls of the temples at Uxmal, Palenque, etc., are exact counterparts of images found in niches both inside and outside of Buddhist temples in Japan, China, and India. A perfect elephant's head is found sculptured on the walls at Palenque, the elephant being the usual symbol of Buddha in Asia, and no elephants being found in America. Then there is an old Mexican image in the Ethnographical Societies' Museum in Paris which depicts Buddha sitting in the cross-legged attitude, with an inscription on either side one of the characters being evidently intended for the Chinese character incorrectly for Buddha engraved by a sculptor who did not know the Chinese written language. On the walls of Uxmal are astronomical diagrams and images, representing among other images the dragon which swallows eclipses by swallowing the sun a thoroughly Chinese notion, but instead of scales it is covered with feathers, showing the idea that it can fly. The enormous temples or palaces at Palenque and Mitla are almost counterparts of Buddhist

temples that are found in Asia, particularly in North China, Mongolia and Java, the large pyramidal bases and the mole of construction all seeming to point to Buddhist origin. There is a Buddhist cross or symbol of Buddha carved on a pillar at Palenque. The ornaments in the walls of the temples in different parts of Mexico are similar in design to those of many buildings in India and China.

Greece's Dictator

The Current History Magazine gives us the following account of General Pangalos, the dictator of Greece.

Probably in no country is politics so charged with drama as in Greece. Here politicians rise and fall with startling suddenness. The entry of a new Premier to office in Athens resembles in public excitement and interest the crowning of a new heavyweight champion or the winning of a world's series with us. Politics, in short is Greece's national sport.

The present political champion of Greece is General Pangalos. He has dissolved Parliament and rules the country today as a dictator. Strange to say, he possesses few of the characteristics which are the usual stock-in-trade of dictators. He has none of the personal magnetism that has won many of the famous despots of history from Alexander to Mussolini the blind allegiance of their followers. One of his chief lieutenants described him to me as a "man not loved by his friends and hated by his enemies." He is a poor speaker. When Minister of War he used to address Parliament as he might a company of soldiers using the colorful and profane language of the barracks. Physically he is in no way imposing. Short and slight, with a cynical, almost sneering expression constantly on his undistinguished face, he is the last man in the world that one would imagine to be a military dictator.

What is the secret of Pangalos's rise to power? An examination of his career I am sure will show that the man has reached his present high estate largely because of a single characteristic—his utter recklessness. This man to achieve his ends is willing to go to any extreme—summarily execute his political enemies, plunge his country into war or stir it to revolution. And, strangely, it is this utter recklessness which now appears to make it possible for him to bring order out of the chaos which has characterized Greek politics since 1915.

A Cool House in Summer

The Scientific American tells us of a novel way to keep the House cool in summer. It is as follows:

Dr. Willis L. Moore, for twenty-years chief of the United States Weather Bureau, former President of the National Geographic Society and founder of the *National Geographic Magazine*, has found a practical way to maintain the air in his home at Pasadena, California, both cool in summer and hygienically moist in winter.

In summer, the Professor takes in air from a large scoop on the roof, washes it, cools it in a simple apparatus and then passes it all through his house by means of ducts. In winter, he maintains the relative humidity of the air at seventy percent, where it ought to be, by means of a special humidifying heater.

The summer apparatus consists of air-scoops on the house roof, an air washer and air cooler, a fan and eight inch conduits leading to the various rooms, also registers for controlling the inflow. With this simple equipment Dr. Moore has found that the house may be closed as tight as a drum, yet in the extreme heat of summer the temperature will not exceed 80 degrees.

How Hot Air Affects Us

The same journal says

Few people know the effect on the contained moisture when we warm our air. For each 15 degrees that we heat it air *doubles* its capacity for holding moisture. What, then, is the corollary of this statement? It means that since we do not usually give our air a chance to take up this needed moisture, it goes without.

No, it does not entirely go without; it abstracts all the moisture it can get from our woodwork and our furniture, which dry up, shrink and crack. Far worse, it takes moisture from us.

As was recently pointed out in the *Journal of the American Medical Association*, when we take cold air from out-of-doors at freezing temperature and at a relative humidity of 80 percent and heat it to 70 degrees, we thereby reduce its relative humidity to only 20 percent. We then live in this air and so we become kiln-dried, along with the woodwork. Office buildings, heated to nearly 90 degrees, often have a relative humidity of as low as 15 percent.

Thus we get the hot-house habit. We become hypersensitive, afraid of every chill and every little draft. We also get colds, grippe, even pneumonia, because the dry, thirsty air of our houses blots up the moisture of our throat passages and reduces their natural resistance to infections.

The Heart of the Plant

The *Journal of the American Medical Association*, one of the leading journals of medicine, has the following—

Sir Jagadis Chundra Bose, F. R. S., the Indian scientist, has announced at Calcutta the second of three remarkable discoveries he has recently made with regard to plant life, and given a demonstration of the "heart beats" of plants with delicate instruments that he has invented. Thirty-

two years ago he began his researches. He found that inorganic substances exhibited fatigue similar to the fatigue of animal muscles, and that the fatigue in both was removed after a period of rest. This led him to investigate the characteristics of the simpler forms of life, as shown by plants. After long researches he was able to prove what he was convinced of before—that the life mechanism of the plant is identical with that of the animal. He discovered how plants may be shown to respond to stimuli, and arrived at the following conclusions, which he demonstrated on the eighth birthday of the institute in Calcutta which bears his name. The plant possesses a differentiated nervous system which can be proved by throbbing pulsations which take the place of the heart beat of the animal and which show violent spasm exhibited at the crisis of death. By his optical lever he was able to demonstrate the activity of the cells of the plant in the propulsion of sap from the roots of the tree to the top-most leaves, thus solving a problem that had baffled inquiry for two hundred years. The location of the heart of the plant was made by means of an electric probe in circuit with a sensitive galvanometer. Bose introduced the probe step by step across the stem. As soon as it came into contact with the pulsating layer an electric response was received and recorded by the galvanograph. Each active cell during its phase of expansion absorbs water from below and expels it upward during the phase of the contraction. Bose likens the heart of the plant to the elongated heart of some of the lower animals, such as the earthworm, in which the peristaltic action propels the circulating fluid. To measure the heart beat of the plant, which is less than a millionth of an inch, it was necessary for it to be enormously magnified, which is done by Bose's magnetic amplifier. A mirror is attached to the astatic magnetic system, the reflected beam being thrown on a screen or photographed on a film. All this Bose performed before his audience, which was able to see how chloroform, for instance, at first immensely excited the plant, stimulating it to great vigor. Then came the death spasm. Rapidly and spasmodically the beam of light fell until it came to rest, indicating that the plant had died.

The Bose Institute, which lies in the centre of one of the busiest industrial quarters of Calcutta, is a beautifully designed building in Indian style. It consists of a large and acoustically perfect lecture demonstration room, with numerous laboratories. Bose's great pride is that his institute is entirely Indian, in inspiration, in personnel, in architecture and in craftsmanship. On one side of a quiet garden quadrangle a new building is rapidly appearing. It is designed to be the first of a series of hostels, which Bose proposes to erect for his students. Those hostels, designed in typically Eastern style, are intended to house students from all over the world, whom it is the ambition of the founder to attract to Calcutta. It is probable that Bose will spend a considerable portion of next year in Europe. He has invitation to lecture at the Sorbonne and in Berlin.

GLEANINGS

Clutch of Crime!

Will it Tear Down the Church? And—if it does, what will happen?

AN UGLY OPEN.

This is one of a series of full-page advertisements against crime in the Brooklyn *Eagle*. The cost of the drive is assumed by several hundred Brooklyn men, who hope thus to bring the public to a dizzying sense of the stupendous extent of crime in this country."

Chaos would reign in all parts of the civilized world. Your property would be valueless. Your business would be wrecked. Your home would vanish. Your family would be unsafe. You and your neighbors would revert to the social condition of the cave men when the strongest and swiftest would be winning the biggest club, took whatever its owner desired.

It is the Church that has sustained whatever progress we have today. Religion rules mankind. It is the backbone of our laws. It is the cornerstone of our faith in one another, without which there could be no business, no social stability.

It is the plain duty of every citizen to support the Church without which Brooklyn could not support us. Are YOU doing your part? The Church wants YOU! Not just your money but your presence at Church services, your active interest in Church enterprises, your work for Church extension, your personal effort in evangelization.

Non-church people are exerting a most malicious influence. Same indifference is responsible for all that is wrong with our city. Do you go idly by and criticize? Are YOU a shirker?

Prove yourself a good citizen, show your gratitude for the good things you have in life by going regularly to Church—any Church. There are 73 of them in Brooklyn—on within walking distance of every home.

of Siamese art in the Museum and amongst the best known. Early Siamese art (before the eighth-century), like the early art of other areas in Indo-China, is closely modeled on India Gupta tradition. Southern Siam (Lopburi, Korat, etc), from the eighth to the twelfth century, was a province of Cambodia, and the art is essentially Khmer. True Thai or Siamese art developed in the north (Sukhothaya-Sawankhalok), gradually traceable southwards (Pitsanulok, Lopburi), it is only after the foundation of Ayutthia (1350 or 1160) that it

Ross collection

Indian Sculptures

Five important pieces of Indian, Siamese, Cambodian and Javanese sculpture, has been given to the San Fine Arts Museum by Dr. Denman W. Ross.

Two of these are here shown. The first is a typical black basalt head of Buddha of the usual massive type, stated to be a head from one of the seated Dhyanas of the smaller perforated stupas of the Borobudur monument.

The second is a stone head of Buddha, pierced and gilt, undoubtedly the finest specimen

predominates in the whole area now known as Siam and sets its stamp on all the art of Cambodia. The Thai type is very unlike the Khmer, in place of the straight brows and level eyes, full lips and impassable serenity of the latter, we find sloping Mongolian eyes, an aquiline and even hooked nose, smaller mouth, and a high degree of nervous refinement, representing a Sino-Tibetan ethnic type very unlike the older Mon-Khmer.

From the Oldest City in the World

The eleventh chapter of Genesis tells us how Abraham and his kindred left their ancestral home in "Ur of the Chaldees" for a journey which was to end in the land of Canaan. For over two thousand years that was all that the world remembered of the once great city of Ur, possibly the first great city to be built in the world.

Such Babylonian histories and traditions as had come down to modern times through the great Greek historian Herodotus or the ancient Babylonian priest Berosus, did not mention Ur. The 'Chaldeans' were remembered through references

to their remarkable knowledge of 'magic,' by which was meant, of course, the science of ancient times. But their city was forgotten except for that one brief mention in the story of Abraham.

About a half century ago it was rediscovered. A huge mound of dirt, rain-washed and featureless, was known to be standing in the desert just west of the channel of the Euphrates River and about one hundred miles up stream from the present shore of the Persian Gulf. Some bricks inscribed with the curious wedge-shaped writing of ancient Babylonians were found near this mound. When these inscriptions were translated they proved that the great mound and some smaller ones surround-

One of the copper bulls from the remarkable relief found at Tell el Obeid near the site of ancient Ur.

The Bull from the frieze in the temple of Nin-har-sag carved in white shell

ding it are all that is left of the city where Abraham was born.

Little work was done on this mound until after the World War. The conquest of Babylonia by the British armies then opened up the country for archaeologists. During the past three years Major C. L. Woolley, commanding a joint expedition of the British Museum and the Museum of the University of Pennsylvania, has been making extensive excavations in the mounds that mark the ancient city.

Not only has Major Woolley discovered great temples and other buildings which belonged approximately to the time of Abraham, some four thousand years ago, but he has carried the history of the city many centuries farther back. When Abraham was a boy in the house of his kinsmen of Ur thirty-five or forty centuries ago, the city was already more than two thousand years old. It had already been a great seat of civilization and commerce for a period much longer than the time from the birth of Christ to the present day.

The oldest written inscription ever found in the world turned up, not far from Ur, at a place now called Tell el Obeid, probably one of the suburbs of ancient Ur. This inscription had been placed originally in the foundations of a temple, just as we still place boxes containing newspapers and other mementos in the cornerstones of modern buildings. The inscriptions is carved on a small tablet of stone in the curious picture writing which was then in use at Ur. Scholars of the University of Pennsylvania have translated it. It says that King A-an-ni-pal-da, who ruled Ur in those days, dedicated that temple to the Goddess Nin-har-sag. It was written, the experts believe, about the year 1500 B. C., more than sixty-four centuries ago.

The excavations have yielded, also, many remarkable art objects, some of which are illustrated on this page. The walls and courts of the great temple of Nin-har-sag, as well as of other public buildings, were decorated with painted or sculptured scenes.

Among the treasures found at Ur is a wonderful relief showing a procession of bulls, and made out of cast and hammered copper. Other objects are made of bits of white shell inlaid on a ground of black bitumen. This bitumen is our modern "crude oil" or asphalt. It was collected at the oil springs and seepages which still exist in Babylonia. It served the masons of Ur as mortar and the artists of the time as a cement to stick their reliefs and carved plaques to the walls.

The people who founded Ur were the famous Sumerians, a people who must have been one of the ablest and greatest of all history, but who were totally forgotten until modern scholars began to dig up and read the records which had been buried for so many centuries in the ruins of the Babylonian cities. No one knows for certain where the Sumerians came from. The most plausible theory is that they came from India possibly by overland migration but more probably in small boats along the shore of the Indian Ocean and the Persian Gulf.

Some time in the millennium between 5000 B. C. and 4000 B. C., these Sumerian immigrants arrived in what is now Babylonia. The country was inhabited then by rude tribes who eked out an uncertain existence on the low and tiny islands scattered among the marshes at the head of the Gulf. The Sumerians introduced civilization. They already knew how to write and make record. They possessed tools of copper. They wore clothes. Presumably they had tamed some animals, including a variety of buffalo. They had kings and wise men (who were also priests) and some idea of religion.

By 1500 B. C., possibly by two or three centuries earlier, there were at least five great cities in the low lands near the Euphrates River. One of these was Ur. The head of the Gulf was further north than now, and Ur was on the seacoast. Silt deposited by the two rivers is responsible for the hundred miles of land that now separates the site from the shore. Another great city was Eridu, a few miles farther down the shore from Ur. Farther east, also near the then coastline was another city named Lagash. Up the Euphrates some thirty miles was Erek and on an arm of the river was the fifth city, Larsa. These five made up the earliest Sumerian state, the first civilized country in the world.

In the twenty-five centuries that elapsed from those days to the time of Abraham, Sumeria suffered many vicissitudes. Kings and dynasties came and went. A semitic people from the hill country to the north and west came down and conquered the five cities. They absorbed the writing, the arts, the civilization of their victims. Wealth and prosperity grew. Other cities were founded, including the great Babylon, a hundred miles farther up the Euphrates. Finally in Abraham's time, the twenty or more cities then existing on the Babylonian plains had become the commercial and artistic centers of the world.

NOON

JEHANGIR J VAKIL

The noon is like a maiden with white lips
Just parted in an ecstasy of dream.
The wind that passes over the silver tips
Of grass, uncovers from her eyes the gleam
Of tired hair, and silence over her face
Broods o'er the rose that was her mouth, and broad,
Curved, drooping petals veiling stars. No trace
Of busy life is here, no men abroad.

The fields are empty, and the peasants' huts,
With low thatched roofs, seem dozing in the sun.
Before their door a lonely peacock struts,
The cock, self-conscious, gives his hens a run.
A lonely peasant gull with dreamy stare
Smiles to herself, unwinds and winds her hair.

Santiniketan

NOTES

British Self-criticism and British Vitality

An article in our present issue shows that John Stuart Mill thought of his countrymen. There have been other great English authors who have subjected their own people to similar criticism. We are, for example, reminded in this connection of Wordsworth's sonnet to Milton, in which he writes

We are selfish men,
Oh! raise us up, return to us again,
And give us manners, virtue, freedom, power

Such criticism of the British people by British authors has never blinded us to the strength, greatness and vitality of that people. The power of self-examination and self-criticism is a sign of such strength, greatness and vitality, and the power to stand such criticism is a still more convincing proof of these qualities. It would be profitable to ascertain our own powers of self-examination and self-criticism and that of bearing such criticism. What Mill wrote or Wordsworth wrote must have been true, but represents perhaps only one side or phase of English life and character, and, may be, the faults they pointed out were not abiding characteristics. There must be something more abiding in the intellectual, moral and spiritual natures of the British people which has made them great. We do not refer here to their vast empire and wealth. We refer to the fact that Great Britain has produced great poets and prose-writers, great thinkers and scientists, great philosophers and historians, and great philanthropists and social workers (not of the imperialistic and exploring variety but real lovers of humanity like Howard the Philanthropist). Not to speak of other great achievements of the British people, their great literature could not have been produced if English society had been rotten to the core.

Thus we are bound to say in spite of the grievous political and economic wrongs visited on India by England

some western countries to military expenditure is taken from an article contributed by Mr Leland Olds to the *Federated Press Bulletin of America*

Country	Percentage of Budget devoted to Military Expenditure
United States	21.7
Great Britain	13.1
France	18.1
Italy	9.3
Holland	20.2
Belgium	9.4
Switzerland	16.9

In India in 1925-6 the revenue receipts amounted to 131 crores and 35 lakhs, and the military expenditure to 56 crores and 28 lakhs of rupees. Therefore the military expenditure was nearly 43 per cent of the total budget.

It has been estimated that in 1926-7 the total revenue will be 133 crores and 43 lakhs and the military expenditure will be 54 crores and 88 lakhs. Therefore the military expenditure will be a little more than 41 per cent of the total budget.

Some apologists of British rule in India argue that in working out this percentage of military expenditure, the revenues of the provincial governments ought also to be taken into account. We do not know whether similar revenues of other countries are so taken into account. But we will do so in the case of India in order to satisfy these apologists. We have before us the estimated revenues for 1926-7 of the following provinces —

Province	Revenue
Madras	16,34,20,000
Bombay	14,51,00,000
Punjab	14,49,00,000
U P.	12,89,68,000
Bengal	10,76,78,000
Burma	10,35,31,000
Bihar and Orissa	5,63,83,000
Total	84,99,80,000

India's Military Expenditure

The following table of the percentages their total 1925-6 budgets devoted by

To this let us add 6 crores for U P and Bihar, 2 crores for Assam, and 1 crore for

N--W F Province, which will bring up the total to Rs. 93,99,80,000. Let us make this 95 crores in round numbers. Adding 95 crores to 133.13 crores, we find the total imperial and provincial revenues of India for 1926-7 to be 228.13 crores. Out of this 54.88 crores or a little more than 24 per cent are provided in the budget for military expenditure.

So even after taking into consideration the revenues of the provinces, indigent India's military expenditure is a higher percentage of her budget than that of the United States, the richest country in the world, which is 21.7 per cent of her revenues. For a rich country to spend even a high percentage of its revenue on its army is easier and less injurious than for a poor country like India to spend the same or a higher percentage of its revenue on its army. Moreover, India's expenditure is incurred not for her own sake alone, but mainly or at least partly for British imperial purposes. If India were not Britain's property, Britain would not force India to spend such a large part of her revenues ostensibly for India's defence.

From Japan's budget statement for 1924-5, published in the Japan Year Book, we find that Japan's military and naval expenditure combined formed a little more than 30 per cent of her total revenues. With this we may compare India's 43 per cent in 1925-26 and 41 per cent in 1926-27 for military expenditure alone. If we take Japan's military expenditure alone, we find that in 1924-25 it formed only 14 per cent nearly of her total revenues. In the case of India, whether we consider the income of the Central Government alone or take into account the incomes of the Provincial Governments also, her military expenditure forms a much higher percentage of her revenues than that of Japan.

Even according to the Report of the Government's own Retrenchment Committee, published in 1913, India's military expenditure is still excessive. The Committee say in their Report —

We do not . . . consider that the Government of India should be satisfied with a military budget of Rs. 57 crores, and we recommend that a close watch be kept on the details of military expenditure with the object of bringing about a progressive reduction in the future. Should a further fall in prices take place, we consider that it may be possible, after a few years, to reduce the military budget to a sum not exceeding Rs. 50 crores, although the Commander-

in-Chief does not subscribe to this opinion. *Even this is more in our opinion, than the taxpayer in India should be called upon to pay, and, though revenue may increase through revival of trade, there would, we think, still be no justification for not keeping a strict eye on military expenditure with a view to its further reduction.*

The italics are ours.

According to the Brussels convention, no country should spend more than 20 per cent of its revenues for military purposes. India is forced to spend much more.

And yet we have literate members of the Legislative Assembly who, instead of concentrating their attack on the huge and unjustifiable military budget, succeeded at expenditure on the archaeological department. 'It was merely digging old ruins.' That India's civilisation is being proved by the department to have been glorious and of immemorial antiquity is nothing.

To Our Contributors

Our contributors are respectfully requested to bear in mind that it is easier for the editor to publish short articles promptly than long ones. We do not mean to suggest that contributions should be almost like paragraphs but it would be convenient if they did not exceed four thousand words. What has led us to say this is that, in addition to short ones, there are not a few long articles in our hands which have been waiting publication for a long time. Typewritten mss are preferred.

Extraterritoriality in China

It is said the Extraterritoriality Commission in China has studied the Chinese Criminal Code and Commercial Code, and is perfectly well satisfied. Of course, a country may have excellent codes but the administration of the laws may not be equally good. But, if that be the case in China, she need not be considered unique in that respect. Here in India neither are all the penal laws and regulations excellent, nor are they justly administered, particularly when the offenders are Europeans, or Indians suspected to have done something politically wrong.

The foreign members of the Extraterritoriality Conference have also visited the courts and prisons in Peking. If a really impartial non-British foreign jail commission were to

enquire into the condition of Indian prisons and the treatment of Indian prisoners, shocking revelations would be made.

The Leper Problem

We read in a Japanese paper that both in India and in Japan, the Governments are far from dealing adequately with the leper problem. It observes that

Segregation is absolutely necessary, especially as the disease seems to stimulate the sexual instinct, and liberty means propagating diseased children and spreading the disease. There is no reason why the disease should not be extirpated in a generation, though the very horror in which it is held causes people to run all sorts of risks and to make others run risks so long as the fact of having a leper in the family can possibly be concealed.

Educational Backwardness of the United Provinces

The United Provinces of Agra and Oudh comprised in ancient times what may be called the heart of Aryavarta. But at present these provinces are the most backward in education in the whole of British India. The following table will prove the truth of our statement

Province	Number per thousand who are literate	Percentage of total scholars to population
Assam	72	3.02
Bengal	104	4.18
Bihar and Orissa	51	2.48
Bombay	95	5.05
Burma	317	4.23
C. P. & Berar	49	2.44
Madras	98	4.3
N-W F. Province	50	2.5
Punjab with Delhi	46	(Punjab) 3.75
Delhi		4.2
United Provinces	42	2.38

As the people of the United Provinces of Agra and Oudh are naturally not less intelligent than Indians of other provinces, it is difficult to ascertain the causes of their educational backwardness. What is also most curious is that these provinces contain a larger number of universities than any other province, namely, four, and there is likely to be one more at Agra in the not distant future. This last one is a necessity and

ought to be an affiliating one. Instead of clamouring for more universities after the establishment of one at Agra, real patriots in the U. P. ought to devote more attention to the spread and improvement of both primary and higher education.

Most probably one of the causes of educational backwardness in the province is the policy of its Government. On this subject let us quote the opinion, not of those whom the bureaucracy love to style professional political agitators, but of two well-known professors of mathematics

In the course of the budget discussion in the U. P. Council, Dr. Ziauddin Ahmed said —

There had been a regular diminution in expenditure under education. This year the proportion of expenditure on education to the total expenditure in the province had been reduced from 15.1 to 11.4 as compared with last year. The Education Department had no policy at all. (Dr. Ganesh Prasad — hear, hear).

Private enterprise in education had not been sufficiently encouraged and the speaker would suggest a lump sum to be provided in every budget out of which grants might be given to encourage private enterprise

Dr. Ganesh Prasad observed —

The total disbursement on the reserved subjects came to 74 percent of the total disbursement made by the Government.

The Government, proceeded the Doctor, had no real policy of expansion of literacy, but it had got a policy for controlling the output of literacy. Similarly, in spite of the pledges given in March 1921, and in April, 1921, by the first Minister of Education, the Government not only did not wish to have educated people, but they had got a definite policy of controlling the output of literates in English.

In the face of the opinion of some very advanced educationists of the U. P., we are constrained to observe that the leaders of the educated classes of the province have unconsciously and unintentionally played into the hands of the bureaucratic pillars of this policy of controlling the outturn of literates by their infatuation for what are called unitary teaching universities. We have no quarrel with such universities or those of any other description. But we care more for the thing called education than for the label it bears, and we must see that even the highest education is not made too expensive for the generality of our people, which it appears to have become in the U. P.

Mortality in the U. P.

We in Bengal have been accustomed for generations to look upon the U. P. as a very healthy region where people should go to recover strength and vitality. But from what Dr. Ganesh Prasad said in the U. P. Council it appears that those provinces have become unhealthy and the Government there cares as little for the physical welfare of the people as for their intellectual progress. The learned doctor said:—

He could not exonerate any member of the Government from the responsibility for the vast amount of misery and illiteracy that we saw around us. The United Provinces Government stood before God and man responsible for the well-being of 45 millions of human beings under their charge. Voicing the feeling of his countrymen, he would say that the Government was not fulfilling its duties in this respect. The average mortality per year was put down as 16 per thousand. At this rate about 18 lakhs of people died every year in the United Provinces. In India about two-thirds of deaths were due to preventable causes, and in these provinces 12 lakhs of people died of causes which were preventable. A distinguished medical man of Bengal had assessed human life in India at Rs. 200. Thus they could see that they were losing Rs. 24 crores every year. This was a recurring loss every year because of the Government not being faithful in the discharge of its duties and responsibilities. In other words, they practically lost twice their receipts per year. This appalling state of things was sufficient to condemn any Government before the bar of the civilized world.

Allahabad Entitled to Compensation

Our readers may remember that some time ago we contended that as, by the gradual practical removal of the capital of the U. P. from Allahabad, it was losing many residents and some Municipal income, and as that would make it more and more difficult for its Municipality to keep the place clean and healthy, it was entitled to receive a subsidy from the U. P. Government to enable it to discharge its duties properly. We also observed that as, like Benares, Allahabad was an all-India city on account of its being a famous Hindu place of pilgrimage, and as any epidemic breaking out there might therefore spread to other provinces, its Municipality was entitled to a subsidy from the Government of India also to enable it to replenish its coffers depleted partly by the removal of the provincial capital. We are glad to find that what we

said purely from considerations of equity is supported by what is law in a part of the British Empire outside India. *The Leader* says that:—

Section 133 of the South Africa Act constituting the Union provided statutory compensation to the abandoned colonial capitals. It says, in order to compensate Pietermaritzburg and Bloemfontein for any loss sustained by them in the form of diminution of prosperity or decreased rateable value by reason of their ceasing to be the seats of Government of their respective colonies, there shall be paid from the consolidated revenue fund for a period not exceeding 25 years to the municipal councils of such towns a grant of two per centum per annum on their municipal debts, as existing on January 31, 1909. The commission appointed under section 118 shall, after due inquiry, report to the Governor-General in Council what compensation should be paid to the municipal councils of Cape Town and Pretoria for the losses, if any similarly sustained by them.

Rumoured Removal of Imperial Library from Calcutta

Calcutta has not claimed any compensation, like that provided in the South Africa Act, for the losses sustained by it owing to the removal of the capital to Delhi, though in equity it is entitled to such compensation. But the people of Calcutta do ask that no injury should be done to it wantonly. Such an injury would be the removal of the Imperial Library from Calcutta.

Possession, they say, is nine points of the law. Calcutta is in rightful possession of the Library. If it is to be deprived of it, some other city must substantiate a better claim to it. But it is not mere possession which Calcutta can urge in support of its right to keep the Library. Originally, though a public library, it was not a government library. At the meeting held at Albert Hall to protest against the rumoured removal of the Library, Raja Kshatindra Deb Ray Mahashay called attention to the terms of the transfer of the old Calcutta Public Library to the Government of India during Lord Curzon's term of office.

"It was distinctly stipulated that the Imperial Library should be located in Calcutta. The Government of India purchased the right and interest of the Calcutta Public Library and the Agri-Horticultural Society in Metcalfe Hall at a ridiculously low sum of Rs. 46,000. It is unthinkable that the public of Calcutta should have parted with such a historic hall and noble building and a rare collection of old prints and books to the Government for such a nominal price if ever there was an idea of removing the library from Calcutta."

The proposal is said to be to remove the Library to Delhi, because that city is now the capital of India. But is it legally or otherwise necessary for all Imperial institutions or offices to be situated at the capital? Should the capital of the British Empire be removed hereafter from London, for strategic or other reasons, would the British Museum also be removed from that city? The federal capital of the Australian Commonwealth is at present situated in Melbourne. It would be located at Canberra when the construction of the new capital there has been completed. Will all federal institutions, including naval ones, now located at Melbourne, be removed hereafter to Canberra?

But let us confine our attention to India. One may be curious to know why the Victoria Memorial building is not proposed to be removed to Delhi. The possession of a mint for the coinage of money has always been rightly considered a sign of sovereignty. An Imperial library has not been considered a symbol of sovereignty. The Indian mint, however, remains in Calcutta. Why does not Delhi claim it? Similarly, for the imparting of military training the Government of India maintains the Prince of Wales College at Dehra Dun, U. P., not at Delhi. The Forest Research Institute which the Government of India intends to improve and raise to a higher standard is also situated at Dehra Dun. The institution for the training of naval cadets and seamen for the Indian navy would be located somewhere in Bombay, and probably there would be another such institution at Chittagong in Bengal. Why not bring the sea to Delhi and locate these naval institutions there? Delhi, moreover, is not the only capital of India. There is the other, the summer capital at Simla. To be strictly logical, therefore, the Imperial Library should be a travelling one, preferably on wheels, located for some months at Delhi and for the remaining months at Simla.

We have given some examples above of Imperial institutions situated, not at Delhi, but elsewhere. There is an example of an Imperial office about to be removed from the capital to another place. It has been recently decided that the headquarters of the Meteorological Department of the Government of India would be removed to Poona on the ground that the work of that department would be better done at Poona than at Simla, the summer capital of India, where it has been hitherto located. The causes

for this decision indicate the correct principle according to which the location of institutions should be determined, namely, an institution is to be located where it can do its work best.

Now, what is the work which a library is meant to do? It is not meant to decorate a city. Its object is generally to help in the spread of knowledge, the carrying on of research, the enjoyment of the refined pleasure to be derived from the reading of books, etc. All this presupposes the existence of a large number of persons who want to acquire knowledge, of many persons who carry on research and a large class of general readers, etc. As the population of Calcutta is 13,27,517 and that of Delhi is 3,04,420, or, including its environs, 4,88,188 only, Calcutta would naturally possess a much larger number of readers, etc., even if Delhi were as literate as Calcutta. But Delhi is far less literate than Calcutta, as the following table shows —

	City	Literate per mille	Literate in English per mille
			206
Calcutta	450	(262 males and 80 females)	
Delhi	122	50.6 males and 10.2 females)	

Not to speak of such a unique institution as the Bose Institute, Calcutta possesses a far larger number of schools and colleges than Delhi; and the biggest university in India, with its post-graduate departments of arts and sciences. It has in addition the Asiatic Society, the institutions connected with the Bengal National Council of Education, the Bangiya Sahitya Parishad, the Moslem Bangiya Sahitya Samiti, etc. Naturally, therefore, it has a larger number of research workers than Delhi. It has also cultural associations like the Rotary Club, the Chaitanya Library, etc. Owing to the existence in Calcutta of a High Court, in addition to many lower courts, it is the abode of many educated persons interested in books. There are also in Calcutta more authors, journalists, medical men, engineers and other professional men than at Delhi. For all these reasons the Imperial Library can be better utilized in Calcutta than in Delhi. We are for, not against, Delhi having a good library, but it should not seek to enrich itself at the expense of Calcutta.

But it will be said that as the Government of India paid for the acquisition of the Library and continues to pay for its upkeep and expansion, it ought to be located at Delhi,

which is the seat of that Government. We do not see how that follows logically. The Imperial Library was never meant and is not meant to help the Government of India to carry on its administrative or other similar political work. It is an institution of an educational and cultural character meant for the benefit of the inhabitants of the Indian Empire, who can all borrow books from it by post at their own expense. And this can be done equally well whether it be located in Calcutta or in Delhi. Rather, it may be said that Calcutta is nearer than Delhi to those provinces, cities and towns which contain the largest number of persons literate in their vernacular and in English. The ideal arrangement, no doubt, would be to locate the Imperial Library in every city, town and village in the Indian Empire. But that being a physical impossibility, the next best thing is to locate it where it can be best utilised. And we have seen that Calcutta is superior to Delhi in this respect. Comparison with any other city is not necessary, because no one has proposed or would propose that the Library should be removed to, say, Bombay or Madras.

As for the financial aspect of the question, as the Government of India receives revenue from all parts of the empire, not from Delhi alone, there is no reason why Delhi should have a preferential claim to the Library. Calcutta also contributes to the treasury of the Government of India and contributes a far larger amount than Delhi. Therefore, even from the pecuniary point of view Calcutta's claim is far stronger than that of Delhi.

The Council of State and the Legislative Assembly no doubt hold their sessions at Delhi. But the Imperial Library is not especially a legislators' library, and the legislators have their library at Delhi. Moreover, if the Imperial Library were to be removed to suit their convenience, it must be turned into a peripatetic library to follow them in their migrations from and to Delhi and Simla, which is impracticable.

There is one other practical consideration which goes against the removal. There are many old books and prints which would be difficult or impossible to replace if once destroyed or lost, which would suffer so much in the process of removal as to become practically useless ever afterwards.

Object of Solar Eclipse Expeditions

The last total solar eclipse in January could be very conveniently observed in Sumatra. For that reason American, British

and some other scientific expeditions went to that island for astronomical observations. A British official wireless, dated Rugby January, 13, stated that the main object of the British expedition was to test the hypothesis of Prof. E. A. Milne of Manchester University regarding the solar corona. Now this hypothesis of Prof. Milne's is based on other theories which are due to Professor Meghnad Saha of Allahabad University. Regarding these theories Professor E. A. Milne wrote in *Nature*, October 30, 1925, page 530.—

'Six years ago, practically no explanation existed why some lines appear in stellar spectra, and no others, why some lines always decrease in intensity through the stellar sequence and others appear reach a maximum, and then fade away. It is to Saha that we owe the key which has unlocked these mysteries. Saha showed that elementary thermodynamics, considered in connection with Bohr's theory of origin of spectra, demands that atoms pass through successive stages of ionisation as the temperature increases and produces the phenomena observed in stars. At the hands of Saha and others (others include Prof. Milne himself), this simple physical idea has received quantitative treatment, which allows a wealth of detailed deductions to be made concerning pressure and temperatures in the stars.'

For a brief account of Saha's ionisation theory vide p 132 of our last February issue. Sir P. C. Ray contributed an article on the subject to *THE MODERN REVIEW* for December 1922, when Professor Saha was connected with the Calcutta University, of which he is a graduate.

"PRABASI" and the Bengal Education Department

The following questions and answers are self-explanatory —

CXXV. Rai Harendranath Chaudhuri. (a) Will the Hon'ble Member in charge of the Department of Education be pleased to state—

(i) whether it is a fact that a circular letter has been issued by the Inspector of Schools, Burdwan Division, forbidding the use of the monthly magazine *Prabasi* in the common rooms of the Government and aided schools, and

(ii) whether such circulars have been issued by the Inspectors of other divisions?

(b) If the answer to (a) (i) is in the affirmative will the Hon'ble Member be pleased to state—

(i) why such a circular has been issued, (ii) whether the Inspector of Schools, Burdwan Division, was advised or authorised by any higher authority to issue such a circular, and

(iii) from what authority such direction originally emanated?

(c) Are the Government prepared to advise the Inspector or Inspectors of Schools to withdraw such circulars.

The Hon'ble Mr. J. Donald. (a) and (b). The magazine is more suited to colleges and adult readers than to schoolboys, and in some divisions, including Burdwan, Inspectors with the consent of the department have circularised schools discouraging its inclusion in the school periodicals. It is not forbidden, and school committees retain discretion in the matter.

(c) In the circumstances stated no action is necessary.

While thanking the gentleman who put the questions, the editor of *Prabasi* wishes to say that the former was probably not in possession of all the facts. Some months ago that editor, who happens also to edit this REVIEW, obtained from some unknown person a copy of a confidential circular (it was so styled at the top left corner) issued in obedience to the Bengal Director of Public Instruction's letter No 201-C, dated the 25th of August, 1925, stating that *Prabasi* was not considered suitable for use in the Common Rooms of Government and aided high schools in the Bengal Presidency. A subscriber of *Prabasi* (please note, only one) also wrote to our office referring to this letter of the Director, asking for a refund of his subscription. Thereupon we wrote to the Director on the 12th October last asking whether he had pronounced on *Prabasi* the opinion ascribed to him, and, if so, adding, "I shall be much obliged if you will kindly communicate to me your reasons in a definite form" for holding such opinion. To this a reply came from the Director's Office after a delay of twenty-three days. It was marked D. O. No. 2765. We had no desire to refer publicly to this matter, because the Director's letter and the Inspectors' circular had failed to do us the injury they were meant to do, but had, on the contrary, increased our circulation, and because the Director was wise enough to mark his reply "D. O." But now that the matter has become public, its inwardness ought to be exposed. It will suffice to quote only two sentences from his reply. It was stated therein that "the Director regrets that he is unable to enter into correspondence upon the subject raised. He, however, Editor desires to pursue the matter and can find time, Mr Oaten will be happy to see him at his convenience." Originally, the letter had the words "Mr. Chatterjee" before the word "desires", but these were penned through and the single word "Editor" substituted in hand-writing, probably because, as Mr. Oaten is Mr., it was not thought proper to mislead a Bengali editor. We would much rather be Babued.

However, this reply was so overpowering in its condescension, that the poor editor lost both the desire and the power of calling on the august functionary to pay him his respects, as the phrase goes. But it was suggested to the editor that a representative of *Prabasi* might see the Director and learn what he had to say. And so a letter was sent to him requesting him to fix the time and the place. But no answer was received. So there the matter ended.

The reader will note that in his *demi-official* reply the Director neither admits, nor denies the authorship of the letter on which the Inspectors' circular was based. In the second place, he implies that the reasons for putting a ban on *Prabasi* are so very mysterious—far more so perhaps than a State secret, that he cannot put them on paper. If the Hon'ble Mr J. Donald's reasons are the real reasons, why this mystification on the part of the Director? That a magazine is more suited to colleges and adult readers than to school boys is quite a *publishable* and good reason. Why then could not Mr Oaten communicate this plain fact to the editor of *Prabasi* by letter? What necessity was there for him to suggest that that person should go in person and hear from Mr Oaten's lips the fateful words?

All this makes it morally certain that there is more in Mr Donald's reply than meets the eye. So we will examine it a little more closely.

There are in Bengal a good many magazines for the general reader in addition to those meant for children. By particularising *Prabasi* and not mentioning any other of these magazines, does Mr Oaten mean to imply that all the others are suited to school-boys? What are his reasons for thinking so? And does the extent of his ignorance or knowledge of the Bengali language entitle him to hold any opinion on the subject at all? If not, on whose advice did he act? To what department did these informants or informers of his belong?

We have never claimed that *Prabasi* is meant specially for schoolboys. But we do positively assert that it is in no respect less suited to schoolboys than the other Bengali magazines for general readers.

May we here incidentally ask whether Mr Oaten has recommended *Prabasi* to be subscribed for colleges in any circular of his? If not, why is he more prone to hinder than to help? Is that the peculiar characteristic of an educational director?

Prabasi alone of all such magazines can claim to have run for years a special section for boys and girls. And its editor has received many letters asking him to bring together such items in illustrated book form as home reading for children. Some juvenile text-books contain extracts from *Prabasi*.

A magazine may become more suited to colleges and adults than to schoolboys mainly for three reasons. The subjects it deals with may be too difficult, and its language and style may be too difficult for school boys. It may not be morally elevating, and may even be morally injurious. Its politics may not be suited to a people who in the opinion of the bureaucracy are fit only to live as minors under the tutelage of alien rulers for ever or for an indefinite length of time.

Generally speaking, *Prabasi* deals with all those subjects which are dealt with in other magazines of its class. And its method of presentation and style and language are not less popular than those of other magazines. Therefore the circular could not have been issued owing to the abstruse character of the contents or style of *Prabasi*. As regards its moral tone, no one who has even a nodding acquaintance with present-day Bengali magazines can assert that its pictures, stories, etc., are more objectionable than those of other magazines. The complaint has been rather of the opposite kind, namely, that we are too puritanic in the choice of pictures and stories. So by the process of elimination we arrive at the conclusion that probably the Director's action was due to the politics of *Prabasi*. Here we plead guilty to the charge that we have from the very first year of that magazine rebelled against the idea that we are a nation of eternal minors. We have always written for political adults, not for political minors. If we have been penalised for this offence, we do not at all make a grievance of it. But we do charge Mr. Oaten with attempting to injure us behind our back and with lack of courage to say distinctly why he made this attempt. We also say that Mr. Donald has been supplied with a disingenuous reply.

The questions and answers which we have reproduced above have been printed by the bureaucracy under the caption—
"Prabasi," non-inclusion of, in school periodicals.

This, again, is a *suggestio falsi*, the fact

being, not that *Prabasi* was not included in the list of school periodicals, but that a circular was issued to bring about its expulsion from Government and aided schools.

Postal Rates in India and Japan

Japan contains a population of 57,233,906. British India contains 217,003,293 inhabitants, which means that the population of British India is more than four times that of Japan. But the total revenue of Japan (for 1924-25) is about Rs 228,97,12,750, while that of British India for 1926-7 has been estimated to be Rs 133,43,00,000. Even if we added the revenues for 1926-7 of the provincial governments of India the total revenue of British India would not exceed Rs 228,43,00,000. In any case it is clear that Japanese numbering less than a quarter of British Indian subjects are able to pay more in taxes than the latter. This shows that the Japanese are a wealthier people than the Indians, and are, therefore, in a position to pay a higher rate of postage than Indians. But what do they actually pay?

We pay half an anna or six pies for a post card; the Japanese pay one and a half sen or four and a half pies for the same. For a letter we pay one anna or twelve pies; the Japanese pay three sen or nine pies. The lowest amount of postage that we pay for sending a newspaper by post is three pies; the Japanese pay half sen or one and a half pie.

So the Japanese, who are wealthier, have to pay a lower postage than the Indians, who are poorer. Why is this so? Because the Japanese are independent and self-ruling and can do what is good for their nation, whereas we are a nation of minors who cannot do what we rightly think best for our own country.

Let us now see what have been the results of the respective postage rates of Japan and India. For the sake of comparison we shall take the figures for 1920-21, which alone are now to hand for both the countries.

POSTAL ARTICLES IN 1920-21

Country	Letters and Postcards.	Newspapers
India	1242615619	70303772
Japan	3300839000	258423000

These figures show that, though the population of Japan is less than a quarter of that of British India, the Japanese send about

three times as many letters and cards by post as Indian British subjects and receive by post more than three times as many newspapers as Indian British subjects. When it is taken into consideration that the people of the Indian States also send letters and cards to the people of British India, which are included in the above figures, the contrast becomes still more striking; for the population of the whole of India is more than five times that of Japan.

Of course, the greater number of letters, cards and newspapers sent by post in Japan is not due entirely to cheap postage. There are other causes. One is that almost all Japanese of both sexes above the age of five or six can read and write, whereas in India only about six per cent can read and write, the remaining 94 per cent being illiterate. Another is that the Japanese, being independent, can shape their politics according to the interests of their country to a far greater extent than we can. Therefore, even their ordinary labourers take a greater interest in politics and read newspapers more than even our literate classes.

Spread of Literacy in India

There was greater literacy in India, at least in many parts of it, in the pre-British period than now. The type of village schools in which a knowledge of the three R's was imparted survived down to our boyhood. The quality of that education could be understood from Lord Sinha's statement that the knowledge of mathematics acquired by him in such a school was found by him more than enough for the discharge of his public duties in all the high offices he ever occupied.

Not an iota more than this knowledge was necessary for going through the most complicated accounts he had to deal with in many important cases in the High Court."

The system of education introduced by the British Government in India was originally and mainly meant to obtain cheap subordinate officials. Enlightening the mass or the people by elementary education and thus rousing them from their torpor never formed any part of their real policy. It is not their policy even now. The lack of funds has always been pleaded as an excuse for not making elementary education free and universal. But money can always be found

for frontier expeditions and bigger wars, or it can be borrowed. If the total number of crores spent for a few of the smaller expeditions were borrowed and made into an educational fund, its interest would quite suffice to make primary education free throughout India.

Or take the case of the Railways. Rai Sahib Chandrika Prasada shows in our present issue, p. 435, that from 1850-51 to 1923-24 the loss to the Indian Treasury on account of the Indian Railways has exceeded three hundred and twenty-two crores of rupees, and the losses are still growing. Is the enlightenment of the people of India less important than the covering of the country with a net-work of railways? Certainly not. But the railways were required for the exploitation of the country by British capitalists (with the consequent destruction of India's indigenous industries and trade) and for British strategic reasons, whereas British political reasons require that the people of India should not be for the most part an educated people. Hence, there has been a net-work of railways but not a net-work of schools instead of or along with it.

Our universities are like mere window-dressing to conceal the vacuity and ugliness behind. And the greater the ignorance and illiteracy in a province, the greater the window-dressing. For example, literacy is lowest in the U. P. and the window-dressing in the shape of many universities is also greatest there.

The vicious bent given to educational policy in India has influenced the educated classes also without probably their being aware of it. Hence we find that almost all our educational benefactors, who are entitled to great praise and sincere respect, have given large sums for high English schools, colleges or universities, but not for the spread of elementary education.

No Reduction in the Postal Rates

Sir Basil Blackett announced in his budget speech that there would be no reduction in the postal rates this year, nay, he suggested that there could be no reduction in them even in the future unless the cost of living greatly decreased or the Indian tax-payer were prepared to subsidise the postal department year after year with ever-increasing amounts from his pocket. The two attempts made by Indian members to get the rates reduced have also failed.

We do not see the cogeny of the Finance Member's arguments. If in England in spite of the rise in prices there has been a reduction in postage after the war, why cannot there be such a reduction in India? And in India itself there have been reductions in railway fares after the war in spite of the rise in prices.

The Post and Telegraphs Department is expected to show a net profit of 18 lakhs in 1925-26, and in 1926-27 the post office estimate taken by itself shows a profit of 20 lakhs, though the telegraphs are expected to show a loss of 20 lakhs and telephones 10. Now, the majority of those who use the telegraphs and telephones are more well-to-do than the majority of those who send letters and cards by post. Therefore, the latter ought not to be taxed in the shape of higher postal rates for the advantage of the former. Moreover, the telegraph rates themselves are unreasonably high. If they were made more moderate, the number of telegrams would be likely to so increase as to turn the loss into a profit. As for the Government telephones, as they benefit mostly the military department, their loss ought not to be shown against a civil department like the Post Office.

It has been pointed out above that the post office taken by itself has worked at a profit. In the past also it used generally to work at a profit. And the profit was utilised for the purposes of the general administration. If the post office really has to work at a loss in future, Government ought to disgorge the above-mentioned profits of past years. Moreover, if postage were reduced to former rates, there would be a great increase in the number of postal articles, swelling the postal income. No doubt, the number of postal employees would also have to be increased to some extent. But their pay roll will swallow up only a fraction of the increased postal income. A member recently pointed out in the Legislative Assembly that there had been a reduction in the number of letters and post cards by 225 millions. This means that on 225 million occasions some Indians or other were deprived of the convenience of communicating with relatives, friends, customers, etc. This should not be the case in any civilised country. The post office is an educating, civilising and commerce-promoting agency, and a means of enjoyment also. Even assuming that loss would be inevitable in its working, the loss should be borne, because it benefits all classes of people. If Government

could lose 322 crores of rupees on Indian Railways mainly in the interests of British capital and imperialism, surely it is absurd to bring forward the loss of a few lakhs or even a crore as an argument against the reduction of postal rates to their pre-war level. The fact is, as the European birds of passage in India can easily afford the present postal rates, they are not to be reduced. Had their interests been affected, there would have been reduction long ago.

The increase in letter and card postage alone is generally discussed as a grievance. But in reality there have been other increases. For example, formerly a book packet weighing up to ten tolas was carried for two pice. Now only five tolas are carried for two pice. *This doubling of book postage is a tax on education.* For it touches the pockets of all school and college students and other readers in the country towns and villages. But no member of the Assembly, so far as we can recollect, has urged the reduction of book postage. Similarly, newspapers were formerly carried by post for two pice up to 40 tolas. Now the limit is 20 tolas. Here also a change to the former rate is required. All value-payable packets have now to be registered, so that a moffussil resident ordering out a book from Calcutta worth one anna by V. P. P. has to pay six annas for it, including money order commission! This is absurd.

A Correction

In our last issue we quoted a statement from the *Calcutta Municipal Gazette* to the effect that paraffin and nickel have been found in some samples of "vegetable ghee". The editor of that journal has since drawn our attention to a correction in one of its issues which states that these substances were "never" found.

Archæology and the Post office

While we advocate a reduction in postage, we cannot support any mixing up of issues. Mr. Rangachariar asked in the Legislative Assembly, "Instead of giving away fifty lakhs for digging out old buildings, why don't you restore the one pice post-card to meet an insistent demand?" The Finance Member's plan for ensuring the regular carrying on of the work of the Archæological Department might

a might not have been the best one. But it is absurd to imply any opposition of interests between archaeology and the post office, or that postal rates can not be reduced except by depriving archaeology of normal or extra support. It would have been as reasonable to say that, instead of making remissions of provincial contributions to the extent that they have been, pice post cards should have been reintroduced. We shall perhaps hear next that instead of making extra grants to universities or colleges, etc., the price of post cards should be reduced, or the salt tax abolished or reduced, because those institutions also are concerned with such 'uninsistent' things as metaphysics, ancient culture, epigraphy, anthropology, etc. The thing is, all these things are necessary, and it is a bureaucratic trick to say or to suggest that a certain thing can not be done except at the expense of something else. For example, it was once argued that if the salt tax were abolished or reduced, the provincial contributions could not be remitted wholly or in part, or the cotton excise abolished. Very large retrenchments can be made both in civil and military expenditure. Instead of concentrating our attack on extravagance in these directions, it is unwise, to say the least, to sneer at archaeology as merely digging out old buildings. Every nation should value its history. And it is obvious that ancient history cannot be complete and accurate without the aid of archaeology. We are not archaeologists ourselves. But we may be pardoned for suggesting that if a man cannot appreciate the bearing of, say, the Harappa and the Mohenjo-Daro excavations on the position of India among the peoples of the world and even on her political buoyancy, he should consider himself a fossil.

Sir Basil Blackett proposed, not to "give away" 50 lakhs to the archaeological department all at once, but to capitalise it in order to get a regular annual income of two and a half lakhs for it, so that its work might go on without interruption. But supposing he did take away 10 lakhs, that would not have been a pure waste like some of the crores spent on the army departments, for example. To allow the camel of the military budget of 10 crores and to strain at the gnat of some lakhs is not the quintessence of political wisdom.

Things which are both useful and necessary should never be pitted against one another. For example, if our legislators

opposed some university grant on the ground that primary education is not being adequately promoted, they might succeed in not helping the university, but the money proposed to be given to it would not be given to primary schools. In the present instance, our legislators have not got pice post cards by sneering at archaeology.

How to Help Forward Archaeology

No intelligent and cultured patriot can deny that archaeological research must be carried on. Not only should there not be any diminution in the activity of the department, but every effort must be made to give it more money and more properly qualified men. We wrote in the current number of *Prahar* that as the Central Legislature could always be depended upon to vote the small sum of 2½ lakhs annually for it, 50 lakhs of rupees need not be locked up for the purpose. And we also appreciate the argument that the Legislature should, by keeping in its hands the power of voting or not voting even small sums, be able to scrutinise and control all expenditure with a view to preventing waste. But the attitude of some members towards archaeology during recent debates has almost inclined us to the position taken up by the Finance Member. The main thing is to carry on archaeological research in an uniform and uninterrupted manner. If excavations be made one year and abandoned the next owing to money not having been voted, the money already spent on the excavations might be more than a waste. Because what remains underground is safe so far, but when excavations have been made to some extent, if they are not continued or adequately protected, important relics may be destroyed or damaged by rain, etc., or be carried away by treasure-hunters or men in search of building materials, etc. Hence like universities, colleges, etc., the archaeological department also requires a certain fixed minimum grant. Members of legislatures should seriously consider the best means of securing to it this minimum grant, and also the question of increasing it whenever practicable.

We are entirely in favour of the opening of a fund for archaeological research to which the rulers of the Indian States and other wealthy persons should be asked to contribute. Cold weather tourists in India

and other foreigners may also be asked to contribute. Trustees should be appointed for this fund. The capital is not to be spent but only the interest

Export of Antiquarian Finds

It should always be understood, however, that, as a rule, no finds are to be transferred to any place outside India. If many identical coins, seals, etc., be found, then a few may be given to foreign museums after all museums in India have been supplied with them. In no other case is even a single find to be allowed to go out of India.

It is absurd to compel us to go abroad in order to study the history of our own country from the original materials. All countries are gradually making the laws against the export of objects of great historical or artistic value more and more stringent. In India the plunder of such material ought no longer to be permitted or allowed to remain legal. Stein's epoch-making discoveries in Central Asia were made with India's money. But the finds have gone elsewhere. From India itself many antiquarian objects found out by India's paid public servants with the help of Indian money have been taken away. This should no longer be permitted. Recently in Egypt many remarkable discoveries were made by some Englishmen by digging ancient tombs at their own expense. Still the Egyptians have not allowed these things to be taken away, and very rightly, too. When foreign concessionaires extract minerals from the bowels of the earth in any 'backward' country, its nationals justly complain of this legalised robbery. The plunder of a country's archaeological finds is worse robbery from some points of view. For one can buy with money minerals from foreign countries when the mines of his own country have been exhausted by foreigners, but the archaeological finds of a country are unique and can not be found elsewhere.

For another important reason also Indian finds should remain in India. We have not only to know and write our own history from the original materials, but we have to correct the errors of foreign historians of India, whose tendency, deliberate or unintentional, is to minimise India's genius and achievements in ancient times and to make her a debtor

for most things to foreign countries. We will give an example.

Occidental indologists had generally held that the use of stone for sculptural purposes in India did not date earlier than the Maurya period and that sculpture was not native to its soil but borrowed from elsewhere. But fortunately there were ancient statues in the Mathura, Calcutta and Patna Museums which revealed to the discerning eyes of Mr. K. P. Jayaswal the fact that they were pre-Mauryan. Had these objects been removed to Europe or America, very probably this discovery and the consequent correction of occidental error would not have been made.

Recently a question was asked in the Legislative Assembly whether the finds in Sind would be in part or wholly transferred to foreign countries. The reply was that "no orders have been passed by the Government of India" and "nothing has yet been settled regarding the eventual disposal of the finds from Mohenjo-daro." The Bharat Itihas Samshodhak Mandal of Poona had, earlier, protested against any transfer. All other similar bodies ought also to protest. It is hoped that Sir John Marshall, who is an enthusiast and whose desire and duty are to promote the cause of archaeology in India, will do his best to keep in India all the things found in India. It should be plain to him that Indian Legislators could not and should not be asked to vote money for his department in order to enrich foreign museums.

Recently we read the following paragraphs in the papers

The Government of India is considering whether to invite scientific societies and museums overseas to assist in the archaeological exploration of various parts of India.

The question has been raised by the recent discoveries of remarkable traces of ancient Indus-Sumerian civilization in the Indus Valley. The success of the excavation during the past year has aroused world-wide interest. Several museums in different countries asked for specimens and permission to take part in the work and share in the results.

Sir John Marshall, the Director General of Archaeology, has on various occasions pointed out that India, even working with the utmost zeal and provided with a large fund could not in half a century exhaust the possibilities of the widely scattered and important sites inviting excavation. Hence it has become a matter for consideration whether scientific explorers from abroad should be allowed to take part in the work, and if so, what should be their share in the objects found.

We have already stated above the principles which should determine the transfer, if any, of objects of antiquarian interest, to foreign countries. The demands of Indian museums must first be *fully* met, and if any funds remain after that has been done, then and then alone can foreigners be allowed to have a share in the results of archaeological exploration. Subject to this condition, it would be quite right to ask for the collaboration of foreign scientific societies and museums. Else it would be best to allow India's ancient remains to lie underground until we can ourselves do all the exploration that is needed.

The Mathura Museum

We have referred in the previous note to the important discoveries made in the Mathura and other Museums. We heard sometime ago from one who ought to know that the Mathura Museum was to be abolished, and consequently its contents would be probably transferred to other museums—whether in India or abroad, it is not known. It would be only proper if U. P. patriots could save their museum from its impending fate. It is a question of a few thousands and rupees per annum. Let them first ask a question in their Council to ascertain the actual facts. It would be a shame for the Province which can afford to have the largest number of universities to allow this museum to be closed.

Cultural Imperialism and Government Publications

If Englishmen or other foreigners find out anything in their own country by their own exertions and by spending their own money, they are of course entitled from the first to make whatever use they like of what they discover. But if things are found in India by men paid by India and by spending Indian money, it is only reasonable that India should have the first chance to know the details of these discoveries and see and use their pictures. But the present state of things is different. Illustrated accounts of the results of the excavations at Harappa and Mohenjo-Daro appeared first in London, and we were left to derive our information therefrom.

Now, if the photographs were supplied to the London publishers gratis, why were they

not supplied gratis to the principal Indian journals? If the English publishers paid for the photographs, why were they not offered in lieu of payment to the publishers of Indian journals? And who got the money paid by the London publishers—the Government of India or some employee of the Archaeological Department who supplied the pictures? If the latter, why is he allowed to make money at India's expense? We have heard that there is a rule that officers of the archaeological department are not allowed to write on the discoveries of the department, except in their official reports. Why was this rule not observed when MSS and photographs were supplied to London papers?

About a month ago we raised questions like these in *Prabasi*, and ask them again here. It has been stated that the first article contributed to a London paper was for the purpose of drawing the attention of Assyriologists to the finds in Sind and the Panjab. But are all the Assyriologists and the best of them to be found in Britain? And what harm would have been done by simultaneous publication in India?

Cultural and scientific Imperialism has strange notions, which are illustrated in an amusing way in the following extract.

In the *Indian Daily Mail Annual* issued in January, we published an illustrated article on the excavations. We received shortly after a letter from an official of the Archaeological Department stating that the photographs were unauthorised and should not have been published. While Indian newspapers are kept at arm's length in this way, the illustrated English newspapers have published numerous photographs as having been supplied to them by Sir John Marshall. What right has Sir John, who is an official of the Government of India, to supply them to the English papers, while Indian papers are told that their publication is unauthorised?

We are going to mention another trifling thing which is quite significant in spite of its insignificance. Towards the end of the second week of March last, a Calcutta British-owned and edited paper published an illustrated article on the report on the Archaeological Survey of India 1923-24, which, it said, had been "just issued." As it deals with the Mohenjo-Daro explorations, we immediately asked a well-known book-selling firm to procure us a copy. It wrote to us the day after that the report could not be had, as it was not yet ready for sale.

If it was not ready for sale, how did the Anglo-Indian (old style) paper get it? Evidently then it was supplied to it *gratis*. It is a beautiful arrangement this—that a

paper owned and edited by birds of passage of the Imperial breed should have *gratis* the first fruits of a department, but that men belonging to the country which finds money for the department cannot have a report even for payment even after the Anglo-Indian paper has exercised the imperial right and enjoyed the imperial privilege of *free* prior utilisation. We are still waiting to buy our copy ! Such is cultural imperialism.

India's Latest Smith's Prizeman

It is generally thought that the winning of the Smith's Prize at Cambridge is a higher distinction than even the senior wranglership. Since the senior wranglership ceased to be

Mr. Ganesh Sakhararam Mahajani

declared, the Smith's Prize has had a still greater attraction for students of mathematics at Cambridge. Hitherto three Indians had won this prize. The first to win it was Prof. Bhupatimohan Sen of the Calcutta Presidency College, the second Mr K. Anand Rao of the Madras Presidency College, and the third, Dr. Shankar Rao Savor, D. Sc., of the same institution. This year Prof Ganesh Sakhararam Mahajani of the Poona Fergusson College has won the prize. What entitles him to additional praise is that he has chosen to serve his old college for a subsistence allowance,

as G. K. Gokhale, R. P. Paranjpye and others had done before him. It is by such devotion and sacrifice, in addition to intellectual gifts, that a people becomes great.

Archaeological Training.

It would not be desirable for India always to depend on foreign experts for archaeological explorations. Her own sons must be able in increasing numbers to take up the work. Both our universities and Sir John Marshall's department should provide for the training of such men. From what we have heard of Sir John we have reasons to believe that he would agree to facilitate such training if men and money were forthcoming. In the meantime let our universities move in the matter. The Panjab may utilise the services of Mr Dayaram Sahni, and Bombay those of Mr K. N. Dikshit. So far as Bengal is concerned, the thing could be attempted by the Calcutta University if bias could be overcome in public interests. The university could perhaps ask Mr R. D. Banerji to give the necessary training in excavation and exploration work. Though he is not versatile enough like some of the University teachers to be able to lecture on Metaphysics, Metallurgy and Mesopotamia with equal ease, he, we presume, knows his own special work better than anybody else in Calcutta. We do not, of course, know what his own plans are, or whether his departmental work would leave him any leisure to undertake the training of apprentices ; but Sir John Marshall may be expected to favour any well-thought-out scheme for the purpose.

"The Vishnudharmottaram."

Part III of the *Vishnudharmottaram* is a Sanskrit treatise on painting. A translation of it with notes and an introduction has been published by Dr. Miss Stella Kramrisch. The translation is signed "Stella Kramrisch." But if, as we have heard, she does not know Sanskrit, how did she translate the work ? In a footnote in very small type, she no doubt says, "For assisting me with the translation I am indebted to" a certain Indian gentleman. But what is the meaning of "assisting" here ? If the translation be entirely or even substantially another person's

work, why is it signed by Miss Kramrisch? If, on the other hand, she knows Sanskrit, in what way, to what extent and why did the other person assist her with the translation?

In fairness to Dr. Kramrisch it must be said that, even if she does not know Sanskrit, there is precedent for what she has done. A certain Englishman is stated to have translated some Bengali stories into English "with the author's help," though he can neither read Bengali nor understand those stories if read out to him!

The Andhra University.

The Indian Daily Mail publishes the following from a correspondent —

The official notification announcing the fact that the Chancellor has nominated Mr. C. R. Reddy as the Vice-Chancellor of the Andhra University for a period of two years from April 1926, not having now been formally issued, it is reported that the necessary measures for the purpose of inaugurating the new University are being pushed through with all possible expedition. The Hon'ble Sir A. P. Patro, Minister of Education, has on the 15th instant handed over all the papers, plans and other things hitherto prepared in connection with the University and the construction of the University Senate House and other buildings to Mr. Reddy for taking the necessary action. The Senate House, as was announced before, will be located at Bezwada, and pending the construction of permanent buildings for the offices of the University temporary accommodation for them has been secured at Bezwada.

The advisory committee of the Andhra University, in which provision has been made in the act itself, has also been constituted and with its help and advice, Mr. C. R. Reddy is expected to proceed straightway with the work of bringing into existence the several University bodies and sub-committees for the functioning of the University. The publication bureau, which was to produce the necessary text books in the Vernacular so that the principle of making it the medium of instruction in the University classes may be brought into practical working, has also been called into being. Already the financial help for the University has assumed an encouraging position, for endowments to the extent of Rs. 4 lakhs have been secured; and it is expected that more endowments will be forthcoming in the near future. All this amount of course, in addition to the provision of Rs. 10,00,000 made in the budget for the University for the teaching and academical side of the University, it is proposed and estimates are already being prepared for it to establish a Technical institute at Bezwada at an early date. This institute will be constructed, as announced, by a public spirited Zeminder and endowed by him, and it will be named after His Excellency Lord Goschen. Preparations are also going on in

Waltair and Rajahmundry at a rapid pace and estimates are also ready for the establishment of an engineering and technological college at the

Mr. C. R. Reddy, M. A., M. L. C. of Madras, who has been appointed Vice-Chancellor of the new Andhra University.

Photo by R. Venkoba Rao

former place and a first grade Honours College at Rajahmundry for training students in the Arts courses. New buildings will be constructed at both these places in course of time.

The Late Mr. T. V. Seshagiri Iyer

The loss of Madras by the death of Mr. T. V. Seshagiri Iyer is also the loss of India. He was a distinguished scholar and an eminent lawyer and citizen and served as a judge of the Madras High Court for seven years. As a public-spirited citizen he served the Madras Congress of 1903 as one of its secretaries. When he retired from the High Court bench in 1920, the Indian National Congress had lost its former character, and Indian politicians had become divided into more parties than before,

to none of which could he give his adherence. Mr. Seshagiri Iyer served his *alma mater* the Madras University, as a fellow for many years and represented it in the provincial legislative council. He also did useful work as

has been acting independently of the Empire.

The Late Mr. T. V. Seshagiri Iyer

an elected member of the Legislative Assembly and as a member of the Financial Commission. He used to contribute to many newspapers and periodicals, generally on literary, philosophical and religious subjects

Mrs. Naidu's Efforts At Unification.

We highly appreciate Mrs. Sarojini Naidu's endeavours for the unification of all Indian political parties. The role of reconciler, peace-maker and unifier eminently becomes her as woman, mother and poet. The declared final goal of some Indian politicians is self-government within the British Empire, and at least the immediate goal of other Indian politicians, whatever their party names may be, is also the same. For this reason we have all along thought that a combined attempt to reach this goal is the duty of all Indian politicians. Nor is such united endeavour beyond the range of feasibility. Those who want to go beyond that goal will not be prevented or hampered by being brought nearer their final goal. This is clear from what Canada has been doing. In some matters she

"The Indian Nationalist Party."

Over the signatures of Dr. Annie Besant, Sir Sankaran Nair, Sir Sivaswami Iyer and other prominent leaders of the Liberal party, Mr. Mahomed Ali Jinnah, Mr. Chakravarty, Sir Dinshaw Petit, Mr. M. R. Jayakar, Mr. N. C. Kelkar and others of the responsive co-operation party, Mr. G. S. Khaparde and Mr. A. N. Suive, in all 125, a manifesto has been issued for calling a conference to form what will be known as the Indian Nationalist Party. In the manifesto the signatories say: "We the under-signed belonging to different political organisations with similar aims and objects and pursuing similar methods to attain them, have come to the conclusion that for the success of those aims and objects, the principle of which is to attain as speedily as possible swaraj or responsible government and dominion status for India it is essential that we should combine and work together to the greatest possible extent and form a coalition on the basis of such aims and objects as are common to all. The methods we shall employ in the pursuit of these objects may be described as discriminating co-operation and opposition or responsive co-operation or constitutional agitation including parliamentary obstruction as and when necessary. Our organisation will be known as the 'Indian Nationalist Party'."

This is a move in the right direction. As, whatever the theoretical position of the Swarajya party may be, in practice it has followed substantially the method described in this manifesto and as its aim also is to attain Swaraj, it would be a great blessing if it also could join forces with all the other parties.

Farewell to Professor Formichi.

On the occasion of bidding farewell to Professor Formichi the staff and students of Visvabharati played a Sanskrit drama. Subsequently in Calcutta on a similar occasion Rabindranath Tagore read a farewell address in the course of which he said —

I know that our scholars, with whom you have worked, and who have come to appreciate heartily the value of the help you rendered and of the kindness you showed to them, will always remember you with grateful admiration. Your scholarship has impressed us most for its living and luminous quality of imagination; we have realised that your study of Indian culture does not merely reveal a scientific mind, but a personality full of sympathetic insight. Having the noble modesty of the truth-seeker, your unbiassed mind could come into intimate touch with the ideal India, with all that is immortal in her of beauty and truth. Your discriminate appreciation has helped our students

in directing their loyalty to the best that India has achieved in her intellectual and spiritual adventure, the loyalty which is needed for the building up of a fruitful future on the promise of a fertile past.

In your own nature you have brought to us a gift which is not merely an outcome of a studious, scholarly training, but something native to the kindly soil of your mother country. It is that generosity of heart which has the magic power of bidding open the door of the inner sanctum of an alien race. I shall always remember the happiness of those days we shared together when gorgeous welcome was lavished upon us by the springtime in the eastern districts of our province, when all along our path we were repeatedly roused by the loud greetings of colour from the extravagant *kinsukas*, from the *asoka* groves, blossoming with wistful reminiscences of a far-away lyric age in India. It made me feel proud of your companionship, when I realised how easily your own accommodating kindness found its way into the hospitality of our people, across the natural boundaries of unaccustomed habits and manners.

Regarding the Italian library which the Professor brought with him as his country's gift, the poet said —

Your arrival in our *asrama* was accompanied by the gift of an Italian library from your country, surprising in its magnificence. It has already aroused in our students a desire to honour it by owning it truly, thereby directly reaching that great source of inspiration which, in a period of new birth in European history, brought out such a variegated luxuriance of intellect and art in the western continent. This library has been a generous invitation to our people by your country to the best of soul in that guest-house which is open to all time and to all humanity. You were a worthy bearer of this message from your own land, but, being a true lover of India, you must act as a messenger on our behalf in carrying our assurance to Italy that this friendly beckoning hers has given a permanent action to our mind in its communication with herself. And this is in accord with the ideal *Visva-bharati* which, as you now, is to realise the freedom pathway along the vast realm of man, lending our consciousness of the unity of all in the different human races. Your genial presence among us, the valuable service you have rendered to our *asrama*, the precious token of

sympathy you brought to us from your country and the masterly exposition you gave us of the gradual course of the spiritual illumination running through the period of Vedic India, has greatly strengthened our cause, creating a strong link with Italy in our bond of human solidarity.

The poet also paid a well-merited tribute to Professor Tucci in the following words —

In this connection I must mention the name of your former pupil, Dr Tucci, who is still with us and for the loan of whose services I cannot enough thank your government. He has studied with an amazing comprehensiveness, along with most of the other phenomena of ancient Indian

Professor Formichi

[By Kana Desai]

culture, the greatest period of India's history, he has pursued the triumphant career of Buddhism in distant countries, following almost obliterated indications across the sand-buried antiquities, among the records of a startled history that has lost the

memory of its own language. He can best remind the modern children of India of what has been the most glorious self-revelation in the annals of their ancestors. It was her ideal of universal sympathy, made uniquely real in the relationship which India at one time established with the neighbouring and distant countries through her self-conquering messengers, unarmed and unafraid, without greed and devoid of material means, the ideal which urged one of her mightiest emperors in the heyday of his power to transfer the progress of his conquest and the expansion of his empire from the political to the moral plane.

The Founder-president of Visvabharati concluded his address thus -

It is our desire to proclaim this richest birth-right of ours as Indians, our faith in this *dharma* which enjoins every man to realise, through the cultivation of *maitri*, the truth of his own self in the Truth which dwells in the All, You who come as a voice from across the seas giving harmony to the voice of the Eternal in the aspiration of India, you who allow us to realise in yourself the spiritual kinship of love and disinterested service,—you have helped us in this dark age of international suspicion and jealousy to light our lamp, which is dedicated to the divine spirit of *maitri*, acknowledged by Visva-bharati as the true ideal of India. And, therefore, our farewell to-day contains within it the deeper silent welcome of all days to our world of endeavour which will always carry in its heart the memorial of the best that your own life has offered to its creation.

Before we part, allow me to say that my relation to you is not merely through the cause I cherish in our institution. It is warmly personal and is intimately associated with my love for Italy and with the exuberant welcome which I received from her. If, owing to my increasing weakness and ill-health, I am prevented from claiming her hospitality ever again, her touch will always remain with me in the many relics of our meeting and the permanent representation you leave behind in our *asrama* of the treasure of her thoughts and dreams, and of the large-heartedness of her people.

To this address Professor Formichi replied in words instinct with feeling

"Cocogem"

We wrote in our last issue .—

"Cocogem," manufactured and sold by Messrs. Tata and Sons, is pure and refined coconut oil prepared for cooking food with and may really claim to be "vegetable ghee". But perhaps this preparation is not widely known to the Indian public owing to Messrs. Tata's almost entire dependence on English agency and newspapers conducted in English.

From a list of distributors of "Cocogem" supplied to us by the Tata Oil Mills Co., Ltd., we are glad to find that with the exception of one or two all are Indian firms. It is to be hoped, therefore, that in course

of time this wholesome article of food, which does not contain any animal fat or mineral substance, will be very widely used throughout India

The Swarajist Exodus.

At Cawnpore the president of the Congress declared in her inaugural address and it was also resolved by that body that if by the end of the cold weather sessions of the central legislature the Government did not show any signs of conceding the national demand, members of councils belonging to the Swarajya party would walk out of the legislative bodies. They have been true to their word. Whether the declaration of the Congress President and the resolution passed by the Congress, referred to above, were statesmanlike or not, is another matter. For their exodus, the Swarajists have been ridiculed and denounced by the foreign bureaucracy as well as by the other Indian political parties. But suppose they had not walked out of the council chambers, would not the selfsame critics have ridiculed and criticised them? Would it not have been said that the Swarajists had taken discretion to be the better part of valour, etc., etc.? Hence, we believe the Swarajists were between the horns of a dilemma, as it were—whatever course they could possibly adopt they were sure to expose themselves to criticism. Taking this and other facts into consideration, we think the exodus has been well advised. It would have been better still if the other parties could have been persuaded to join the Swarajists.

It is alleged that this step has been taken with a view to capturing the largest number of seats at the coming elections. But supposing that is the object, electioneering tactics of this description are not necessarily either immoral or unwise.

We also have been among the critics of the Swarajya party, as indeed of other parties, too. But we have never considered its aims and methods opposed to the principles of political science. Opposition, obstruction, civil disobedience, even revolution (when and if needed) are recognised methods. What particular method is to be adopted depends on circumstances. Coming straight from his office of Executive Councillor of the Central Provinces, Sir Moropant Joshi declared in his address as President of the Calcutta session of the National Liberal Federation:

As extreme measures nothing is ruled out for

achieving political emancipation—not even revolutions, much less civil disobedience and obstruction

Of course he had also said that

it is quite feasible to bring adequate pressure to bear on Government to grant India dominion status if the electorate and the people as a whole take much keener interest in matters political. The will to be free must be infused in the masses and intensity of feeling secured by constant reiteration of the birthright of Indian citizens. The Liberals have still faith in constitutional methods, which, they believe, have not been adequately tried

In our opinion, if the Swarajists have faith in other methods, also constitutional, than those in which the Liberals have faith, it ought not to be too great a strain on anybody's fraternal charity to believe in the sincerity of their faith

"A bird in the hand is worth two in the bush", so runs an English proverb. Herbert Spencer characterised British rule in India in a certain connection as a "cunning despotism". Present-day British bureaucrats in India have lost none of the cunning of their predecessors. They have enough wits about them to keep the hands of Indian politicians who have abounding faith in British justice filled for ever or for an indefinite period with small birds of "Reforms", in order to prevent them from trying to capture the bigger birds in the bush

We have been hearing from our childhood of a certain redoubtable warrior who complained that he had neither of his hands free for a fight, because one of his hands had enough to do to carry a sword and the other a shield. It was a very reasonable complaint. Our constitutional politicians are also quite logical. Some have their hands occupied with "transferred" subjects, and a smaller number with "reserved" subjects. Let them first prove to the satisfaction of their guardian tutors that they can keep these small birds in their hands before they can think of catching the bigger birds in the bush

But it is imaginable that there may also be ill-Liberal naughty boys who would agree to allow these small birds to fly away in order that their hands may be free to catch the bigger birds. If we cannot swell their ranks, we may at least connive at a division of labour—the good boys keeping the small birds in the hand and the naughty ones trying to catch the bigger ones in the bush.

Some persons honestly believe that we must prepare ourselves by long apprentice-

ship for the responsibilities of self-rule. But others also can equally honestly believe that there are men even in India who can rise equal to the occasion, should responsibilities fall on their shoulders, without the indefinitely long period of apprenticeship prescribed by the alien rulers. During and after the great war, many subject countries and nations have become self-ruling and independent. They had not served a tenth part of the term of apprenticeship we have already undergone. Some of them had not been apprentices at all. How have they become fit to shoulder their burdens? True, they became free after a bloody fight fought either by themselves or by others. But is it indispensable that speedy and great political changes must be preceded by bloodshed? Or is there any scientific or philosophical reason for thinking that competent statesmen cannot emerge except out of a blood bath in a country which claims to be free without suiting the convenience of the present holders of power as to the times and stages of advance?

We have always held that by co-operation the bureaucrat practically means subserviency. There has been already more than enough of real co-operation even on the part of the Swarajists. But the alien rulers want total surrender on the part of all political parties.

There is still a talk of working the reforms to prove that they are inadequate. But has not that fact been amply established already? Have not Ministers and Executive Councillors of the Liberal creed testified to that effect?

Government will not move an inch from its position and co-operate with us. In spite of all rebuffs, in spite of resolution after resolution carried in the councils but not given effect to, in spite of the restoration of rejected grants by certification, in spite of Government's contemptuous treatment of the national demand which is substantially the demand of all political parties, it is we who are to continue to co-operate. That is practical politics. Practical politicians must not be sensitive as regards national self-respect.

But there may be men who believe that freedom implies self-respect and that it is a sort of contradiction in terms to try to obtain freedom by methods which disregard loss or decrease of self-respect or produce callousness in relation to it. Such sensitive souls deserve to be forgiven and tolerated by practical politicians. Please allow them to dream

that it is self-respecting and manly to think of winning freedom by civil disobedience and that it is not impossible yet to make at least some people ready for that step. The foreign bureaucracy hold that all political rights must be obtained by us as boons, as favours condescendingly granted by them. What harm will it do to the practical politicians if some political dreamers dare to differ from the bureaucracy?

Some have thought it absurd that the Swarajists after having walked out of the council chambers, should still try to re-enter them. But it is not impossible to understand their point of view. It may be that they think that small reforms are often the greatest enemies of real and fundamental reform. They may hold that, unless the present councils are ended or at least so mended as to transform them altogether, real and substantial political progress would be impossible.

Those enthusiastic non-Swarajists who would welcome the utter collapse or extinction of any intransigent party should remember past history and take note that if there be no such party there can be no motive for the British bureaucracy to "rally" "reasonable" Indian politicians. "Reasonable" men are generally patted on the back, when there are dynamically "unreasonable" men in the country. Small birds are placed within the reach of good boys when the naughty boys want to net all the big birds in the bush.

The proviso that the British Parliament is to be the arbiter of India's destinies—determining the time and manner and extent of each step of her political progress, is an insult to India, and will continue to be a negation of real freedom, whatever reforms may be doled out to us as boons or favours by Britannia as the Lady Bountiful. Unless the British rulers can be moved from this position of theirs in practice—whatever the theory may be, India can never *feel* free and be free. India's salvation depends on the removal of that incubus. Co-operation, as understood by the bureaucracy, can never bring about this result, and we doubt if even responsive co-operation can do it.

Dr. Annie Besant has said that if the Commonwealth of India Bill be rejected by the British Parliament, she would advocate the policy of not voting any supplies to Government. But that method has been tried already, and all rejected demands have been restored by the process of certification. Sup-

plies can be effectively and really cut off only by a successful No-tax-payment movement, which is one form of civil disobedience. Therefore, pushed to its logical conclusion, what Mrs Besant advocates is tantamount to civil disobedience. Why then do that lady and her colleagues and followers criticise and condemn civil disobedience when advocated by the Swarajists and No-changers? Civil disobedience may be impracticable just now. But it is not wrong in principle. It may fail even once or twice or more often. But have not some other methods of emancipation been sometimes crowned with success only after repeated failures?

Who Will Learn a Lesson from Antæus?

The Swarajists have still the ear of the country and will continue to have it and obtain most of the votes so long as they can make the people believe that they are more against the Government than any other political party. But to serve and thereby possess the country and its heart is a different matter. They cannot keep their position of vantage for ever merely by striking heroic attitudes. Let them capture the heart of the country by real service, instead of merely talking of service and drawing up plans.

The Greek myth of Antæus has a lesson for us all. Antæus long remained invincible in wrestling because his strength was renewed every time he touched the earth, his mother. Hercules throttled him while holding him off the ground. In India the bureaucracy by their royal commission on agriculture are trying both to get in touch with the soil and to break the Indian politician's contact with the earth. That party which will be able to hold fast to the ground by its real love for and service to the masses will become and remain invincible.

Anil Baran Ray

• We accord a warm welcome to Babu Anil Baran Ray, who has been released from prison after having been unjustly kept there without any trial or without even the formulation of any charge against him. We wish him a long and uninterrupted career of devoted service to the motherland.

Political Prisoners in Burma Jails.

Maulana Shaukat Ali has given a description of the condition of the political prisoners confined without trial in Insein and Mandalay jails which makes very painful reading. Like Babu Anil Baran Ray, they should all be released now.

The revelations made by Lieut-Col Mulvany before the Jail Commission and given out to the world recently by *Forward* and Babu Tulsī Charan Goswami have convinced the public that political prisoners are sometimes kept in solitary confinement under police orders even at the risk of their becoming insane and that superintendents of jails are sometimes compelled to write false reports regarding the treatment and condition of such prisoners. The Home Member's argument that all this refers to what happened 15 years ago is unconvincing. Why did such things happen even 15 years ago? And what guarantee is there that even worse things are not happening at present?

The Montgomery Jail Incident

Lala Bodh Raj, M. L. C., a non-official visitor to the Montgomery jail in the Panjab, was attacked in that jail by two prisoners who poured a pot of urine on his head, obviously at the instigation of some jail officials who did not like his visits to find out the actual state of things there. That the alien bureaucracy are not inclined to mete out condign punishment to the offenders even in such a disgraceful and wicked affair, will appear from the following extract from *The Tribune of Lahore* —

The orders of the Punjab Government on the findings of the Jails Enquiry Committee in regard to the wicked attack on Lala Bodh Raj, M. L. C., in the Montgomery Jail in December last, which were announced by the Finance Member in the Punjab Legislative Council on Monday, add one more to the long list of cases in which an irresponsible bureaucracy has refused to do ordinary justice to a long-suffering public. "After consideration of the report," we are told, "the Government decided that the Superintendent and the Jailor failed in their duty. Major Trutter, officiating Superintendent, has been reverted from employment in the Jails Department, and Niyamat Ullah Khan, the Jailor, has been transferred to a small district jail" [Italics ours.] And this in the face of the definite and unequivocal finding of the Committee that "the assault was arranged by the jail officials and that the main motive for the assault was annoyance at the conduct of Lala Bodh Raj as a non-official visitor." (Italics ours.) The Committee,

while considering that there was not "sufficient" evidence to connect the Superintendent "directly" with the affair, state

"At the same time we are not prepared to hold that there are no grounds of suspicion against him. He certainly had reasons, both personal and official, to be annoyed with Lala Bodh Raj."

As for the jailor's responsibility for the heinous offence, the committee hold, on the basis of the circumstances and the Jailor's own conduct, which they fully examine, that there was left no doubt in our minds that the Jailor Niyamatulla Khan had a hand in the affair and instigated the offence which was committed by Budhia and Hussaina."

The lightest punishment which should have been inflicted on these jail officials for the wicked and disgusting offence is dismissal from service

"Lawless Laws"

"*Lawless Laws*", published recently by the Forward Publishing, Ltd., is an opportune and useful publication. It contains Regulation III of 1818, the Ordinance of 1924, and the Bengal Criminal Law (Amendment) Act, 1925, extracts from Lord Morley's *Recollections*, the opinions of public men on the Ordinance, the verdict of the Press (excluding the *Modern Review*), the protest of public bodies, a short history of the treatment of political prisoners from 1908 to 1926, suppressed questions and resolutions regarding detenus sent to the Bengal Council, extracts from Sir Surendranath Banerjea's *Reminiscences* and speech, and many other things. All public men and students of public affairs should have a copy of the book for purposes of ready reference

Cooch Behar Affairs

We are afraid Cooch Behar may be heading for scandals worse than, though somewhat different from, those which have given Indore an unenviable notoriety. We have before us copies of representations and petitions submitted to the Governor of Bengal and the Viceroy which we are not inclined to publish in full. If Cooch Behar were an independent State, say, like Nepal, the Government of India would have no duty in the matter. But it is a State tributary to the British Government and enjoying its protection. Therefore, that Government is responsible for the education and future welfare of its minor Maharaja, for the welfare of

Cooch Beharis, and for the welfare and dignity of its ruling family. In the case of many Indian States, including Cooch Behar when the late Maharaja Nripendra Narayan Bhup Bahadur was a boy, Government have not hesitated to make arrangements for the upbringing of minor Maharajas independent of the influence of the mother and other female relatives. Therefore, in the present case, too, Government should intervene, if on inquiry that should prove to be necessary, as we think it is.

For the present, we shall content ourselves with supporting a representation made to the Governor of Bengal and a petition submitted to the same high authority on the 6th June, 1925, both by Rai Saheb Panchanan Varma, M.L.C., and a numerous signed petition submitted to the Viceroy by the Cooch Beharis, and making extracts therefrom. In his representation the Rai Saheb stated among other things—

The guardianship and the training of the minor Maharaja and of the minor prince and princesses demand careful consideration and handling for the interest of the minors as also for the welfare and dignity of the State. At present Nawab Khusru Jung Mahboob Ali Beg is the guardian and Controller of the Household and another Muhammadan, the Secretary to Her Highness. Both are young Muhammadans of Western India and Her Highness is a Hindu woman, still not aged nor elderly, but without the company of a respectable relative of hers either from Baroda or Cooch Behar.

It does not at all look normal nor is it permitted by ordinary law of guardianship that the guardian of a Hindu Minor should be a Muhammadan, nor does it look well that young Muhammadans should control the Household affairs of a Hindu family, Royal or otherwise.

Bad rumours pierce through the ears and tears the Cooch-Beharee's hearts, and the poor Cooch-Beharees are in a very awkward position, as they can neither express nor suppress their feelings.

In his petition he asked on behalf of the Cooch Beharis—

We the Cooch Beharees, seriously apprehensive of the present and future situation and the dignity of our State, beg humbly and most respectfully to pray that Your Excellency will graciously be pleased to direct enquiries being made to ascertain—

(a) If Nawab Khusru Jung, the tutor and guardian of the Maharaja and the Maharaj-Kumar and Kumaris, the controller of the household and as such the constant companion of Her Highness, herself a young woman, is the Prince Mahboob, the native Secretary of Raja Sir Hari Singh alluded to in the Midland Bank case.

(b) If so, our prayer is that Your Excellency will be graciously pleased—

i. to direct a sifting enquiry as to the circumstances under which Nawab Khusru Jung was

brought into the house-hold staff and as to the circumstances under which he is being retained in the service of the State;

ii to take such steps as seem proper for the removal of Nawab Khusru Jung from all connections with the State and the Royal family;

iii to arrange for the proper guardianship, education and training of the minor Maharaja and the Maharaj-kumars and Kumaris with due consideration of the religion the family belongs to, to the high position they are to occupy and the functions they are to perform.

The petition of the Cooch Beharis contains similar prayers in greater detail, which we shall publish, if necessary.

It should be stated here in connection with the appointment of Nawab Khusru Jung on a monthly salary of Rs 1,500, all found, and that of Nawabzada Abdul Karim Khan on a salary of Rs 800 per mensem, that the Cooch Behar Gazette Extraordinary, dated May 25, 1923, which announced their appointment, also announced the compulsory retirement of five Hindu officers on the ground of "enforced retrenchment". Nawab Khusru Jung, it is alleged in the petitions, has no educational or other qualifications which would entitle him to even half his emoluments. It is also alleged that Nawabzada Karim has no work to do, "the power of the Maharaja having been vested in the Regency Council."

The Holkar's Abdication

The ex-Maharaja Holkar abdicated, it is said, because on principle he could not submit to be tried by a commission. Not having read the treaties of the Indore State with the British Government, we cannot say what sovereign rights its ruler possesses in theory. But in practice we find that there is no ruling prince who has not sometime or other to put up with various restraints on their movements and activities and to carry out various mandates, written and unwritten. Therefore, when the ex-Maharaja is alleged to have stood on his rights as a sovereign prince only when he was, wrongly or rightly, suspected to have been privy to the Bowla murder, the position said to have been taken up by him on this occasion cannot convince impartial people of his innocence. Nor, on the other hand, can it be dogmatically asserted that he was guilty of aiding and abetting or instigating the murder. But of this one may be morally certain that if His Highness's character had been different from what it appeared to be from the evidence given in the Bowla-Mamtaz case, he

need neither have been suspected, nor forced to abdicate.

Not that he was a bad prince in other respects. He had done much for the causes of education, social reform, industrial revival and expansion and popular government in his State, for which he will be remembered with gratitude.

Apart from the rights and dignity of his State, personally he would certainly have been a gainer if he could have stood his trial before the commission and established his innocence. As things stand, people are not satisfied that the demands of justice have been fully met by punishing only the tools in a heinous crime, allowing the principal or principals to escape, whoever he or they may be. In this respect the Government of India has done less than its duty.

Ramakrishna Mission Home of Service, Benares

This Home has been doing very good work for suffering humanity for the last twenty-five years. The report of its activities during the year 1925 is satisfactory. It maintains an indoor general hospital, a refuge for aged invalid men and women, a girls' home for giving training in the general work of the female hospital besides general education and an outdoor dispensary, and gives outdoor relief to invalids and poor ladies of respectable family who are stranded in Benares. Casual relief is given to needy pilgrims in the shape of train fare to their homes. The Home also tries to get for students books and examination fees.

The needs of the Home are various and many. It is in a position to make the best use of all donations, big and small.

Indians Aliens in Britain

We have received from the Glasgow Indian Union copies of some papers relating to the arbitrary registration in Glasgow and district of 63 Indians living there, as "Alien enemies." The Union has protested against the order of the Home Secretary in obedience to which such registration has been made.

The Home Secretary's action does not surprise us. If Indians tried to make their living in Great Britain in such numbers as they have been doing in South Africa, the

British nation also would most probably take the same steps for "reducing" their number as the Boer Government have been doing.

We do not like the latter part of the following sentence in the Glasgow Indian Union's circular letter —

All Indians have, on the ground of their nationality, been refused admission to certain Picture Houses and some other places of entertainment in Glasgow, "the most liberal City in Scotland"—an eloquent evidence of the gratitude of the people of this country for signal services rendered by Indians during Britain's time of greatest affliction and crisis recorded in the annals of History.

If Indians fought for and helped Britain in other ways during the world war from a sense of duty, they ought not to *expect* any thing in return from Britain. But as a matter of fact most of those Indians who served during the war were either mercenaries or were compulsorily enlisted.

Mr. Sastri's Lectures on Citizenship

The Rt Hon V. S. Srinivasa Sastri's four Kamala lectures on the rights and duties of citizens, which he delivered in Calcutta, were repeated in Madras. It is to be hoped they will be available in a handy booklet form. They were a brilliant, eloquent and lucid exposition of all aspects of citizenship. And they were not merely academic. In some of them Mr. Sastri dealt with the present state of things in India, and denounced executive abuse of power.

The Indian Executive is highly pampered. It is given to-day powers denied to the Executive in other countries. It uses these powers pretty freely, and without much regard to the requirements of a high level of citizenship, and the Executive are continually fond of asking the Legislative Councils to give them more and more of such arbitrary power. Moreover, if you give them power for one purpose, they use it for other purposes, provided you have not been sufficiently careful in framing your legislative provisions.

The Calcutta Municipal Corporation honoured itself by giving Mr. Sastri an address of welcome.

Sir Abdur Rahim Goes On—

Sir Abdur Rahim is irrepresible. He is more irrepresible than any paid agent of the alien bureaucracy could possibly be. He asserted that his community, the Musalmans of Bengal, would never accept Bengali as a

medium of instruction in high English schools in Bengal. But his community threw him overboard. Then he said that all *educated* Bengali Moslems were against the vernacular medium, insinuating that its Moslem supporters were not educated. He thinks that his community speak only a sort of Bengali, which is not the central or standard Bengali. But even the Hindus of east and north and west Bengal speak dialects which are different from the colloquial and literary Bengali found in books. And for that matter, in every country dialects prevail. E.g., in Britain, there are Dorsetshire, Yorkshire, Scottish and other dialects. Does any Britisher for that reason object to standard English being used as the vehicle of instruction in British schools?

Sir Abdur Rahim would fain make Urdu the vernacular of Bengali Moslems. But in the old Bengali literature, ransacked by Dr Dinesh Chandra Sen, Pandit Abdul Karim and others, there are hundreds of Bengali books written by Bengali Moslems. In modern Bengali also there are many such good books. How many, if any, Urdu books have been written by Bengali Moslems of past and present times?

Sir Abdur Rahim thinks that Bengali is unsuited to the genius of Islam, and implies that Urdu is suited. But the Quran and some other Islamic books were translated into Bengali about half a century ago by a Bengali Hindu. There have been subsequent translations of them by Bengali Musalmans too. All these have been appreciated by Sir Abdur's community. They are a great help to them.

Urdu, like Bengali, is a Sanskrit language with only a large admixture of Arabic, Persian and other foreign words. Such admixture is found in Bengali also. The characters in which a language is written do not alter its 'religious' genius. Persian is written in Arabic characters, but it is an Indo-European, not a Semitic tongue like Arabic. By the by, is the genius of English, which Sir Abdur would retain as the vehicle of instruction, particularly suited to Islam? If so, is it because Englishmen are in power?

Sir Abdur's diatribes against the Calcutta University have been fully answered. If Hindus have power and influence there, they have made heavy sacrifices and laboured for it;—Moslems have not. Not a single College in Bengal has been founded or maintained by Moslems. Only a very few recognised Schools out of about 900 owe their birth and

existence to them. Out of lakhs, verging on a crore, paid to the University as endowments and for prizes, medals, scholarships etc., only a few thousand rupees have been donated by Musalmans.

Sir Abdur Rahim asserts that Musalmans have always been in the forefront of freedom's battle. Not Indian Musalmans. Here the fight was long carried on by non-Musalmans long before the Moslems arrived to claim a share in the "spoils." As regards foreign countries, certainly the Turks, the Riffs, the Persians, and the Arabs have been fighting freedom's battle. But when and in what form did Sir Abdur and his satellites ever show their sympathy with these soldiers of freedom?

As regards Moslems in general, we hope be pardoned for pointing out that the glories of carving out large empires and of championing liberty cannot both be claimed by any race, sect, or nation. If Moslems or Christians are proud of the vast empires carved out by the Saracens or the Anglo-Saxons, for example, let them be. But they cannot at the same time pose as champions of liberty. For large empires are built up by extinguishing the liberty of many peoples and countries.

Emigration of Unskilled Labourers to British Guiana

The adoption without discussion by the Council of State of a resolution approving the emigration of unskilled labourers to British Guiana cannot but be condemned. Whatever guarantees may now be given, they will be treated as mere scraps of paper when the white colonists want to get rid of these Indian labourers or their descendants. At present the Imperial British Government will assume a *non possumus* attitude. No, Indians must emigrate as free *citizens* or not at all. India should cease to be represented anywhere as a nursery and supplier of human cattle.

Reforms for the Frontier Province.

The resolution in favour of introducing dyarchy in the N.-W. F. Province has been carried by a majority. But the Government had made up its mind beforehand that the Reforms were not to be introduced there for a long time yet to come, if ever. Still it must

have enjoyed the importing of communal considerations into the discussion—that is a plank in the divide and rule platform.

Among Government members, Sir A Muddiman, the Home Member, spoke against, and Sir Denys Bray enthusiastically for the resolution. That was rather curious.

Sir Sivaswami Iyer and Mr Rangachariar spoke against the resolution, but not in the least on communal grounds. Not a single argument advanced by them could be refuted by the official members. In fact, Sir Denys Bray was driven to employ some rather funny arguments in trying to controvert them. For instance, said he —

"I am told, how can you give Reforms to this desert Frontier? I ask, who pays the mighty bill for the protection of the coast line of Madras? Does the British Navy dictate to him what form the reforms in Madras should take?"

How absurd! Madras is a part of India and if the British Navy protects the Indian coasts, it does so mainly in British interests in order to protect Britain's principal estate in Asia called India. Moreover, Britain gets £100,000 annually from India for this naval service. The indirect gains are enormous, and too numerous to mention in detail. They have been in fact, the foundations of Britain's greatness. The next thing to be said is that the Parliament of Britain, the owner of the Navy, does claim to determine the stages and times of political advance, not only of Madras, but of the whole of India. Finally, India (including Madras) is able and willing to meet all the expenses of full self-rule, including defence. But the N-W F. Province is not in a position to pay all its present administrative expenses, which will increase if dyarchy be introduced. Nor is there any likelihood of its becoming self-supporting in future.

Indianisation with a Vengeance

The British Parliament's declared policy is to provide for "the increasing association of Indians in every branch of Indian administration." The sincerity and honesty of this declaration have been proved to demonstration, if such demonstration were ever needed at all, by some recent happenings. The large majority, 236 out of 292, of medical posts open to the I. M. S. hitherto without any racial distinctions, are henceforth to be reserved

on the civil side for Europeans. That means practically shutting the gates of the I. M. S. against Indian youth as a career. They must no longer aspire to the posts of Jail Superintendents, Professors of Medical Colleges, or Civil Surgeons in the big mofussil towns. But why give more details?

The large majority of I. M. S. men to be employed on the civil side must, it is said, be European in order to secure the attendance of European medical men on the European personnel of the all-India services and their families. But Sir Henry Lawrence, now officiating Governor of Bombay, said in the Bombay Legislative Council

"Living in a place where I had the choice of calling in a dozen English doctors for myself, my wife and child, for several years invariably I summoned an Indian doctor, for I had more confidence in his skill and experience than in the skill and experience of his English competitor."

Like the medical service the engineering service is also to be Indianised in a peculiar manner.

The Secretary of State for India in Council will in 1926 appoint nine Assistant Executive Engineers for this Service, including if possible one Burman who will be appointed to the India-recruited branch in Burma.

Except for this one appointment, every candidate must be a European British subject.

Sir Edward Sullivan was quite honest when he wrote in his *Letters on India*, published in 1858 —

"India opens out an almost exhaustless field for the educated labour of Great Britain, or, in other words, it maintains at a higher level than existing in any other country, the reward of the labour of educated men."

"... to men who weigh well the crowded condition of every outlet for educated labour in this country, and remember how dangerous to a State the want and desperation of the educated unemployed has always been, it will appear an ample reason for striving in the utmost to retain, if not all, at least a very sufficient portion of our Indian possessions. It is no use of hyperbole to say that the marked tranquility of England when all Europe was tottering, was owing not a little to the outlet, India had given to her educated men." *Letters on India*, p. 29.

"... For fifty or sixty years India has been to the brains and intellect of this country what the Western States have been to the thow and sinew of America—the safety-valve that has yearly afforded an escapement for the surplus energy or ambition of our educated population. There is no mob, however numerous and violent, half so dangerous as an educated middle class irritated with want, and conscious of deserving more than the crush and competition of the multitude enable them to acquire."

"If we consider the price that is paid for educated labour in India, we shall see that it is

at least twice as high as that existing in any other country." *Ibid.*, pp 51-52

In the December (1925) number of *The Century Magazine* the American sociologist Professor Edward Alsworth Ross wrote of Britishers employed in India that 'these men probably have twice the income they could command in England'

Such being the case, we ought not to expect honest Indianisation of the higher services so long as British ascendancy lasts. Our educated men must suffer from unemployment in their own country in order that British educated men may not become desperate owing to unemployment

The Contempt of Court Bill

The Contempt of Court Bill, which has been passed, had been unanimously opposed and condemned by the Indian Press. In the course of the debate, Mr K C Roy quoted in the Council of State the following opinion of Mr Justice Lal Gopal Mukherji of the Allahabad High Court —

I approve of the Bill except as to the nature and amount of punishment. A 'contempt of court' committed out of court (and not in the presence of it) is much milder in form and substance than a 'contempt' committed in court itself, yet the maximum sentence provided by section 228 I. P. C. is 6 months' imprisonment and a fine of Rs 1000. A heavier sentence may result in gagging the public opinion. I would fix the maximum sentence at one month's simple imprisonment with a fine not exceeding Rs 500.

In the Bill as passed the maximum fine has been fixed at Rs 2000

International Labour Conference

The appointment of Lala Lajpat Rai to represent Indian labour at the eighth and ninth International Labour Conferences to be held at Geneva in May and June next is a good one in every respect. The interests of Indian labour will be safe in his hands so far as his voice may prevail. But the personnel of the delegation taken as a whole cannot be commended. At each conference the Government of India will have two delegates and the employers of labour one; but the employees are to have only one representative. So he will always be in a minority of one to three. Even if all the four delegates were Indians, the proportion would have been undesirable. But Europeans preponderate.

So, there is little chance of labour obtaining full justice at the hands of capitalism, racialism and imperialism combined.

The Indian Philosophical Congress in Calcutta

In our note on the Calcutta session of the Indian Philosophical Congress in the last January number we commented on what we then believed to be a fact, namely, that the teachers of philosophy in the post-graduate department in arts of the Calcutta University had not contributed any papers to the Congress. Two professors of the University have recently told us that a few papers had actually been contributed by their colleagues, and many others who could have done so did not contribute, because, owing to the time for reading papers and the number of pages of the report definitely assigned for the publication of papers being limited, it was thought desirable to give a chance to as many outsiders as possible. We are thankful to these two gentlemen for bringing these facts to our notice and regret that we were previously misinformed

Nepal and Anglo-Russian Rivalry in Asia

Soviet Russia is at the back of Turkey to stiffen the stand of the latter on the Mosul question, and there is no doubt about the activity of Soviet agents who are aiding the Chinese to carry on anti-British propaganda and boycott. This Russian policy is bound to be followed as long as the Soviet authorities feel that the British Government is taking a leading part in bringing about "isolation of Soviet Russia."

If ever there be an actual conflict between Soviet Russia and Great Britain, Asia will be the principal battle-ground, and possibly all the important countries in Europe and Asia will be directly or indirectly involved in the struggle. Of course, India will be the object of Russian attack, and India will be the principal support in that struggle. For various reasons Great Britain can hardly expect any aid from Turkey, Persia and Afghanistan. As the international situation stands to-day, it is quite probable that Turkey, Persia and Afghanistan may join with Soviet Russia against Great Britain, or at best they will adopt the policy of armed

neutrality, as was the case with Afghanistan during the World War. China has not forgotten the Opium War and the British expedition in Tibet, and it is highly improbable that China will fight for Britain against Russia. China's best interests will be served by adopting the policy of strict neutrality, although the Soviet Government is straining all its nerves to win China over to its side. The first Anglo-Japanese alliance was made to serve the common interests of Britain and Japan against Russia. As a result of the renewal of this alliance it was agreed that Japan would aid Britain with Japanese forces in India, in case the Indian frontier were attacked by Russia. But the Anglo-Japanese Alliance had been abrogated through the British initiative after the successful conclusion of the Washington Conference. So Britain cannot expect any Japanese aid. To-day in Japan there is a school of politicians who, like the late Prince Ito, believe in Russo-Japanese understanding. The Soviet Government will never go to war with Great Britain without making it certain that at least Japan will remain neutral. The British Indian Government and the Imperial authorities fully realise this situation and expect that Australia will be able to send active forces to India to support the British Government, in case of any emergency, and that is the primary reason why Australian officers are being trained in India. The only Asiatic State from which Britain can reasonably expect support in case of an Anglo-Russian conflict is Nepal. It may be that the realisation of this fact was one of the causes of the recent Anglo-Nepalese treaty, which marks a new era in the international relations of Nepal.

Nepal has been for over a century a true friend of Great Britain. She has shown her sincerity in assuming the role of a friend and ally of Great Britain more than once during the most critical moments of the British Empire. Happily for Nepal, the rulers at the helm of the state of Nepal fully realise that the political, economic, cultural as well as religious life of the people of the country is tied up with India; and all responsible Indian statesmen are working for the freedom of India within the British Empire. To-day, as it was in the past, Anglo-Nepalese friendship is the key-stone of Nepal's foreign relations. To promote closer relations between Nepal and Britain, it is desirable that Nepal, like Afghanistan, should

establish a Nepalese Legation in London and adopt various other steps by which Nepalese scholars and statesmen may come in intimate and personal contact with British educators, scientists and statesmen.

Cannes, France.

TARAKNATH DAS.

Feb. 3, 1926.

Irish Free State's Attempt To Remove King's Prerogative

For about seven hundred years the British fought hard to keep Ireland in subjection and always contended that "the Irish were incapable of self-government." But as fate will have it, the Irish have not only established the Free state by a treaty with the British Government, but are working constitutionally to eliminate the British King's Prerogative. The following news-item will be of great interest to all students of constitutional law.—

DUBLIN, FEB. 4.

In Dail Eireann yesterday the Land Bill, 1926, was read for the second time, without a dissentient voice. The Bill is designed to prevent certain appeals to the King in Council from decisions under the Land Act of 1923.

In moving the second reading the Minister for Justice (Mr. Kevin O'Higgins) declared frankly that the Free State Government was opposed to what he termed "the fiction of the King's prerogative—one of the many fictions of which the British Constitution is composed." The treaty, he said, prevented "this anachronism" from being deleted from the Free State constitution, but the Government was determined to make it as ineffective as possible.

The real value of this Bill is that the Free State asserts its independence in matters of justice, enthroning the Free State supreme court as the highest tribunal of justice for the Irish people. None can take exception to this, if one agrees that the Free State is entitled to regulate its own internal matters, particularly its Department of Justice. There is much merit in Mr. Kevin O'Higgins's Bill from the standpoint of sovereignty of the Irish Free State.

In this connection I may remark that some time ago Dr. Gour introduced a Bill to establish a Supreme Court for India, which did not receive adequate support from the Indian Nationalists. India should have a Supreme Court of her own. Indian constitutionalists can learn much from the experience of the Irish.

T. D.

Irish Agreement Goes To League.

Geneva, Feb. 9.—The Irish Free State's deposition with the League of Nations of the London agreement revising the Anglo-Irish Ulster boundary treaty has raised the question of whether or not agreements between component parts of the British Empire are subject to the League's jurisdiction. It is remembered that, after the original Anglo-Irish treaty was registered, London sent a note to the League, pointing out that England did not recognize the liability of such treaties or agreements for arbitration under the League. However, it is not expected that a similar announcement will be made by the foreign office, since the disputed question is purely hypothetical at present.

This is another instance of Ireland's attempt to establish a position of equality with independent nations.

An American Professor's Candid Views On the American Attitude To Asia and South America.

We reproduce the following report printed in the *New York Times* of recent date —

Professor Albert Bushnell Hart of Harvard University, speaking to-day in Agassiz Hall, Cambridge, before the League of Women Voters, School of Politics, opposed the admission of Japanese, Chinese and Hindu immigrants, not on the ground that they are inferior, but because their descendants would for many generations be distinguished from Caucasians, thus causing endless difficulties, such as those which had arisen in connection with the negro problem. In his discussion of American Diplomacy—Treaties and Foreign Policy," he said:

"The League of Nations goes on the principle that the nations are all substantially equal before the law. Liberia, Siam and Paraguay are all on an equal footing in the League. Only the Council, the vital part of the League, recognizes race and color differences.

"I don't say the United States is right, though I think it is for the peace of the nations that we do not allow Asiatic immigrants to plague our posterity. As to the United States, Pan-America and the Caribbean, the truth is that the twenty-one Latin American republics, so called, are independent only in theory, for the United States practically controls Panama, Nicaragua, Honduras, Cuba, Haiti and San Domingo."

The American professors and politicians are filling the minds of the women voters of America with a new spirit of American imperialism and race superiority. Prof. Hart does not say that the American attitude is right. So it seems that if a strong nation has power to enforce its will, then it is not necessary for it to follow the path of righteousness! Might makes Right.

T. D.

Growing American Opposition to Filipino Independence.

Every Englishman in the Far East, opposed to America's granting any further concession to the Filipinos leading to the independence of the Philippines. They hold this view, because Filipino independence may rouse the Indians to greater activity to secure their independence. But there are American Imperialists who regard the Philippines as the American outpost to extend American political and economic power in Asia. They are opposed to granting independence to the Filipino people. *The New York Herald Tribune* in an editorial gives the following interesting view on the question —

"It is probable that Congress has no constitutional right to grant independence to the Philippines. The chances of passing a constitutional amendment alienating the sovereignty of the American people are exceedingly remote. The sooner this legal situation is recognized and the problem dealt with candidly the better. Self-government should unquestionably be granted to the Filipinos as fast as any group of them become competent to govern themselves. After nearly three decades of colonial rule, independence has become a more remote possibility than ever, both from the point of view of Filipino welfare and American development. To continue to deny the Filipinos by partisan talk of independence is particularly dangerous and unpatriotic kind of nonsense."

A French Martyr to Science

Paris, Feb. 3, 1926.
A posthumous award of the Cross of the Legion of Honour has been made to André Ribaud, a 26-years-old chemist, who has sacrificed his life to the cause of scientific research. Ribaud is cited as a young scientist who, "engaged in delicate and important researches concerning the extraction of rare gases from the air, lost his life in one of the mysterious accidents which so often occur to those engaged in research work." Ribaud, a graduate from the School of Physics, had been engaged for two years as collaborator of M. Georges Claude, a savant who has already made many important discoveries in the sphere of chemistry and physics.
At the time of the accident he was experimenting in extraction of such rare gases as xenon and krypton from the air. He was standing by a retort in which the residues from the evaporation of liquid air were being distilled, when there was an explosion so violent that both his legs were torn off, and he died three hours later. M. Georges Claude has pointed out that this case ought to stimulate the support of scientific research work by providing a typical example of the enormous risks run by quiet workers in laboratories, who are seeking every day to add to the sum of human knowledge, for Ribaud knew well enough the risks he was running, though the most dangerous point

of the experiment had not been reached at the time of the accident.

Progress Of Science in Russia

An electric bulb giving 1,000,000,000 candle power without the aid of any reflectors or glasses has been constructed in Petrograd by Professors Gickel, Bulgakov and Mitkevich. A test of the lamp in an electrotechnical experimental laboratory proves that with the help of glasses the bulb can give a light of several billion candle power.

Non-Burman Offenders' Expulsion Act

That the Non-Burman Offenders' Expulsion Act was meant especially for discriminating against Indians in Burma is quite clear. For the Chinese in that province could already be dealt with under the Foreigners' Act, and Britishers and Anglo-Indians need not apprehend expulsion. That Indian politicals are aimed at is also obvious because of the inclusion of sec 124A of the Indian Penal Code in the schedule of offences attached to the Burma Act. The Bengal Gonda Act is no precedent for the Burma Act as the former is directed against bootleggers and *budmashes* only. It is a constitutional enormity that one province of the Indian Empire should be allowed to pass a law discriminating against all the other provinces. The Viceroy should never have given his assent to such an unreasonable, unjust and unconstitutional Act. Those Burmese who have supported it—all have not, were guilty of ingratitude, too, for Burma has long carried on her administration with India's pecuniary help. That some European members of the Legislative Assembly supported the motion that H M the King-Emperor should be advised to veto the Act was an encouraging sign. They know that in theory European offenders can be expelled from Burma, and it is not *impossible* for the theory to become a fact in certain circumstances. Lord Reading should not have sanctioned Burma's South African law.

Edmund Candler

The news of the death of Edmund Candler has been received with sorrow by journalistic and literary circles. His was a romantic figure in the literary world. Born in 1874, Candler spent a considerable part of his life

tramping and roughing it, now in Tibet, now in Siam and Cambodia, now in Central Asia and now in South America or somewhere else. He received nine wounds at Tuna and served as war correspondent in France and Mesopotamia. He lost one hand owing to frost-bite. He was the author of many books, of which the following may be mentioned—*The Unveiling of Lhasa*, *Mantle of the East*, *The Long Road to Baghdad*, *The Edge of the World*, *Year of Chivalry*, and *Youth and the East*. He was a versatile man and had more than an ordinary knowledge of several literatures and of history, archaeology, etc.

A. C.

Muslim Ladies' Conference

The conference of Muslim ladies held at Aligarh under the leadership of Atiya Begum was a sign of the times. We rejoice that there are such signs of awaking consciousness among women of all religious persuasions in India.

All is not well with the Locarno Pacts

Fourteen members of the British Labour Party voted against the ratification of the Locarno Pacts, in spite of the fact that the Rt Hon Ramsay MacDonald made arrangements with the Conservative Government leaders to support the Pacts.

The Rt Hon Col Josiah Wedgwood, M. P. and Hon George Lansbury, M. P., two members of the British Labor Party Executive, were among the fourteen who voted against the Pacts. These two gentlemen are not communists, neither are they dreamers. So far as we understand, they took the adverse attitude towards the Locarno Pacts, because they were convinced that isolation of Russia did not promise to be a peace measure. Mr MacDonald and others wanted to censure these fourteen members of the Labor Party, but in a party meeting held in the House of Commons, Col Wedgwood and Mr Lansbury "condemned the action of Mr MacDonald in settling the policy of the party on this important subject without consulting the rank and file. After a good deal of heated discussion the motion of censure was withdrawn and disciplinary action postponed."

We are inclined to think that all is not well

with the Locarno Pacts as measures to promote World Peace

T. D.

The Geneva Fiasco

Article 10 of the "Treaty of Mutual Guarantee between Germany, Belgium, France, Great Britain and Italy," initialled at Locarno on 16th October, 1925, contains its kernel. It provides that the said treaty "shall enter into force as soon as all the ratifications have been deposited and Germany has become a member of the League of Nations." But Germany has not been able to become a member. It has been decided at Geneva that the election of Germany to the membership of the League and to a permanent seat on the League Council—the primary purpose of the whole meeting—must be postponed until the next session of the League in September. The reason for this decision is that Brazil, which holds a temporary seat on the Council, insisted on vetoing the election of Germany unless she herself also received a permanent seat. Brazil's action is believed to have been due to the intrigues of some anti-German European powers.

Thus the Locarno Pacts have still to come into force. Not that they presaged any universal peace. They gave only a new form to the old theory of balance of power in Europe. Russia was sought to be isolated and weakened.

Permanent seats in the League Council for some powers and temporary seats for others savour of national superiority and inferiority. The Council should be reconstituted and all seats made elective.

"Broad Men" and Education

In his annual report as president of Columbia University, says *Scientific American*, Dr. Nicholas Murray Butler sets at the apex of the world's problems the disappearance of "broad men". "The plain fact is that early and intense specialization is at the bottom of the trouble," says he.

"Specialization is the parent of information and of a certain type of skill, but it is the foe of knowledge and the mortal enemy of wisdom. Not narrow men, however keen, but broad men sharpened to the point, are the ideal product of a sound system of school and college education."

An excellent statement in which we heartily

concur. The broad man must not shrink when his days within academic walls are over. He must keep up with the achievements of the leaders of thought and action, not only in his own narrow segment, but in the whole sphere of human action. He must know what is going on and what it is all about. Or, to carry on Dr. Butler's simile, the broad man's fine point must not be permitted to grow dull from lack of use. Constantly it must be whetted on the swiftly turning wheel of progress.

Wanted—A State to Adopt the Indian Citizens!

Referring to Dr. Abdur Rahman, leader of the South African Indian Deputation to India *The Statesman* writes —

"We are convinced," he declared, "that the Government of India are doing everything possible to prevent the anti-Asiatic Bills passing into law. The responsibility is thus shifted to the shoulders of the Home Government, and Dr. Rahman calls upon it to take up the challenge of South Africa on penalty of breaking up the Empire. He considers that 'no person should be compelled to belong to an Empire of which one member is being persecuted by another while the rest of the members and the Imperial Government are impotently looking on.' We sympathize with his indignation, but surely there is no element of compulsion in the British Empire. Any citizen can leave it if he wants to, and can induce another State to adopt him."

The Statesman belongs to canny Scots, we believe. It is wideawake enough to know that owing to racialism and because of the Indian's intelligence, industriousness and drift, white men will not adopt him anywhere, nor will allow him to have foothold in any sparsely populated region where they are powerful and they are powerful in all such regions of the earth. So the paper must have written the above paragraph with its tongue in its cheek.

However, as it has permitted any Indian citizen to transfer his allegiance to any State outside the British Empire, it is to be hoped the paper will allow his properties also to be so transferred. And what is permissible for one citizen is surely permissible for a group of citizens, however large. So let us all negotiate with some non-British Power to transfer India and its people to it, for *The Statesman* permits it! Or is it its opinion that a few citizens may singly seek adoption elsewhere in a landless condition, but that if the whole group seek to do so with their country as their property, they must be declared an unlawful assembly?

ECONOMIC DEVELOPMENT

Snap-shots of World-movements in Commerce,
 Economic Legislation, Industrialism and
 Technical Education

BY

PROF. BENOYKUMAR SARKAR, M.A.

*Author of Political Institutions and theories of
 the Hindus, The Futurism of Young Asia, etc*

We have pleasure in bringing to your kind notice
 that we have just now brought out a work of
 Applied Economics, the first of its kind in our
 country, and in view, of changing economic con-
 ditions throughout the world, of the utmost practical
 importance to us. The observations are all based
 on first-hand knowledge, derived from visits to
 workshops and institutions as well as conversations
 on the spot. Post-war Europe is in the melting
 pot and fraught with lessons of vital significance
 to fast-changing India. The book is opportune, for
 economic history is handmaid to *Applied Economics*.

And India comes in for her share of discriminat-
 ing discussion. "The chief object in these sections,"
 tells the author in his Foreword to the book, "is
 to furnish an objective basis of interpretation and
 attempt an estimate of India's present place in the
 life of materialism." The chapter that closes the
 work contains a scheme for her material develop-
 ment which, in its definite suggestiveness, opens
 a wide field of vital work to do if India were to
 take her place among the competing nations of the
 world—work which demands immediate attention
 and has been comparatively ignored owing to the
 glamour of politics.

We would specially draw the attention of
 students of economics in our Universities to this
 interesting work owing to the suggestion it con-
 tains of lines of Industrial Regeneration for our
 country in accordance with modern conditions of
 economic life. In a word, it is a book that is
 indispensable to every administrator, politician,
 journalist, professor, student, as well as clubs,
 libraries and banks.

JOIN THE WELFARE GOOD TURN COMPETITION

At Least Rs 300 in Prizes

All you need do is to fill up the Form given below and do your best for the next three months. Read the Rules and Regulations carefully and see for yourself if it isn't just the chance you have been waiting for to utilize your leisure.

RULES AND REGULATIONS

1. The Name of the Competition is the Welfare Good Turn Competition.
2. It will commence on the 1st of April and close on the 30th of June 1926
3. The Editors Welfare shall be the final judges in all matters regarding this competition and no correspondence will be entered into with anybody excepting for informing winners
4. Nobody shall be enlisted as a competitor without duly filling up the attached form and fulfilling its conditions.
5. The Prizes shall be forwarded to winners, freight paid, within British India. But no responsibility will be undertaken regarding safe delivery or damage in transit by the Editors Welfare.
6. The competition shall not take place unless at least twenty-five competitors enlist themselves. In such a case, Consolation Prizes will be awarded to those who enlist.
7. To join the competition fill up the Form, secure two new yearly-subscribers (or four half-yearly subscribers) to Welfare and send their subscriptions to us per Money Order (or we can collect the money by V.P.P.) We shall then enlist you as a competitor and send you a receipt. After this go on securing further subscribers (two half-yearly subscribers will count as one). The Prizes shall be awarded on the 1st of July to Competitors in order of the number of subscribers that they have secured for Welfare.
8. The Yearly Subscription to Welfare is Rs 6 (Half-Yearly Subscription Rs 3). There must be many among your acquaintances who would like to take Welfare. If you tackle one man a day for three months and succeed with half the people you see, you ought to come out well in the list.

ENLISTMENT FORM

To,

THE MANAGER WELFARE,
91, Upper Circular Road, Calcutta.

Kindly Enlist me as a competitor for the Welfare Good Turn Competition.

Himalayan Remedies

Wonderful Discovery in the Medical World!!

For some Obstinate and "Incurable" Diseases

Sourced from the hidden stores of Great Lamas and Yogis of Tibet Burma and Himalayan Hills by Mr P C Mukerjee B.C.E. MISC. F.T.S. Vidyabhusan, Late Resident Engineer Calcutta Corporation during his tours and travels in the obscure regions of these mysterious lands while Engineer to P.W.D. of Burma and Personal Assistant to the Chief Engineer of Kashmir State

The fruits of many years' hard researches in the Himalayas and 25 years' successful experiments by the founder and 12 eminent Physicians of Calcutta and elsewhere are now placed before the public for the relief of suffering humanity in general

Since 1918 the founder has been practising in Calcutta as a SPECIALIST IN LEPROSY, LEUCODERMA and DIABETES and has cured a good many serious cases successfully

THE HIMALAYAN REMEDIES GUARANTEE CURE OF

I Leprosy, Leucoderma, Gangrenes and all incurable types of Sores, Skin-diseases, and of ulcers within or outside, also sinus and fistula in ano etc

II Obstruction of urine and all urinary troubles due to Gravels, stone, &c (a) Renal colic, (b) Gall-stone. No operation or catheter-passing is necessary

III (a) Diabetes of all stages, (b) Pulmonary Phthisis up to the stage when the patient has not been bed-ridden and reduced to skeleton but has vitality enough to digest our medicines

Cure is effected by regular and scientific treatment with these unique medicines under the founder, assisted by an able Medical Board who help the founder so far as Diagnosis of any critical case is concerned

For an experiment we request the sufferer to try any of the following cheap but wonderful medicines— for serious Malaria Special Preparation, painful Asthma and dreadful Dysentery of all stages, Rs 1-8 each Scorpion Bite is 8 Extreme Dyspepsia and hopeless Nervous Debility, Rs 2-8 each Gastric Colic, obstinate Eczema, all eye complaints except cataract as well as long-pending Rheumatism of all stages, Rs 2 each

Medicines are Free from any Injurious Substance.

All confidential Letters are to be addressed to Mr A Banerji M.D. (Homeo)
Secretary to the Medical Board

UNSOLICITED OPINIONS A FEW OUT OF A LARGE NUMBER

LEPROSY CURED. Dr. A. P. Bagchi, M.D., B.A., Calcutta, writes 5-7-18. "You have successfully cured a female relative of mine of her Leprosy. Her case was of 14 years' standing and was tried by most of the well-known Physicians of Kayiruppes of Calcutta as well as of other places of India but with no effect. Prior to your treatment she used to suffer from severe attacks of fever. Her sensation of skin was paralyzed in many places and she had sores and swellings all over the body and finally lost three toes. But under your marvellous treatment for the last 9 months she has been completely cured of all her ailments."

CURE OF EXTREME DYSPEPSIA. Mr. Subinjit Mukerji M.A., B.L., LL.B., the late renowned Prime Minister of Kashmir State and Vice-Chairman, Calcutta Corporation—writes 11-6-15. "I am suffering from a long and continued Dyspepsia torpidity of the liver and extreme nervous debility. I did not expect to live long. But now under your excellent treatment I find that normal tone has been restored

to the alimentary canal and the peristaltic action so revived evacuates the bowels easily and twice every day and I feel stronger daily with the expectancy of a further lease of life."

Major-General A. W. Hume writes from Dupleing 15-10-15. "I am an old man of 72, your medicine reminds me of my young age of 32."

Dr. S. K. Lahiri, M.D. writes 15-8-07. "After sufficient trial I have found you (1) Himadrikalpa (Nervous Debility), (2) Himadri Sudha, and (3) 'Zerula' colic to be excellent medicines and undoubtedly far above the known specifics for diseases in which your Remedies are applicable. I am sure they will do immense good to the public."

Mr. R. Mehmood, late Chief Justice of the High Court, Kashmir State, writes 9-4-15. "The case of KALA-AZAR which occurred in my house and was declared as hopeless by all doctors, has been completely cured by your Fever-end, Himalayan Remedies."

NEW BOOKS

HUMAN NATURE AND EDUCATION

With special reference to India by A. S. Woodburne of the Madras Christian College. Rs. 6-8-0.

A new contribution to psychological science compiled with special reference to Indian condition and problems and with most of the illustrations drawn from Indian school life. A book for all educationists and thoughtful people. Just published.

SCENES & CHARACTERS FROM INDIAN HISTORY

As described in the work of some old masters—compiled and edited with historical and explanatory notes by C. H. Payne. 6s.

A brilliant little book that brings life into the pages of history.

'The book will be found a valuable support to lessons on the history and geography of India.'

—*Statesman*.

SPIRITUAL VALUES IN ADULT EDUCATION

Some studies of a neglected aspect by Basil A. Yeaxlee. 2 Volumes. 25s

A work of theosophical, philosophical, and sociological importance. 'This book is most valuable and informing.'

—*Pioneer*

AN ECONOMIC HISTORY OF ENGLAND 1066-1874

by Charlotte M. Waters. 7s 6d.

A compact book of unique authority. 600 pages long.

The book is beautifully and profusely illustrated.

THE OXFORD BOOK OF ENGLISH PROSE

Chosen and Edited by Sir Arthur Quiller-Couch PP. XX. 1092.

Ordinary paper, Rs. 7-7 On Special India Paper Rs 9-3

Handsomely bound in dark blue cloth with gilt lettering. This book was published in England on the 25th anniversary of the publication of its world-famous sister volume The Oxford Book of English Verse.

Published at the same prices and in the same style and is now available in India.

This book, the most ambitious of its kind, contains 800 extracts and carries the reader from the beginning of English Prose to its modern development at the hands of such as Conrad, Hardy and Lytton Strachey.

'Letters, journals, speeches, translations..... histories, and novels, philosophers—political, moral and metaphysical, essays, criticisms, natural history, sport and battle, the Prayer Book and the Authorised Version.....the book deserves an enthusiastic welcome.'

ECONOMIC DEVELOPMENT

Snap-shots of World-movements in Commerce, Economic Legislation, Industrialism and Technical Education.

BY

PROF. BENOYKUMAR SARKAR, M.A.

Author of Political Institutions and theories of the Hindus, The Futurism of Young Asia, etc.

We have pleasure in bringing to your kind notice that we have just now brought out a work of "Applied Economics" the first of its kind in our country, and in view, of changing economic conditions throughout the world, of the utmost practical importance to us. The observations are all based on first-hand knowledge, derived from visits to workshops and institutions as well as conversations on the spot. Post-war Europe is in the melting pot and fraught with lessons of vital significance to fast-growing India. The book is opportune, for economic history is handmaid to *Applied Economics*.

And India comes in for her share of discriminating discussion. "The chief object in these sections," tells the author in his Foreword to the book, "is to furnish an objective basis of interpretation and attempt an estimate of India's present place in the scale of materialism." The chapter that closes the work contains a scheme for her material development which, in its definite suggestiveness, opens a wide field of vital work to do if India were to take her place among the competing nations of the world,—work which demands immediate attention and has been comparatively ignored owing to the glamour of politics.

We would specially draw the attention of students of economics in our Universities to this interesting work owing to the suggestion it contains of lines of Industrial Regeneration for our country in accordance with modern conditions of economic life. In a word, it is a book that is indispensable to every administrator, politician, journalist, professor, student, as well as clubs, libraries and banks.

Rigvedic Culture

By DR. ABINAS CHANDRA DAS, M.A., PH.D

Author of "Rigvedic India" and Lecturer in Ancient Indian History and Culture,
Calcutta University

Demy 8vo. About 600 pages Well bound in Cloth, gilt With Illustrations and Maps
PRICE RS. 10/- NET.

A FEW OPINIONS

The Asiatic Review (April, 1926). "Supplemented with an excellent bibliography and copious index, 'Rigvedic Culture' should prove of great interest to the Vedic students on account of its attempted re-construction of the life actually lived in Rigvedic times. It is a volume of 561 pages, and Mr Das, as lecturer on Ancient Indian History and culture, is to be congratulated on his zeal, industries and learning."

The Englishman, March 19 1926. "The author of this interesting volume has made an intensive study of Ancient Indian History and Culture..... throws a flood of light on the Aryan problem, and locates the original Aryan home in the ancient Sapta-Sindhava or the Punjab which comprised Gandhara in the west, Kashmir and Bactria in the North, from a primitive state they passed through all the stages of development, colthic, palaeolithic and neolithic, prior to their knowledge of metals. It was here that they developed a culture and civilisation which became

widespread. Dr. Das has thus penetrated into the pre-Aryan Culture drawing his materials from the Rigveda alone. This necessitated him to give a far greater antiquity to the Veda itself. Here he has shown a great deal of originality and thought, and his data, he is backed up by many Indian and European Schools and scientists..... All students of Ancient Indian History and Culture and of Social Anthropology are indebted to the author for this valuable work."

Prof. G. Sergi, of Rome University. "Your book, 'Rigvedic Culture' is very valuable in describing fully the life and customs of the Vedic Aryans. It is a very useful book of Ethnography and Sociology of the ancient Aryans, and from this aspect it will remain interesting."

Prof. V. Lesny of Prague University: "As to the arguments relating the age of Rigvedic Culture I cannot find them very convincing, but the other portions of the book I think very valuable and very useful."

The Evolution of Japan and Other Papers

By Lala Lajpat Rai

Price Re. 1, per V. P. P. Re. 1-8.

Second Edition. Revised and Somewhat Enlarged

Prayag or Allahabad

Price Re. 1-8, Postage Extra.

The book contains 57 illustrations on art paper. The booklet is a guide to the visitor to the ancient city. The English speaking reader will know from this book why so many people visit Allahabad year after year, especially during the Kumbha Mela years. Cloth-gilt, paper and printing are beautiful

The Knight Errant—Rs. 2-8

A Novel by SITA CHATTERJEE.

By the same Authoress

The Cage of Gold—Rs. 2-8

Both the novels received a warm reception from the press and public. In these two novels, the writer has analysed carefully and unveiled the secrets of the human heart in a way worthy of a psychologist. English-reading public will have a great opportunity of seeing Bengali life in some of its beautiful and real aspects.

Just Out II

General Index

to Major Basu's "Rise of the Christian Power in India" Five Vols.

by Gangacharan Roy Choudhury, M A , B.L

Cloth Gilt Letters Rs. 2.

A very handy, convenient and useful book for those who have purchased Major Basu's Monumental Work as well as for those who may do so hereafter.

History of the British Occupation of India

By N. Kasturi, B A

Cloth, Gilt Letters, Rs. 3.

This is a Summary of "Rise of the Christian Power in India" by Major B D Basu, I.M.S. (Retired) in five volumes. Those who may not be able to afford to buy the bigger work and others who may wish to have some idea of its contents should purchase this book. It is furnished with an index and a list of references to the bigger work.

The Historical Works of

Major B. D. Basu, I. M. S. (retired)

1. Rise of the Christian Power in India.

Five volumes Rs. 5 each, Postage Extra.

The Author has explained in the preface why the British Power has been called the Christian Power

2. Story of Satara.

A true history of how Satara was annexed and its Raja deprived of his Sovereignty.
Rs 10 , Postage Extra

3. History of Education in India under the Rule of the East India Company.

The author has shown that English Education in India was first begun by the Indians themselves, and that when the Government took it up, it was done with selfish motives. These motives have been laid bare from official papers.

Rs 2-8; Postage Extra

All public Libraries, All University Libraries, All College and School Libraries. All Libraries of Educated Indians should possess these valuable works. They supply the corrective to our incorrect knowledge of Indian History. The Author supports his conclusions by copious extracts from official dispatches, Parliamentary papers and proceedings, and the works of British and other European Authors, which few Indian Libraries possess.

Principal S. Ray's New Sanskrit Works

1. Bhavabhuti's Uttaracharitam

PROF. A. BERRIEDALE KEITH, *Edinburgh University*, says —

"I have looked through your book in order to see whether there are any suggestions which I could usefully make to secure greater adaptation to its purpose. It seems, however, that the mode in which the work is performed is well adapted for its purpose, and I note with satisfaction the effort to render the text into effective English. The explanations seem well adapted to secure comprehension of the text, and certain new renderings deserve serious consideration."

PROF. E. J. RARSON, *Cambridge University*, says. —

"I have read with great pleasure and interest The commentary and notes are admirably clear"

WORKS OF PROF. JADUNATH SARKAR, M.A.

AURANGZIB

50 years' eventful history, and a life's task in research.

Complete in 5 vols. sold separately, Rs. 16.

Vols. I & II together (Second edition)

Reign of Shah Jahan and War of Succession, Rs. 5.

Vol. III. Northern India, 1658-1681, 2nd ed. Rs. 3-8

Vol. IV. Southern India, 1646-1680, Rs. 3-8.

Vol. V. (1689-1707) Rs. 4.

Based mainly on original contemporary Persian sources, viz., the Mughal State Papers, daily bulletins of the Mughal Court, the letters of Aurangzib and his contemporaries, (more than 5,000), Marathi *bakhars* and letters and the Assamese *buranyas*, besides contemporary Factory records of the English, French and Portuguese

H. BEVERIDGE.—"Jadunath Sarkar may be called *Primus in India* as the user of Persian authorities for the history of India. He might also be styled the Bengalee Gibbon."

VINCENT A. SMITH.—"You are doing first-class work. I have the highest opinion of your learning, impartiality and critical ability."

W. FOSTER, C. I. E.—"It is easily the best authority on the period with which it deals."

Studies in Mughal India

320 Pages. Rs. 2.

Contains 22 Historical Essays on India in the 17th century and Mughal civilization in all branches.

ASIATIC QUARTERLY REVIEW—"A series of essays of the most entertaining description."

INDIAN ANTIQUARY—"All the essays are brightly written and several contain information not hitherto available in English."

Mughal Administration

Second edition, size more than doubled.

Rs. 3.

A study of the administrative system of the Mughal Empire, the Departments, the functions of the chief officials, the provincial administration, its influence on the peasants, the legacies of the Mughal Empire, the causes of its downfall.—Emperor—aristocracy—State factories, *farmans*.

SHIVAJI

Second edition, revised & enlarged. Rs. 4.

PIONEER—"Probably the only really first-class piece of work in English on Maratha history published during the present century."

H. BEVERIDGE.—"Jadunath Sarkar.....All his works are good; but perhaps the best of them is Shivaji. It is full of research and gives a striking picture of the birth of the Marhatta nation." Based on an exhaustive use of all the available original materials—Persian, Marathi, Hindi, Dutch and English—most of which were unknown to Grant Duff. Shivaji's character and achievements, and the Maratha institutions and system of Government are discussed in two long chapters. 45 pages."

Anecdotes of Aurangzib

English translation, notes and a long life of Aurangzib

2nd. Ed. Re. 1-8.

The work is exceedingly interesting and valuable as it throws much new light on Aurangzib and exhibits his pithy sayings, and his principles of government.

The Well-renowned Talisman, **Paramananda Brahmachary's**

Nabagraha Kabacha

Do you wish to propitiate the nine planets which regulate and influence human fate? Use, then, Brahmachary's Nabagraha Kabacha. This Talisman has extraordinary power to undo the evil influences of all the planets and to bring you all success, peace and happiness in life. It is purely and sacredly made in the Shastric form. Thousands of unsolicited letters testify that this Talisman is wonderfully and verily efficacious for:—

Success in Business, Trade, Commerce, Agriculture, Examination and Litigation, Cure of all sorts of diseases, Aversion for worldly troubles, Premature death, Dangers at every step, Pecuniary distress, Quarrel with friends and relatives, Mental disquietude, Loss of wife and children, Increase of the number of enemies, Service, Promotion, Increment of pay, Suitable marriage, Conjugal love, Honours from Government, Longevity of life, in a few words, Health, Wealth and Prosperity.

It acts marvellously on the body of men, women and children, either Hindu, Mussalman, Christian, Parsi or of any other faith. PRICE Rs 3 AND 4 Postage Extra

A FEW TESTIMONIALS.

1. Raja Sreenath Roy Bahadur, Bhagyakul, Dacca.—I have used your Talisman, its effects are undoubtedly wonderful

2. Prof A. B. Bhattacharya, M.A., Rajshahi Government College.—I had no faith in any Kabacha but Brahmachary's Kabacha's miraculous effects have astonished me

3 Mr. P. C. De, Well-known Detective Novelist, Calcutta.—One of my relatives, suffering from chronic diseases, has achieved great benefit by wearing your Talisman

4. Mr. R. C Guha, Dacca.—Just after using your Talisman I have secured a good service. Its prompt effect really reminds me of Aladdin's Wonderful Lamp.

5. Mr. Raicharan Mistri, Khulna.—Babu Harimohan Roy, a neighbour of mine, by using your Talisman comes out successful in every Litigation. He instructs me to wear your Kabacha. Please send me one

6. Mrs. Kusumkumari, Dacca.—Wearing your Nabagraha Kabacha I have gained a new life. I am now out of diseases, mental disquietude and pecuniary difficulties

7. Mr. M. P Pradhan, Craddock Town, Nagpur.—The Nabagraha Kabachas I ordered, were put on by myself, my brother and my daughter. I got my increment, my brother also got increment and my daughter came out successful in Matric., quite unexpectedly.

STERLING IMPORT Co., (Dept. M. R.)

Post Box 515, Calcutta

Rs. 2-8

BEGAM SAMRU

Rs. 2-8

By **Brajendranath Banerji**With a foreword by **Prof. Jadunath Sarkar, C.I.E.**

Profusely illustrated.

Begam Samru was a wonderful woman: "A Kashmiri girl who from abject poverty and obscurity rose to the command of a European-drilled brigade, the sovereignty of a territory as large as two English counties, and the honoured position of a shield to the Delhi imperial family, and died in the fulness of her years in the odour of sanctity as the honoured ally of the English rulers and a saint of the Roman Catholic Church" Sarkar

This is the first attempt to write her biography on the basis of a critical study of all the available historical materials in print or MS in English, Persian, Marathi and French, besides the mass of old State-papers in the Imperial Record Office, Calcutta

Sir Evan Cotton—"A most readable and valuable book" (*Bengal Past & Present*)

Pioneer—"A fascinating historical romance of the 18th century... the result of patient, laborious research. It is a successful biography of Begam Samru on the basis of a critical study, a judicious blending of a powerful romance with true and accurate historical information on the downfall of the Mogal Empire"

H. Beveridge, I.C.S.—"The author has written an

interesting account of the Begam, and has given much valuable information about her"

Prof P. E. Roberts Oxford—"I have found it extremely interesting and I congratulate you on having found so good a subject and also on having treated it so ably and vividly."

G. S. Sardesai—"This work of Brajendranath Banerji is very useful in helping historical students to understand the second half of the 18th century. There is a great need for such a research"

(*Chitra-maya Jagat*).

R. B. RAMSBOTHAM, M.A., I.E.S. —

"Your book is an admirable type of scholastic work which I hope other Indian writers will copy."

M. C. Sarkar & Sons**90-2A Harrison Road, Calcutta.****THE AMAZING DISCOVERY OF THE AGE**

A Revolution in the Scientific World! Equally appreciated by the Indians and the Europeans"

MR. B. PATRA'S UNIQUE PUBLICATIONS'

THE MYSTERIES OF NATURE—(1) To get promotion in services (2) Receiving favours from superior officers and others (3) How to be fortunate (4) The science of dream. (5) To know death beforehand. (6) To turn disobedient persons obliging (7) How to read character in faces (8) Thought-Reading. (9) How to be successful in all undertakings (10) Fulfilment of one's due desires in life etc.

THE HIDDEN TREASURE—How to choose a wife. How to get perfect happiness from conjugal life and many other hidden secrets not mentioned here. It gives unspeakable joy to the reader, etc.

The above books deal with many secret sciences which are still unknown to the world those who intend to read the books should apply soon with the guarantee form thus "I do give you my word of honour to keep the secrets private and not to misuse the powers." The price is fixed at Rs. 4 each. V.P. charges extra. Those who will order for two books at a time will get them at Rs. 8 including all charges. Limited number in stock. Apply soon.

Durjodhan Herbal Home, Post Box No. 11416 Calcutta, India.

READ WHAT THEY SAY:

THE PRACTICAL MEDICINES, DELHI: The *Mysteries of Nature* is the best book of its kind. This is a Novel Book for one and all of any age, caste or creed and in any walk of life. It unravels the many and diverse MYSTERIES of NATURE and helps one to get all-round happiness in every respect, for instance, to get promotion in service and how to receive the favour of superior how to win other's affection and to turn disobedient persons into obliging ones and many other valuable suggestions.

MR. A. K. LUKANSY, Palmgroves, Bingerville (Ivory Coast) writes:

THE HIDDEN TREASURE. In my opinion, if there was time, when the marriage topic called for vigilant surveillance, ... it is in these days ... the question therefore arises, what is the root-cause of so many failures, disappointments, separations and divorcements as the after-math of some matrimonial alliances? Undoubtedly, the answer lies in a deep mine of immutable laws of Nature which I dare say, Prof B. Patra has successfully excavated.

Altogether, it is an unique and excellent publication that cannot fail in attaining its objective. **THE HIDDEN TREASURE** should find a corner in the wise man's library.

SRIKRISHNA

HIS LIFE & TEACHINGS

BY DHIRENDRA NATH PAL—A True Companion in every walk of Life

Social—Political—Religious

His Life and His Teachings are the Beacon Light that guided and will ever guide the humanity to the eternal Land of Bliss. Equally appreciated by the thinkers of Asia, Europe, Africa, America. Highly spoken of by Max Muller, Wilson, Telang, Sir John Woodburn, Wilmherst, P. G. Bridge, C. R. Das and thousands of eminent persons. The only book which has ever been written systematically on a really historical basis. All sorts of Human-life—emperor and slave, wise and fool, lover and hater, murderer and martyr, witty and dull, merry and sad, march ever onward through the pages of this book. Innumerable references from start to finish. The book deals with about 100 subjects in two parts which will fascinate the readers like hypnotic influence.

A few contents:—Part I—The Kingdom of Mathura, The King of Mathura, The Plot against Kansa, The Birth of Krishna, Krishna as a Child, Krishna as a Boy, Krishna in the Brindavana, Fight with Kaliyas, Sports in the Forest, The Great Banyan Tree, The Indra Yagma, The Great Dance, Departure for Mathura, The Death of Kansa, Krishna as a Prince, The War with Jarasandha, Krishna in Dwarka, Kuru Panchala, The Marriage of Draupadi, Indraprastha, The Marriage of Subhadra, The Great Assembly Hall, Proposal for Rajasuya, Arrival at Girivraja, The Death of Jarasandha, The First Worship, Sishupala's attack on Krishna, Bhishma's Reply to Sishupala, The Death of Sishupala, Krishna the Greatest of the Great. **Part II—**The Banishment of the Pandavas, Krishna as Charioteer, Sanjaya's Embassy, Krishna and Sanjay, Krishna and Pandavas, Krishna and Draupadi, Journey to Hastinapur, First day in Hastinapur, Krishna and Kuru, Krishna's Speeches, Duryodhana and Krishna, Plot against Krishna, Krishna and Karna, March to Kurukshetra, The Pandavas before the Battle, The Great Crisis, Deity and Duty, Action and Devotion, Knowledge and Work, Virtue and Sin, The Great Declaration, The Yogee of Action, The Yogee of Devotion, The Supreme One, His Worship, His Emanations, The Great Manifestation, The Great Battle, The Death of Bhishma, The Death of Abhimanyu, The Death of Drona, The Death of Karna, The Death of Duryodhana, The Pandavas at Hastinapur, The Last days of Srikrishna.

THE MAKING OF A GREAT JOURNALIST

Life-story of Hamilton Fyfe, Editor of the Daily Herald, London

By Sri. NIHAL SINGH

I

FOR three reasons I wish to relate the life-story of Hamilton Fyfe, Editor of the *Daily Herald*, the official organ of the British Labour Party

First and most important, Fyfe's career is full of interest for the public in general, and inspiring to the youth. He pushed his way to the top of British journalism until the power he wielded over millions of his people was envied by his brother-journalists.

Second, he, in middle life, learned the folly of Jingo-Imperialism—was compelled to admit to himself that only inflated race-pride had made him cherish a supreme faith in the superiority of his people over other peoples—in the British ability to manage other peoples' affairs better than they could manage them themselves. Thereupon he threw himself into the struggle which the under-dogs in his own country are making to dislodge the top-dogs from their position of power.

Third, Fyfe is keenly interested in the effort which we in India are making to secure control of our own affairs. He has a message for us.

II

Fyfe, as his name implies, is a Scotsman. His ancestors must originally have been natives of Fyfeshire. His grandfather crossed the English border in search of a living more plentiful than that provided by his Motherland, which Nature has dowered more with scenic beauty than with the capacity to support mankind.

The Fyfes, in their native environment,

were handicraftsmen. They wove fabrics in their crofts or little homes set in picturesque glens (valleys) or against rugged mountain sides. Barrie—another Scotsman has much to tell about these kindly, industrious, thrifty people in his *Window In Thrums*.

That occupation has left its mark upon the descendants of these craftsmen—even upon the descendants who no longer pursue the original vocation.

Their hands are small and delicately shaped. So are their feet. And their livers are large. Large livers and small hands and feet often go with people of sedentary habits—and their progeny.

Hamilton Fyfe's physical frame is so well built that any observer with half an eye notices his slim, shapely, white hands, with their long, tapering fingers, and his small, well formed feet—the contrast is so great. As one grows acquainted with him one learns that his liver would get the better of him if he did not eat the simplest fare, work in the garden, and take long rambles in the country as often as opportunity permits. He eats practically no breakfast and his luncheon, when he is working in his office, consists of a few nuts and raisins, and a banana or apple or pear, generally washed down with a glass of water. He eats little or no meat and is practically a total abstainer. But his pipe is seldom away from his lips. I sometimes wonder if he has hypnotised himself into believing that but for the pipe he would find writing difficult or life tiresome.

Fyfe's head, fast becoming gray and a little bald, is massive. His forehead is splendidly developed and furrowed with the lines

THE MAKING OF A GREAT JOURNALIST

Life-story of Hamilton Fyfe, Editor of the Daily Herald, London

By SH. NIHAL SINGH

I

FOR three reasons I wish to relate the life-story of Hamilton Fyfe, Editor of the *Daily Herald*, the official organ of the British Labour Party.

First and most important, Fyfe's career is full of interest for the public in general, and inspiring to the youth. He pushed his way to the top of British journalism until the power he wielded over millions of his people was envied by his brother-journalists.

Second, he, in middle life, learned the folly of Jingo-Imperialism—was compelled to admit to himself that only inflated race-pride had made him cherish a supreme faith in the superiority of his people over other peoples, in the British ability to manage other peoples' affairs better than they could manage them themselves. Thereupon he threw himself into the struggle which the under-dogs in his own country are making to dislodge the top-dogs from their position of power.

Third, Fyfe is keenly interested in the fight which we in India are making to secure control of our own affairs. He has a message for us.

II

Fyfe, as his name implies, is a Scotsman. His ancestors must originally have been natives of Fyfeshire. His grandfather crossed the English border in search of a living more plentiful than that provided by his Motherland, which Nature has dowered more with scenic beauty than with the capacity to support mankind.

The Fyfes, in their native environment,

were handicraftsmen. They wove fabrics in their crofts or little homes set in picturesque glens (valleys) or against rugged mountain sides. Barrie—another Scotsman—has much to tell about these kindly, industrious, thrifty people in his *Window In Thrums*.

That occupation has left its mark upon the descendants of these craftsmen—even upon the descendants who no longer pursue the original vocation.

Their hands are small and delicately shaped. So are their feet. And their livers are large. Large livers and small hands and feet often go with people of sedentary habits—and their progeny.

Hamilton Fyfe's physical frame is so well built that any observer with half an eye notices his slim, shapely, white hands, with their long, tapering fingers, and his small, well formed feet—the contrast is so great. As one grows acquainted with him one learns that his liver would get the better of him if he did not eat the simplest fare, work in the garden, and take long rambles in the country as often as opportunity permits. He eats practically no breakfast and his luncheon, when he is working in his office, consists of a few nuts and raisins, and a banana or apple or pear, generally washed down with a glass of water. He eats little or no meat and is practically a total abstainer. But his pipe is seldom away from his lips. I sometimes wonder if he has hypnotised himself into believing that but for the pipe he would find writing difficult or life tiresome.

Fyfe's head, fast becoming grey and a little bald, is massive. His forehead is splendidly developed and furrowed with the lines

of constant, deep thought. His eyes are at times restless, mirthful, even twinkling and gay, and at other times dreamy, far-seeing, like those of a seer—of a philosopher. The lower part of his face belongs to a man of action. It offers a vivid contrast to his forehead and eyes, especially when he is pensive.

I have had the opportunity of studying this great writer in his many moods and at various times—when he was talking with me or entertaining guests in his home, or when bare-headed and jack-booted, he was digging in the garden round about his little cottage in the country, or when he was seated in his office just off Fleet Street, or when something had gone wrong in the reporters' room or the composing room, and curses were expressed by his flashing eyes and quivering lips, if not actually uttered. As I have tried to sort out the impressions thus gathered I have often pondered how exceedingly complex is his nature.

Mr Hamilton Fyfe

III

Just as a duckling takes to water, so did Fyfe take to journalism. His father worked on the *Times* and got Harry—as his people call him—a job on that paper, when he reached the right age. He found the management of the *Times* kindly and willing to give him every opportunity to learn his job. From the worldly point of view Fyfe, therefore, had a fortunate start.

When Fyfe had had enough of that paper he sought another which would give him

a higher salary and greater scope for the journalistic skill which he had acquired. In course of time he made several changes of that kind. Some of them were to his pecuniary advantage, others were the reverse.

Life in Fleet Street, directed by shrewd common-sense and pursued with great industry and determination, put a keen edge on Fyfe's senses—made him exceedingly sensitive to his environment—gave him a fine perception of human nature—invested him with the "nose for news." His work brought him in touch with men and women of high and low degree—as high and low degree are reckoned by the multitude. He attended feasts given in honour of persons who had distinguished themselves in one or another realm of life. He went through mammoth industrial and commercial concerns and became acquainted with their creators and conductors. He had entered into the sanctums of the mighty who frame or who administer British policy—policy which dominates half the world. At the other end of the social scale he went into slum-land and saw how the toilers dwelt in sordid conditions which sapped the body and soiled the soul. The hunt for news, which would satisfy the craving of nerves jangled by life led at high pressure and too much amusement took him to the police court and the divorce court, where he came face to face with human depravity and life's tragedy. His alert mind, in consequence became, with passing years, a storehouse of knowledge relating to every mood and tense of every variety of humankind.

During all these years Fyfe was devoting such leisure as arduous life in Fleet Street left him to improving his intellectual equipment. What the sons of better circumstanced parents learn at college, he taught himself in the hours which he stole from sleep and amusement and at times at the expense of much needed physical exercise. He made long, rambling excursions into literature, poetry, art, political and social sciences and economics. Every side of human nature appealed to him. He, therefore, read anything and everything that came his way—that he did not find to be trifling or too dull. And because he struggled for higher learning instead of having it administered to him by University professors and lecturers, he got a better hold of fundamentals and a far wider intellectual horizon than he would have secured otherwise.

All this time Fyfe's style was forming

His eye and ear being quick and his reasoning straight, he naturally wrote concisely—crisply. From the very start he was fond of making his sentences short and “snappy”—to use the Fleet Street parlance. He had, however, the good sense to realise that a succession of very short sentences becomes monotonous—tiresomely staccato. He, therefore, interspersed his short sentences with long ones. He similarly gave unequal length to his paragraphs. Some he made short, others long.

The beauty and force of the style lay in the economy of words and choice of diction. His work read naturally—as if no thought had been bestowed upon writing—nor any effort had been expended in the telling of the story. In 500 words he could relate an incident which another person would take twice or four times as many words to describe. He was like a painter who, with a few dabs of the brush, produces a complete and faithful likeness of a person whereas a more plodding artist would sketch in a wealth of detail which would be bewildering.

Not only did this economy of phraseology give power to Fyfe's style, but it enabled him to do his work quickly. He could set down his impressions while they were fresh in his mind, and would thus be left with strength and time to go on observing, whereas his fellow-workers, not gifted with the same conciseness of style, would exhaust themselves in doing their writing. Most important of all, he could keep the reader from becoming bored—keep up his interest to the end, and then make him wish that the end had not yet come.

A heart which felt for others gave to Fyfe's work a touch of sentiment. Without that touch the clear, crisp, concise style might have had power—even beauty—but it would have lacked soul. It certainly would not have gripped the imagination of the reader.

Experience in handling themes endless in variety, led Fyfe, in course of time, to make his style objective. He related facts not in the solid form in which the encyclopædist would present them to the diligent scholar, but as a series of pen pictures, the meaning of which could be gathered in a fleeting glance. Or, to change the metaphor, he cast the information which he had to convey in the shape of a story which the dullest wit could readily grasp—and enjoy.

IV

A writer who can arrest the attention of the multitude—and hold that attention—has great value in the eyes of a capitalist bent upon making money—or wielding power—through owning and conducting a newspaper, or a battery of periodical publications. Alfred Harmsworth, better known as Lord Northcliffe, recognised Fyfe's worth and secured his services, at a good salary, when they both were in the prime of life, and gave him free rein as so masterful a megalomaniac as was Harmsworth could give to trusted employee.

Mr. Hamilton Fyfe's mother. It is only necessary to look at her to realise where the Editor of the Daily Herald got his sunny, optimistic disposition.

Fyfe went about London or the provinces, or browsed through books, and wrote upon topics of the moment as they appealed to him, day by day, week by week, year by year. Some of his work appeared as leaders or leaderettes. Most of it, however, was published as signed articles. Northcliffe knew the drawing power of his name or his magic

initials "H.F."—too well to let his work appear anonymously.

The public, which bought the Northcliffe papers by the million, could never get enough of Fyfe. Every week he rose higher in the estimation of his employer, who could be generous to the men whom he appreciated.

Whenever any event of great importance occurred abroad whether in Canada, Egypt or Australia—Fyfe was sent over to write it up for the Northcliffe press. In this way he saw a goodly portion of the Continent, the British Empire, and the United States of America. Whatever country he visited he sought out men and women who were doing things, and also tried to obtain an intimate view of the common people and the life they led.

Of the many tasks which Northcliffe set for Fyfe, one needs specially to be mentioned.

Not long before my arrival in England in 1910 that great newspaper owner started a publication which was to be exclusively devoted to women's interests. He christened it the *Daily Mirror*—an appropriate name for a paper which was to reflect the fashions of the day as well as news and views of particular interest to women of all classes. It was to be produced in *à la carte* style as a paper sold at a half penny could be produced.

Though Northcliffe prided himself upon his ability to divine what the British public wanted, this paper failed to go. As the sales went down day by day he was compelled to admit that he had made a mistake for once. He did not mind so much the money he was losing as he did the fact that he was exposing himself to the jeers of his rivals.

A man of versatile genius and capable of taking up his mind quickly, as soon as Northcliffe became convinced that the British women would not buy his paper and, in effect, that the British women did not need nor desire a daily paper specially produced for them—he determined to change the entire nature of the publication. From a woman's publication the *Daily Mirror* was converted to a picture paper. Fyfe, detailed to accomplish the change, took in hand a failure and turned it into a success.

V

When the war fever caught Europe in its grip, Northcliffe sent for Fyfe and a few other journalists in whose ability he placed faith. They held a consultation—a consultation

à la Northcliffe, which really meant that he asked for his employees' opinions and before they had had the opportunity to state them told them what he had decided to do. Fyfe would have liked to go to Serbia. He knew that he could get through. But Northcliffe thought that he could not. Knowing his employer Fyfe did not give tongue to his convictions. At about mid-day he was asked if he could catch the 2--10 train for the continent—"Oh, yes," he replied.

Fyfe went instead to his cottage in the country. He told a servant to pack a bag for his wife who was away in town, while he packed one for himself. When the two bags were ready he set forth for the station, one in each hand. Arrived in London he made for the *rendezvous* which he had arranged for with his wife when he left the house in the morning for they had planned to meet and go to a theatre in the evening. When he saw her he told her that they were not going to see a play, but would, instead, take the night boat for France and that he had brought her bag packed with the necessary articles of clothing. She showed no surprise, much less consternation: but as she was in evening dress and wore no hat she had to buy one. In a little back street they found a milliner's shop still open. The hat was bought and carried in a paper bag until she could change into travelling clothes and wear it.

The man who set out in this gay fashion for France accompanied by his wife, was the highly intelligent, exceedingly efficient, cocksure type of Imperialist which the objective civilisation of Britain produces. His people he thought were the salt of the earth—the mounted of the Lord. His view of Indians was the orthodox view of the British governing classes. He wrote a book ridiculing the notion that the Egyptians could manage their country without British help. He went to Ireland and mistook the Ulster aspect of the Irish difficulty for the aspect that most mattered, and dismissed the question of Home Rule as absurd. He went to Mexico and was deceived into deploring the American decision not to step in and take charge.

Fyfe at that time believed in the unavoidable nature of war. Norman Angell, who also was one of Northcliffe's principal employees, held the opposite view. Fyfe debated with him at a dinner of the Whitefriars Club. Britain and Germany, he declared, were like two men in a small room who grew bigger and bigger until there was

enough space for both. They might not struggle, but as they swelled and pressed one against the other, they would push to save themselves from being crushed. They might push gently, good-naturedly, at first, but as each still grew, they would shove more energetically and soon would be striking at one another and could not help themselves.

Such was Fyfe's mentality at the beginning of the second decade of the present century. He was, in fact, one of those genuinely patriotic Britons who know their job and, have a fine sense of duty, but whose intellectual horizon is limited by the fog created by tradition and prejudice, and who, in consequence cannot see realities which lie beyond that fog.

VI

Fortunately for Fyfe, the war came along in 1914, and so much ammunition was blown out that the fog was dispersed. He went, in the service of his newspaper, from one front to another, came in contact with many of the principal actors in the war drama—shouldered elbows with the masses of people in France, Belgium, Italy, Serbia and Russia, and, at the behest of "Statesmen" and generals, was blindly throwing themselves in front of the cannon. The more he saw, the more he was disappointed—the greater was his disillusionment.

The news which the Allies sent out officially Fyfe discovered to his disgust, were "topsy-turvy." The French he found, went far beyond suppression and suggestion, they actually invented news. He did not find his own people immaculate in this respect, they sometimes suppressed vital facts or suggested falsehood, but did not actually invent stories.

Fyfe tells, for instance, in his book "The Making of an Optimist," that when Fort Maumont, one of the principal of the Ardennes Forts, was announced to have fallen, the French *communiqué* said that it had resisted "several fruitless attacks, which cost the enemy very heavy loss." The truth is that at Headquarters they had no news of the affair except the bare fact that the fort had fallen. There had really been nothing at all. Here is an instance of how the British cooked their news. An official statement appeared in the newspapers early in 1917 that a hostile raiding party had succeeded in entering the British trenches

south-east of Loos. Heavy fighting had ensued, and the enemy had been speedily driven out, leaving a number of dead in the British trenches. Some of the British soldiers were missing. The truth was, according to Fyfe, that 51 British soldiers had been taken prisoners. Most of them had been in deep dug-outs in the support line, to which the enemy penetrated with ease. The battalion commander had been removed for negligence, not a word was said about the cashiering of that officer.

Mr. Hamilton Fyfe's cottage near
Sevenoaks, Kent

VII

Admission behind the scenes of the war drama destroyed Fyfe's faith in the leadership of great generals. Few victories, he learned, were gained by reason or foresight, of planning in advance by general or by staff. Several allied generals got credit for planning successful coups which really came about through sheer accident.

Fyfe relates that General Currie, the corps commander of the Canadians, admitted that Foch did not think of keeping up pressure on the German lines in the last great push in 1918 until the British victory on the 8th of August showed him what an opportunity lay within his reach. Then he kept on hammering and displayed energy which was of the highest value, "but no great quality of intellect was required," which was fortunate, since Foch was not an intellectual man any more than "Papa" Joffre who, by snatching a lucky chance, won the Marne battle.

Clemenceau, declares Fyfe, "could not help despising Foch," but realised that his energy, his confidence in himself and the troops, were just what the situation required. When

"Foch turned up by chance—at the Doullens Conference, at the time when it seemed likely that Amiens might at any moment be captured again, he was recognised as the man of the hour, and by great good luck given the supreme command."

The difference in the treatment which was accorded to the officers and to the men disgusted Fyfe. He was particularly impressed when he was serving as war correspondent on the Italian front. He saw the officers sitting down in comfortable surroundings to a wonderful dinner of several courses, each of the most appetising, with good wine and excellent coffee, while the men were given "hunks of bread, small tin drinking-cups of thin red wine and larger tins of stew ladled out of a cauldron," which they "ate standing about or squatting in corners—exactly like animals being fed." He could not bring himself to feel that it was right that a few men should fare sumptuously, while the many had to bolt their coarse rations like dogs or wild animals. It could not be said that all men were used to that sort of living, for many of them were conscripted soldiers who had been brought up in comfortable homes.

VIII

If Fyfe was disgusted with what he saw at the front, he was still more disillusioned with the men who had in their power the making and ending of war. Investigation showed him that the highest among his own people were not straight in their dealings with their public that they either did not know their job and were muddle-headed blunderers, or were incapable of making up their minds until circumstances hemmed them in and sealed up every avenue of action but one.

Grey, the Foreign Secretary, for instance, he declares, could have prevented the war had he only possessed the wisdom and the decision of character to take his stand against it. France's President had, in fact, told the British Ambassador at Paris during the hours when peace hung in the balance that if Germany knew that Britain would support France it would not go to war over the Austrian affair, and begged Britain to speak out and thereby prevent the conflagration. Grey, supported by Asquith, his chief, however, chose the primrose path of *laissez faire*.

Grey, in Fyfe's opinion, was "a muddle-headed, ill-instructed, well-meaning English

gentleman, unfit for his position and quite unable to break through the poisonous net of intrigue and diplomatic custom in which European foreign relations were enmeshed. He was 'as deeply disgraced by his acquiescence in the breaking of the Pact of Algeciras as Bethmann-Hollweg was by the defence he set up for the German invasion of Belgium.' His "deception of the House of Commons and the nation" was as disgraceful as if he had cheated at cards or deceived an acquaintance over a trifle. He justified "his shameful 'scarp of paper' treatment of the guarantee of Albanian independence" on the plea of war necessity. In fact, "he was because he could not think clearly, one of the chief architects of the war."

Fyfe has no higher opinion of Asquith. "Wait and See" was a "perfectly accurate description of the method preferred by a politician whose indecision brought disaster upon his country and upon the world." He was a lawyer-politician, capable, clear-headed but with the marrow of his brains weakened by the long years of forced study over briefs. Without "a spark of statesmanship Mr Asquith was unable to shape events by any policy of his own. He had to let his policy, the policy of Britain, be shaped by events. He drifted." And because "he drifted, Armageddon raged."

All through the war Fyfe found that the politicians, Allied and otherwise, helped to concoct and to disseminate lying tales of barbarity perpetrated by the enemy. So long as the Czar and his bureaucrats were in control of Russia, Asquith, Grey and their successors in office, he found, had a pathetic belief in Russia's invincibility. As soon however as men who were determined to break down the capitalists-monopoly came into power there, Churchill, then at the head of the Admiralty, began secretly to aid the Russian rebels. If the "Council of action" which threatened to usurp the authority of Parliament had not come into being, he declares, Churchill and his colleagues would have gone on using British men and British money to suppress Lenin and Trotsky. That Council, having accomplished its purpose, disappeared, but it showed the direction in which the British mind was running. Parliament, by becoming a pliant tool in the hands of the Executive, had forfeited the confidence which the people reposed in it. The setting up of an emergency body de-

strated that a considerable portion of the people looked upon Parliament as being unrepresentative and that they were ready to employ alternative organs to serve their purpose.

Fyfe had much time to ponder these and other matters while "lying under the stars with incessant furious shelling of artillery in his ears, or in deep dug-outs, safe and snug, or in the trenches, riding now over battlefields and through villages deserted and destroyed, mingling now with crowds of soldiers, and now with crowds of civilians, for an instant of good news generally contradicted the next morning, or hushed and panic-stricken by tidings of disaster." He saw the "inaptitude, follies and crookedness of the principal actors in the war-drama whether these actors belonged to his own nation or to the nations standing shoulder to shoulder with it, or to the Powers arrayed against them, sickened him. After serving as a war correspondent on five fronts, and seeing the misery and desolation of war, its blighting effect upon character, its stupidity and its appalling ill-management," he learned that rulers, whether claiming divine appointment or holding office only so long as they could persuade nations to vote them to power, were seldom superior in character or intelligence to the general run of their fellows. He realised "the pitiful and ruinous consequences of leaving to such men decisions which meant life or death, contentment or wretchedness, to interminable millions of men and women."

IX

During the latter stages of the war Fyfe conducted the factory which his chief—Lord Northcliffe—had established with Government money and in behalf of the Government, to manufacture leaflets and newspapers to be dropped from aeroplanes or smuggled through neutral countries into Germany, with a view to disgusting the Germans with their rulers. In his flat in Maida Vale he still has a few copies of the papers which he and his assistants faked, as also the German productions which served as their prototypes. When one

The Garden where Mr. Fyfe takes recreation

compares the genuine German article with that collected in the Northcliffe factory, one cannot help admiring the British ability to fabricate.

These papers must now be of very melancholy interest to Fyfe, for, as the sequel showed, he and his colleagues were made to offer false inducements to the Germans to influence them to dethrone their leaders and end the war. Fyfe attributes the blame to the coalition Government. "Lloyd George himself," he says, had suggested to the German people that if they got rid of their antiquated personal-rule monarchy, they would be treated with lenient, even friendly terms, and "he and the other members of the British War-Cabinet sanctioned this as a basis for British propaganda in Germany and among the German armies."

Just after the Armistice Lord Northcliffe published an article "proposing terms of peace which would have been just and humane, and would have kept well within President Wilson's conditions." This article Fyfe considers was the crown of their "efforts to secure a settlement calculated to repair as quickly as possible the devastation of four years' barbarism." But the propagandists had to reckon with Lloyd George. According to Fyfe:

"As soon as Lloyd George found the pledges he had given inconvenient, he broke through them. 'Now they (the Germans) are down,' he said gleefully, 'we can do as we like.' He kept up the newspaper fury against the defeated peoples, he assented to the infliction upon them of indignity, even outrage."

The events which followed the signing of

the Armistice, in fact, shocked Fyfe even more than the ghastly tragedies enacted during the War. Lloyd George and his colleagues pandered to the basest passions by their election cries of "Hang the Kaiser," and "Make the Germans pay." When Woodrow Wilson came to Europe for the purpose of taking a personal part in the framing of the conditions of peace, the politicians and diplomats set to work to "dope" him. By degrees they got him under such perfect control that he claimed as his own production a document which, to any unprejudiced person, appeared to be a travesty of the "14 points" upon which the Germans had given up the struggle.

The planting of allied troops in the valley of the Rhine and the occupation by Britain of more than a million square miles of territory in Asia and Africa upon the pretext of "Mandates," and of smaller but potentially rich areas by the other Allies upon a similar pretext, followed the imposition of that infamous Treaty.

A

Such wrongs perpetrated with barefaced cynicism without parallel in the world's annals by persons who all the time prated about humanity, civilisation and culture completed the process of education which Fyfe began to undergo with the outbreak of the hostilities. The British patriot who had unbounded faith in the ability of the British rulers to manage any people's affairs better than they could manage them themselves, knew them to be muddlers and bunglers at home and abroad. European civilisation, which he therefore, had extolled to the skies, appeared to him to be mean and shallow. It "secured for the few the utmost material comfort and mechanical convenience, while it left the mass to struggle for scarcely more than a bare subsistence, with destitution never far away."

How could this post-war Fyfe fit back into the scheme of producing newspapers for the personal gain of his employer? He tried to do it but failed. The stimulus which had animated the pre-war Fyfe had disappeared. He gave up writing special articles and leaders designed to extol this or that characteristic of British culture or hold up to scorn the inefficiency of some other race, and took to writing book reviews. He grew sick of even writing critiques, for he felt hampered

in giving expression to the real criticism which he felt he ought to make.

The very ground upon which the pre-war Fyfe had stood had slipped from under his feet and left him standing on the edge of a precipice looking down into a deep, dark cavern dominated by greed and lust. He therefore, had to acquire an entirely new basis upon which to lay the foundation of his future life.

In lieu of a religion weighted down with dogma and ritual—a religion which was kept for purposes of show just as much as the "Sunday-go-to-meeting" clothes—Fyfe adopted a simple, primitive faith—the faith of the Christ—"a living, compelling force, bond uniting all who are influenced by its sense of brotherhood, all who know that makes for their own greater happiness, well as for the greater happiness of others, be helpful, generous, open-hearted, instead of regarding mankind either with suspicion and grudging justice or as sheep to be fleeced." This way of life was "independent of creeds and churches, of presbyter or priest." It did not stand in need of "official, hierarchical interpretations and ceremonies," but drew "its comfort and inspiration from the words and life of Christ. Christ as 'a man striving with all his might to understand and help his fellow-men'."

As a corollary to these convictions, Fyfe determined to give up his expensive way of life, adorning his person with tall hat, frock or morning coat or evening dress—eating meals consisting of many courses of the choicest viands and wines served in expensive restaurants. In future he decided that he would make his way of living "simple and frugal, avoiding every kind of ostentatious luxury, or excess."

Of the existing political parties the Labor Party came nearest to his new political ideals. He did not find it to be perfect but it consisted almost entirely of common people and aimed at promoting the welfare of the mass of the people, and at the abolition of monopolies of every kind. He joined it because he felt that "among the few it would be hard not to become puffed-up and self-indulgent, while with the mass of people leading more natural, friendly lives, he could be more in sympathy with the noblest and gentlest characters of all ages who have appeared, almost all, in what are disdainfully called the lower ranks of mankind."

VI

Fyfe's employer and his friends thought that the war had upset his nerves—that he had gone "daft." The more indulgent among them hoped that in course of time that malaise would pass. They had not the eyes to see that his attitude towards life had so completely altered that he could never be the same again.

Fyfe's affiliation with the Labour Party proved to be the "Great Divide" in his life. Many of his friends gave him up for lost regarding themselves as realists; they relegated him to the category of "visionaries" and "ranks."

There must have been many persons in the Labour Party who doubted the genuineness of Fyfe's conversion to their political faith. He nevertheless proved a great accession of strength to their party. His experience as a writer—his extensive knowledge of various phases of the political and economic systems of Britain and other countries—his deep insight into human nature—would have been of inestimable use to a political group which was far richer in men of such a type than was British Labour. No wonder that little time was lost in installing him in the editorial chair of the *Daily Herald*, which Labour owed to the pluck and perseverance of George Lansbury.

Only those persons who knew the *Daily Herald* in the pre-Fyfe days and know it now can appreciate the great changes that he has effected in its appearance, in the presentation of news, and in the scope and character of the leaders, leaderettes and special articles. These improvements have already more than doubled the circulation and it is steadily rising. The increase in the influence of the paper as it is now conducted is incalculable.

Fyfe has shown great courage in the conduct of the editorial policy of the *Daily Herald*. He has refused to pander to the passions of that section of the Labour Party which will not be satisfied unless a propagandist shrieks at the top of his voice all the time—cries out for the heads of their opponents. He has had the courage to expose the vainglory of even some of his new masters. When the Labour Party came into office and the Labour Prime Minister and his colleagues took to aping the dress of the nobility on ceremonial occasions, he did not hesitate to chaff them. He has gone

further, and found fault with British royalty for ranging itself on the side of the rich and fashionable classes which batten on the toil of the masses, and for its devotion to horse-racing and the killing of harmless animals for sport.

Such criticism, as may be imagined has given umbrage to many men high up in Labour politics. Some of them have given expression to their annoyance. Fyfe has, however, gone his way unconcerned. When a man decides to give up the flesh-pots of Egypt he is not afraid to quarrel with his bread and butter especially if he feels that by so doing he can serve mankind.

The classes in control of British affairs of state believe themselves to be securely entrenched in power, and affect to scorn Fyfe's criticism. I know, however, that such condemnation does not go unread by those classes.

Something like a million readers, in any case, look upon Fyfe's paper almost as gospel, and are powerfully moved by what he publishes in it. The minds of that million are becoming permeated with his ideals—his political and social philosophy. He is wielding tremendous power—rendering a great service to humanity.

Every time I go to Fyfe's office I wonder how, circumstanced as he is, he can manage to produce so good a paper as he does. He works under enormous handicaps. A few of his assistants are both efficient and devoted to him for he does not have the large, experienced, well-paid staff which he had in the old days, when Northcliffe's millions were behind him. Nor can he pay the prices for contributions which he then was able to offer. He cannot afford to give all his time to the shaping and administration of the editorial policy—to interviewing men and women of distinction—to keeping abreast of current literature in his own and other countries but must needs write much in order to supply the material otherwise beyond the financial reach of the paper.

The firms which annually spend tremendous sums of money to advertise their wares in organs produced for profit, will not use the *Herald*, because it is frankly out to destroy the capitalist system. Despite Fyfe's economies and self-sacrifice, the paper could not live unless the Trades Unions and the Labour Party subsidised it. Few of the men who dominate those organs have any first-hand, intimate acquaintance with the business of newspaper production such as North-

cliffe had. Working under them, I should imagine, cannot be all "beer and skittles."

Yet Fyfe goes on day after day without complaining - even cheerfully content in the thought that he is helping to educate his fellow men to lead a more useful, happier, nobler life. The chains with which his people are bound, he knows, are largely of their own forging, and would snap were they merely to exert themselves. They, however, do not know their own power, Fyfe and his helpers keep on telling them that whenever they will to be free they can be free. A time will come when the common people in Britain will realise their power, and cease to be the under-dog.

Being an optimist, Fyfe expects that the common people of Britain will give Indians their freedom. I have my doubts about that but even if I were inclined to cherish that hope, I do not see any likelihood of the bottom dog becoming the top dog in Britain to-morrow or the day after. So phlegmatic are the British people that so long as the Tories do not abandon their age-long policy of trimming their sails according to the prevailing wind, they will remain in power. And by Tories I mean Tories of all parties - and not merely die-hard Conservatives - that is to say, men and women of British blood who are bent upon preserving the Established Order, (which merely means their own

possessions—their own power) as long as possible.

If Fyfe sometimes becomes provoked at the pathetic contentment of his own people with the degrading conditions in which so many of them live and work, what must he think of our people, who permit themselves to be characterised as incompetent blunderers? I remember asking him, on one occasion, to print a short statement about an incident which had occurred in India which showed the British in such a bad light as to lead to the suppression of the news by British correspondents stationed in Indian cities.

"What publicity has that incident had in India?" He asked me "what protests have your people made against it?" What action are the Indians in London and the provinces going to take about it?"

In bare truth I had to admit that little notice had been taken of it in India, and nothing had been done or was contemplated by Indians in Britain.

"How is one to help a people who will not help themselves?" was his rejoinder.

If I comprehend Fyfe's philosophy at all his message to India, I should say, would be

"Cease thinking that someone else can win your freedom for you. People who depend upon others even for the winning of their freedom are really not worthy of freedom, and will remain as indeed they deserve to remain—serfs."

MUSEUMS IN INDIA

Valuable Educational Institutions

By REV. ARTHUR R. SLATER, F.R.G.S.

THE educational value of museums is being increasingly realised in India, and public authorities are giving more attention to them than ever before. It is true there is still room for considerable development, but museum collections are not made in a day, even if the buildings were ready. Much steady and patient work requires to be done. It is necessary for men who are interested in these things to use their energies in getting together, wherever possible, collections

of value. The object of this short article is to briefly describe a few of the museums to be found in this country. The ones in Calcutta, Bombay etc. are not referred to, but a typical selection is given of the smaller museums, several of which show evidences of the greatest care and skill in organisation. There is a tendency in this country to make a great spurt at the beginning and then to allow the collections to remain without any serious effort to increase them. Doubtless,

Victoria Museum in Jaipur

if the plan of adding a new section for war exhibits is followed, a new interest will be aroused in these institutions

In the centre of what is probably the finest public garden in India, laid out by the orders of the Maharaja of Jaipur, stands the Albert Hall, in which is housed a beautiful museum. The building is a sumptuous modern structure of which the Prince of Wales laid the first stone in 1876, the whole is most imposing. Here the Maharaja has collected a most complete set of objects dealing with modern works, of art and industry, and also of antiquities from every part of India. Mr. Forrest says that it is one of the finest collections in India. He writes :

"As we strolled through it," "we came upon an interesting group. There are four Rajputs from the wilds, with their women, whose faces were veiled, listening with rapt attention to a guide who was dilating on the imitations of the frescoes in the Ajanta caves."

The silks and carpets and porcelain and clay vessels, are well worth a close study and it is instructive to go from the museum to the School of Art and compare the work being done now with the work of the past. The work executed there is of a high quality and great interest, but something has gone from the beauty, an indescribable something, the soul of the artist. In the museum there is a fine collection of arms of every kind, suits of chain mail, wonderful engraved blades of every description. There are specimens of every kind of brass work for which the town is famous, also many excellent specimens of jewellery work. The building itself is an imposing structure, built in a distinctly Indian style of architecture, and is quite the most imposing edifice in the town. The gardens in which it is situated are 70 acres in extent and were laid out by Dr. de Fabre at a cost of about Rs 400,000. These gardens cost the Maharaja Rs. 30,000 a year to keep in order.

Victoria Museum in Trivendram

Another museum belonging to one of the Rajputna States may be referred to, but there is no comparison between this and the imposing structure at Jaipur. Nor does it compare in its value as an educational asset of the State. The Victoria Institute situated in the capitale city of Udaipur, was built in memory of the Great White Queen, but like so many similar institutions in this country, very little appears to have been done since it was opened to make the collection of articles representative. In view of the fact that the Jaipur authorities have been so successful in their collection, there appears to be no reason why Udaipur, a country with a wonderful history of romance, courage and endurance should not have an equally fine collection. The famous fortress of Chitorgarh itself should provide sufficient materials to give new life to the museum. Doubtless, the authorities will seek to enlarge the accommodation in order to provide a home for the war trophies which her soldiers brought back from the great war in which they have taken an honourable share. The building, which is white like all the structures in this fairy-land city, is built in the Moslem style. It also includes a library of moderate dimensions with a statue of Queen Victoria which cannot be

described as a work of art. There are modelled heads in coloured plaster, ranged in cases numbered and ticked, of all the Hindu castes, each with its proper caste mark upon the forehead. There is a miscellaneous collection of other things, native arts, industries and antiquities being represented, though not to any great extent. It does seem a pity that the authorities having a suitable building, should not make better use of it, especially in view of the fact that many valuable treasures that can never be replaced are being lost.

In the Native States of South India we find that great interest is taken in the collections made by the orders of the ruling princes. The beautiful building erected by the ruler of Travancore for the housing of his collection, is one of the most imposing in the State. It stands in the capital city, Trivendram, in the midst of an extensive garden which is well kept. In the season the surroundings are ideal, for the whole garden is one mass of bloom. That the museum and gardens are appreciated is evident from the large number of people who use them regularly. The work of collecting the materials for the museum was begun by General Cullen, who lived as Resident in the State for several years. In 1852 he began to collect specimens of the many kinds of rocks to be found in the neighbourhood, and this work was continued by several later enthusiasts. The object of the museum is limited, being the formation of as complete as

Victoria Museum in Bangalore

Victoria Museum in Ajmeer

possible: a collection of the articles which exhibit the manners, arts, and crafts, fauna and flora of Travancore, and the authorities are to be congratulated on their success. One of the most striking exhibits is that of a beautifully made model of a *Taiwad*, a typical native house of Travancore. In the compound are typical figures of the inhabitants. There are also some interesting models of the various races that inhabit Travancore, including the hill tribes which are still uncivilised. There is also a collection of ancient implements of torture which were used by these tribes years ago. The work of the State—silver work, ivory and sandal-wood—is represented by some excellent specimens. Several cases are devoted to a collection of the fishes found in the sea and back-waters. No attempt has been made to introduce objects from other parts of the world, but the collections serve to give a knowledge of the life

of the Travancore State. The building in which the collection is housed retain some of the characteristics of native architecture on the Malabar Coast.

The Maharaja of Mysore has established a museum in Bangalore, the most important

Victoria Museum in Lahore

A Specimen of an old Pillar at Sarnath

town in his State. The building which is of red sandstone, is not without architectural merit and stands in Cubbon Park, now most tastefully laid out in flower beds etc. The museum attracts a great number of people, especially the villagers who are always to be seen looking with interest at the objects collected here. The meaning of many they may not understand, but they are interested in those things which touch their own lives. In the vestibule of the museum is a slab with twelve Persian districts, brought from Tipu's palace in the fort; a figure of a Jain deity with a very superb carving round it,

brought from a Jain temple, also some wonderful carvings from Halenid. In the large room adjoining is a valuable collection of stuffed animals, butterflies, and native ornaments and dresses, with a remarkable exhibition of fishes. The geological specimens are also of great value. This State is so rich in material that an enlarged structure will be necessary to house anything like a representative collection of the State resources. Several of the small towns of the State are trying to establish small museums which will be of service to the people in connection with their industries.

Reference may be made to two museums in British India which are typical of others being erected in various places. The handsome building in Lucknow has been made the home of a most interesting collection of sculptures from Muttra and other places where large excavations of ancient buildings and sites have been carried out by Dr. Marshall and others. Especially interesting are the Buddhist images which have been taken from the sites of the ancient temples in Muttra. The building which is in true oriental style, is visited by considerable numbers of people of all classes. The exhibits are carefully labelled and described so that the visitor has no difficulty in learning all about them.

The new museum at Sarnath has taken the place of the old structure in which were housed many articles of interest taken from the ruins of the Buddhist topes here. It is a long, low building of stone, in the vicinity of the ruins, and has a collection second to none in archaeological interest. Innumerable images of Buddha in every position have been brought to light in the course of the excavations, and these have been arranged very carefully by the authorities. Perhaps the most striking object is the capital of one of the Asoka pillars with its lions'

New Museum at Sarnath

The Armoury at Lahore

needs. The work of these old carvers has scarcely been excelled, and the whole is as fresh to-day as if it had been recently done.

The provision previously made for the care of these valuable objects was inadequate, but the new museum will preserve for many generations the objects which speak of a distant but great art.

The value of museums as an educational asset will be increasingly realised in this country, and time and money devoted to making these collections even more complete than at present will not be wasted.

In view of the very extensive excavations that are now being made in the Punjab and Sind, the need for well arranged museums will become of even greater importance. In Taxila, Sir John Marshall has erected a small museum which will be a worthy building for the valuable finds he has made in that area. In connection with the other fields of archaeological research it

will be necessary, as funds are available to provide suitable accommodation. In Lahore there is a very fine museum containing some of the most interesting examples of ancient sculpture, together with a splendid collection of ancient coins etc. Reference should be made to another type of museum which is of unending interest, museums in which are to be found a collection of the various types of arms etc used in India in different periods. Those in Lahore and Alwar are well worth a visit. Of a more general type mention may also be made of the museum in Srinagar where the Maharajah has collected together a fine number of archaeological remains, typical of the various kinds of structures that existed there in ages past. In addition there is also a very full display of the products of the country. As educational aids it is difficult to exaggerate the value of these museums found in various parts of India.

CONSTANTINOPLE

Seen through French Spectacles

[By DR. M. AHMED, M.A., LL.M., PH.D., BARRISTER-AT-LAW

THE transfer of a capital is always an important event, specially when it concerns, an imperial city like Constantinople accustomed for the last sixteen centuries to rule over great empires. Since 1923 Constantinople is no longer the capital of the present Turkish empire. It has become a provincial town, governed by orders received from Angora. The object of this article is to show how Constantinople has reconciled itself to this transfer of sovereignty. But let us first consider why such a mighty and beautiful capital, which has for nearly 500 years been the seat of the Turkish Government, has been subjected to such a disgrace. Is it a passing whim or the effect of momentary anger? Has it been subjected to temporary penance with the hope and assurance of ultimate pardon? Do not let us be deceived. The present rulers of Turkey have cool heads and far-seeing eyes. Their will has matured during long years of trial and their resolves have been deliberately taken during the long evenings spent by them in the trenches of Chanak and Zakaria during the great war. Constantinople has been condemned by men, who are resolved to turn their backs on Europe and then faces towards Asia. The present Turkish empire is not only Asiatic by the situation of its territory, which does not comprise more than the small conclave of oriental Thrace in Europe. She has also Asiatic sentiments and Asiatic aspirations. She is Asiatic in its sympathies and antipathies as well as in its political projects.

There can be no doubt about Turkish sentiments. There is no love lost between Modern Turkey and Europe, from which Turkey has experienced so many evils. She distrusts her ancient enemies as well as friends, including the Americans. She does not spare them even small inconveniences and worries, as if to avenge itself for the old capitulations. She has a horror of the Greeks and Armenians who have been the proteges of Europe. Constantinople has always been a Cosmopolitan city. It, therefore, has its disadvantages.

There is another reason. The "Modern" rulers recall with horror, the debauches, follies and extravagances committed by their predecessors in Constantinople. They squandered millions borrowed from Europe, which Europe has later on realised with compound interest. Now that Turkey has been impoverished, it must devote itself to the work of regeneration, it must eliminate all occasions for luxury and prodigality, so seductively offered by the nonchalant Capital of the ancient Sultans. A fig for Constantinople, they say for the city full of non-Muslims and the centre of seduction and perdition.

The political objects are no less plain. Disowned by Europe, at whose eastern extremity it hangs on clinging, as it were, by the skin of its teeth, Turkey is determined to concentrate in Asia, and to look to it for consolidation and expansion. The pan-Turanism, which the Germans encouraged has become a vigorous plant. The thought of their Turanist brothers is haunting the Turks and the former are supposed to be dispersed in Caucasasia, Persia, Turkistan, Mongolia and China. The Turks look to these countries for expansion. Constantinople, isolated in the western corner of the Turkish republic, is too far removed from the centre of these activities. Besides, it is too much exposed to the menace of European fleets, and liable to military reprisals in the straits that have lately become denuded of troops. With Constantinople as its capital, Turkey feels, as it were, under tutelage. Reasoning as well as sentiment thus point to the same conclusion *viz.*, to locate the administration and vital centre of the country away from the sea, away from restless Europe, in the middle of Turkish territory and in the vicinity of the East.

How will Constantinople reconcile itself to this political *débacle*. How would its life and even appearance be affected by this change? As soon as you land at Constantinople you notice that the port is empty. You miss

the rattle and noise of boats of all kinds and sizes, which used to be the wonder of all newcomers. There are only seven or eight ships there now, and one can move about among them, without any let or hindrance. Most of them are passenger boats of well-known Companies including the Turkish *market*, whose boats ply between Mudania and Bosphorus. Not long ago Constantinople was one of the most frequented and crowded of the Mediterranean ports. The rise in the customs-duties ordained by the new rulers has still further diminished the sea-borne commerce. Let us prepare ourselves then to find Constantinople reconciling itself, like an mental fatalist, to its new fate.

It is true that if you disembark at Pera-alata, you do not realise much change. This is the business quarter where the Europeans and Christians consisting mostly of the Greeks and the Armenians congregate. There is a good deal of animation here, which is naturally to be expected in the beautiful setting and even magnificent surrounding scenery. Out-side the Grand Rue, which is almost straight and sufficiently wide throughout its length, all Pera is a network of lanes and alleys, of ascents and descents along the sloping hill-sides. This part of the city is at once rich and poor, clean and dirty. Newly built lofty houses, highly ornamented, with their projecting balconies, stand side by side, with the most miserable hovels. On the inferior worn-out roads, with sordid pavements, you see electrical trams full of passengers, automobiles taking corners at full speed, with rickshaws in single file and in unbroken succession. Pedestrians crowd on the pavements as well as the roads,—men wearing fez and kalpaks, fashionable young men with straw hats, street porters stooping under their loads, water-carriers, loquacious men-licants, women with bare arms and short skirts and Turkish ladies dressed entirely in black. On top of this, you hear the cries of itinerant hawkers, newspaper sellers and shoe-blacks. When you see the Grand Rue of Pera in the evenings brilliantly illuminated and as it were flooded with light and swarming with people you cannot help thinking that Constantinople beats all her rivals. But if you enter the places where business is transacted and questioned the merchants and bankers, they all tell the same tale, that business is slack and that trade is at a stand-still. There is despair and defiance in every eye. Everything has become fearfully expensive and the

people are feeling the pinch. If they wear clean and fashionable clothes it is because all orientals prefer the external signs of prosperity and economise over their food, in order to buy elegant shoes and head-dress. It is a deceptive exterior which hides real poverty and resignation.

Let us turn for a moment to Stamboul the oriental part of the city. There can be no doubt that it is very beautiful and truly royal, as seen from the Bosphorus, the variegated buildings of the serial with its green gardens and picturesque ruins of the Byzantine walls, the domes and minarets of St Sophia and the mosque of Sultan Ahmad, the high tower of Sir-Askariat and the towers of other mosques overlooking the golden horn. The moment you leave the Ghelata bridge, the net-work of narrow and dirty streets begins, with crumbling and ram-shackle houses and the noisy crowd of hawkers, idlers, loafers and water-carriers balancing their cans full of rose water and the heterogeneous medley of wagons, automobiles and pack animals consisting mostly of mules and asses, celebrated in the pages of the French novelists Loti and Farrere.

You come to the best quarter between the imposing buildings of Sir-Askariat and the beautiful mosque of Sulaiman. This is a quiet but real Turkish quarter, with lofty and curious wooden houses, in grey-brown colours, with creepers passing from one house to another overhead, across the lanes. Behind the wooden shutters, flung open in the upper stories you hear the charming babel of Turkish ladies, chatting with one another. The scene is classic and has been celebrated in master-pieces of art and romance. It is sad to think that desolation reigns all round this beautiful scene, the adjoining portions—having been ruined by fire,—both during and after the great war. Fires occurred in Constantinople regularly after every 10 or 20 years in the past when some quarter or other was burnt down, but phoenix like it used to rise again from its *debris* almost as soon as it was destroyed, and when rebuilt it was prettier and statelier than ever. This time the devastated zone has been allowed to remain in ruins and extends from the Golden Horn to the sea of Marmora, over a good third of the town area. The beautiful mosques named after Sultans Ahmed and Fath fortunately escaped the ravages of incendiarism, but their minarets overlook the scenes devastated by fire. The

ruins are a mass of *debris* with little walls, covered with coarse plaster, interspersed with fields some times cultivated and some times over-grown with weeds. Here and there one notices cottages resting on the debris, with posts or stakes driven under ground, and supporting corrugated iron sheets or tarred card-board roofs maintained in position by builders. The poor live in these miserable holes or precarious huts. New-buildings are seen only along the big thoroughfares leading towards the west and these consist for fear of incendiarism of small rooms made of bricks and mortar which do not in the least resemble the old Turkish houses. The aqueduct of Valsey, spared by the flames is the only ornamental feature that adorns the desolate landscape.

Constantinople thus presents the spectacle of a grand thing of the past, approaching

its death. The population is diminishing there are now less than a million inhabitants residing within the vast municipal area instead of a million and a half before the war. The compulsory banishment of a large number of the Greeks and Armenians, according to the stipulations of the Lausanne treaty is reducing the population still further. One wonders whether the city is destined like Adrianople to become another necropolis. The thought is distressing to many a good citizen, and the most laudable efforts are being made to arrest the process of dilapidation and ruin. The authorities are elaborating projects and town-planning (if not town-saving) is the order of the day. But all these plans depend for success on the good will of the Government. All eyes are naturally turned towards Angora, and everybody is asking whether Angora will spare her rival.

MAHARAJAH KALYAN SINGH. AN INDIAN ADMINISTRATOR OF THE EIGHTEENTH CENTURY

By IMTIAZ MOHAMAD KHAN, M.A. (LONDON)

KALYAN Singh's grandfather, Rao Himmat Singh, a Kayasth of Delhi, was the Diwan of Mohamad Shah's (1719-1748) Prime Minister, Amirul 'Umara Samsamud-Dawla, at the time of Nadir Shah's invasion (1739 A.D.).*

He was the son of the famous Maharaja Shitab Ray, the Naib Diwan of Bihar, who along with Mohamad Reza Khan was arrested and tried in 1772.† Immediately after his father's death which occurred on the 19th Jamadi IL 1181 Fash (1st September, 1774) he succeeded to his office, jagir and other honours connected with it. According to his own statement, his father did not leave any cash‡ It seems quite probable because his

trial must have cost him a lot and he died soon after acquittal.

Kalyan Singh was called by Hastings* who was at that time staying at Bag Poor in Bihar, and in the presence of councillors was invested with the rank, jagir and Altamgha in consideration for his father's services. The Governor-General also gave him a Khilat of seven pieces and his title of Intizamul-Mulk Mamtaz-ud-Daula Maharaja Kalyan Singh was recognised and confirmed. "The Governor," writes the author of *Seir*, "to show that he entertained no disinclination to the deceased and to prove that he retained no suspicion against his fidelity, took care of his own motion, to bestow the father's office on his son, Raja Kalyan Singh, although the latter did not show that capacity and fitness which might have been expected from a man of his age and education."

His appointment was confirmed by the

Directors in their letter of 3rd March, 1775 *

It must be remembered that immediately after the arrest of Mohamad Reza Khan and Shitab Ray in 1772, the Company had determined "to stand forth as the Diwan" and the posts held by Shitab Ray and Reza Khan were abolished. Consequently it must not be supposed that the succession of Kalyan Singh to his father's post meant his appointment as the Naib Diwan with all its responsible duties.

In the place† of the old system a committee of Revenue consisting of the Governor and four members of Council was established at Calcutta to visit principal districts and the Company's servants hitherto called supervisors were to be called collectors. In each of the districts there was to be a native officer with the title of Diwan to inform or check the collector. But after little more than a year the post of collector was abolished. Under the Central Committee of Revenue of Calcutta worked six provincial councils at Calcutta, Murshidabad, Dacca, Burdwan, Dinajpur and Patna. It was to the § last named Provincial council that Kalyan Singh was attached.

** His domestic affairs were settled easily after his father's death, his younger brother, Raja Bhawani Singh consenting to accept Rs 1000 a month from him and giving him full control over everything. But the jagir in Allahabad and Oudh which had been conferred on his father by the Nawab Vazir of Oudh and the Emperor was confiscated. He appointed Khayali Ram, his father's friend and colleague, as his agent.

He continued to serve on the Provincial Council at Patna till 1781, "without accepting even a penny as a †† bribe," as he himself boasts "I was passing my days happily," he writes, §§ "when I fell into a trouble through the treachery of Khayali Ram and as a result of which I became a pauper and had to go to Calcutta and stay there for 24 years." In 1781 there was a deficit of thirty four lakhs of rupees in the revenues of Bihar. The Provincial Council of Patna was

dissolved in the same year and Kalyan Singh's jagir was taken over by the Government according * to the decree of the provincial court of justice for the payment of that deficit. To add to his misfortunes, his allowance of Rs. 50000 a year which had been settled on him in 1774 "as Diwan of Bihar province and in consideration of the merit of character of his father" was reduced to Rs. 18000 in December, 1787 † as he had no official duties to perform as Diwan. Even this reduced allowance was to be stopped on the restoration of jagir which was then under attachment, and ultimately it was stopped in 1789 §.

According to his own statement ** the deficit in the revenue of Bihar was due to the rebellion of Chait Singh of Benares and to the refractory behaviour of other Zemindars. But those who know the revenue history of this period can not be satisfied with this explanation. The real cause was much deeper than the rebellion of Chait Singh. It was due to the defective system of revenue administration. The policy of giving lands to new farmer-bidders at a high price for a few years, coupled with "the substitution of an untrained and foreign agency" had brought this †† state of affairs. Estates were knocked down to speculators at a revenue," says Ascoli, "which, as the old Zemindars knew, the estates were unable to bear. The only hope of the new farmers was to extort what they could from the cultivators during the term of the lease, and leave the estate ruined and deserted... The amounts bid were high... In one pargana the proprietor to retain his property bid up to Rs 134109 but within two years his arrears exceeded the annual revenue due from him. The result was even at the time attributed to over assessment. The first attempt of the Company to manage its revenue affairs had resulted in the complete extinction of a skilled, though corrupt, collecting agency and the substitution of an untrained and foreign agency appointed to

collect a revenue that must be, by the very manner of its assessment, excessive."

Another instance of the defectiveness of the system is evident from the case of Khayal Ram * who obtained the Ijara of some districts from the Patna Provincial Council, but failed to realise from the cultivators the amount he had to pay to the Government, with the result that he was imprisoned. The records † of the Provincial Councils of Calcutta, Murshidabad, Patna, Dacca, Dinajpur and Bardwan are full of such instances.

The Provincial Councils were abolished in 1781, as a part of Hastings' great schemes and policy. But Kalyan Singh § firmly thought that this abolition was due to the representations made by his agent Khayal Ram to Hastings, through Ganga Govind Singh who was at that time the Peshkar** of the Central Committee of Revenue at Calcutta, and who, Kalyan Singh supposed, had a great influence on Hastings. According to his own statements the beginnings of his trouble were in 1779, when his agent and colleague Khayal Ram took the Ijara of some districts from the Patna Council but failed to pay the Government dues and was arrested. Kalyan Singh saved him from the prison but Khayal Ram went to Calcutta and excited Hastings against the Council and against himself with the result that his jagir was confiscated, the Council was dissolved and he became a pauper. The futility of this argument of Kalyan Singh has been shown above.

Compelled, by poverty, he† went to Calcutta in 1195 Fash (1788 A.D.) there to live "under the shadow of protection of the English Company." In 1790, being reduced to poverty he petitioned to the Governor-General for the restoration of his allowance

of fifty thousand a year which had been reduced to eighteen thousand in 1787. In support of his claim he produced a Sanad which he claimed, had been granted to his father by Clive for life with reversion to his son Kalyan Singh "as a reward for the attachment and services of the former to the Company."* The Sanad produced by Kalyan Singh was carefully examined and "from an inspection of the records of the late Provincial Council at Patna," it was found "that the Raja's allowance was the remaining moiety of a pension of a lakh of rupees per annum which with the office of Naib Nazim was granted by Lord Clive to Maharaja Shitab Ray for his life with reversion to his son Kullian Sing, as a reward for his attachment and services to the Company. The full amount of this pension was received by Maharaja Shitab Ray until the year 1773, when the President and Council thought proper to reduce it to 50,000 rupees, informing the Raja that although this sum was only half the amount of his former allowance they expected in the present reduced state of the charges, he would consider it as adequate not only to his station, but also to the loss he sustained by being deprived of the Pachotia ‡.

Cornwallis, in spite of the genuineness of the Sanad, did not recommend Kalyan Singh's application. The Governor-General* in forwarding Kalyan Singh's petition to the Board of Directors on 10th August, 1791 wrote —

"We think it our duty to observe that we cannot recommend the restoration of the Maharaja's allowance upon the grounds of his own merits or services. We are moreover inclined to believe that the present involved state of the Raja's affairs is in a great degree to be attributed to his own impoverished conduct. His claim therefore rests entirely upon his father's services and on the grant from Lord Clive, for the confirmation of which you will determine how far the good faith of the Company is pledged."

"We transmit to you the above remarks with all the papers relating to Raja's claim, leaving it to you to determine upon the propriety of restoring to him for his life either the whole or a part of the allowance of 50,000 Rs. annum which devolved to him upon the death of his father. But as he is at present in very distressed circumstances

§ A kind of Nazar, consisting of 1/5th of assessment. This term is still remembered in some parts of India.

** "Letters received from Bengal" dated 10 August, 1791. Para 40 and 41, volume XXX.

(he produce of the greater part of his Jaghir having been attached for the satisfaction of a decree of one of the provincial courts of justice immediately upon its being released by Government in 1787 and being still under sequestration), we have agreed to allow him until your pleasure shall be known, the sum of Rs 1500 per month which he enjoyed while his lands were under attachment for the discharge of the demands of Government, upon his executing a bond to refund the amount that may be paid to him in the event of your confirming the former orders for the entire reduction of his allowance."

* The Court of Directors in reply to the above letter of the Governor-General questioned the authenticity of the Sanad produced by Kalyan Singh on three grounds: (1) That Clive had no power of granting such pensions (2) that the office of Naib Nazim could only be conferred by the Nawab himself and that this was evident from the fact that Kalyan Singh was continued in office by the Nawab at the recommendation of the Bengal Government and that it was the Nawab who issued this Sanad to Kalyan Singh. If Clive had power of conferring the Sanad there was no need of the Nawab's recommendations. (3) that if Maharaja Shitab Ray had a Sanad for an allowance of a lakh of rupees, he could not have acquiesced to its reduction by half in 1773. Kalyan Singh himself did not produce the Sanad when this allowance was further reduced to Rs 18,000 in 1787, and nor did he say anything when it was completely taken away in 1789 and that he was silent even so late as 7th April, 1790 when he petitioned the Bengal Government for the restoration of his father's salary (not a pension), saying that he was given, and not succeeded in his father's office. Besides, as the Bengal Government did not recommend the restoration, they could not consent to it because in the opinion of the Governor-General he executed no official duty as Diwan and that the post had been abolished. The Directors however approved of a provisional allowance of Rs 1500 a month in view of Kalyan Singh's distressed circumstances but they added that this in no way implied the admission of his claim based on the Sanad.

The Governor General on the receipt of this letter instituted a thorough inquiry as to the authenticity of the Sanad and after many 'fruitless researches' it was found that the Sanad in question was quite genuine.

"In obedience to your commands," the Governor-

General wrote, * "we examined the Sanad under the signature of the late Lord Clive and that on comparing the handwriting with his Lordship's signature on other official papers, they appeared to us to correspond very exactly, nor could we discover any defect in the Sanad in any other respect."

"With regard to the proceedings of the Provincial Council at Patna, we can only observe that their accounts show the payment of the stipend to Maharaja Shitab Roy but their proceedings do not refer back to so remote a period as the date for the grant, nor can we on any of our public records trace the origin of it or any resolution of the Government authorizing his Lordship to issue such a grant. It does not appear to have been the practice at the time when the grant is stated to have been executed to record every transaction with the same regularity as is at present observed and consequently his Lordship might have conferred the grant without having caused it to be entered on the public proceedings."

The Directors † in reply to the above postponed their decision in their letter of 29th May, 1799 asking the Governor-General to find out from the Records of the Provincial Council of Patna as to when were the first and the last payments made and the total amount paid. In the meantime, the provisional grant of Rs. 1500 a month to Kalyan Singh was to continue.

In 1806 †† he preferred a claim for compensation for the loss he has incurred by the abolition of the certain duties he used to collect from the District of Bihar and which were known as Parchoon Mohal (referred to above in the Bengal letter of 10th August, 1791). These duties were a part of his post as Diwan and he collected it till 1790 when all the Sairs were abolished. In 1793 many Zamindars had received compensation in this connection and Kalyan Singh's claim too was admitted. He was allowed Rs 8487 per annum and Rs. 152784 were paid to him on account of arrears.

According to his own statement § he has lived in Calcutta for 24 years (1788-1811) where he "enjoyed the society of the Lords and Council Members." In 1810 while at Calcutta, he fell seriously ill and was confined to bed for ten months. He lost his eyesight as a result of this illness. His medical advisers advised him to go back to Bihar the climate of which, they thought was more suitable for him. The Bengal Government allowed him to go to Patna. He left Calcutta on 28th March, 1811 for

Benares and travelled partly by river and partly by road. When he reached Patna he found, "all his beautiful houses dilapidated and there was no place to stay." But what annoyed him most was the coldness of the people of Patna who, it seems, did not give him a good reception. "But alas," he writes in *Khulasat-Ut-Tawarikh*, "the residents of this place who had lived on my father's bounties and gifts, did not take any notice of me." On his arrival at Patna he himself and most of his dependants fell ill and he began to prepare for going back to Calcutta. But fortunately he met Mr Abraham Welland who through Kalyan Singh's son Daulat Singh, asked him to write a detailed history of Mir Qasim. On account of his blindness he had to rely on his memory and could not consult his notes.

KALYAN SINGH'S HISTORIES

He seems to have written only two histories, *Khulasat-Ut-Tawarikh* and *Wardat-i-Qasmi*.

The former was meant to be a sort of introduction to the latter. It treats very briefly of the early Mogul Emperors from Baber to Shah Jahan, but from Aurangzeb (1657-1806) to Akbar Shah II it is fairly detailed.

Wardat-i-Qasmi contains a detailed account of the events in Bengal, Bihar and the adjacent provinces from 1761 to 1785 including an account of his father from his arrival in Patna till 1774 when he died. In his preface he gives a brief account of himself and at the end is to be found a fairly good account of his succession to his father's post. There is also a brief notice on Governor-Generals from Clive to Minto and at the end is to be found very brief notices on 124 Civil and Military British Officers, including Col Sir John Murray, whom he and his father knew personally.

Both of these histories were dictated by him at Patna in 1812.

As regards the merits of these two histories, it cannot be said that they are in any way of high order. As compared with other contemporary works like Ghulam Hosain Khan's *Seir-ul-Mutakhirin* and Mohamad Ali Khan's *Tarikh-i-Muzaffari*, Kalyan Singh's histories are not very accurate and reliable. The value of *Khulasat-Ut-Tawarikh* is practically nothing, because there are so many detailed histories of the Moghul Emperors. But even *Wardat-i-Qasmi*'s value diminishes almost to nothing as compared to *Seir* which is, comparatively speaking, far

more critical and reliable than the *Wardat*. The Persian language used by Kalyan Singh has a strong Indian flavour and may be likened to what is called the "Baboo English" at the present time.

HIS CHARACTER

The verdict of the author of *Seir* who says, "Maharaja Kalyan Singh... was so slothful and so supine a nobleman, as to have lost all power and influence at the Council Board of Azimabad where he was looked upon as a cipher," does not seem to be very far from truth. It is supported by the remarks of the Bengal Government who seem to have had no high opinion of him and who attributed his financial difficulties to his own "impoverished conduct". This verdict of the Governor-General might have been taken as biased, as this remark was used by him when he was forwarding Kalyan Singh's application to the Directors for the renewal of his allowance which had been stopped by the Governor-General himself. But the opinion of the author of the *Seir* gives a good deal of weight to the Governor-General's opinion. Discussing the succession of Kalyan Singh to his father's post, Golum Hosain Khan says that he succeeded his "father, though he did not show that capacity and fitness which might have been expected from a man of his age and education."

His going to the rescue of his friend and colleague, Khayali Ram might have been attributed to the generosity of his character. But the fact that he quarrelled with him in spite of the latter's generosity in bringing a Khilat for him and setting apart the revenue of several villages for him, does not help to illuminate Kalyan Singh's character. Besides, the author of *Seir* does not attribute Kalyan Singh's help to Khayali Ram to the generosity of the former's character. On the other hand, he says that Kalyan Singh went to Khayali Ram's assistance simply because he (Kalyan Singh) was much discontented with all members of the Patna Revenue Council.

Like most of the personages of this time whose character the present writer has discussed Kalyan Singh, too, was a product of his age and therefore the only way to save him from a severe condemnation is to remember again that the world and specially India, in the 18th century was something quite different from what it is to-day.

* See "Letters received from Bengal", 10th August, 1791, para 40 Vol. XXX.

COIMBRA, THE PORTUGUESE OXFORD

BY DR. J. DA PROVIDENCIA COSTA,

Professor in the Faculty of Arts of the Coimbra University

WHOEVER, after the three hours' journey from Oporto or Lisbon, visits Coimbra for the first time, might think he enters quite another country, so very different are the impressions he gets there. Of course, we recognize in the three chief Portuguese cities a certain similarity, as between persons of

the same family the streets steeply climbing picturesque slopes, the glittering waters of their smooth rivers, the amplitude of the horizon, which, over valleys and hills, loses itself in the immensity of the ocean. But each of the three cities has its special features, its characteristic silhouette.

The University of Coimbra

A citadel commands Lisbon, which stretches over its "seven hills" like an endless serpent. Lisbon is the capital of the Republic, the seat of the supreme government the last redoubt of the nation.

To the silhouette of Oporto belong first of all smoking chimneys. The dark sooty

sky, the noise of its factories, the restless activity of its inhabitants, the crowding, hurrying and hustling of people and vehicles in town and harbour: everything betrays the great centre of industry and commerce.

And now Coimbra... Groups of lovely white houses mantle the eminence in solemn refi-

A partial view of Coimbra including the University Buildings and the Faculty of Arts, where will be installed the Indian Hall and the Indian Institute

gious silence. We are in the city of science and spiritual life. See, there towers above the rest Portugal's greatest Cathedral, its University!

The situation of Coimbra is unique. Nature smiles all around and adorns it with beautiful sunny landscape, that seems to invite every Portuguese to be a Poet.

"Look at the landscape, friends! Hill and vale full of music and songs!" is the first verse of a popular quatrain. Indeed, it seems that songs and melodies hover in the air of this enchanted land.

But the seat of the Portuguese Muses, the place where the prettiest melodies, fairy-tales, and songs feel at home, shows its charm at best, when over its old cathedrals, manor-houses and ruins, over woods, gardens and the river, a clear, starry or moon-lit night spreads the romantic, dreamy wings of fancy. Then we feel as if the spirits of ancient times were alive all around the city, and we understand best the language of its poets. Then also is the time when the students hold

their serenades. They wander and ramble about bare-headed, in their long black cloaks, like shades; and their voices accompany woefully the sad melodies of the guitar.

"In moments to delight devoted
—My life!—with tenderest tone, you cry,
Dear words! on which my heart had doted,
If you could neither fade nor die
To death even hours like these must roll,
Ah! then repeat those accents never
Or change—my life!—into my soul!
Which like my love, exists for ever."

(Byron's translation of a Coimbra Song)

And just as this new Parnassus excels the rest of the land in pure literature and art so does it surpass every other place of the country in the cultivation of pure science and philosophy. It seems as if the spirit of Plato had haunted this place down through the centuries. The University of Coimbra was founded in 1290 by king Dionisius, and though its seat sometimes moved between Lisbon and Coimbra, only here could the celebrated University hold its place as the great stronghold of Portuguese science. Nay, Coimbra

became even in the course of time one of the most famous and important centres of culture in the world. Here studied, Camões the greatest lyrical poet of the 16th century. From here the great mathematician, Pedro Nunes, directed the Portuguese caravels through unknown seas. Coimbra has always been, not only the cultural but also the political and religious centre of the country. And being the most Portuguese of our cities, it is at the same time the most liberal and unbiassed. Many foreigners frequent its famous Summer Course. And in its Institutes (The French, English, Spanish, German, Brazilian, Italian, North American, etc.) Portuguese students, as well as any others, may get full and unprejudiced knowledge about the peoples and civilizations of the world. No wonder therefore that in this place much sympathy should be found for the people of Kalidasa and Tagore, though in that truest Society of Nations India is not yet represented by its Institute. Recognising that sympathy and wishing to fill up this deficiency, a group of Indian students of the University of Coimbra entertain the idea of founding here an Indian Institute, their initiative having met with the warmest feelings of the Faculty of Arts.

May such a generous idea prosper and be fruitful, and its realization be a fact in a short space of time as we are sure in this way a new bridge will be laid between East

Dr. Mendes dos Remedios

and West, and many an error about India will disappear from the minds of the Europeans.

THE EXPLOITATION OF INDIA

By MAJOR B. D. BASU, I M. S. (Retired)

IN the British Government of India, administration and exploitation are convertible terms. Hence, when the English acquired political "supremacy in India, their watchword was "Gold."

It was Indian "plunders" which not only enriched individual plunderers, but made English people build up their industries and factories. But after the Indian Mutiny, the "exploitation of India" took another shape. The States governed by "heathen" princes were no longer to be annexed and their accumulated treasures to be plundered, ways and means

were devised to enrich the natives of England at the expense of those of India. They covered their design under the euphemistic phrase "to develop the resources of India."

The development of the resources was to be effected by (a) The Construction of Railways (b) Cultivation of Cotton. (c) Concessions to British capitalists to float companies in India to work her resources. (d) Larger employment of Englishmen in India. (e) Denying self-government to India. India was known to be a very poor country. As capital was required to develop the resources, so foreign English

capital was to be borrowed for the purpose. The foreign English capital was no doubt then a myth. But as Lord Salisbury, once said that "India must be bled," this myth was designed to do so.

That the foreign English capital was then a myth is evident from chapter VII, pp. 122-134, of "Ruin of Indian Trade and Industries."

CONSTRUCTION OF RAILWAYS.

In the matter of the construction of railways in India, great injustice was done to the people of this country. The railways were constructed under "guaranteed securities" and with so-called English capital. There was no need of borrowing capital from the people of England, when the people of India could have lent money on those terms on which it was taken from the former.

But the real motive in constructing railways in India was to enrich the people of England at the expense of those of India. As was pointed out at that time, by some eminent engineers such as Sir Arthur Cotton and others, India needed metalled roads and irrigation canals for traffic purposes and not costly railways.

Then again, eight pence in the shilling expended in constructing the railways in India found their way to England. Mr Swift Macneill said from his place in the House of Commons on 14th August, 1890:

"It has been computed that out of every shilling spent in railway enterprise, 8d makes its way to England."

Another motive in constructing the railways in India was to cheapen the bread in England, for they would facilitate the export of wheat from this country.

Railways also by importing the British manufactures into India have destroyed Indian industries.

While the construction of railways in India has proved beneficial to England in many ways, it has hardly done so to India. On the contrary it has done great harm to India. It has not only burdened the people of this country with debt, and destroyed their industries, but has ruined their health also, and has decimated the inhabitants of towns and villages by malaria. Deserted villages have been caused by it.

Railways were also constructed from the consideration of their "strategic importance,"

to the State. Thus, the construction of railways was not beneficial to India from the financial or sanitary point of view, but the construction was thought expedient from political and other considerations already mentioned above.*

COTTON CULTURE

Of all the industries which have enriched the natives of England, none did more than that connected with cotton. They had already created a market for their goods in India, but they had mostly to depend on America for the supply of cotton. From time immemorial, India was well known to be a great cotton-producing country. But some of the provinces which produced or possessed the potentiality of producing the finest cotton in the world were still governed by Indian rulers. It was necessary to bring them under British rule. Berar, Sindh and the Punjab were noted for their fine cotton and hence these provinces became incorporated in British India. As has been told in the fifth volume of the *Rise of the Christian Power in India*†

In 1858 from Manchester was published by one I. G. Collins Esq., a pamphlet bearing the following significant title --

"Sindh and the Punjab, the gems of India in respect to their vast and unparalleled capabilities of supplanting the slave States of America, in the cotton markets of the world or an appeal to the English nation on behalf of the great cotton interest threatened with inadequate supplies of the raw material."

*See the article 'Railways in India' in the *Modern Review* for June, 1909.

†Wrote W. John Malcolm Ludlow, in his "Thoughts on the Policy of the Crown towards India," (pp. 58-59).

"Curiously enough, the key to these transactions is to be found less in the Parliamentary paper especially affected to them, than in those relative to Nagpore, and it is clear from these that the Nizam's cessions in 1853 led to the annexation of Nagpore in 1854. For, as Lord Dalhousie phrased it, the 'essential interest of England' required that the territory of Nagpore should pass under British Government. 'The great field of supply of the best and cheapest cotton grown in India lies in the valley of Berar' (ceded by the Nizam) 'and in the districts adjacent to it.' Those 'districts adjacent' were in Nagpore. During the past year, the government had obtained, 'by treaty with the Nizam, not the sovereignty indeed, but the perpetual possession and administration of the valley of Berar'. This cotton-held, however, was 'inaccessible for want of railroads,' the possession of Nagpore would enable us to make them. We took both, as has been seen."

* Hansard's Parliamentary Debates. Vol. 248, p. 1051.

This pamphlet was dedicated "by permission to Lord Stanley who was at that time President of the Board of Control, and afterwards became the first Secretary of State for India" in grateful acknowledgment of his Lordship's eminent public services for the development of the resources of British India (especially in reference to the cultivation of the cotton plant).

No wonder need be expressed then for the British conquest of Sind and Punjab!

The above-named writer concluded his pamphlet as follows —

It is in our power to make our Eastern Empire supply the wants of Lancashire and of the world, and if we do not do so, great is our folly and enormous our guilt! For, says Mr. Snow (the best authority on this subject), 'It is my full and firm belief that India can produce cotton equal to the American Upland, Mobile, or New Orleans, and at less than half the cost. And I indulge the hope improbable as it may now appear, that Indian cotton may ultimately oust the American from the English markets, and it is by no means impossible that we may supply America herself. Then let us not delay putting our shoulders energetically to the wheel. The game is in our hands, if we are only determined to play it out.'

A prospectus was issued for the formation of the East India Cotton Company, Limited, with a capital of £ 1,000,000 in 100,000 shares of £ 10 each, "for the cultivation and purchase of cotton in India."

There was also the Cotton Supply Association of which Mr. John Cheetham, M. P. was the chairman, to whom, Mr. J. B. Smith addressed a letter dated London, January, 1859. In the course of this letter he wrote.

The reason why we go to America for cotton is that we can get it cheaper there than any where else. Machinery almost to any extent can be made and set to work in a year or two but to increase the growth of raw materials is a work of slow progress, hence every effort should be made to remove all impediments, and to promote their growth in every way.

"Our great object is to endeavour to obtain cotton from other countries, on equal or better terms than from America. Can this be accomplished?"

What country except India, can furnish a supply within the next 20 years, that can compete with America? India then is the country of all others to which your Association should direct their attention."

It is not necessary to quote any further from this letter to show the importance of India to England for exploitation of raw cotton. India was then made use of for the supply of the raw material and also furnished the best market for the finished cotton products of the

factories of Lancashire. Whatever little money was paid to India for the supply of cotton was taken away by England with interest and compound interest, when she forced her cotton goods on her.

CONCESSIONS TO BRITISH CAPITALISTS

As India was to be colonised by Britishers, so concessions were to be granted to them to enable them to make India the white man's land. The nature of these concessions has been mentioned in "*The Colonisation of India by Europeans*," and need not be repeated here again in detail.*

Those Englishmen who obtained concessions tried to reduce the people of India to the position of hewers of wood and drawers of water and to enrich themselves by profits accruing from slave labour. A large number of those men engaged themselves in Indigo planting. This industry proved an engine of oppression, tyranny and ruin to the helpless and hapless cultivators on whom their English masters delighted in practising all sorts of refined brutalities. Official notice had to be taken of these mis-deeds of the Indigo planters and several government communications were issued, some of which aimed at whitewashing the conduct of the perpetrators of the evil deeds.†

* In his brochure on "Dalhousie and Canning" (p. 139) the Duke of Argyll wrote:

"Lord Stanley's suggestion was expressly made with special reference to the importance of affording all possible encouragement to the employment of British capital, skill, and enterprise in the development of the material resources of India."

† In his evidence before the Indigo Commission in Calcutta on Saturday, 21st July, 1860, Hon'ble Mr. (afterwards Sir Ashley) Eden, who rose to be the Lieutenant-Governor of Bengal, said that in his opinion the cultivation of Indigo was "in no instance the result of free agency, but that it was always compulsory." Being asked to state fully "the facts, proofs, or reasons which induced" him to hold that belief, he said

"First, I believe it to be unprofitable, and therefore I cannot believe that any ryot would consent to take up that cultivation, involving as it does serious pecuniary loss to himself; secondly, it involves an amount of harassing interference to which no free agent would subject himself; thirdly, from a consideration of the acts of violence to which the planters have throughout been compelled to resort to keep up the cultivation as proved by the criminal records of Bengal; fourthly, from the admission of the planters themselves that if the ryots were free agents, they would not cultivate Indigo; fifthly, the necessity under which the planters state themselves to be of spending large sums in the purchase of Zemindaries and other descriptions of rights, giving them territorial

Tea was another industry which received great support from the Indian Government. The industry could not flourish without "slave labour." Writes Mr. Russel Smith in his *Industrial and Commercial Geography*, pp 301-302 —

"The Labor Factor and United States Tea Growing —

The vast amount of hand labor in pruning and caring for tea trees and picking and curing the tea shows why the tea industry has not been developed in the United States, although it has long been known that the tea tree thrives well over an area 100 times greater than all the tea plantations in India and Ceylon. A little tea of good quality has for some years been produced near Charleston chiefly by the labour of negro children, but naturally the industry does not expand in this region of relatively high wages. It costs fifteen cents a pound to pick tea in South Carolina and the labourers there have been unable to learn a certain dexterous move that pulls a leaf without destroying the bud in the axis of its stem. To avoid this they pinch it off, leaving about one-third of the weight of the leaf.

"Tea-Districts of minor Importance —

Tea growing has been carried on to a small extent in a number of places throughout a rather large part of the world in which the tree would naturally thrive. Among them may be mentioned Johore in the Strait Settlements upon the Malay Peninsula, French Tonquin, Southern Burmah, Jamaica, the Fiji Islands, Madagascar, Brazil, the Russian province of Transcaucasia. In none of these regions has it been an important success, chiefly for labor reasons."

LARGER EMPLOYMENT OF BRITISHERS IN INDIA

One Sir Edward Sullivan, in his *Letters on India*, published in 1858 wrote

"India opens out an almost exhaustless field for the educated labour of Great Britain, or, in other words, it maintains at a higher level than existing in any other country, the reward of the labour of educated men.

"To men who weigh well the crowded condition of every outlet for educated labour in this country, and remember how dangerous to a State the want and desperation of the educated unemployed has always been, it will appear an ample reason for striving in the utmost to retain, if not all, at least a very sufficient portion of our Indian possessions. It is no use of hyperbole to say that the marked tranquillity of England when

influence and powers of compulsion, without which they would be unable to procure the cultivation of Indigo; *scarcely*, the statements of ryots and the people generally in the districts in which I have been; *scarcely* the fact that, as soon as the ryots became aware of the fact that they were by law and practically free agents, they at once refused to continue the cultivation."

It is not necessary to give any more extracts from the evidence placed before the Commission to show the manner in which the British Indigo planters behaved towards the ryots.

all Europe was tottering, was owing not a little to the outlet, India had given to her educated men' *Letters on India*, p. 29.

"... For fifty or sixty years India has been to the brains and intellect of this country what the Western States have been to the thew and sinew of America—the safety-valve that has yearly afforded an escapement for the surplus energy or ambition of our educated population. There is no mob, however numerous and violent, half so dangerous as an educated middle class irritated with want, and conscious of deserving more than the crush and competition of the multitude enable them to acquire

"If we consider the price that is paid for educated labour in India we shall see that it is at least twice as high as that existing in any other country" *Ibid.* Pp. 51-52.

In the December (1925) number of *The Century Magazine*, the American sociologist Professor Edward Alsworth Ross wrote of Britishers employed in India that "these men probably have twice the income they could command in England."

So the policy of employing the natives of England in larger and larger numbers in India, at the expense of the natives of the soil was best calculated to exploit the resources of India in more ways than one and thus by impoverishing her, England meant to consolidate her power in India.

DENYING SELF-GOVERNMENT TO INDIA

A certain political officer, a native of Scotland, and serving in India as Resident in a Native State once said to the present writer :

"We have educated you, your eyes have been opened and so you are clamouring for your rights and privileges. But your interests and our interests clash. We cannot concede all your demands."

Then he said a good many things which it is not necessary here to repeat.

Britishers came out to India originally as "unpretending merchants" to whom Indian princes gave "every encouragement." But when they acquired political supremacy in India, they did not abandon their role as merchants and traders. They were a nation of shop-keepers and so were also Indians. Two of a trade cannot agree. Hence INDIAN TRADE AND INDUSTRIES WERE DESTROYED BY "THE ARM OF POLITICAL INJUSTICE"

India was deliberately denied self-government, because there was the fear of the

iter.

So severely went on the exploitation of
India by England by the various means
mentioned above, which helped greatly to
consolidate her power in India.

CHARACTER EDUCATION

By SUDHINDRA ROSE, M. A., Ph. D.

Lecturer, State University of Iowa

Education is the basis of the Greek State —
Plato
The common school is the cradle of America's
democracy — Theodore Parker

PUBLIC education in America is wide-
spread and is generally of high type,
but America is not content with it. Keen
sensing leaders of the nation are now
insisting that training in character is the chief
function of education. No school program
which neglects moral training is worthy of
serious attention.

One of the most important leaders in the
field of character education in America to-
day is Dr. Edwin D. Starbuck. His work in
character training in public schools has
attracted much attention in America and
abroad. Not long ago a committee of educa-
tors, of which Dr. Starbuck was the chair-
man, won the prize of sixty thousand rupees
for the best statement of methods of character
education for public schools. It seems
now that in view of the increasing demand
for moral teaching in Indian public educa-
tion, it would be worth while to know some-
thing of Dr. Starbuck's "Science of Character."

Now what is character? The answer is
simple. It consists, according to Dr. Starbuck,
in the whole-hearted response to personal
and social values. The moral person is the
one who responds wholesomely to the funda-
mental life situations, such as,

"Participation in civic duties, right attitude to-
wards property and wealth and their uses, respect
for family relations including ideal love and care
of offspring, refinements in social ways, response
to things of beauty in nature and human nature,
fidelity to self and humanity through a vocation,
power of creative endeavour"

The best way to cultivate character is not
direct moral instruction, but indirect. Dis-

courses on abstract ideals by ethical experts
do little good to the pupils. "We must stop
rubbing the virtues into the mental skins
of our children. We must reduce to a mod-

Dr. Edwin D. Starbuck
An Apostle of Character Training

Children are giving a short play portraying the life of the Indians. Instead of receiving direct lessons on the life of that brave race of people, youngsters are trying to actually feel it by acting it out.

cum all the direct moral appeals that are too apt to end in sentimentality or insincerity. We must minimise the introspection and vivisection that threaten to lead to paralysis, artificiality and introversion." Children are not inclined to abstract thinking. Genuine thinking for the youngsters must spring from the experiences they have had or are about to have. Moral values must have their roots not in a formal morality code, but in their own vitalized experience.

That will sound like heresy to the devotees of the direct method of moral instruction. They may even brand Dr. Starbuck as a radical. In the strict sense of the term, he probably is a radical; but so was Confucius, so was Buddha, and so was Socrates. Where and when has there been a great teacher or leader who was not a radical? But anyone not fuddled by theorizing, will see how eminently sane and practical Starbuck is.

Dr. Edwin D. Starbuck is a Professor of Philosophy at the State University of Iowa. He is a philosopher by profession, and a teacher by instinct. He is the author of a

number of learned works on psychology and education. He has also been an important contributor to Hastings' *Encyclopaedia of Religion and Ethics*. Apart from his learning and scientific scholarship which I greatly admire, he specially appeals to me as a man of what the Germans call *Weltanschauung* and which the English feebly translate as world outlook. Dr. Rabindranath Tagore once remarked to me in a letter

I have been greatly attracted to Dr. Starbuck. I felt almost at the very sight of him that he was one of the few men whose heart belonged to all humanity.

Dr. Starbuck is the outstanding exponent in America of character training by indirect method. It is not to be inferred, of course, that direct moral instruction is absolutely wrong. To a certain extent direct instruction, tactfully administered, may be of some help, but much cannot be expected from it. It has definite limitations. The Indirect method, which Dr. Starbuck calls the natural method, is superior and far more effective. This method would have the pupils

Children are learning to take active sympathy in industry by carding wool and working at a spinning wheel.

cover for themselves most of the virtues—good will, self-control, sympathy, helpfulness through conduct. Remarks Dr. Starbuck, "The teachers of the world whom we honor" have gone heart first rather than head first at their task. They have not chopped nor dissected, defined the virtues. Why should you? They've lived naturally with those whom they have taught. Why not you? The truths they have created have been living verities. The Buddha hewed the logical, ethical and theological artness of his day and clung to the principle Karma, the determining power of the deed. The fine-souled teacher of Nazareth went about bringing good by quickening the conduct and impulse. He was the artist-teacher who uttered the precept or told the parable and left it doing its suggestive and impelling work. Was it not so with Socrates and has it not been so with every great teacher?

These words indicate the spirit in which Dr. Starbuck approaches the problem of moral education.

He should not be misunderstood. Perhaps his views could be made still clearer by the following "don'ts" which he uttered with the vision of a seer in a public address.

'Avoid, as you would a plague, too much direct

moral instruction. Be the artist. Utter moral truths only when they are pregnant with meaning. Touch the strings of the child's nature with the delicacy with which an artist lures music from an instrument. When the occasion is right, strike the keys so vigorously that he feels the awful majesty of the moral law. Don't preach at all. You'll only bore the youngster.

"Don't keep rubbing the virtues into the moral skins of the children. One of the methods now in vogue would spend a month on each of several virtues, with appropriate poetry, narrative, story and discussion. A healthy-minded boy might well withstand a week of such discipline on the virtue of helpfulness, let us say, for he can be counted on to have the milk of human kindness in his heart and will like to abate the pedagogical passion of his teacher. But two weeks of it should bring irritation, three aggravation. A healthy, red-blooded boy should come out of the fourth week of such persistent piety with murder in his heart.

"Be the artist. Don't moralize. Avoid telling the story or reciting the biography as a choice morsel and then spoil the digestion of the hearer by analyzing its content. In the words of Felix Adler, 'Don't pull the plum out of the moral pudding.' Leave the 'This teaches us' and 'From this we learn' in the limbo of forgotten educational relics.

"Don't keep intellectualizing the virtues. They will become but curious pickled and mounted

Physical training is a required part of the educational programme in American public schools

specimens of conduct. A cat or a flower or a virtue cannot endure too much dissecting.

"Finally, among these homely precepts, be very human and very natural, don't be too serious. There has been historically too much pathos in our piety. The virtues were badges of entrance into immortality and the shadow of death has been about them. In this new world the good life is a way of living and a rather cheerful way of living at that."

Dr. Starbuck would have the youngsters consider situations rather than learn the catalogue of virtues. The one great advantage of this plan is that situations are definite and concrete, while virtues are abstract and subjective. Children's minds, like Tolstoy's, "go straight to the concrete as a horse to a manger full of oats." By centering attention upon facts and conditions which surround children, they will learn to master each situation as it arises. This wrestling with concrete facts will develop mental muscles, and give them moral ruggedness and refined judgments. In course of time they will have acquired the habits to make right response to country, friends, enemies, tasks, games. It is, therefore, the duty of the intelligent teacher to create live situations rather than extol abstract virtues and deliver so-called moral precepts. If any appreciable good has ever come

out of direct moral preaching—sentimental snuffling and gurgling—I have not heard of it, and I doubt very much if Starbuck has.

A simple example of practical training in conduct for the little folks may be readily cited. Suppose the lawns in the neighbourhood of the school are being spoiled by some students, and a group of younger children undertake to protect the lawns. Now their work should consist not in the mere discussion of what might be done, but in the making of actual plans which they are to carry out. They may make little signboards with such signs as "Please Help Save the Grass", "Don't Spoil the Lawn", "Keep off the Grass". It is thought that if such a training could be given for meeting all moral situations, the problem of ethical education would be very near solution.

Dr. Starbuck has prepared a series of interesting charts of projects and problems to enrich a character training curriculum. Here are some of his suggestions. Two groups of students act out settlement of a quarrel; make a bird restaurant and support it collectively; make badges to wear on certain patriotic days; mother an orphan animal; make an observation trip to locate insect homes; give an exhibition of Spartan

gymnastic training : play teacher in settling a quarrel; report to the municipal authorities breeding places of flies and mosquitos , establish a school bank , report on some martyrs and heroes of science , visit and study a bank ; write a school creed , plan and earn money for dinner for adopted family ; create beautiful designs

These and scores of other suggested projects involve the carrying of moral ideas into action. Such activities make for interest and insure a rigid training on the part of students. What is more important still is that the projects involve, in most cases, a community of effort. "The spirit of the group vitalizes the interest of each one. The truest fellowships spring up among those devoted to common causes. The surest mark of the good person is his ability to enter sympathetically into the activities of a group and to accept his share in common enterprises. Habits of social responsiveness are the best training in moral responsibility. In the program of ethical instruction, all that the teacher should do would be to give hints and suggestions, and never under any circumstance moral homilies.

The old rule, "Spare the rod and spoil the child", has long long been in the discard in the progressive educational world. Goose stepping in education is thoroughly out of fashion. Pupils should be trusted always. They should be allowed, tactfully and gracefully, to learn from their own experience. There is practically no limit to their capacities to think their way through moral questions. "There is hardly any limit to the acumen and refinement of thought children can command when they face a *real* situation. There is hardly any thinking to which they can be driven when forced up against an *artificial* situation." The aim of the cultural teacher should be not to enforce Prussian discipline, but to help every boy and girl, young man and woman, into a thoughtful grasp of life's purpose and values. And if there is anything at all in the

student, he will in time develop creatively.

Dr. Starbuck, with the aid of a staff of research assistants, is now engaged in preparing a detailed classified bibliography that will give school teachers quick access to the choicest materials on character education. Says Dr Starbuck,

"Teachers must have ready reference, to the best stories that stir the impulses of courage and heroism and the choicest poems that awaken a sense of the beauty of natural objects, the records in history that show the possibility of service through wealth, songs that voice the spirit of love and loyalty, and so on

Making Merry on the Green
Children enjoy their annual spring play day.

through an endless tools of culture that can vitalize and give moral significance to everything that is done."

With the aid of such a bibliography which will utilize the best wealth of material now available in story, poetry, drama, tradition, the teacher will be able to help the pupils in establishing habits of moral reaction.

The question may be asked. Should religion be included in ethical teaching? That depends upon the meaning of the word religion. To Dr. Starbuck, religion consists in whole-hearted response to ideal values such

as beauty, truth, reverence for the divine order of the world. He sympathizes with the aims of those who would include religion, founded upon broad principles, in a program of moral training. Liberal in religious and social questions, he holds, however, that true religion has nothing to do with fabulous yarns, creeds, dogmas, and all the other cargo of beliefs invented by theology. With all his gentle, warm affection for his fellowmen, Starbuck, I believe, would make a Cannibalistic holiday for all such non-essentials of theological category. Well, why not? For one, I can surely offer no strong objection.

In the Western world of to-day, culture, not sectarian religion, is the ultimate court of appeal. Social and psychological changes leave huge sections of theology high and dry on the shores of time. Theological creeds and dogmas are merely the handiwork of man. They come and go as women's fashion-plates, they serve their time, they pale and die, and are forgotten. John Calvin, who piled the faggots around the Spanish physician Servetus, because of his denial of the Trinity, was regarded by the Christians of his day as a religious saint. Roasting a live man at the stake, for creedal differences, was supposed to please God and the Holy Ghost. I am not an expert on ghostly matters; but I have always maintained that Calvin was a creed-

monger. Most of the Calvinists, however, are now civilized and have developed better morals. Today the creeds and dogmas of John Calvin no longer hold the intellect of Scotland in their paralyzing grip, as they did years ago. Humanity has risen supreme over Calvinism, as it ever will over every other creed of the practitioners of theology. As I see it, the religion that counts most in this sad vale of tears is the religion of heart, the religion of mercy and pity and charity.

The future welfare of the citizens of a nation is in the schools. They should be the power house of inspiration. Schools which build character, which produce intelligent and public spirited citizenship, are among the greatest assets of a country. For after all, the purpose of education is not merely to make a living but a life. This is the time for educational reconstruction in India. We need better schools, and better teachers. At present some of our teachers are as competent to teach as a troupe of chimpanzees to play the Vina. We should know only one aristocracy—the aristocracy of competence and culture. Our country wants the best youth with the best training. May the schools of the future in India become the true Temples of Wisdom, and the teachers then authentic High Priests!

THE ATTRIBUTES OF GOD*

THE book contains the Gifford Lectures delivered in the University of St. Andrews in 1924-25. It is the second course of lectures; the first course was delivered in the year 1920 in the same University and the subject was "Greek hero cults and ideas of immortality."

Lord Gifford, a Scotch lawyer founded a lectureship in each of the four Scottish Universities viz. of Edinburgh, Glasgow, Aberdeen and St. Andrews, the amount of endowment to these Universities being respectively £25,000, £20,000, £20,000 and £15,000.

The Gifford Lecturers are all men of approved merit and most of them are scholars of world-wide reputation.

These lectures have grown to be a literature

in themselves and some of them have already become classics. Among the lecturers we find such names as—

Adam, Alexander Balfour, Bergson, Bosanquet, Bruce, E. Caird, I. Caird, Campbell, Driesch, Farnell, Fowler, Fraser, Frazer, Gwatkin, Haldane, Inge, James Jones, Lang, Laurie, Lloyd, Morgan, Max-Müller, Paterson, Pfeiderer, Pringle-Pattison, Royce, Sayce, Sorley, Stirling, Stokes, Thompson, Tiele, Tylor, Wallace, Watson, Webb (some of them twice).

Dr. Farnell was twice appointed Gifford Lecturer and this shows in what estimation he is held by the literary world. He is a scholar of vast learning, keen intellect and Catholic spirit. He is a specialist in Hellenic Literature and his "Cults of the Greek States" (5 volumes, 84 s.) is a standard work. His "Evolution of Religion" is an anthropological study and his Hibbert Lectures deal with the "Higher Aspects of Greek Religion". The Present course of Gifford Lectures is a valuable contribution to

* The attributes of God by Lewis Richard Farnell. Published by the Clarendon Press Oxford. Pp. X+283. Price 12s. 6d.

the literature on comparative religion. But the value of these lectures would have been far more enhanced, had he been able to draw fresh and additional materials from the Indian literature. In spite of this, the book is extremely useful.

We give below a summary of the lectures without any comment of our own

I (a)

This course of lectures is not directly concerned with the basic principles of all higher religions; its chief concern is to review the qualities and activities attributed to God in the living religions or in those that have lived and had force. It is an essential chapter in comparative religion.

(b)

At the outset the author assumes that the basis of religion is never primarily intellectual. The stuff of religion is emotional and psychic. But he admits that intellectual activity reacts on religion and modifies it. Thus, says our author, a devoted physicist may be so penetrated with the sense and the value of the law and order of the cosmos that he must revolt from a religion which proclaims indiscriminate miracles and casual divine interference with nature (pp 5-6)

(c)

ORIGINS AND VALIDITY

Our author says—"The discovery of origins may exercise a momentous influence upon religious faith and even practice." "If it can be clearly shown that certain dogmas that we have believed essential to our [Christian] higher theology are only transfigured refinements or symbols of some old-world ritual that is abhorrent to us, such as human sacrifice or of some crude ethical view which are now pronounced immoral such as the rightfulness of vicarious punishment, it may well be that those dogmas will gradually lose their hold on the thoughtfully religious." "We can imagine how difficult it might be to maintain a fervid Mariolatry among sincere Christians if the worshipper was vividly conscious that he was worshipping, not the historic personage but another form of the great Pagan Goddess of the Mediterranean" (p 8). "But recent discovery has compelled or stimulated the champions of orthodox Christianity somewhat to change their position" (9). "Many of them have now accepted the formula 'origin does not affect validity'" (9)

(II) (a) ANTHROPOMORPHISM

The subject dealt with in the second chapter is "Personal and Anthropomorphic Deity." "The imputed attributes of the Highest God are," says our author, "The glorified reflex of the ideal man" (22). "The full history of anthropomorphism would reveal the evolution of the concept of deity, presented in the first stage as the naive and crude concept of the earthly king, with many of the weaknesses, tyrannies, jealousies of his human counter part, demanding nourishment, gifts and bribes, and angry and vindictive on their omission; then among the progressive communities divested more and more of all human weakness and degradation until it approaches the ideal of human personality transcending the limits of time and space; until at last

in the highest speculation or vision, the idea is released from all material embodiment and God becomes pure spirit, but a spirit still in harmony with man's. This evolution is the record of thousands of years of man's spiritual history, and has been the work of poets, philosophers and prophets" (27)

IDOLATRY. "Of the higher world-religions the only two that have remained consistently non-idolatrous are the Judaic and the Islamic.The history of Christendom in this matter has been strange and tragic. The early church upheld for a time the Judaic ideal but the spirit of the Hellenic and Mediterranean idol-lover triumphed soon over the spirit of Moses and the popular religion of Christendom, except within the shrinking borders of Puritan Protestantism, must to-day be called idolatrous" (36)

SACRIFICE. "To the Cruder Anthropomorphic imagination The sacrifice is not only a gift to placate the divinity, a bribe by which to win his favour, as the earthly ruler may be placated and bribed, but it is necessary sustenance without which the deity like man, would perish. The Gods need the same sustenance as man and where men were cannibals or where they had once been cannibals, human victims might be offered as a cannibalistic feast" (38).

"The ritual of the gift offering to God, either of the fruits of the earth or of the animal life, has not actually survived in Christendom as an orthodox act of worship. But as we might expect, the feeling that inspired it has not wholly died out among us (Christians) and occasionally manifests itself among our own (Christian) Congregation in quaint and innocent ways, the flock may be appealed to for contributions to the poor or for some gift to the church of furniture or vestment or decoration as if these were 'gifts' to God. In religion, as elsewhere, what was once literal thought, survives in our speech as metaphor, and the history of the word 'Sacrifice,' which has become a common word of our secular-moral vocabulary is strangely interesting" (42)

VICARIOUS SACRIFICE. "Far more momentous," continues our author, is the influence exercised by the pre-Christian ideas of the sacrifices on one of the fundamental dogmas of our traditional Christology, the dogma interpreting the death of Christ" (42)

"The idea of Vicarious Justice or vengeance is inherited from the savage state of our race, when the morality was tribal, communal or corporate only, when the sense of individual responsibility had not arisen, when the sin of one affected the whole group, when the savage blood-feud was satisfied with the slaying of any member of the offending tribe although the individual slain may have been wholly innocent of the original offence. Therefore in accepting the vicarious sacrifice the duty is as indiscriminating as the savage. We have risen far above it in our secular law and ethics, but as religion with its instinctive conservatism is the stronghold of ideas extinct elsewhere, the vicarious sacrifice is still a prominent dogma in our religious history (45). It is "reflected in the teaching that came to be accepted as orthodox in the church concerning the death of Christ" (46).

(III)

Polytheism and 'Monotheism'. In the third

chapter the author tries to account for the rise and growth of polytheism and its drawbacks. He has described also its contributions to civilization and advanced religion.

With reference to Christianity our author writes:—

"Mediterranean polytheism was never permanently overthrown and that many of its fibres survive in the soil of our orthodox Christianity. The fervent votary of the Virgin is touched unconsciously—it may be—by race-memories of Isis, Artemis, Cybele, or the Cretan Goddess. We may applaud and approve this. . . But in this attitude we must part company with the old Testament and abandon any claim to call our religion a pure monotheism a term which strictly applies only to Unitarian Christianity; the current popular religion of Europe should be rather described as a high spiritual polytheism tempered and restrained by the Athanasian Creed" (100-101). In another place he writes:— "There is a strong reason for believing that the majority of earnest Christians have always addressed their prayers primarily to God and to Christ as two distinct personages without any thought of the trine dogma, and that the Holy Spirit is too shadowy an entity for the popular mind to grasp" (99).

(IV) PHYSICAL AND ETHICAL ASPECT

In the fourth chapter he describes two types of divinities, viz.,—(1) Elemental and Nature-divinities; (ii) and divine personalities of ethical and spiritual characteristics. "Nature and the elements of nature may be felt and perceived as divine either in an animistic or theistic sense, the whole fabric of the world or striking parts of it may be believed to be permeated with an immanent divine spirit or spirits and this view in the terms of popular religion is called animism and is supposed to be more natural to primitive consciousness, or it may be regarded as directed either as a whole or in the various parts of it, by a High God or subordinate gods, personalities of super human power and intelligence acting from without, and this may be called 'theism', belief in a world controlled by a personal *theos* or *theon*. . . We may often find both beliefs and modes of imagination combined in the same religion and the animistic view appeals, not merely to the savage but to the civilized mind and agrees well with our higher poetry, the more ideal phases of science and with a pantheistic philosophy" (pp 103-104).

(V) TRIBAL GOD

In the fifth chapter, the author describes the development of Universalised God from tribal deities. The God of Israel was originally a tribal god. "The tribal god", says our author, "may be cruel and pitiless in respect of aliens, the cruelty of Jahwe a reflex of old Hebrew ferocity is a blot in the older religion of Israel and its shadow remains in our own. The tribal god is a communal god and concerned mainly with the whole Society and less with the individual soul. Also, the morality of the tribe, its moral responsibility is corporate, and the whole body must suffer for the sins of an individual, the sins of the fathers is visited upon the children. There is some survival of this mode of thought in our own culture; for in certain doctrine concerning the Atonement, as that through the sin of Adam all mankind

are guilty, our own advanced theology" continues our author, "bears the imprint of the old tribal theory of corporate responsibility, of which the converse doctrine is that one life may atone for the sin of the whole community, and that is the basis of much of our 'Christology.'" (pp 124-125)

The tribal religion is according to the author, naturally intolerant. "Wars of religion, the outcome of the fanatical cruelty that prompts or justifies the extermination of aliens of different creed" are characteristically Judaic. The same spirit appears with devastating results in Islam. The early Christian church accepted the Judaic dogma that God's pity and scheme of salvation are extended only to those who hold the right theory of his nature and follow the right worship and that those who do not are outside the pale of his mercy or orthodox man's compassion." (pp. 127-128.)

(VI) POLITICAL ATTRIBUTES

In the sixth chapter the author describes the political attributes of God. He finds an interaction between religion and politics in ancient Greece. But the ancient Greek Society was not theocratic. The idea of theocracy was developed in the Semitic Communities Israel and Babylonia. "Before Jahove had dictated to Moses his ordinances for the tribes of Israel, Hammurabi had received the first secular legislative code in the world directly from the hands of the sun-god Shamash (110). The pyramid texts of Egypt, as recently expounded by Breasted reveal the same interdependence of government and religion" (111). This 'old-world view of God the legislator, the author of the whole social system under which a particular community lives probably survives nowhere outside Israel and Islam' (144).

In the old world, the kings were the immemorial depositaries of the state religion, thus showing the close association between kingship and God-head. We may note that 'the Christian tradition has maintained the political-religious conception of the divine right of kings'. On the other hand we find in ancient Athens a religious consecration of democracy and that divinity of their state became a democrat' (173).

Regarding the warlike attributes of God, the author says—"There is scarcely any theistic religion in the world in which the high deity or deities have been kept aloof from any concern in war. Looking at least at its past history we must say that the religion of Christendom forms no exception, it has been deeply infected with the bellicose traditions of the Old Testament and in large areas inflamed with the war-like spirit of the north we discern this in much of the phraseology and metaphors of our liturgy and hymns, in a strong and naive verse of our National Anthem and in our prayers for victory over the king's enemies, while our prayer to be delivered 'from battle, murder and sudden death' is no always sincere"....(P. 158).

"The old idea accepted and proclaimed by Judaism, Christianity, Mazdaism and Islam that war against unbelievers was inspired by God, is extinct now and not likely to survive. The higher ethical thought of Greece, as represented by Plato, was content to regard war as a grim necessity to be accepted at times by the most law-abiding state' (159).

(VII) MORAL ATTRIBUTES

(a)

The heading of the seventh chapter is "The moral attributes of God." The author says that "Vindictive justice is a fixed attribute of the deity in all primitive religions and the concept of a malevolent deity is comparatively rare. In Mazdaism an evil principle is recognised. But Moulton has given strong reasons for believing that this apparent reality of Ahriman, the evil god, with Ahura Mazda in a dualistic world was not part of the original message delivered by Zarathustra but was a degeneracy in later Magianism, in any case there is no evidence that Ahriman received any sort of worship from the good Mazdean, who was his mortal foe." (163)

(b)

In all higher religions of the older world, the most prominent attribute of the divine character has been justice. This is the dominant aspect of the Old Testament in the Koran as well as of Greek thought and the Vedic system, (167-168) "There are 'ugly facts of life'—the prosperity of the unjust and the afflictions of the just" (168) "Various solutions have been attempted. The *Iliad* and the *Odyssey*, the Book of Job, finds no solution. But one passage of the psalms the easy solution is offered that we must not judge too hastily of God" (168) "The idea of belated justice has also suggested another solution, namely that though the unjust man will escape punishment in his own life, his children will fall upon his children and his children's children the theory of vicarious punishment familiar to the old world and prominent in the Old Testament" (169) "Another solution is the belief in a posthumous judgment" is most clearly expressed in the Egyptian and Zoroastrian religion. "Next it appears in power and force in Israel shaping the vision of the Jewish Apocalypses and Christianity, giving it thence, has made it hitherto the keynote of orthodox faith." (170-171)

"If we reflect", says our author "of the various notions of judgment and the discourses on the same contained in a vast body of literature sacred and profane the Jewish apocalyptic books, the writings of the Christian fathers, the creeds of the Church, the works of the theologians of the middle ages and the reformation and post-reformation periods down to recent times, we discern how the idea of divine justice embodied in them have been infected with human passion, human vindictiveness and intolerance and are dictated by ethical standards of action that are no longer accepted by the highest modern thought. For throughout its long period the award of salvation and happy immortality has been made to depend not on pure righteousness but on dogmatic belief, ceremonial observance, or in Gnostic systems, on the knowledge of certain formulae; therefore St. Augustine obliged to relegate the unbaptised infant and virtuous Pagan to hell". . . P. 171. But the author writes in another place —

At least one early Christian father could rise above the orthodox view, namely Origen, who maintained that all God's punishments were purgatorial, not vindictive and that ultimately all men will be saved" (173).

The Hellenes, though they held some theory of Hell which was deepened by Orphism, were saved

generally by their temperament from brooding on it with that insistence which has darkened the imagination of so many of the Christian and Moslem world. And Neo-Platonism could at least expunge the idea of cruelty and vindictiveness from the character of God by interpreting Hell as a state of the mind" (173)

"The darker side of the traditional doctrine of the Day of Judgement rests on an ethical theory of Justice, human, and divine, that is called the vindictive theory—'good must be meted out for good, evil for evil'. Jewish theology never seems to have risen above this in its exposition of the ultimate divine purpose. And Christianity down to our own day has been in its doctrine of Judgment in bondage to the Jewish spirit, of which it inherited a large measure from the beginning". (173-171)

"The vindictive theory was first challenged as we should expect, by the humanitarian ethics and philosophy of the Greeks. In conformity with Plato's theory of human punishment, that its intention should be reformatory and remedial only, Greek speculation on the whole purified God's justice of any element of vindictiveness and explained it as directed to the good of mankind or the whole cosmos. We might conclude from passages in Plato's *Republic* that he could condemn the Christian traditional doctrine of the Day of Judgement on the view that it tends to base morality on a system of rewards and punishments and thereby to degrade its essential nature—the true value of morality and especially of Justice, according to the highest teaching of Greek ethics is that it assimilates man to God" (175)

Our author refers also to "the theory that the dispensation of happiness and unhappiness in the next world will be the exact reversal of that which prevails in this, so as to make things equal as between one world and the other. It strangely appears as the motive of the parable of Dives and Lazarus and on the surface of such beautitudes as 'blessed are ye that hunger now, for ye shall be filled. Blessed are ye that weep now, for ye shall laugh', and in the counter utterance 'woe unto you that are rich' for ye 'have received your consolation'. In such passages we have a picture of the two worlds as each mechanically adjusting the inequalities of the other, and such a vision of Judgement differs *toto caelo* from that other where in the divine justice is dispensed according to the tests of righteousness, faith, and good works." (177).

(c)

Then the author discusses the divine attribute of Mercy. It is less prominent in the Old Testament than in Hellenic religious literature. It reaches its strongest expression in the New Testament. Hence emerges the concept of the Saviour God, Christ, Krishna, Asclepius and hence the concept of the God suffering for humanity" (ix).

(d)

Other moral attributes discussed are Holiness and Purity. From these emerges the idea of the total renunciation of the sex-life—"the exaltation of virginity".

(e)

In the concluding part of the seventh lecture, the following two pronouncements are examined:

(i) First, that religion was the source and formative cause of all morality.

(ii) Secondly, that religion, in the clear sense of belief in a personal moral duty, gives the only sure basis and ultimate validity to the moral life. (205).

The discussion is highly interesting and should be read not in a summary but in the original.

But for the convenience of our readers we may summarise the views of the author. He says—"It is obvious that to sanction anything is not the same as to originate it, therefore the observed fact that in ancient society and to some extent in modern, religion sanctions law is no proof that herein lay their origin." (206). He further says—"In fact we may find primitive tribes without any clear belief in personal duties, but we find none without morality." (207).

"The opposition," says our author, between the two views as to the source of moral validity, the secular and the religious, may be most strongly presented by contrasting Aristotelian ethics with the theories of the medieval disciples of Occam: the Aristotelian system is secular almost throughout, based on a subtle analysis of human society and the human soul; the practically wise and good man gives the standard for the moral judgement and it is valid because it is intrinsically reasonable; but for the Occamist it was valid because God pronounced it, and his paradox, though quaint, is logical that, if God had ordered us to hate him it would be our moral duty to hate God." (208).

Then he combines the two views.

"The secular and the religious points of view are combined by maintaining that the moral judgment is valid because it is reasonable and being reasonable it is also God's injunction. Only then, we must allow that its validity would remain even if belief in its divine origin disappeared."

"Or it may be that the surest method for harmonizing the secular and the religious aspect of morality is to maintain that the power of pronouncing a moral judgement comes to us from the intuitive perception of moral values, the perception that something is morally good and must therefore be done or chosen and that this is a value-judgment belonging like the value-judgments on beauty and truth, to the spiritual order, and that spiritual order is permeated with the power and essence of God." (208-209).

VIII (a) BEAUTY

In the eighth chapter the author discusses the attributes of Beauty, Wisdom and Truth. In Judaism, Egyptian religion, Moslemism, Mesopotamian and Vedic polytheisms there is no prominence of the idea of beauty as a divine attribute. "The association of the idea of beauty with the religious sphere, encouraged by the strong anthropomorphism of the Hellenes and their unique artistic faculty and enthusiasm was a distinctive feature of Greek philosophy and especially the Platonic and Neoplatonic, reappearing at a later period in the religious theory of the Cambridge Platonists." (211).

"The overmastering impressionableness of the Greek temperament to beauty suggested to Greek philosophy the conviction that beauty was a part of a higher reality." (212).

(b) WISDOM AND TRUTH

Wisdom and Truth are considered divine in all higher religions. "But neither in Mazdaism nor in Judaism nor in orthodox Islam do we find any

expression of the belief that God inspires, favours the devotion of the intellect to pure science or high philosophy. The religious trend of the three great peoples was innately hostile, indifferent to such pursuits." (218).

"The outburst and marvellous development of science and philosophy from the sixth century onwards in Hellas is primarily due to the intellectual genius of the race and their enthusiastic devotion to the things of the mind. As has been well said the Hellen was the first man who endeavoured to make himself at home in the world and for that purpose he was incited to study it as it was. And in this he was actually assisted or at least unhindered as for long centuries Christendom was hindered by religion." (218).

Regarding the Hebrew and the Hellenic idea of God's personality our author says—

"Whereas for the Hebrew personality of God is mainly a moral power by Plato and Aristotle and the succeeding schools it tends to be expressed in intellectual terms. So that God could be defined as the supreme 'Nous' or mind of the universe as Apollo was explained by Empedocles as the holy thought of the world." (219).

With reference to the Hellenistic and the Christian ideal, the author writes—"Although Hellenistic ideal survived with a changed expression in Neo-Platonism it could not maintain itself in the face of a victorious Christianity, whose spirit and trend of enthusiasm were essentially alien to the life of the secular thinker and scientist. Still it is now laid on repentance and faith rather than knowledge and among the divine attributes of justice, mercy and love rather than wisdom and thought." (220).

IX. POWER

The ninth chapter deals with the divine attribute of Power. Power is the most essential mark of divinity not only in advanced but also in primitive religions. But the dogma of divine omnipotence is of later development. The developed mind sees this omnipotence in the Cosmic Law whereas the undeveloped mind finds it in the so-called violation of that Law. Our author says, "We have the right to believe that the primitive mind is more excited by that which is extraordinary and occurs at rare intervals than by the regular sequence and the constant order of recurrence of phenomena, and early theistic faith discerns more easily in the former, for instance in the hurricane, the thunder, the earthquake, the pestilence, the rainbow the undoubted manifestations of divine power. If such power so manifested is regarded as omnipotent, it might be the impotence of an arbitrary despot bound by no law but by caprice and varying emotion. It is at this state of thought on God, that miracles abound. . . . Gradually and with difficulty but with ever-increasing conviction our minds have arisen to the conception of the natural world, first proclaimed by the physicists of Ionia in the sixth century B.C. as a great cosmos of ordered and connected forces governed by Law. If this physical revelation is combined with theistic faith, these so-called Laws of Nature may be regarded as manifestations and determinations of God's infinite power and wisdom. Now it is no longer the arbitrary and irregular, but the fixed and rational order of things that is recognized as best displaying the transcendent majesty of omnipotence. Such recognition is broadcast throughout

philosophy where it uses theistic language" (240-241).

Our author remarks ---

need not be thought irreligious to pray for most childish and grotesque. But as we gain more educated sense of the laws of nature and we raise and define our conception of the use of omnipotence by linking it with wisdom it implies a mind working it in accordance with a plan and with steadfastness of thought and we feel that there are certain things we must pray for. ... Our own (Christian) liturgy is in urgent need of revision in respect of the things for which we think it legitimate to proffer prayer. We do not pray for alterations in the orbits or movements of the planets, but we show ourselves on the primitive level of knowledge and emotion when we pray for or against rain as if the weather, being variable, obeyed no law dependent on the caprice or temper of an eternal deity and we seem to impute to the Creator a startling inconsistency of purpose. We petition him, as in the Burial Service to us, in the 'Day of Judgment' (244-245).

(X) METAPHYSICAL

The tenth and last chapter is metaphysical and therefore highly controversial. It deals with the finite and personality, the dilemma of pantheism.

Eternity and timelessness, Infinity and evil. The theories of William James and Rashdall concerning a Finite God and some other kindred subjects.

According to the author the idealistic concept of God as the Absolute, ineffable, unknowable, indeterminate is of no value for religion. 'Religion demands personality', and this idea is, according to him, inconsistent with the Absolute All-in-All.

Referring to a particular, though predominant school of Indian thought our author writes ---

According to Indian thought a permanent unchanging God could have no relation to the movement and activity of life, for according to its narrower view permanence is excluded from activity. But the Greek mind achieved the deeper theory that the power which caused change and movement might itself remain unchanged and unmoved, and therefore such a power might be interpreted as a divine creator and the source of life and activity" (259).

We have taken too much space, but considering the worth of the book we have thought it necessary to let our readers know what the nature of the book is.

Of all the books covering the same ground it is the best. The book is indispensable to the students and teachers of comparative religion. No library should be without it.

REVIEWS AND NOTICES OF BOOKS

[Books in the following languages will be noticed: Assamese, Bengali, English, French, German, Hindi, Marathi, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Punjabi, Sindhi, Sinhalese, Tamil, Telugu and Urdu. Newspapers, periodicals, school and college text-books and their solutions, pamphlets and leaflets, reprints of magazine articles, addresses, etc. will not be noticed. The receipt of books received for review will not be acknowledged, nor any queries relating thereto answered. Review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer etc. according to the language of the books. No uniformity of book-reviews and notices will be published.—Editor, M. R.]

ENGLISH

ROMAN EDUCATION FROM CICERO TO QUINTILIAN. By Henry Guynn, S. J. 260 pp. (Oxford University Press), 10 s. net.

This is a very well-written and instructive work on the subject of educational history among the old-conquering Romans and the influence of education on their character at different periods. It describes concisely the early Roman traditions and the ideals of the Greek and Roman races. The author describes the coming to Rome of teachers from conquered Greece, the revolution (if strong term be permitted) in Roman education character, and the new Graeco-Roman culture which was thus evolved. Cicero is studied in detail, and rightly so, as he was the flower of his fusion of cultures. So also is Quintilian, the masterly exponent of the new rhetoric. The work is not only interesting and pleasant

to read (on account of the author's lucidity and terseness and attention to "the general principles which underlie all Greek and Roman theories of education"), but gives the reader food for thought, especially to us living in a modern organized empire which replaced an oriental civilization of the mediaeval type in its last stage of decline.

"A vast change was taking place in Roman society under the early Empire. Tacitus has analysed this social change (*Annals*, iii. 55), and has described the various elements which were rapidly replacing the old Roman aristocratic families in the Senate and as officers of the imperial administration. Two main types can be distinguished—the members of obscure Roman families and an increasingly large body of talented provincials to whom the imperial policy gave opportunities of public service which had been denied by the more conservative statesmen of the Republic. Vespasian's story is

the story of a successful civil servant owing every thing to the Empire. His grandfather had been a centurion in Pompey's army, his father was a tax-farmer...The younger Pliny's correspondents, with their endless talk of culture and literary criticism, were the sons and grandsons of men like Vespasian...The imperial civil service was perhaps the surest road to success under the early Empire" (134-137.)

Making allowances for the difference in race between the rulers of British India and the people of the country and the restrictions upon the rise of the latter up the official ladder, does not the above give us an anticipation of the state of things among the Indians equipped with that new learning which Bentinck and Auckland had introduced and of which the generation coming of age just after the Mutiny (headed by Satyendra Nath Tagore) took full advantage?

On p. 137, the author uses a marked man in the sense of a man marked out for distinction. We commend it to the notice of those Indian opium eaters who can write nothing themselves but make Pockanflin's strictures on what they falsely brand as Indian English, though sanctioned by the best Englishmen's usage.

JOURNAL OF FRANCIS BUCHANAN (Patna and Gaya Districts 1811). Edited by V. H. Jackson. Pp. 270+39 with 4 maps and 2 plates (Patna Govt. Press) Rs. 1.

Francis Buchanan, w. p., first earned the gratitude of students of Indian antiquities and social conditions, by publishing in 1807, in three quarto volumes, the notes of his Journey through Mysore, Canara and Malabar (made in 1800-1801), which describes "the state of Agriculture, Arts, and commerce, religion, manners, and customs, natural and civil history, and antiquities of the Dominions of the Rajah of Mysore". In 1807 he was ordered by the Government of India to go out with a staff of pandits, maulavis and draughtsmen, and make a similar Gazetteer survey of the Bihar and Bengal districts,—which actually extended from Shahabad in the west to Rungpur (and Kamrup) in the east. Buchanan's report to Government in 25 folio volumes with many drawings, remained in MS. in the India office London, till at last in 1838, a selection from them made in the most haphazard and unintelligent manner by Montgomery Martin, was published in three octavo volumes, as "Eastern India" without Buchanan's name on the title page. (The report on the District of Dinajpur alone was printed in Calcutta in 1833.)

In addition to the Reports submitted to Government, Buchanan also kept a private diary (*Journal*) during his survey, and this also (with the exception of the Purnia volume) has found its way to the India office. In addition he carefully corrected Rennell's maps of these districts from his own survey.

From this it will be seen what a vast mass of information, collected by a trained observer on the economic, social and architectural condition of Bihar and Bengal, just on the eve of their modernization, is included in the Buchanan paper. In the present century these attracted the attention of three high officials of Bihar—Sir Hugh Macpherson, Mr. C. E. A. W. Oldham, and Principal V. H. Jackson,—during their Home furloughs. Thanks to the generosity of some Bihar Rajahs, the Bihar

and Orissa Research Society (supplementing the local Government) have undertaken to publish Buchanan's *Journal* (as yet in MS.) and *Report* supplying all the omissions of Mr. Martin.

The Patna-Gaya *Journal*, annotated by Mr. V. H. Jackson, is before us. No better editor could have been found, as he has again and again travelled through the interior of the districts and retraced Buchanan's paths in the tracts rich in Buddhist antiquities. Mr. Jackson's Introduction contains many correctives of accepted views and indicates his deep study of the subject from every angle while his "Notes on old Rajgriha" (in the Appendix pp. 239-250) with its site-map is invaluable to students and tourists alike. We are glad to find this map and notes are now available in a handy form. No orthodox Hindu should read Dr. Caldwell's analysis of *Silajit* (pp. 237-238) science's destroyer of caste purity like *kala-pani*.

On the subject of Buddhist antiquities Buchanan, who wrote in the days of ignorance before Prinsep, is disappointing, and his hand sketches of inscriptions mostly worthless, also are his draughtsmen's plates.

HINDU-PAD-PADASHAH! or a Review of the Hindu Empire of Maharashtra. By V. D. Savarkar. 1924+296 (B. G. Paul & Co., Madras) Rs. 3.

The volume has a foreword by the author himself, an introduction by Dr. R. C. Majumdar of the Dacca University, and yet another introduction (called *announcement*) by the publisher. The bookseller (naturally, as the cynic will add) makes this boast—"The Author has laid under contribution all contemporary records,—historical, literary and epistolary,—and there is not a single fact cited here for which he is not prepared to quote chapter and verse as authority."

There is not a single citation of authority, quotation from sources, or bibliography in the whole work, and a study of its contents shows that it is the latest example of that romantic writing which passes for history among the Chauvinists of the Chitpavan caste. Rajwade's critical insight and direct contact with original sources often saved him,—though a Chitpavan when he went perilously near such absurdities. But Mr. Savarkar had no such equipment. We should be sorry if this book is taken as a specimen of the history which modern critical Marathi scholars can write, for such an inference would do injustice to Sare and Khare, Parasnis and Sardesai besides several keen and rightly directed young men whom I have met with in the Western Presidency. Mr. Savarkar's feelings have no doubt affected his historical vision, and this disturbing factor is wanting in the other writers.

It is impossible to overestimate the influence which such false readings of our country's past and emotional extravagance of the platform orator type put in print do to the true advance of the nation. Is the young Indian of the future to be thrust forth into the world's broad field of battle and to fight his political and economic rivals, fed on such *Knowledge* is power, passion only darkens vision and unsteadies the boxer.

It will be enough to quote a few examples of Mr. Savarkar's view in illustration:

(a) The mutiny of the Sepoy mercenaries in 1857 due to the fear of forcible pollution by the lard and cow's fat, was "a national rising" (p. 200).

(b) "The day when the Haribhaktas of Hindu-domin entered Delhi in triumph and the Moslem throne and crown and standard lay hammered and rolling in dust at the feet of Bhan and Vishwas Rao in 1761 was the day which made an honourable unity between the Hindus and the Moslems more or less feasible. The Hindus conquered the conqueror and then could honourably embrace him if so he wished, as a fellow countryman and friend" (xiv) Mr. Savarkar recommends these views "to the attention of all Indian patriots, Moslems as well as Hindus." Yes, there is no love-philtre like the Taming of the Shrew!

(c) The Maratna annihilation at Panipat was a defeat that vanquished the victor as well" (p. 121).
J. Sarkar

AN EXPOSITION OF THE DIRECTIONAL ASTROLOGY OF THE HINDUS AS PROFOUNDED IN VINSHOTTARI DASA. By Dr. V. G. Kale, L. M. and S., F. C. P. S. Published by the author (Gungaum, Bombay), pp. 36. Price not known.

An interesting booklet on Astrology. It contains a chart explaining the periods of planets according to Vinshottari Dasa.

THE ISVAR-GITA TRANSLATED INTO ENGLISH. By I. Kannon Mal M. A., Judge Dholpur State. Published by Motilal Banarsi Das, Proprietors The Punjab Sanskrit Book Depot Lahore. Pp. 62. Price Re 1-8.

The book forms a part of the Kurma Purana and contains 11 chapters with 496 slokas. It is written in imitation of the Bhagavat-Gita and is worth-reading.

The translation is readable, but the translator has made some provincial mistakes which jar upon our ears. He writes 'Brahm' for 'Brahman', or 'Brahma', 'Pran' for 'Prana', 'Har' for 'Hara', 'Ahankar' for 'Ahankara', 'Nirvan' for 'Nirvana', and so on.

THE HOLY LIFE OF OUR LORD AND SAVIOUR BHAGWAN SHRI-KRISHNA VOL. I BALA-KANDA. By S. N. K. Bhargava, B. A., Coondapoor, S. K. Dist. Pp. 64. Price 12.

Compiled from the Puranas.

MAHESH CH. GHOSH

THE SCIENTIFIC AND OTHER PAPERS OF RAI CHUNILAL BOSE RAHADUR, C. I. E. Ed. by J. P. Bose, M. B., F. C. S. D. C. 16, pp. 558, Vol. II, Calcutta, 1925. Rs. 5.

The second volume of collected papers of Rai Bahadur Dr. Chunilal Bose has been published. Unlike the first volume which was meant mainly for scientific readers this volume is written in a simple style free from technicalities and contains matter of general interest such as dietary, milk supply, infant mortality, maternity and child welfare, health of college students, temperance movement, etc. There are also certain biographical sketches and articles on social problems. The variety of topics discussed indicates the wide range of the author's interest. The paper on food adulteration contains many interesting suggestions which if acted upon will certainly remove this evil to a large extent. In trying to prove the injuriousness of certain types of adulterated articles, e. g., ghee, etc., the author has put forward arguments which may not be accepted as convincing by scientific authorities. The author has made

a special study of dietetics and the food values of different articles of diet, and his paper on some common Indian foodstuffs deserves our closest attention. We would, however, like to point out that ordinary analysis of foodstuffs to determine the percentages of protein, fat, carbohydrate etc., gives us very little information about their dietetic value. For example gelatine has very little nutritive value in spite of its high protein content. At the present day no analysis of a food-stuff will be worth considering unless the relative percentages of the different types of amino-acids yielded by it is known. Animal experiments with proper control are also desirable before anything can be said definitely about any article of diet. The author has advocated the claims of fresh milk-curd and there is no doubt that it can occasionally replace meat and fish with advantage in the Bengali dietary.

In his article on impure air and infant mortality the author has given us a vivid pen picture of the insanitary conditions of the lying-in-rooms in most Indian houses. But defects are much easier pointed out than remedied and it is to be feared that no appreciable improvement in this direction will result unless the general economic and educational level of the country is raised.

The author's paper on the health of college students is based on the findings of the Student Welfare Committee. The author feels for the students and his suggestions should receive the consideration of the authorities. The author would ascribe the cause of our present degradation and misery to our straying from the high standard of Brahmacharya as preached by our ancient sages. This is an assertion which one frequently comes across in pseudo-scientific works and it would be wise not to attach too much importance to it even when it comes from such an authority as Rai Bahadur Dr. Chunilal Bose. The author's paper on temperance is well worth reading although one may not agree with all his views or with those of the authorities he quotes. The biographical sketches give the personal impressions of the writer and are interesting. The popular lectures on scientific subjects will be appreciated by a large circle of readers. The papers on marriage dowry and professional beggary will amply repay perusal. The paper on immoral traffic bill is obviously based on reports of certain social bodies and lacks that element of interest which comes through personal study.

The book is provided with an extensive index. The price Rs. 5 seems too high.

THE YOUNG DELINQUENT. By Cyril Burt, M. A. D.Sc., (Oxon) Demy 8, pp. 643. University of London Press, Ltd. 1916d. net.

Dr. Cyril Burt in his book *The Young Delinquent* has given us an exhaustive study of the problems of juvenile delinquency. The study of the abnormal child is of importance not merely because it strives to improve the condition of the young delinquents, but also because it throws valuable light on the problem of education of the normal boy, and the author in his book mainly appeals to those who are interested in the moral welfare of young people. The author writes in a pleasant style and has a clear grasp of the different standpoints from which the problem of delinquency may be approached. It is not merely the investigation of the causes of delinquency that interests him. He has given us valuable sugges-

tions for tackling the problem from the practical standpoint. The author's vast experience in this line has enabled him to make a detailed study of the different factors that are responsible for the abnormality that prompts a child to commit antisocial acts. From the mathematical consideration of the data the author has apportioned the relative pathogenicity of the different factors involved. He has made it clear that it is not a single factor that is responsible for delinquency but that the abnormal state is the result or the final outcome of a multiplicity of factors. So far as the hereditary factors are concerned our present state of knowledge does not indicate any method to modify them, and notwithstanding the best efforts of the eugenicists the author believes that no practical results can be obtained in the present generation at least. On the other hand the environmental factors are susceptible of modification and prevention at the early stages will certainly be productive of very hopeful results. The author believes that an intensive study of the child in its earlier years will enable the expert to predict with some amount of definiteness the chances if any of its turning a criminal. The adoption of remedial measures in such cases would certainly be fruitful.

The author's classification of the sub-normal children into the backward, the unstable and the delinquent is of doubtful scientific value, but it has the advantage of practical utility. The book deals exhaustively with the problems of the influences of home life, defective family relationship, companionship, leisure and work so far as they are of importance in the development of a criminal tendency. The physical developmental conditions and the pathological states responsible for delinquency have also been considered fully. Mental deficiency as the most important single factor in the production of the criminal type has been very fairly treated. The instability in the instinctive and the emotional life and the question of habit formation have also received due attention. The author has kept himself abreast of the times and has devoted a special chapter to the findings of the newer psychologists. There is a valuable index of authors, as well as an index of subjects and a bibliography of selected references. On the whole the book is an excellent production and we can confidently recommend it to the lay as well as the technical reader.

G. Bose

THE BIRHORS: A LITTLE KNOWN JUNGLE TRIBE OF CHOTA NAGPUR. By Rai Bahadur Sarat Chandra Roy, M.A., B.L., M.L.C., Ranchi, 1925. Price ten rupees, foreign fifteen shillings. Pp. VI+608, with index.

The above account of the Birhors is the third volume of a series of monographs from the pen of the veteran anthropologist, Rai Bahadur Sarat Chandra Roy, on the primitive culture of the different aborigines of Chota Nagpur—an area, of which we owe practically all our systematic data of ethnology to the indefatigable investigations of the same worker.

The people whose manners and customs are described in this volume are one of the rudest and little known of the jungle tribes of India. As in the case of other tribes in a very low state of material and mental culture, the people were believed until recently, to be of canni-

balistic habits. At this day, though no long accused of feasting on the flesh of human beings they are credited even by their near neighbors with wonderful magical powers. In this respect they are comparable to the Kurum of the Nilgiris and other tribes in an equally lowly state. Detailed accounts of people in these are of special interest to the student of culture history. Some idea of the service done to ethnology by this latest contribution Rai Bahadur Sarat Chandra Roy, may be gauged from the fact that the previous accounts, even when quoted *in extenso* (excluding second-hand gossip) cover a bare thirty-eight pages. The rest of the volume running to 597 pages (and plates) is packed with details of the life of the jungle people collected first-hand by Mr. Roy repeated visits to their settlements. The difficulty of the work was aggravated by the fact that the Birhors are scattered in very small migratory bands over an extensive area of hills and jungles—and the people are usually on the move throughout the year. It is only during the rains that they form something like a settlement, usually in some inaccessible place.

In the second chapter of his book the author gives us a general view of Birhor life, passing on to their social organisation—in the family and the clan,—and their relations. A full account of the customs of birth, puberty, marriage and death follows in the next three chapters and are naturally succeeded by accounts of religious and magical beliefs and practices. A valuable chapter on folktales and one on arts, crafts, games and amusements of the Birhors brings the survey of the life of the tribe to close. Useful linguistic and anthropometric data are given in the appendices. Appendix IV contains some interesting data about the size and sex of families. The language of the Birhors belongs to the Austro family—a form of speech associated almost everywhere with a low material and mental condition. Their economic life belongs to the type usually found in the earliest strata of material culture. Gathering of fruits, roots and jungle produce, hunting of small animals and monkeys suffice for their economic need. Houses are shelters of leaf, even more rudimentary than the temporary huts put up in our rice fields when the corn ripens, while clothing dwindles away to the minimum that may be called covering. The social organisation is also very simple. The clan may regulate marriage and the tribe exist in name; but the real effective social unit is the *tanda* or hunting camp with its constant association in food quest, sacrifices and festivities. Sufficient evidence is however forthcoming from the data of kinship and social usages to show that the clan life was more organised at some previous stage in the life of the people, and the present apparent simplicity is due to the almost complete disappearance of many complex features. To the student of social organisation the life history of such a tribe is most important; and the large amount of first-hand data collected by Mr. Roy will prove highly useful in a scientific study of the subject.

THE HOME OF AN EASTERN CLAN: A STUDY OF THE PALACES OF THE SHAN STATES. By Mrs. Lesh Milne. Pp. VI+428 (including the index). The Clarendon Press, Oxford, 1924. Price 16s.

Mrs. Leslie Milne is known to readers interested in the people of the Far East, as the authoress of a volume on Shans. The present work is a study of the remnants of an earlier people of different culture, displaced by the Burmans and later on by the Shans who became their rulers. The account given is of the people of one particular Shan state where the ruler is of the same race as the conquered people. The Palaungs whose customs are described in this book by Mrs. Milne, are among the few races of Burma, speaking a language of the Austric family. Any account of such a people are therefore of interest and value to the culture historian. The usefulness of the work is doubly increased when the writer happens to be fully conversant with the language of the people described. Mrs. Milne's book on the Palaungs will therefore be read with interest by students of ethnology.

The authoress is not familiar with anthropological literature and has not received any training in that line. She has however taken pains to collect as much detail as possible and carefully described the ceremonies observed by the people. The description of these and the life of a Palaung boy or girl from babyhood to marriage are admirable. Very useful information concerning their religious and magical practices and beliefs, are found in the later chapters. The information supplied on many important points are however meagre. There is practically nothing about descent, inheritance, succession and kinship nor much about the economic organisation of the village. The strong points of the book lie in the careful attention paid to those aspects of the life of a strange people that draw the attention of an outsider. The weak points are in those matters which are of special interest to the ethnologist but do not obtrude themselves into the everyday life of a people in their relation with a stranger, albeit a welcome and sympathetic visitor.

K. P. CHATTOPADHYAY

THEOSOPHY AS THE BASIC UNITY OF NATIONAL LIFE. *Theosophical Publishing House, Adyar, Madras. Price Re 1 1925.*

The four Convention lectures delivered in Bombay at the 49th Anniversary of the Theosophical Society by Dr. Besant, J. Krishnamurti, Lady Butler and C. Jinarajadasa have been collected in this book.

TOWARDS DISCIPLESHIP (ILLUSTR.) *By J. Krishnamurti. Theosophical Publishing House, Adyar, Madras. 1925.*

A collection of "extremely informal and unconventional talks" given "to aspirants for discipleship."

GNOSTICISM: *By Mary W. Barrie. Theosophical Publishing House, Adyar, Madras. Price Re. 1-4. 1926*

The substance of lectures delivered in the Brahminvidya Ashrama.

COMMERCIAL ARITHMETIC: *By T. V. Subramania Aiyar. Published by S. Varadachari & Co. Mount Road, Madras. Price Re. 1-4.*

This book is intended for students of secondary and Commercial schools.

ASSAM CONGRESS OPIUM ENQUIRY REPORT. *Published by S. R. K. Hatibaruia Chinnamara, Jorhat, Assam. Pp. 165. Price Rupee one and annas eight only. Foreign 3 sh. 1925.*

Both in opium-smoking and in opium-eating for non-medicinal purposes, Assam holds the blackest record in India. In its sitting of the 20th June, 1924, the Assam Provincial Congress Committee appointed a representative Committee to enquire into the opium habit, "which has caused misery, unhappiness, physical and moral degradation among the Assamese people". In general in the report, under review, the Committee has succeeded in giving full public information concerning the opium sale, consumption and addiction in Assam. While commending the devoted courage and perseverance of the members of the Committee, we sincerely hope that their recommendations would be accepted by the reformers of Assam and that opium will very soon be prohibited among the indigenous population and the Hill tribes.

P. C. S.

AN INTRODUCTION TO PHYSICAL SCIENCE. *By Ivor B. Hart, 1925 Oxford University Press. Cloth bound. pp. XII+306. Price Rs. 1.*

This is an elementary manual for beginners in Physical Science. Considering the size of the book rather a comprehensive treatment has been made of the subject in all its branches, especially Electricity. Moreover the book is quite up to date. The illustrations, lessons and examples will be of real help to the students. The arrangement of lessons is sound and should be imitated by Indian authors. The special feature of the book is the stress laid on practical details and experiments.

CHEMISTRY TO THE TIME OF DALTON. *By E. J. Holmyard. The world's manual series, Oxford University Press 1925. Pp 128. Price 2-6d net.*

The main outlines of the development of Chemistry from the earliest times to the establishment of the Atomic Theory by John Dalton at the close of the eighteenth Century have been given in this little manual. The book is throughout made attractive by illustrations. The author has tried to emphasize on the continuity of chemical thought giving in detail the works of the alchemists. The book is however incomplete in the sense that India's contribution to the development of the subject has not even a bare mention. Recent researches show that the very theory of atomic structure of matter owes its origin to the philosophers of India, Kanad and others. The theory was first propounded in Europe by Democritus who had it from India through the Arabs. We request the author to consult Dr. P. C. Ray's History of Hindu Chemistry before publishing a second Edition.

HINDI RELIGIOUS POETRY. *By the Rev. Ahmad Shah and the Rev. E. W. Ormerod, 1925, pp 232. Price Rs 4-8. Published by Rev. Ahmad Shah, S.P. G. Mission Cawnpore.*

This is a choice collection of Hindi religious Dohas of such saints as Nanak, Kabir, Dadu, Tulsiidas, Surdas, Mirabai and others, rendered into beautiful English by the two compilers. The translations are faithful and retain the charm of the original. The compilers have done well in

giving the original Dohas in Hindi script for with those on the left and the translations on the right pages the book will also help in learning the language itself. The compilers and the publishers deserve our praise for presenting so many beautiful things in one single volume.

SELECTED RUSSIAN SHORT STORIES: Chosen and translated by A. E. Chamot. The World's Classics series, Oxford University Press pp 144 Price Rs 2

The selection includes fifteen beautiful short stories from the pen of Master Artists of Russia from Alexander Pushkin to Leonid Andreyev. Russia has perhaps attained the highest standard in story-writing. The stories of Anton Chekhov (two of which are given in this book) are recognised as the best of his age. Pushkin, Gogol, Lermontov, Turgenyev, Dostoevski, Gorki, Kuprin and Andreyev are considered first class writers of the world. This book, containing stories selected from their works, is really a precious addition to one's library. The stories can be read and re-read. No selection from Tolstoy is included as his stories form a separate volume of this series.

S. K. D.

BORDERLANDS OF ECONOMICS. By Radhakamal Mukherjee, M. A., Ph. D., Prof. of Economics and Sociology, Lucknow University—George Allen and Unwin, Ltd., Indian Agents. The Book Co. Ltd. pp 280

In this treatise Dr. Radhakamal surveys the borderlands between Economics, Biology, Psychology, Ethnology, and Sociology and his wide and extensive reading in these sciences has enabled him to make a solid contribution to Economic Science. In his previous volumes on "Comparative Economics" he has made an intelligent synthesis of the different branches of economic and social sciences. In this book he makes out a plea for understanding the economic activities of mankind from the platform of Natural Science. Neither the old classical school of Economics though renovated to a great extent by Dr. Marshall nor the historical school of economists can satisfactorily explain the economic phenomena of our modern days. Hedonistic psychology and utilitarian ethics still dominate the field of modern economics. It is no longer wise to consider that man is guided solely by material considerations and mechanistic interpretation of life is not only a false cue but fails to adequately explain the human urge. Man is a bundle of instincts and impulses and his activities cannot be cribbed, cabined and confined to a "Procrustean bed of classical or neo-classical formulae, averages and indexes." Prof. J. S. Haldane has shown us that there is a "guiding power innate in us" and the psycho-analytic and experimental analysis of life is progressing rapidly so that the complexity of man's nature has to be understood before any economic interpretation of his activities can be undertaken. Economics has to be slowly but surely lifted from the material and physical plane. Biologic instincts, psychological factors, physical influences, social values and habits and ethical endowments are influencing economic concepts. Orthodox economic theory might refuse to include them in their interpretation but in the practical field economists can no longer hope to neglect their influence. In the help of agricultural production we invoke the aid of

scientific research. Modern agriculture requires the services of Chemistry, physiology, mechanical Engineering, Bacteriology and more besides. Coming to industrial production an attempt is made to evoke the creative instinct of the worker. Economists hope to secure distributive justice, discarding the old theories of wages and the "Fair or living Minimum" wage is being put in practice by the Trade Boards. Group Control being exerted to check over-individuation and unethical competition. Social control and social standard have distinctly supplanted the ideals of individual standard and individual control. There is belief in common onward march. Considering the field of distributive justice the efficiency of transport agencies and means of communication is being secured with the aid of recent scientific researches. The services of science are enrolling in the field of consumption. Adulterated milk leads to typhoid, diphtheria and croop (children diseases) and pasteurising plants are installed in New York and Ontario to guarantee the sale of fresh and pure milk. Inspection of sale shop cow-houses etc., is also provided. To secure health food for a growing population science is the only remedy. Taking trade and business into consideration book-keeping and scientific accountancy are becoming important. Thus the economists do not only realise that the motives for human action are very many and understood only by increasing grasp over psychology and other sciences but they are actually seeking their service in aiding the human factor. Economic reformers are undoubtedly availing themselves of the researches in the kindred sciences.

Dr. Radhakamal however insists on a reform in the teaching of Economics so that the recent findings of the researchers in the other important social and physical sciences can also be included. He pleads for a new interpretation of economic life brought about by a scientific cooperation of the sciences and hopes that the regional and human differences would certainly be reckoned in explaining our "multi-coloured tapestry of civilisation."

But our Modern Comte should not show signs of impatience at the inability of the present-day economists to take the above theories into account. Theories die hard. Neo-Malthusianism still flourishes in spite of its being refuted effectively by latter day economic history. The marginal utility theory of value persists in spite of the fact that value is determined by an impersonal social process. Again it must not be understood that 19th century economic thought was neglecting the influence of instincts and impulse, in dominating the action of individuals. Unfortunately it has emphasised the wrong instincts leading to concerted group action. Dr. Radhakamal himself asserts that "the process has begun. New lines of enquiry and effort are suggesting fruitful currents of economic interpretation." We only wish along with the author that this process of reorientation proceeds in a quicker pace. We also hope that this valuable contribution will receive due attention it deserves at the hands of Western writers on Economic Theory.

COMMON SENSE OR EKATMA VIGNAN: By Paramahansa Sivananda. Published by Surja Banerjee R. L. (Gandaria Press, Dacca) pp 310, price Rs. 4 only.

This posthumous work of Soham Swami would be welcomed by many earnest spirits of India and elsewhere. The attempt to develop a philosophy of the "common sense" requires courage and the Swami is a veritable incarnation of Courage and audour. He scatters to the winds the innumerable superstitions of humanity and points out with a phenomenal clarity and conviction that the only way to cross over the illusion of Maya and to have Perfect Rest—is to have faith in one *attuned and universal consciousness*—the Self or "I".

If this is what the Swami means by his philosophy of the common sense then we must say that it is the most uncommon thing in human mind, especially a victim to inherited and acquired superstitions. The Swami has shown with a rare catholicity of outlook and profundity of thought that man's salvation depends on him and him alone. Moreover this salvation is not something transcendental and imaginary but within the reach of every soul who by self-discipline becomes a revelation to himself a *Jivan-mukta*.

We recommend the book to all those who are aspirants after this life of vigorous and independent self-realisation.

K N.

FRENCH.

EASY FRENCH READER PART I. By Dr. Pashupatinath Shastri, 1926, 41, Baghbarai Street, Calcutta.

This little book would prove to be a very easy and faithful introduction to the French grammar. Dr. Pashupatinath Shastri has already made his name by publishing an "Easy German Reader" and one finds from the present French Reader that he spares no pain to make the book as correct and interesting as possible. Beginners in the study of the French language in Bengal would be thankful to Dr. Shastri for this primer and we recommend the book to them.

K N.

SANSKRIT

MIMAMSA NAYAPRAKASA OF APADEVA. Edited with an original Sanskrit Commentary by Vedavivarada Pandita A. Chinna-swami Sastru, Professor of Mimamsa, Benares Chaumkhamba Sanskrit series office, Benares City.

The book, as the very name shows, deals with the subject of the *Purbamimamsa*. It is a well-known manual and read widely in Sanskrit Pathasalas. Though it is meant for beginners there was keenly felt the want of a commentary. The late Pandit Mahamahopadhyaya Krisnanatha Nayapanchanana removed it to a considerable extent by writing a commentary on it. Now the second commentary which is better in more than one respect is written by Pandit Chinna-swami who is really a master of the subject as the book itself shows. Without knowing well the *Samhitas* and *Brahmanas* none is quite fit for understanding the Mimamsa system excepting of course, the purely logical or philosophical topics. It is just like reading the *Brahmasutras* without first knowing the Upanishads. Pandit Chinna-swami has this

advantage, besides having the practical knowledge of performing different Vedic rituals and ceremonies. He has explained the text in a clear way and has tried his best to meet the requirements also of the students who are not familiar with the Vedic sentences quoted or referred to in the work by tracing their sources and giving charts of different Vedas which will undoubtedly help them very much.

CALCUTTA ORIENTAL SERIES. No. 17 E 10: PADMAUTRANA AND KALIDASA. By H. Sarma, M. A., Professor of Sanskrit, Ramyas College, Delhi, with a Foreword of Dr. M. Winternitz, Ph. D.

What is the source or sources of Kalidasa's *Abhijnana Sakuntala* and *Raghuvamsha* is a problem and Prof. Haradatta Sarma undertook a thorough investigation of it at the suggestion and under the guidance of Prof. Winternitz when he came to the Visvabharati as the visiting Professor for 1923, and the result is embodied in the little volume lying before us. The story of *Sakuntala* is related, though not in the same form in different Puranas, such as the *Bhagavata* the *Padma* etc., in the *Mahabharata* and in the *Jatakas*. Some references to it are also found in the *Salapatha Brahmana*, and one may add, in the *Atireya Brahmana* (8.23) as well. Having thoroughly discussed all these details Prof. Sarma arrives at the conclusion that the *Abhijnana Sakuntala* is based on the *Sivargakhanda* of the *Padmapurana* and not on the *Mahabharata*. He says: "The story of *Sakuntala* seems to have been known of course not in the present form, in the time of the Brahmanas. Then the story was developed, and in the time of the old *Mahabharata* contained the incident of Duryanta's deliberate insulting of *Sakuntala*. Then it fell into the hands of some rhapsodist, who added the didactic portion to the story. This was further increased in bulk by some still later editor, by adding lengthy descriptions of the hunt and the hermitage. The *Padmapurana* probably borrowed from the older recension the 108 verses which are wholly didactic. Then the story was influenced by some old ballad on which is based the Buddhist legend, and from it, it derived the incident of the ring. The whole was then recast by the *Padmapurana* or by some other writer earlier than the *Padma*. Finally from the *Padmapurana* it was adopted and the present shape given to by Kalidasa."

As regards the *Raghuvamsha* his conclusion is the same. While the source of the *Abhijnana Sakuntala* is the *Sivargakhanda* that of the *Raghuvamsha* is the *Palalakhandaka* of the *Padmapurana*.

Prof. Sarma's decision may not be accepted by all, but his discussion is scholarly and as such deserves to be studied.

In investigating the matter he has examined a number of MSS. of the *Padmapurana* all of them being secured from Bengal. These MSS. present a recension different from that in the Anandasrama edition. His researches show that there are reasons to believe that the Bengali recension is older than that found in the Anandasrama edition. It is nearer to the stories of both the works of Kalidasa namely, the *Abhijnana Sakuntala* and the *Raghuvamsha*. And so Prof. Sarma has given us in his book a critical edition of these two sections of the *Padmapurana* viz. the *Sivargakhanda* and

Patalakhundu of the Bengali recension Sanskrit scholars, and especially the readers of Kalidasa are thankful to him for his present contribution to the studies in Kalidasa literature.

VIDHU SHEKHARA BHATTACHARYA

HINDI

VEATAT-SARA CHANDRIKA. By Pandit Satkopal Sarma, Bhatat Dhanmu Mahamandal, Benares. Pp. 156. Price Rs. 1.

The rites and ceremonies of the orthodox Hindus are fully described here. As many as 44 are delineated as fully as possible. The old puranic basis, the popular form and the moral of these ceremonies are a very interesting study of Hindu sociology. We endorse the opinion that the Hindus immortalised the birth, victory or religious propaganda of the great men, but not their death. The author's enthusiasm for the vindication of these ceremonies sometimes leads him to express opinions which cannot be supported by modern educated Indians. The bulk of the work could be compressed if the unnecessary remarks were left out.

SRI BUDDHA GITA. By Swami Satyadeva. The Laganua Publishing House, Agra. Price Rs. 12.

This translation of the famous Pali work 'Dhammapada' is much welcome. The translator rightly names his work as 'Buddha Gita'.

KARMA YOGA. By Chhannath Pandeya, B.A. L.L.B. Hindi Pustak Bhavan, 181, Harrison Road, Calcutta. Price Rs. 12.

Translation of a well known work of the late Aswini Kumar Dutt.

RAMES BASU.

ORIYA.

TARKA VINYAN--PART I. By Bipin Behari Roy. M.L. Price Rs. 2-8-0.

We have gone through Prof. B. B. Roy's *Tarka-Vinyan* Part I (a treatise on Logic) in Oriya. This is quite a new attempt at introducing the logical principles of the West into the Oriya Vernacular. In view of the proposals made by Indian Universities to introduce the medium of Vernaculars in higher classes of High Schools and Colleges, we think it will satisfy the needs of Oriya Students of Logic. It will make a good text-book in Colleges and Training Schools. The author has carefully set forth the different topics in a language easily intelligible barring of course the Vernacular equivalents which may seem to the beginners difficult not because of their unintelligibility but because of their novelty in the language. Logic as we know is a controversial subject in which any two logicians are always at loggerheads at least on some points. The author has however embodied in his book the views of eminent logicians with criticisms wherever necessary. At places references have been made to Hindu logic with a view to creating an interest in a comparative study of the subject. We congratulate Prof. Roy on his new attempt which will give a stimulus to other writers in other subjects.

The present volume mainly deals with deductive logic and we hope the author will fill the want by soon publishing the 2nd part which will give us the inductive portion.

R. L. B.

ARABIC

A GRAMMAR OF THE COLLOQUIAL ARABIC OF SYRIA AND PALESTINE. By G. R. Driver, (Probstham and Co., 1925, 256 + cm, 12s. 6d.)

Though not in line with the well-known grammars of the Oriental languages published in the *Porta Linguarum Orientalium* series, it still deserves our appreciation. The author has composed this work in the land where this Arabian dialect is spoken and has availed himself of the help of the educated inhabitants of the place. While supplying a practical basis of study for those officers and men who may be serving in Syria and Palestine, this careful work is not without its use for those who are studying the modern dialects of Syria in a scientific manner. The print and the general get up of the work leave nothing to be desired. We sincerely congratulate Mr. Driver as well as the publishers on this nice production.

KITAB-AL-MA'THER. By Abul Amathal Al-Arabi edited by F. Kienko (in German), (Probstham, 1925) Pp. 8 (German) + 100 (Arabic) with 2 plates of facsimile of MS. Price 6s. net.

The text, occupying 86 pages of Arabic beautifully printed at Beyrouth, is taken from the Constantinople Codex. The author was a Maula of Jafar ibn Sulaiman ibn Abdullah ibn Al Abbas and flourished in the year 213 of the Hijra (847 A.D.) in the province of Khurasan.

This work will be of interest only to those few who are engaged in the scientific study of classical Arabic. The book deals with those Arabic words which when written appear to be similar in shape but indicate entirely different meanings. It is therefore, of purely lexicological interest, but a critical edition of works of this nature, though a labour of love is not to be regarded as valueless. We are sure it will prove of use to the scientific investigator of Arabic lexicography. (Ph. D.)

GUJARATI

MAHATMA MAHIMA. By Mcharyabhai Manjhi Patwa. Printed at the Diamond Jubilee Press, Ahmedabad, Cloth bound. Pp. 338. Price Rs. 2-12 (1925)

On reading this substantial volume one finds it hard to believe that it is written by a Parsi so saturated it is with the philosophy, mythology and theology of the Hindus. His object is to impart *Dharmaynan* and *Brahmaynan* to the erring and the ignorant. To get them he has been in quest of *yogas* and to his surprise he found several *yogas* in quest of learners. The language of the book is quite in keeping with his former works and though the form in which the teaching is given is that of a drama, we think the usual drawbacks inherent to such a form would stand in the way of its general popularity.

JIVAN RAHASYA · By *Girdharlal Gorind Mehta*
Professor of Phrenology, printed at the Subodhhu
Printing Press, Bombay. Cloth bound, pp. 396. Price
Rs. 7-0-0 (1925)

A most sumptuously bound volume (our copy) with numerous illustrations and a store house of information culled from India and Europe, the work is meant to regulate "Sexual Life." Each and every phase of the life, theoretical and practical is touched. Sanskrit and English works have been ransacked and their contents co-ordinated. There has been a lot of outspoken comment on our ways of life by the author and altogether it is a work which would please a majority of people rather than displease them.

THE POPULAR TALES OF KATHAWAD By · *Gokuladas Jivarkadas Rautchura* Printed at the Ganapati Printing Press, Rajkot, thick Card board, pp 200, Price Rs. 1-8-0 (1926) With illustrations

These tales illustrate the mode of life of the indigenous population of Kathawad. They manifest an undercurrent of chivalry, simplicity and courage on the part of both men and women and for the moment the reader is transformed into a being living in some remote age so vividly are the scenes depicted. The style is easy and a little provincial, but that it was bound to be otherwise the subject would not have been well brought out.

K M. J.

MARATHI

POLITICS OF THE DISARMED, By *Dr. S. V. Ketkar*, M. A. Ph. D., pp. 164 Rs. 1 Published by the author himself

Dr. Ketkar is about to finish his colossal work of Marathi Encyclopedia and has decided to devote his future years to another work of immense—its greater magnitude, viz., that of obtaining Swaraj of the Dominion type for India. He realises that the work will require sustained intensive effort and that there is no escape from it if India is to attain Swaraj. This work is to be accomplished by 1929, i.e., within about 3 years from now and for this purpose he proposes to organise a body called the League of self-determination which will employ 5000 well-paid missionaries to carry on the necessary propaganda amongst the peoples of the two countries concerned, viz., India and England. The present booklet is a preliminary work meant to explain and popularise the idea of the League and the methods to be adopted by that League for the end in view. This booklet is to be followed later on by another in which will be explained the lines on which the Swaraj government is to be conducted. Dr. Ketkar is of opinion that England has really nothing to lose by granting Swaraj to India, that the only obstacle in the way is the absence of a class which will be ready and fit to accept the responsibility which the grant of Swaraj will entail and that it is quite possible to create, by 1929, a body of men who will be able to undertake the necessary responsibility. The booklet sets the various considerations to show how it is to the ultimate interest of England to let India have Swaraj, but it is at least extremely doubtful whether these considerations

will appeal to a nation which throughout recorded history never been known to see farther than its nose. As regards India itself, the whole nation has during the last 150 years of foreign rule lost its habit of caring for anything higher or nobler than the safety of its own skin and 's at the present moment so completely covered by fissiparous tendencies fed by selfish and narrow views that Dr. Ketkar's unbounded optimism alone can hope to overcome, within the short space of 3 years, the whole lot of these tendencies and raise the nation to that high moral altitude from which it can, as one man, make a determined and sustained stand for Swaraj. The learned Doctor has not the shadow of a doubt as to the capacity of his League to prepare the country for such a stand, but he does not completely shut out from view the possibility of England not being willing to grant Swaraj even with the creation by 1929 of a class of men willing and fit to undertake the responsibility of Swaraj, and against this contingency he contemplates the use of that alluring weapon of the disarmed which goes by the name of mass civil disobedience and non-payment of taxes. The goal is admirable, the methods of doubtful efficacy and the time limit impossible. The language suggests that the book is thought out in English, written in best (or worst) yankee style and then translated in Marathi. Extreme optimism also has its uses in the economy of nations and we have no doubt that the 100,000 readers whom the booklet is intended by the author to reach will benefit by its perusal. The booklet is fully worth its price, viz., Rs. 1.

KARKUN (A NOVEL), By *Mr. G. T. Desai-Kollhatkar*
B. A. Publisher—Shri Dhul Agency, Narayan Peth, Poona City Price Rs 1

In these days when vitiated taste both of Marathi fiction-writers and their innumerable readers is rampant, a novel even of moderate merit is welcome more so when it treats of a neglected subject like that of the social, economic and moral condition of the class of poor clerks in Govt. service. The state of things depicted in this novel is not overdrawn. The author has taken good care not to raise goblins of imagination and to show his bravery in killing them. The slavish mentality generated among clerks in offices by the treatment they receive at the hands of their 'boss' the hardships they have to undergo, the vices to which they become addicted, and the immoral means (like betting at the races) to which many of them resort in their anxious desire of escaping from the clutches of a money-grabbing Marwari, are all every day occurrences, but not so their accidental deliverance from the pit of misery at the hands of a retired Rao Bahadur who with a philanthropic motive visits the race course in search of one who needs reclamation. The author instead of using such accidents as a means of deliverance, could have done better to contrive more usual and surer means of the reclamation of the fallen. The novel is interesting from cover to cover and deserves well at the hands of fiction-readers.

MAHARASHTRACHA PUNYAGRAMA OR A DESCRIPTIVE ACCOUNT OF POONA THE CENTRE OF MAHARASTRA
By *Mr. V. V. Karmarkar*. Publisher—*Mr. N. A. Godbole*. Price as 12.

Poona is renowned not only for its political

glory in the past, but is even now the intellectual centre of Maharashtra, the source from which all reform movements, political, social, religious or literary, emanate and radiate the whole country. It is to Poona that the whole Deccan looks for the lead, and it is to Poona that many a public institution owes its inspiration, existence and useful career under careful guidance based upon a lofty ideal of self-sacrifice in public interests. It is a pity that for want of a suitable hand-book in English a reliable descriptive and historical account of the city its numerous temples, historic buildings

political, social and educational institutions. A foreign tourist should go with the impression that Poona is a hot-bed of sedition and profitable wrangling. It is some satisfaction, however, that at least Marathi-knowing public from outside will not be misled if they care to read Mr. Karmarkar's little Guide to Poona. This little book with all its shortcomings is eminently useful and therefore its author deserves to be congratulated on his performance of civic duty.

COMMENT AND CRITICISM

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally, no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor The Modern Review.]

Another View Of "Crime In America"

To the Editor of the Modern Review

Having just finished reading the February issue of your highly prized Review, will you permit me to say, very respectfully and very regretfully, that I am sorry to find there the article by Dr. Sudhindra Bose, which he entitles, 'The World's Worst in Crime.' I have a very high regard for Dr. Bose. But I think he made a mistake in sending you such an article.

The black picture which he paints of America unquestionably has much truth in it, or, would have, were there not a very large other side, which I wish he had given, so that the people of India might have the whole truth, which means the real truth about the American people. I hope he will give that other side in some future article. If there is a serious crime wave sweeping over America at the present time, as unfortunately is the case the causes of it are plain. But it does not represent the normal America, and it will pass.

It has to be confessed, and I confess it with shame, that in some respects the United States government has not treated India well, our immigration laws are, in my judgment, unjust and cruel toward all the Asiatic peoples, Indians included. But is that helped by gathering together a list of our worst sins and crimes and evils, and sending the same to the Indian people? There is no nation or people in the world that does not have its dark side. When we attempt to portray that alone, we throw things out of perspective and we are almost sure to exaggerate, thus we convey a false impression. The Indian people can easily understand what I mean, for they have had to bear much of this kind of treatment from this country, from England and from Europe. England has persistently wronged India in representing the Indian people as

half civilized, and therefore unfit for self-rule (Kipling portraying the typical Indian as "half devil and half child"). Christian missionaries have persistently wronged India by bringing to West reports and pictures without number of the darker side of her civilization, her religion, and her life,—emphasizing her superstitions and her social evils, such as her untouchable class, her child marriage, purdah, abuse of widows, etc., and ignoring the whole vast higher and better side of Indian civilization and life. If we regret these unjust portrayals of India let us be careful not to make an equally one-sided and unjust portrayal of America, or any other country. It is a beautiful trait in Gandhi that, he looks for finds and rejoices in, the best that is in men and nations. So does Tagore. I think that this is generally recognized in India as the better spirit.

America has many and grave sins, but she has also many and great excellences. I am sure that India has much to teach her, but I believe she has some things of importance to teach India. Let us all think on the things which will draw us together, not on the things that will separate us and make us distrust, despise and hate each other.

In closing, let me repeat my hope that Dr. Bose will correct the impression he has made, and do justice to America by writing for the Modern Review another article giving an intelligent, sincere, and at least measurably adequate portrayal of the real American people, their ideals, their aims, their civilization, and their actual lives,—a portrayal, not of our few criminals, for they are relatively few, but of the vast body of our people who are not criminals, but who hate crime as much as do the people of India, or as does Dr. Bose himself.

NEW YORK, U. S. A.
March 10th 1926

J. T. SUNDERLAND

THE HINDU-MUHAMMADAN PROBLEM

A Western anthropologist has laid great stress on what he calls "Disease of Nations;" that is to say, there comes a time when nations, however strong and vigorous, suffer from "disease", and if the proper remedy is not applied, they become past recovery and sink and die. This explains the position of the long-suffering "sick man" of Europe for many centuries past.

From time to time, the Hindus also suffered from the "Disease of Nations", but with the application of suitable remedies they recovered somewhat and thus did not altogether succumb Muhammadanism, like a tornado, passed over many lands in the East and the West and swooped down upon many a nation whom it held in subjection for several centuries. Among other nations, it brought under subjugation the Hindus in the East and the Christians of Spain and Greece in the West. The two latter countries, when they recovered from their disease, not only shook off the yoke of their Muhammadan conquerors but took steps not to let any of the followers of the Crescent remain in their lands.

When portions of India recovered somewhat from the Muhammadan domination, the Hindus did not adopt the same measures towards their Muhammadan conquerors as the Christian Spaniards and Greeks did. The Marathas and the Sikhs brought about the downfall of the Muhammadan power in India, but they did not treat the Muhammadans as the Spaniards and Greeks did. They did not break or desecrate a single Muhammadan mosque. On the contrary, the spirit of toleration of some of the Hindu sovereigns was so great that they built mosques for their Muhammadan subjects. Thus we read in the *Punjab Notes and Queries* Vol. 1, p. 61, contributed by Mr. R. W. Trafford.

"The principal queen of Maharaja Ranjit Singh lived at Shekhupura (Gujranwala district), where she built a *Masjid* for her Muhammadan subjects in a similar spirit of liberality a *Masjid* was erected at Botla *Surala* by a Sikh sardar."

The Hindus are not only tolerant, but a very forgiving people. They easily forget

and forgive the insults and injuries they receive. They are taught from their childhood to do so. In the *Hitopadesa*, there is the golden maxim, *अभयं क्षमा* ;

"On attaining one's desired object, one should forgive his enemy who thwarted him in obtaining it."

Ahimsa or non-violence is a part of Hindu spiritual idealism. Therefore the Sikhs and the Marathas did not behave in the same manner towards the Muhammadans as did the Spaniards and the Greeks.

Some of the Hindu reformers tried their best to bring about friendly relations between the Hindus and Mussalmans of India. The blessed Nanak, Kabir and Chaitanya tried it, but it must be admitted that they failed in their attempts.

The greatest defect of Hinduism is, in its social side, the existence of caste. Unless and until this is abolished, there is very little hope for any reformer to bring about good relations between Hindus and Mussalmans, or between high and low caste Hindus.

The strength of Hinduism lies in its spirit of toleration and syncretism. The latter word may not be familiar to many and hence it requires explanation. In the course of an article on "Syncretism" in the *Encyclopedia of Religion and Ethics*, Vol. XII, pp. 155-159 James Moffat says—

"There is a blending of religious ideas and practices, by means of which either one set adopts more or less thoroughly the principles of another or both are amalgamated in a more cosmopolitan and less polytheistic shape. Such movements in the religious world are often preceded and accelerated by a new philosophical synthesis, as well as by a political re-arrangement, but the outcome invariably is a unification of deities which proceeds on one or other of two lines, either two deities of different religions are assimilated by comparison or several deities are grouped together in a fresh synthesis. The motives for this re-statement are drawn from the dawning consciousness that any particular form of religion is no longer adequate by itself, that others possess like features, possibly of superior efficacy and appeal, and that such features can be incorporated without detriment to the essential principles of the particular religion in question.

"The tendency of syncretism, when broadly viewed, was to henotheism or pantheism, rather than to monotheism."

The Hindus absorbed Buddhism by giving a place to Lord Buddha in their pantheon. They are again doing the same with the creeds of Christ and Muhammad. This shows their spirit of toleration and the efficacy of syncretism.

The strength of the Muhammadans lies in democracy among themselves, in their fanaticism, in their not tabooing, disparaging or condemning sensual pleasures, and, on the whole, in their abstinence from strong alcoholic liquors.

Democracy without education and culture becomes mob rule, and, unfortunately, such is the case to a great extent with the Muhammadans in India. The criminal or turbulent and unruly sections form a larger proportion of the Muhammadan community than of other communities. Amongst the former they have a more effective influence because of the democratic spirit in Islam. The social value and status of a thorough gentleman in the European sense of that word and of one who is not so, being practically the same among Moslems, there is not much stimulus for the illiterate people to distinguish themselves by education and culture.

Fanaticism is also a distinguishing feature of the Moslem creed. An orthodox Mussalman will not be considered a true one if he is not a fanatic. The masses are governed more by passions, prejudices and sentiments than by cool judgment or sound reason. Unfortunately such is the case with the majority of Muhammadans.

In fanaticism lies the strength and corresponding weakness of the Islamic world. The Muhammadans do not believe in the brotherhood of all men, but in that of their co-religionists only. Their fanaticism has brought into existence among them practically a dual code of morality—one code for Moslems and another for non-Moslems.

The great German philosopher Schopenhauer accounted for the fanaticism of the Semitic creeds, amongst which is also Muhammadanism, by their monotheism. He wrote

"As a matter of fact, intolerance is only essential in monotheism, an only God is by his nature a jealous God, who can not permit any other God to exist. Hence it is the monotheistic religions alone that furnish us with religious wars, persecutions and heretical tribunals, and also with the breaking of images, the destruction of the idols of the gods;—and all this because a jealous God had said: *'Thou shalt make no graven image'*."

Their religion allowing polygamy, Moslems have multiplied very rapidly. The spread of Islam was due in not a small measure to the "confiscation of women". Writes Draper, in his well-known work on the "Conflict between Religion and Science, (pp 100-101)

"A nation may recover from the confiscation of provinces, the confiscation of its wealth, it may survive the imposition of enormous war-taxes, but it never can recover from that most frightful of all war-acts, the confiscation of its women.... It was the institution of polygamy, based on the confiscation of the women in the vanquished countries, that secured for ever the Mohammedan rule. The children of these unions gloried in their descent from their conquering fathers. No better proof can be given of the efficacy of this policy than that which is furnished by North Africa. The irresistible effect of polygamy in consolidating the new order of things was very striking. In little more than a generation the Khalifa was informed by his officers that the tribute must cease, all the children born in that region were Muhammadans, and all spoke Arabic.

Polygamy amongst Muhammadans has produced one good result—a result which has been referred to in favourable terms by travellers to Turkey, *etc.*, the non-existence of prostitution, as it exists at the corners of every street in big towns of Christendom like London and Paris. In India, prostitutes have a better chance of rising in the social scale among Moslems than in any other community. The prostitutes amongst Muhammadans are eligible to be married by well-to-do members of that faith and thus have the prospect of rising to the respectable class.

Some Hindus have also increased the number of Muhammadans by keeping Muhammadan concubines as their progeny could not be taken into the fold of Hinduism they have gone to swell the ranks of Muhammadans.

Under the Muhammadan rule the number of Muhammadans in India was not so large as it is now. This is partly due to the rigors of the caste system of the Hindus, which has done very little for the amelioration of the lot of the depressed classes, or of the widows, who, when they go astray, are turned out of their houses and thus are in many instances forced to adopt Muhammadanism.

The temperate habits of the orthodox Muhammadans is much to be admired. But a certain Christian British military officer who had long served in India told the present writer that this abstemiousness of the Muhammadans is one of the main causes of their fanaticism. He explained it by saying that "wine cheers the hearts of men, those

who do not take it are morose and take a gloomy view of life, this leads to fanaticism."

The Muhammadans call others *Kafirs* or infidels, especially those whom they look down upon with contempt as "*But-parast*" idolators. The door of Heaven is believed to be wide open to that Muhammadan who reduces the number of the *Kafirs* even by one. Many Muhammadan sovereigns imposed the tax called *jizya* upon their non-Moslem subjects, whose places of worship were also desecrated and destroyed by them.

The Hindu-Moslem *entente*, therefore, seems on its very surface to be an impossible thing. This can only take place if the Indian Muhammadans accept Kamal Pasha as their guide, friend and philosopher, and follow his lead. They should remember the position of the Islamic world to-day. Although they consider the Christians as people of the Book, their earthly possessions have been appropriated by Christians all over the world. Half a century ago, Turkey was one of the largest empires in the world. But how stands that empire to-day? Gladstone wished to drive Turkey bag and baggage out of Europe. Had he been alive to-day, it would have gladdened his heart to see his fond dreams almost realised.

The Moors are under the tight grip of the French and the Spaniards. The Crusaders have after all gained their object, for the Holy Land has been delivered out of the hands of the followers of the Crescent. Very few Muhammadan kingdoms or states have independent existence to-day; they are mostly under the leading strings of and are used as puppets by the Christian powers.

It is time, therefore, for Indian Mussalmans to ponder over the fallen condition of their co-religionists all over the world. They should not make Hindus their enemies by terrorising them. They should not dream any more to make India a wholly Muhammadan country. The Indian Mussalmans should not forget that they are greatly outnumbered by the Hindus and if the latter boycott them socially and economically, what will be their condition? In many things they cannot do without the Hindus. They are a minority in India and therefore should live harmoniously and peacefully with their Hindu neighbours. That the Muhammadans cannot do without the Hindus is evident from the fact that they are allowed to live unmolested in lands which are professedly Muhammadan. There are many Hindus living in Baluchistan who

enable its Muhammadan inhabitants to feed and clothe themselves. "The Bakkal (Hindu Bania) does not feed me," is a well-known saying in Baluchistan. The saying is used when the Baluch runs into debt and the Hindu Baniya ceases to supply him with food-stuffs on credit.

The present writer, who spent several years on the Frontier and frequently visited many an Afghan village where he very often enjoyed the hospitality of the Pathan rustics, once remarked to an official of that race that his compatriots being so hospitable and kind to strangers, how is it that there were so many Ghazi outrages in his land? The reply of that official was very remarkable. He said "Go to any village and you will find large numbers of Hindus there. They are idolators and so are *kafirs*. But they are not only not molested by the Pathans, but addressed by such endearing terms as Chacha, Mama, Bhai, Ae No. Pathans cannot do without them. The Hindus are the money-lenders, shopkeepers and traders and are quite inoffensive and therefore left unmolested. The victims of the Ghazi outrages are mostly Feringhees, who being Christians are people of our Book. The Pathans believe in 'blood for blood', which explains the frequent blood feuds amongst them. If one were to analyse the cause of the Ghazi outrages, one is sure to find that some friends or relations of the perpetrators of the outrages were hanged or transported for some crime or offence by British officers, and revenge being the code of honour with the Pathans they kill the Feringhees whenever they get a chance to do so. One should remember Frontier Law was no law at all. Criminals are summarily tried and either executed or transported for their crimes."

The above conversation took place with the present writer nearly thirty years ago, before the creation of the North-Western Frontier Province. Even when the Muhammadan rule in India was at its zenith, the Muhammadan rulers could not do without the Hindus and hence they conferred high offices of trust and responsibility on some of them and left them unmolested without any thought of converting them to the creed of Islam.

The Hindus should recognise their perilous situation. They should close up their ranks and bidding farewell to the obnoxious caste system should elevate the position of the depressed classes and take back such Muhammadans and Christians as

are willing to return to their fold. It should be remembered that the Muhammadans and Christians in India were for the most part Hindus before their conversion to those two Semitic creeds. There are many Muhammadan communities in India who even to-day observe Hindu customs and manners and are governed by Hindu Law in their social usages. It will not be a difficult task to reclaim them if the Hindus welcome them heartily when they join them.

The remarriage of Hindu widows should be introduced in Hindu society and their lot ameliorated, and they should thus be prevented from embracing any Semitic faith. It is therefore that the Shuddhi and the Sangathan movements should enlist the sympathy of all Hindus.

Bad times are in store for the Hindus if they do not take steps to be so strong physically as to defend themselves, their persons, property and the honour of their women. They should practise *lathi khel* and have *akharas* for physical exercise.

After the suppression of the Mutiny, some of the responsible British officers gave it as their opinion that for the existence of the British supremacy in India, the policy of "Divide and Rule" should guide the British Government. Thus wrote Lord Elphinstone, the then Governor of Bombay.

"Divide et impera was the old Roman motto, and it should be ours."

Lieut.-Colonel John Coke, holding the very important office of Commandant at Moradabad, wrote —

"Our endeavour should be to uphold in full force the (for us fortunate) separation which exists between the different religions and races, not to endeavour to amalgamate them. *Divide et impera* should be the principle of Indian Government."

Who knows if some of the British officers are not acting on that policy and are therefore doing very little to bring about good relations between the Hindus and Mussalmans? The members of these communities should remember that they have to live and die in India and therefore should not cut each other's throats.

Formerly, riots took place on the cow-killing question. In this perhaps the Hindus were to blame, for they attempted to rescue the inoffensive cow from the butcher's knife. But now, "the favorite wife" of some

bigamist English administrators has taken it into her head not to allow music in front of the mosque where she happens to pray. While "the favourite wife" objects to music, she has no objection to the rattling noise of carriages or the discordant notes of the cries of hawkers in the streets. Her prayer in the mosque is disturbed by the concord of sweet sound but not by discordant and abominable noises.

The Hindus have during the last forty years flattered the vanity of the Muhammadans in every conceivable manner, to make them live amicably with them. But neither flattery or cajolery, nor the offer of any indirect bribe has had the least permanent effect on the followers of the Crescent to come to terms with them. Unfortunately there is no far-seeing statesman amongst the Indian Mussalmans, and those who are educated and have been honoured by Government with titles and responsible offices seem to be more intolerant and fanatical than the illiterate Moslems. Who knows if the Calcutta riot was not due to the recent utterances of one of the most prominent Muhammadans who had been in Government employ for the last twenty years. Hindus should no longer pander to the vanity of the Moslems. Some of the Muhammadans think they are basking to-day in the sunshine of official favours. But they should not think that such would be their happy condition always. They should remember what Britishers wrote and said regarding them during the days of the Indian Mutiny. "The Muhammadan religion must be suppressed", was their war-cry. For an account of this, let them read the *Modern Review* for September, 1925, pp 274-274 and also for November, 1925, pp 611-612.

"Never place your trust in princes. The policy of governing India by England is so inconsistent that one would rue it if he were to think that there were any stability and permanency in her policy in administering Indian affairs. In an editorial note in the *Modern Review* for November, 1907, pp 471-472, it was written

"That British policy is inconsistent and variable is not a surmise of ours. It rests on the high authority of Lord Salisbury. In a minute written by him on April 26, 1875, he says:—

"The other and more serious difficulty is that

* *The Modern Review* for February, 1926 pp. 226-227.

have not the power to give permanent force to a new policy. Can we enact that our successors shall do exactly that which we are not doing for fear from altering their predecessor's work? Mr. Louis Mallet notes a long series of inconsistencies in the course of the Indian Government. Are we any grounds for thinking they will cease? They are not merely subjects of reproach, they are a warning of the fashion after which an Indian Government is made. By the law of its existence it must be a government of incessant change. It is the despotism of a line of kings whose reigns are limited by climatic causes to five years. What power exists in England is divided between a council of which the elements are fluctuating, and a political officer whose average existence amounts to about thirty months. It would be absurd to expect from this arrangement a persistent and systematic policy, if the policy is to depend on the will of the Government. We might indeed commence a new policy with some confidence, if the state of opinion in the service and among Anglo-Indians here was such as to give assurance that it would be sustained. Out of that security there is no appearance. Any abrupt change of measures would not be a natural development. It would be "Octroyé" by the present Government, and would be at the mercy of any succeeding Government to set aside, and another link would be added to the chain of inconsistencies that would present themselves to future criticism." *Notes on Indian Land Revenue.*

The Indian states at present are mostly Hindu, there being only half a dozen Muhammadan ones. In most of the Muhammadan states, the Hindus are not fairly treated and not unfrequently attempts are made to convert them to Muhammadanism. Although the subjects of these states are mostly Hindus, they are not employed in

large numbers in the public services, or hold any position of trust or responsibility.

Imitation being the most sincere form of flattery, it may lead the Hindu rulers to follow the example of Mussalman administrators and do all they can to advance the earthly interests of their Hindu subjects alone.

Some of the Britishers are not tired of saying that before the advent of the British in India, the Mussalmans were cutting the throats of the Hindus and if the British were to leave India, the Muhammadans from the North-Western lands of India would make short work of the Hindus. Here, of course, the wish may be father to the thought. But those Britishers should remember that they are condemning their rule in India by indirectly admitting that the Hindus have become so emasculated under their administration that they would not be able to defend their hearths and homes if the Frontier tribesmen were to attack India. A century ago, those wild tribesmen were subjugated by the Hindu Sikhs. The Muhammadans of Afghanistan were then so terror-stricken that even to-day the name of Hari Singh Nalwa is that of a bogey-man to their men, women and children. Naughty children are made to sleep by their mother saying, "Hari Singh Nalwa raghle de" (Hari Singh Nalwa has come).

A WELL-WISHER OF INDIA

BRITISH EXPANSION IN TIBET

CHAPTER III (Concluded)

Anglo-Japanese Alliance, Russo-Japanese War, and Younghusband's Expedition to Tibet.

By TARAK NATH DAS

While the discussion between the Governments of Russia and China on one side and the British Government on the other were in progress, the British Indian Government, under the direction of Lord Curzon, authorized Col. Younghusband to present a plan regarding the proposed expedition, and ordered the

march of the expedition. The despatch of the Viceroy to the Secretary of State for India, dated the 26, October, 1903, stated among other things —

"After consideration and upon Col. Younghusband's advice, we unhesitatingly recommend that the advance should extend to Gyantse and should

not be confined to the Chumbi Valley. We do not anticipate any serious resistance."

The policy of sending a British expedition to Tibet took a definite shape when the British and Japanese governments felt that the Russo-Japanese war was inevitable. The details of the operation are immaterial, the British entered Lhasa and in the process, many Tibetans were killed. British superiority was impressed on them by looting of Monasteries and Churches—certainly an action indefensible and against the sanction of International Law.

The progress of the British soldiers on the sacred soil was not confined to the killing of a few thousand Tibetans, but was accompanied by rapine and plunder of the treasure-houses of the Monasteries. A correspondent of the London "Daily Chronicle" says

The expedition has looted Monasteries, and for weeks past boxes of plunder have been coming over the passes into India. Their contents have brought joy to the officers' wives and friends whose houses in the hill stations began to look as some of them looked after the sack of Peking four years ago (during the Boxer uprising). An Indian vernacular paper depicts the deeds more graphically, and by the way, gives vent to the feelings of the Hindoos on the subject.

"The Dalai Lama has made himself scarce from Lhasa, and there are no early prospects of a settlement. In the meantime syndicates are being formed in England to plunder the wealth of Tibet. Before this systematic spoliation has had an opportunity to begin, informal loot has been going on, and Tibetan curios are already displayed in *Drapelung* drawing-rooms. The English have such a special knack of looting, and they do it in such an adroit manner that no one can venture to call it by its true name."

Col Younghusband and others were for virtual annexation of Tibet and to accomplish this he entered into a treaty with the Dalai Lama after the latter's complete defeat. The provisions of the treaty would, if accepted as drawn up, have made Tibet a British protectorate in the true sense of the word.

The most important clauses of the Anglo-Tibetan agreement signed by Sir Francis Younghusband on the 7th, of September 1904 are the following:

"Article VI. As an indemnity to the British Government for the expenses incurred in the despatch of armed troops to Lhasa, the Tibetan Government engages to pay a sum of pounds five hundred thousand—equivalent to rupees seventy-five lakhs—to the British Government, the indemnity shall be payable at such place as the British Government may from time to time, after due notice, indicate, whether in the British districts of Darjeeling or Jalpaiguri, in seventy-five annual instalments of rupees one Lakh each on the 1st of Janu-

ary in each year, beginning from the 1st of January, 1906.

"Article VII. As security for the payment of the above-mentioned indemnity, and for the fulfilment of the provisions relative to trade mentioned in Articles II, III, IV, and V, the British Government shall continue to occupy the Chumbi Valley until the indemnity has been paid and until the trade marts have been effectively opened for three years, which over date may be the latter."

"Article VIII. The Tibetan Government agrees to raze all forts and fortifications and remove armaments which might impede the course of communication between the British frontier and the towns of Gyantse and Lhasa.

"Article IX. The Government of Tibet engages that, without the previous consent of the British Government, no portion of Tibetan territory shall be ceded, sold, leased, mortgaged or otherwise given for occupation, to any Foreign power. (b) such power shall be permitted to intervene in Tibetan affairs. (c) no representatives or agents of any Foreign power shall be admitted to Tibet. (d) no concession for railways, roads, telegraphs, mines or other rights, shall be granted to any Foreign power. In the event of consent to such concessions being granted, similar or equivalent concessions shall be granted to the British Government. (e) no Tibetan revenues, whether in kind or cash shall be pledged or assigned to any Foreign power, on to the subject of any Foreign power."

On November the 11th, however, the Viceroy and Governor-General of India, Lord Ampthill, who was acting in the absence of Lord Curzon in England, modified the treaty with a declaration by which the sum of indemnity was reduced to 2,500,000 rupees and the British occupation of the Chumbi Valley would cease after the payment of three instalments of the indemnity and the opening of the marts.

Col Younghusband expressed his view about the rejection of his treaty in the following terms:

"If after a day like this the Government home throws away the chance we now have of strengthening Tibet as a buffer state, why, they will be guilty of retrospective murder."

Sir Francis Younghusband's great desire was to bring the Chumbi Valley under British control, and for that very reason he arranged the treaty with Tibet in such a way that it would at least remain under British control for seventy-five years. However others suggested that it must be annexed under the pretext of leasing.

"In any case and whatever else is done, the Chumbi Valley should be retained permanently in British possession. This can be effected with regard, if desirable, to Tibetan susceptibilities under the name of lease or by treating it as equivalent to compensation or indemnity. Neither geographically nor historically does it form part of Tibet. It was conquered in 1888 and abandoned in defiance of reason and advice. As a source

...one it is worth nothing, but strategically and commercially it is of high importance, being the open gateway from the Tibetan plateau to the plains of India, only some 800 miles from Lhasa. It cannot be allowed to pass again into the hands of the people who might permit its occupation by a rival Power which already threatens our Indian frontier in other places.' 10

Demand for the annexation of the Chumbi Valley, after the Younghusband expedition, is persistent. But Lord Lansdowne did not intend to take an immediate aggressive measure while the Russo-Japanese War was on, and held to the same view when Russia met defeat in the same War. But, some date of the British Imperialist urged immediate annexation. The Hon. Ian Malcolm, M.P., in an article gives the following view—

'The Chumbi Valley, which lies on the Indian side of the watershed, has never been claimed by Tibet as the Kingdom of the Dalai Lama. It is a mistake for the suzerainty of China to be claimed as a reason for not disturbing the status quo in the Chumbi Valley. If suzerainty is to be respected, it must be effective, and we have learned at least the lesson that the Chinese suzerainty in these regions is a protection *pour rien*. Nor can the terms of the pledge, so explicitly referring to Tibet alone, have been extended solely for the pleasure of Russia, whose desire for the integrity of China is manifest in Manchuria unless indeed, to hold some reciprocal guarantee from her that she will respect for all time the Chinese Kingdom of Mongolia and Turkestan.' 11

If the Government of India were free to act then undoubtedly Tibet would have been annexed; but because of the world situation, and very possibly not willing to antagonise China, and Russia unnecessarily, Britain did not formally annex Tibet 12

All this happened during the Russo-Japanese War, and the Anglo-Japanese Alliance had a good deal to do with the Tibetan affair. Russia could not intervene in Tibet, and China was incapable of doing anything against Great Britain at that time, and thus Great Britain virtually extended her power over Tibet.

In connection with the British expedition to Tibet, Col. Younghusband makes some interesting remarks.

'That strange force which has so often driven the English forward against their will appears to be in operation once more. It is certain that neither the British Government nor the British people wish to go to Lhasa.'

Then he pertinently remarks:—

These quotations are not applicable to the Tibetan affair alone, but to the British Empire generally and not only to the British Empire, but to the Russian Empire, the Chinese Empire, the Japanese Empire, to the French in Tonquin and

Annam, Algeria and Tunis, to the Americans in the Philippines, the Germans in Asia Minor, the Austrians in Bosnia and Herzegovina. They are of fundamental importance and go to the very root of things. They are, therefore worth examination by so practical a people as ourselves the (British)

He then with all solemnity and sincerity and altruistic profession of the cause of freedom and order, goes to the root of the thing with the following answer—

'It is when we have found ourselves in contact with disorder or repugnance to association that we have been so often compelled to intervene. We have intended and we have publicly and solemnly declared our intention, not to intervene, somehow we have to intervene somehow we have to stay. Not only we find this but other great nations find the same. Practical statesmen find nothing so disturbing to their wishes and intentions as contact with a weak unorderly people. They try for years to disregard their existence, but in the end, from one cause or another they find they have to intervene—to establish order and set up regular relations, they are in fact driven to establish eventual harmony, even if it may be from the use of force at the moment.' 13

All the great nations are moving in the same directions to establish international harmony. This is another irony of fate, because this spirit of bringing about harmony through imperialism and expansion at the cost of other weak nations has produced wars. Since the classic partition of Poland by the great Powers to the present-day punitive expeditions of the twentieth century, the theory of establishing order and harmony has played a great part, and force has been used to establish harmony among nations by depriving peoples of the enjoyment of their own freedom. But, the reflex of this use of force has inevitably generated another force which has even destroyed mighty empires of the world. Imperialism is its own justification to the Imperialists, and to others no justification will ever make imperialism sanctified and acceptable.

Regarding Tibet, the question of harmony and order may be the justification of conquest by Britain, but Article IX of the Anglo-Tibetan Agreement shows that Tibet is rich with mineral resources, and economic imperialism demands the control of the raw materials for the material gain of "the practical people" of Great Britain. Tibet is not strong, as Lord Curzon pointed out, in military strength, and thus she is the victim of "the great nation" which wishes to establish "harmony" there. It may be said to those in the West, who are really looking for world peace, that the people of the East are beginning to under-

stand the argument the West values most, that is, that force is the only means of attaining peace and harmony

In the question of British expansion in Tibet, there cannot be any justification. It has been a gross violation of justice, and it was a reflex of rivalry among European nations on the one hand, and military weakness of China and Tibet on the other. Lord Rosebery in defence of the action of the British Government in Tibet, has made it a question of prestige rather than justice, and I shall let him speak for British statesmanship and its imperial motives.

"As regards the question of justification for Lord Curzon's policy, it was noticed by Lord Rosebery in the House of Lords in 1904, that the situation of 1903 in regard to Tibet presented some rather sinister points of resemblance to that of 1878 in regard to Afghanistan. At both dates an independent state on our borders was showing a strong inclination to enter into relations with Russia. In both cases we had the doubtful ethical or legal right to interfere, but in both, too, there existed a strong feeling, in many respects no doubt well justified, that our prestige would seriously suffer if we were excluded and Russia's representatives were admitted. Once more a vigorous policy was pressed on reluctant home authorities by the Indian Government."

As early as 1904, Mr Crosby in an article in the *North American Review*, (May) remarked

"The practical destruction of Tibetan independence which may be assumed as the object of the present Younghusband's Expedition will serve Russia admirably as authorising the conquest of Chinese Turkestan. For such is the accepted code of balance generally adopted by the nations who believe themselves commissioned to benevolently assimilate certain other nations. Recognising then that the status quo is now rudely shaken in Tibet and may at any time be destroyed in Turkestan let us note that in both cases there will result a partial disintegration of the Chinese Empire, for whose integrity the world may well be concerned. European and American diplomats in China should endeavor to watch the back door as well as the front door of the great mansion which all desire to enter."

German opinion regarding the Tibetan expedition was bitter, suggesting Great Britain was taking advantage of Tibet and even playing Russia against Japan, while she was taking the rich territory belonging to the Tibetan people under the pretext of violation of Treaty obligations

Mr Dillon says—

"Russia and Germany are especially indignant at the land-greed of England, to which neither human nor divine laws would seem to have set any bounds, and at the shamelessness with which she robs weak nations of their independence with no avowed motive and without even a plausible pretext. The German press has discovered, that the raids complained of by the Indian Government are imaginary, that the trade between India and Tibet is almost nominal, and the treaties broken were violently thrust upon the Government of the Dalai Lama, who, therefore, naturally is not keen to further English trade. An influential Berlin press organ informs its numerous readers that in order to seize Tibet Lord Lansdowne cunningly provided funds necessary for Japan's war preparations and induced the Mikado to keep that danger hanging over Russia's head without actually letting it fall. In this way Japan and Russia are being hoodwinked at one and the same time, for friends and foes are all one to the perfidious enemy of the human race."

RAJAH RAMMOHUN ROY'S MISSION TO ENGLAND

(Based on unpublished records)

By BRAJENDRANATH BANERJI

II

DINNER TO RAMMOHUN IN LONDON

PUBLIC honours came thick and fast upon Rammohun while in England. His reception among the Anglo-Indian officials appeared to have brought about a change in the attitude of the East India Company, who had refused to recognize his official position and his title. On 6th July, 1831, they entertained him at a dinner at the City of London Tavern, attended by about 80 distinguished guests, the Chairman of the Company presiding. It is interesting to read the account of this entertainment published in the pages of a contemporary journal.

"It was what is called a family dinner, in contradistinction to the grand feast given upon the eve of the departure of a governor for India. The Chairman said: 'They had been honoured with a visit from the distinguished native of a great country. Those to whom he had the honour of proposing the health of Rammohun Roy were aware of the virtues of the distinguished Brahman, of the vast services he had rendered to the Indian community, and of the effect such an example was calculated to produce. Like the bee, which sucked the choicest sweets from the flowers of the garden, the Brahman collected from the boundless stores of knowledge, to which from travel and study he had access, the richest intellectual treasures. The reception which the Brahman had met with would, it was to be hoped, influence other able and influential members of the Eastern community to visit England.'

Rammohun Roy rose, and in a very graceful manner addressed the company...

It was rather curious to see the Brahman surrounded by hearty feeders upon turtle and venison and champagne and touching nothing himself but rice and cold water." (*Asiatic Journal*, Aug. 1831, pp. 236-37)

RAMMOHUN RECEIVED CORDIALLY AT THE ENGLISH ROYAL COURT.

The Home Government, however, recognized his embassy and title. Royalty itself honoured Rammohun.

"At the levee held at the Palace, St. James's, on the 7th September [1831], the Rajah Rammohun Roy was introduced to an audience of the King (William IV) by the Right Hon. Charles Grant, the President of the Board of Control, and was most

graciously received. The Rajah wore the costume of a Brahman, viz: the turban and kabah. The latter was composed of purple velvet, embroidered with gold." (*Court Circular*)

At the Coronation this distinguished visitor from India had a place assigned to him among the Ambassadors of the Crowned Heads of Europe. He was also received with the utmost consideration on his visit to France during the autumn of 1832. He was introduced to Louis Philippe, with whom he had the honour of dining more than once.*

The Royal Asiatic Society (of Great Britain) invited the presence of Rammohun at its 10th Annual Meeting held on 11th May, 1833. The Rajah delivered a short speech † on the occasion.

Miss Collet has truly observed: "Rammohun's three years in the West form the crown and consummation of his life's work." The three principal objects which brought him to England were one by one crowned with success.

The Rajah had indeed a very busy time of it. He presented the counter-petition—brought from India §—to the House of Commons and had the satisfaction of being present when the appeal to the King in Council for the renewal of the *Sati* atrocities was rejected and the decision announced, on 11th July 1832.

Rammohun, as a recognized authority on Indian questions, was called upon to give evidence before the Select Committee of the House of Commons—appointed to consider the renewal of the Company's Charter. Though he declined to appear before it, he by successive "Communications to the Board of Control" gave his views on the Revenue and Judicial Systems, and the Condition of the People

* *The Last Days in England of the Rajah Rammohun Roy* by Mary Carpenter (2nd edn.), p. 69.

† For the speech of the Rajah, see *Asiatic Journal*, May-Aug. 1833, p. 224.

§ For a copy of this petition, see *Asiatic Journal*, May 1831, pp. 20-21.

of India, which undoubtedly evince acuteness of observation and depth of reflection. These communications between Rammohun and the Board of Control passed during the months of August and September 1831 and were embodied in the Blue-books.

DELHI EMPEROR'S CLAIMS URGED IN
ENGLAND—SETTLEMENT

The mission from the King of Delhi was ever present in the mind of Rammohun. Although he had proceeded thither as a private individual, it appears from Governor-General Bentinck's Political Despatch to the Court of Directors that he avowed himself as the Agent of the King of Delhi after his arrival in England.

"2. In the course of my route from Roorpi to this place I learned from various sources, as well as from the English newspapers received by the *Thomas Grenville*, that Rammohun Roy had avowed himself in England the accredited Agent of the King of Delhi" (*Pol. Letter to the Court*, No. 22 dated 16-12-1831).

Rammohun delivered to the Court of Directors, and circulated before influential personages, a printed statement on the subject of the claims of the Delhi King, corresponding in substance with the letter from the King of Delhi to His Majesty, George the Fourth, which he had framed in English and Persian. (*Asiatic Journal*, Jany 1834, p. 57).

The Court of Directors had received during 1828-1831 several despatches from the Government of Bengal regarding the claims of the King of Delhi and the mission of Rammohun, but they had hitherto remained passive. It was only when Rammohun began an agitation of this question in England * that they found it unwise to leave the matter unsettled. In their Political Letter No 5

dated London 13 February 1833, addressed to their Governor-General in Council, Fort William, Bengal, they sanctioned an addition of 3 lakhs of Rupees per annum to the stipend of the Delhi King.

"1. We now reply to your letters in the Political Department dated

3rd July 1828, paras 66-79

22nd May 1829 (whole)

9th October 1830, paras 48-49

14th October 1830, paras 169-171 & 334

in which you acquaint us with the pecuniary claims upon your Government advanced by the King of Delhi with the application made to you by Rammohun Roy on the part of the King, and his departure for England with a view to the prosecution of these claims. And we now proceed to state the opinion which we have been led to form on the question of the augmentation of the stipend of the Royal family founded on a mature consideration of all the documents to which you have referred us in the letters above acknowledged.

2. It is not our intention, nor do we deem it at present necessary, to enter into a discussion of the various points that have arisen out of the agitation of this question being persuaded of their tendency rather to embarrass and impede, than to facilitate a sound and satisfactory decision.

3. We are willing to sanction an extension of the provision at present fixed for the support of His Majesty and the Royal family to 15 lakhs of Rupees per annum leaving it to your discretion to distribute the additional three lakhs among the members of the family in such manner as may appear to you most just and proper upon a consideration of their respective claims.

4. It must be distinctly understood that the further pecuniary grants which we have now authorized are to be received by the King of Delhi in full satisfaction of all claims of every description that he may be supposed to possess.

5. We think it expedient to advert also to the representations regarding the ruinous state of the Palace at Delhi and the expense necessary for putting it in repair. If the increased annual allowance to be made to the Family would, in your opinion, be too much pressed upon by putting the palace in repair we think that an adequate sum might be granted by you for that purpose. The charge of afterwards keeping it in repair should rest entirely with the head of the family."

* In an obituary sketch of Rammohun, contributed to the *Asiatic Journal* by (according to Miss Collet) Mr. M. Sandford Arnot, who served the Rajah while in England as his Private Secretary [but was not quite reliable—Ed., M.R.], we find that

"A short time before his death, he had brought his negotiations with the British Government, on behalf of the King of Delhi, to a successful close, by a compromise with the Ministers of the Crown, which will add £30,000 a-year to the stipend of the Mogul, and, of course, make a proportionate reduction in the Indian revenue. The deceased ambassador had a contingent interest in this large addition to the ample allowance of the Mogul parent, and his heirs, it is said, will gain from it a perpetual income of £3,000 or £4,000 a-year." (Nov. 1833, p. 208).

This decision of the Court of Directors was formally conveyed to the King of Delhi by Mr. Fraser, the Agent to the Governor-General at Delhi, in his letter dated 12 July, 1833. The King, however, declined to accept the conditions proposed until he should receive accounts from Rammohun Roy, his Agent in England, which were daily expected:

"I have received your petition, dated 12th July 1833, representing that the Hon'ble the Court of Directors had been pleased to sanction an increase of three lakhs of Rupees a year on the fixed tribute (*peshkush*), but that this addition was to be understood as answering the demands made through

Rajah Rammohun Roy, informing me likewise that it was left to the discretion of the Government here to distribute the sum amongst the members of the Royal family, and that a part of the amount would be set aside for repairing the palace and its buildings. I have understood perfectly what you represent.

That the Court of Directors should have caused this addition to the annual provision (*peshkush*) has very sensibly gratified me. But as my claims, which rest upon compacts concluded with officers of the Company, are of higher nature and the Royal Agent I have sent for the purpose of prosecuting them is still in England, until I receive information from him I must decline acceding to the conditions proposed. I stated this to you when you waited upon me in person." (*Pol. Procdgs.* 2 Aug. 1833, No. 13).

Mr. Fraser forwarded a translation of the Delhi King's reply to the Secretary to Government, Pol. Dept. and remarked in his covering letter dated 18th July, 1833:

"I was informed the day before yesterday that letters had been received from Rammohun Roy on that date recommending His Majesty to reject any offer which might be made to incline His Majesty to forego the benefit of those claims preferred in England, which it was probable would be concluded through the exertions of his Agent." (*Pol. Procdgs.* 2-8-1833, No. 13)

The Governor-General in Council reported to the Home authorities that the Delhi King had declined their offer.* The Court of Directors replied as follows:—

"2 The King of Delhi having refused to accept the increased provision granted by us on the condition annexed to it, until he should receive further information from his Agent in England, you very properly apprized him, that you did not deem yourselves at liberty to enter into any further discussion on the subject, and that the fact of his having declined the offer would be made known to us. You will apprise us if any new application should be received from him; but in the event of his hereafter offering to accept the proposed increase, with the condition annexed to it, you will consider yourselves at liberty to carry the arrangement authorized in our instructions of 13th February 1833, into complete effect†

DELHI EMPEROR ACCEPTS THE INCREASE OF HIS PENSION.

The unfortunate death of Rammohun, which occurred on 27th September, 1833, sorely disappointed the Emperor of Delhi, and retarded the prosecution of his claims. He was thus obliged to be content with what had already been offered to him

In his letter, dated 13th September 1834, to Mr. W. Fraser, the Governor-General's Agents at Delhi—an English translation of which is quoted below—he expressed himself willing, although somewhat vaguely, to accept the increase of his stipend by three lakhs of Rupees per annum

"Your petition,—in reply to our letter calling for information on the determination of Government to increase the amount originally proposed, viz., three lakhs of Rupees, also intimating, that in the event of no augmentation having been made, to send the amount from the date of its becoming appropriated,—has been received,—representing that no instructions have been received from the Presidency in reply to your petition [and] also suggesting that we should write a letter in the event of having accepted the increase, agreeing to the conditions upon which it is to be made, [in order] to forward [it] with a report and to act as should be directed. In your first petition to us on the subject you stated that one of the conditions on which the increase should be made is that the part of it so disbursed should be apportioned to individuals of our House in conformity with the wishes of Government. Another condition was to abstain from prosecuting the matters entrusted to Rajah Rammohun Baboo. A third condition was that the Royal Palace and its buildings should be kept in repair by an assignment of money out of the increased allowance. Now, the state of the matter is this: The apportionment of sums of money out of the addition proposed to those of our family who shall receive them, will be done with the knowledge of the Officers of Government. In regard to not prosecuting claims on account of which Rajah Rammohun Roy was sent to England, this person was commissioned to obtain an increase according with the engagements and promises of the Government. If the Justice of the Court of Directors is satisfied with the increase now made, have I the power (or) to obtain a larger increase or to enforce the engagements of the Government? Helplessly, on account of the clamor of debtors occasioned by our heavy daily expenses and the large outlay incurred by sending an Agent to England which is very great, the increase proposed is accepted. But as our claims according to the engagements of Government are greater, ascertain and report [as] to the reason of 3 lakhs of Rupees per annum being fixed upon, and what are the grounds of making an additional allowance only to this amount. With respect to titles and ceremonies which were subject of complaint on our part through the Rajah, I shall observe, that as our favor was increased towards Lord Amherst, by our favor also the same will continue (meaning future Governors will be received as Lord Amherst was received) and Lord William Bentinck may now address me as was before usual or in the style adopted by Lord Amherst. In this respect I wish to please the Governor General. The repair of the Royal Palace and its buildings, I, of course, desire for my own comfort, and it will be done, a monthly amount being set aside for the purpose. Do you now, aware of the pressing claim of our debtors and the straitness of our means

* Pol. Letter No. 8 dated 2 Sept. 1833 to the Court of Directors. Paras 42-44.

† Pol. Letter No. 14 dated London 1 May, 1835 from the Court of Directors to their Governor-General in Council.

even for daily expenses, write quickly to Government and obtain the amount of increase of tribute from the date of its offer up to the present day." (*Pol. Con.* 16-10-1834, No. 22)

Mr. Fraser, however, suggested respectfully to the King to "signify in explicit terms his pleasure and the acceptance of the proposed increase to the stipend, with the attached conditions, if he thought proper to do so, by which means future misunderstandings would be obviated" (*Pol. Con.* 16-10-1834, No. 21). This the King of Delhi did in a letter, dated 14th October 1834 (*Pol. Proceeds* 31-12-1834, No. 15)

WHAT RAMMOHUN DID FOR THE DELHI EMPEROR

The foregoing facts can leave no doubt in a reasonable mind that Rammohun had before his death effected the object of his mission, at least in part. We are, therefore, surprised to read the following remarks in a letter, signed "A B", published in the *Asiatic Journal* (Jan'y 1834, p. 57) —

"No negotiation on the subject, verbal or written, was carried on with Rammohun Roy, neither has his mission been referred to in the Court's instructions to the Supreme Government of Bengal, as having had any influence or concern whatever in their resolution to augment the stipend of the royal family of Delhi. That augmentation was founded exclusively on a consideration of the condition and exigencies of the King and his family, as represented through the channel of the local Government, and was the result of a specific reference on that subject from the Governor General in Council to the Court of Directors, and would have taken place although Rammohun Roy had never made his appearance in England."

This attempt at saving official prestige must have emanated from some official source, and the historian cannot support it. That the impecunious Emperor of Delhi—prior to the deputation of Rammohun as an envoy to the Court of Great Britain—failed to achieve any redress of his grievances from the local Government, despite his repeated efforts for half a decade, will be evident from the following translation of a *shukka* which he addressed to the Resident at Delhi in November 1831 :

".....I had invariably looked for relief from the Government in every case through the medium of the Resident in attendance at my Court, and that I had always continued to make him the channel of communicating my grievances to the Government, but that no one had ever exerted himself, in any instance, in my case. Providence at length favored me with a visit from Lord Amherst, which I hailed with feelings of the fullest confidence and delight at the prospect

which it afforded of securing to me the fulfilment of the pledges that had been given me and the realization of all my desires. I accordingly did everything in my power to please His Lordship, and showed him every kindness that I could possibly manifest, explaining at the same time the engagements of the British Government towards me and making a full disclosure of my wishes to him. His Lordship, however, evinced as little disposition as others to redeem those engagements or execute the provisions contained in the regulations of Government, and, not confining himself to this, he had recourse to the novel procedure of setting aside the ceremonials and forms of address (*utab wa alkab*) observed by his predecessors, thus lowering me even in respect of the style of correspondence adopted towards me,—a thing that I could have least expected.

I am in this place desirous of calling your attention to the fact that, when I resolved upon deputing Rajah Rammohun Roy as my agent I fully apprized Sir E. Colebrooke of my intention and through him transmitted to the Government copies of the several papers which I had entrusted to the Rajah, distinctly informing him at the same time that that individual was about to proceed to Europe. But, notwithstanding I had given notice of my proceedings and had furnished copies of the documents which I intended to send by the Rajah, the Government remained perfectly passive, and the whole case has now been accordingly referred to England, in due order and in conformity with the practice prescribed by the Regulations of Government" (*Pol. Proceeds* 31-12-1831, No. 15; *Punjab Govt. Records, Delhi Residency*, 1 347-48)

Justice to the memory of the venerable Rajah demands the admission that, however officially ignored his mission may have been, it was his exertions alone that impressed on the Court of Directors the need of making terms with Rammohun's master without further delay. The unhappy descendant of the Great Moghal had been petitioning the E. I. Co. ever since 1827, but without effect. The Governor-General concurring in the opinion held by Sir Chas. Metcalfe, Resident at Delhi, had on 3 July 1828 counselled the Court of Directors not to increase the Delhi Emperor's allowance, and a year later he held the same view (*Pol. Despatch* 22 May 1829). Nor had the Court of Directors for years before Rammohun's mission shown any inclination to do justice to Akbar Shah on their own initiative. Rammohun reached England in April 1831, and the Court of Directors decided to increase the Delhi Emperor's allowances early in 1833. These dates are conclusive.

RAMMOHUN DIES AT STAPLETON GROVE, NEAR BRISTOL

But the great Rammohun, crowned with victory as he was, never set foot on Indian

again. He had intended to return home in 1831 via Turkey, Russia and Persia, but died on 27th September 1833 at Stapleton Grove, near Bristol.

Sacred as was the spot where he was laid, and owing to those who knew and loved him none came to mark the spot, beneath the overhanging rocks, which their hearts revered.—yet it was felt that the public should have access to his grave and should see a befitting monument erected over it. This could not be done at Stapleton Grove, which had now passed out of the Castle family. The Rajah's friend, the celebrated Dwarkanath Tagore, desired to pay this mark of respect to his memory, and it was therefore arranged that a case containing the coffin should be removed to the beautiful cemetery of Aino's Vale, near Bristol. This was suitably accomplished on the 11th of May 1843, and a handsome monument was erected in the spring of the year following by his son.*

I shall conclude this paper by quoting an interesting incident—hitherto unappropriated by the biographers of Rammohun—of the employment of Rajah Ram at the Board of Control, which Sir William Foster was the first to recall in an article read before

The Last days in England of the Rajah Rammohun Roy by Mary Carpenter, p. 160

the Royal Historical Society on 10th November 1916 :

"After his father's death, Rajah Ram came to London and applied to Sir John Hobhouse who was then President of the Board of Control, for an appointment in his office, requesting that the opportunity may be afforded him previously to his return to his native country of acquiring an insight into the mode in which the public business is transacted in England.' He was appointed in August 1815 for one year as an extra clerk on a salary of £100, but a writership in Bengal was refused to him. In Alexander's *East India Magazine* for July to December 1836 (vol. 12, p. 568) the following extract from the *Hukaru* may be found. —

"We hear that the Court of Directors have refused to confirm the nomination to a Bengal writership by the President of the Board of Control of the adopted son of the late respected Rammohun Roy, and that the refusal of the Court will be brought before Parliament."

Rajah Ram, however, retained his post in the Board's office for nearly three years; and when he then expressed a desire to return to India, he was allowed to draw his salary to the end of the third year and received in addition a donation of £100 'in consideration of his diligence in the discharge of his duties and the circumstances under which he accompanied his father to this country.' Details of his subsequent career are wanting." (*Bengal Past and Present*, Oct-Dec. 1925).

THE COMMONWEALTH OF INDIA BILL

By N SHRI RAM

THE National Convention, which drafted the Commonwealth of India Bill, was a body composed of 256 members, all men and women of influence and representative character, of whom 231 were members of the named Legislatures, Central and Provincial. There were members in it belonging to every political party represented in the Legislatures. The only object for which the Convention was assembled was the framing of a Constitution for India giving her Swaraj at Home and Dominion Status abroad, and the only condition on which members of the Legislatures and the others who were coopted by these members were invited to participate in that endeavor was the taking of a pledge to draft such a Constitution, on the basis of certain principles, which every party in the

Legislatures has since formally accepted. The Convention was, in no sense a party affair. On the other hand, its composition and the procedure adopted by the National Conference, also a representative body formed for the purpose of calling the Convention with all due publicity, enable us to say to Britain "This is a Bill drawn up by representatives of the Legislatures which you have established in India."

In December, 1918, the Indian National Congress passed a resolution claiming for India the right of Self-Determination, a principle for which the Allies professed to be fighting in the War, and which Mr. Lloyd George, the then Prime-Minister, declared was to be applied in tropical regions as well as the temperate. It was then

understood that for the purpose of Self-Determination, the voice of the representative Councils that were to be established in India was to be considered as the voice of the Nation. In the National Convention movement, that resolution has been carried out. As was stated in the Memorandum issued in support of the Commonwealth of India Bill soon after the appearance of the Bill by 40 leaders belonging to all parties in India, the Bill is based on the principle of Self-Determination. The Preamble of the Government of India Act makes the insulting claim that Britain must guide the steps of India to the distant goal of Responsible Government. The Bill is a challenge to that claim, for it embodies a Constitution made by Indians, with due regard for Indian conditions and requirements and their present limitations, to be applied at once.

The Commonwealth of India Bill places India on a footing of equality with the Self-governing Dominions sharing their responsibilities and privileges. It provides for the exercise of the right of Self-government from the village upwards in each successive autonomous area of wider extent, namely, the Taluka, the District, the Province, and India, excluding the Indian States. In the village, all adults are to elect every year a Panchayat which will look after all village affairs; in the Taluka, a Sabha, based on a very wide electorate, is to administer functions allotted to it by the Bill, the District Samiti is to be elected by voters possessing slightly higher qualifications than the Taluka electors, these three Local Bodies, or "Sub-Provincial Units of Governments," as the Bill prefers to style them, are to do much of the work that is now performed by the Provincial Governments; a Provincial Executive, responsible to a Provincial Legislative Council, consisting like all the other representative bodies provided for by the Bill, entirely of elected members; an All-India or Commonwealth Cabinet, responsible to a bi-cameral Commonwealth Parliament, and a Supreme Court of Judicature complete, in graded order, the constitutional edifice. The keynote of this arrangement is decentralisation of functions along with responsibility of the agents to the people more particularly concerned. The Bill also gives power to the Indian Parliament for amending the Constitution.

Defence is, however, temporarily reserved to the control of the Governor-General, who

otherwise is a mere constitutional head. This reservation is necessitated by the impossibility of Indians taking over responsibility for it at once, an inability which, of course, due to no inherent defect theirs, but to the emasculating policy deliberately pursued by the British Government in India. But the Bill does not leave the discretion for terminating this transitional arrangement in the hands of the British Parliament. There is to be a Defence Commission, constituted in India with a majority of Indians on it, which will fix the minimum of military expenditure that may be voted by the Commonwealth Parliament and recommend measures for the Indianisation of the Army; and the moment India is in position to take over the responsibility for Defence, the Indian Parliament may, by an Act of its own, assume full control over it. The Bill it will be seen, is a self-contained measure, obviating any further resort to the Westminster Parliament. It is a fully worked out scheme which fulfils the ideal, suggested by the Minority of the Reforms Enquiry Committee, of a Constitution on a permanent basis, with provision for automatic progress in the future.

The proposals for Constitutional Reform embodied in the resolution on the subject carried in the last September session of the Assembly, by the combined strength of practically all the elected Indian members, are for the most part a reproduction of those that underlie the Bill. This fact constitutes a valuable testimony to the support that its main principles have received in the country. The proposals were silent, however, on the question of Communal Representation, with regard to which the Bill, discarding the system of communal electorates, provides only for earmarking seats in the Legislatures for Musalmans and Europeans, in the existing proportions, leaving the question open, however, for further consideration five years later. Similarly, several other points that had necessarily to be left unconsidered in the Resolution, a circumstance which the officials and Anglo-Indians have not failed to turn to their own advantage, have been fully and satisfactorily tackled in the Bill. It presents no surface for the criticism that any of the constitution-making intricacies have been left unravelled, as far as it is necessary to perform that task at the outset of our constitutional journey, before gaining the practical experience in the light of which

one finality can be attained in the detailed laying of a Constitution.

Since the Bill was published in April last, it has won remarkable and widespread support. Swarajist leaders, like Mr Jayakar and Mr Kelkar, No-change Congressmen, represented by Srimati Sarojini Naidu and Mr Shaukat Ali, Independents of the stamp of Mr T. Rangachariar, Sir Ali Imam and Mr Hasan Imam, Liberals, prominent among whom are the Rt. Hon. V. S. Srinivas Sastri and Sir Tej Bahadur Sapru, leaders of the Justice party in Madras, such as Sir

Venkata Reddi, have given it their backing. It is impossible to expect that on all points there would be complete agreement among all schools of thought. But it is not without significance that on no political platform, except the one improvised at Bombay for protesting against the Bengal Ordinance, have members of all parties united as they have in blessing the Commonwealth of India Bill. The Maharashtra Provincial Conference accorded its support to the principles of the Bill. Though at the Patna meeting of the All-India Congress Committee a resolution on the Bill fell through for want of a seconder,

it has been publicly stated by some of the members present that no significance was to be attached to the incident. Gandhiji himself has stated that if he were assured that Lord Birkenhead would sanction the Bill, he would undertake to obtain for the signature of any Congress leader who might be named—a queer way of approaching the practical problem before us—but testimony to the generally acceptable character of the Bill.

The plan of presenting to Parliament for enactment a Bill embodying the nation's demand is the only way in which India's freedom can be won in the shortest possible time with the least amount of suffering to ourselves, and without the incitation of any avoidable ill-will between Britishers and Indians. It has behind it Mr Besant's unrivalled knowledge of the methods of agitation best calculated to impress the British mind and of the psychological moment for inaugurating great movements. So long as "Swaraj" was simply catch-word or a slogan or a cry for something intangible and undefined, it was possible for the average Britisher, with his objective outlook, to dismiss it with a shrug of his shoulder or a puzzled look. His

representatives in India have assured him that it was a longing for the unattainable, the expression of an unrest due to causes that may be trusted to work themselves out, at any rate an ideal for the realisation of which, impossible in any foreseeable future, a long process of discipline and consolidation under Britain's experienced guidance was absolutely indispensable. The problem was thus left in the hands of the bureaucracy here, unwilling to part with its power, and confident of its ability to crush all manifestations of rebellion against it. It is useless, therefore, merely to keep knocking at its door, and impossible to overthrow it by methods of physical force, open or camouflaged. We are weak materially but rich in the righteousness of our cause. Our battle must, therefore, be fought on a plane where arguments will tell, where Reason and Justice can enlist supporters on their side. Dr Besant and her co-workers hence regard constitutional methods as the best and the only practicable ones for India, and look upon the Bill as an instrument whereby, if it is properly supported by Indians, the British public can be taken by storm, despite its reactionary elements, its ignorance and prejudice. It states what India wants in concrete striking terms, offers a solution of the Indian problem acceptable to Indians themselves and consistent with Britain's own declared ultimate objective in India, and asks only for Britain's acceptance of it, so that an era of goodwill and co-operation between the two great Nations may be ushered in at once, and the danger of an ultimate rupture between them, with all the anxieties and struggles of the intervening stages safely avoided.

If Britain is to take notice of India's demand, India must speak with one voice. Hence the supreme necessity for all parties ranging themselves actively behind the Bill, whatever else might divide them. They all agree as regards the end to be attained, and differ only as to the means to be employed to reach it. The Bill represents the end and thus provides a basis of union between them. It is constructed in such a fashion as to make an appeal to the entire population, as it gives to the masses in the villages rights of control over matters intimately affecting their daily life. Hence a vigorous agitation for its passage, if carried on now, will soon gather a momentum

that it would be impossible for Britain to ignore, and may easily surpass in power the agitation of 1917, which succeeded in eliciting the Declaration of August 1917 and effecting the release of the three interned patriots whose crime was their advocacy of Home Rule. If we cannot all of us immediately unite under the banner of the Congress, let each, at least, in his own way, give his support to the Bill and do all that he can to push it forward.

Already much has been done in England by Dr. Bessant to pave the way for the passage of the Bill. It has attracted the notice of the press and prominent politicians in that country. Lord Birkenhead's offer to consider any constitutional proposals, framed by Indians, on which there is "a fair measure of general agreement," was a recognition of the prominence the idea of Self-Determination underlying the Bill had assumed in Indian politics. The Labour Party Conference recently held has asked him to examine the Bill, but it goes without saying that there is no chance of the present Government in England accepting it or anything like it. If India backed up the Bill sufficiently strongly, there is every reason to hope that the Labor Party and all other progressive elements in Britain would be forced to take it in right earnest. To ask for more Con-

ferences in India to draft a similar Bill is not only waste of precious time, but, I wish which, if it were fulfilled, would carry no certainty, in the present state of affairs, of resulting in the realisation of our cherished ambition. We must strike while the iron is hot. The Bill has been cast by the Labor Party's Parliamentary draftsmen into a form suitable for introduction into Parliament. It has been introduced in Parliament by some influential Labor Party members. If the Party unanimously backs it up, then even if the Bill is defeated in the present Parliament, there would be practical certainty that it would be reintroduced the moment the Labor Party comes again into power and passed by it into law. Will India strengthen the hands of our friends in England for the attainment of this consummation? Here is a golden chance for the winning of Swaraj for our Motherland. Will Indians snatch it, putting aside their petty party quarrels, prepossessions and prejudices? Does party or country come first? If the latter, will you, reader, enrol yourself as a soldier in the army of Liberation of the Motherland, marching along the open track traced out by the Bill?

Since the above was written, the good news has come that the Bill has been placed in the Labor Party's list of business in the House of Commons.

DR. VENKATARAMIAH AND THE DISCOVERY OF ACTIVE HYDROGEN

By GANPAT TENDULKAR

IT is my purpose in this article, to write in a few words about the very original research work achieved by an Indian scientist, which received wide and warm recognition in different intellectual circles of Europe. The importance of this work is acknowledged to be great and its potentialities are recognised to be still greater. The work consists in the discovery of a new gas named Active Hydrogen and its discoverer is Dr. Venkataramiah of the Vizianagaram Laboratories.

The constant attempts of the Scientists which led to the discovery of this gas date as far back as 1853, when Osann obtained an active variety of Hydrogen by the electrolysis of diluted sul-

phuric acid and to which he gave the name "Ozonwasserstoff", but Lowenthal showed in 1871 that the acquired activity of Hydrogen, prepared by Osann, was due to sulphurous anhydride coming from the sulphuric acid. Towards the same epoch Magnus tried to confirm the work of Osann but with no success.

In 1912, Langmuir discovered an active modification of Hydrogen (1). He showed that by heating a wire of tungstene or of Palladium to a temperature higher than 1300° in an atm-

(1) J. A. C. S. Vol. 34-1912 V. 36-1914 V. 37-1916.

sphere of Hydrogen under a pressure from 0.001 to 0.2 mm the Gas disappears slowly. This author also showed that this Hydrogen was chemically active and under certain conditions preserved its activity for several days. This Hydrogen could repeat on the Oxygen and the phosphor at an ambient temperature and that its activity was not due to ions. Sir J. J. Thomson² concluded from his studies on the trajectories of positively charged particles that they reveal the presence of particles having an atomic weight 3, which he attributed to the triatomic Hydrogen. Thomson found³ that the Gas which gives the ray me-3 can be prepared easily if one submits certain minerals, metals and salts to the cathodique bombardement and that the Gas thus obtained is very stable and chemically almost inert, although it has the property of chemical combination in certain cases. Thomson gave to this element the name X₃. This was followed by the work of Dempster⁴. Duane and Wendt prepared in 1917 an active modification of Hydrogen by the action of the Alpha Rays. These authors think that the characteristics presented by the Gas could be attributed to the molecules H₃ produced by the Alpha Rays. Wendt and Landaur prepared this Gas in 1920⁵ by different methods, alpha rays issuing from the emanation of the radium, electric discharges under reduced pressure etc. In 1922 they prepared the gas by other methods and also observed many properties.

Independently of Wendt and Landaur⁶, Dr Venkataramiah prepared in 1920 the active modification of Hydrogen⁷ in submitting the ordinary hydrogen to the action of the silent electrical discharge in an ioniser and equally in exploding a mixture of Oxygen and Hydrogen, in presence of an excess of the latter. In studying the activation of hydrogen by explosion in a quantity of oxygen insufficient for bringing about a complete combination Dr Venkataramiah employs four new methods:

1. Continued combustion of oxygen into hydrogen
2. Combustion of hydrogen and oxygen over a surface of platine.
3. Arc of high tension in hydrogen.
4. Heating of hydrogen in the arcs of several metals. He further showed that the gas of Langmuir was distinct from this new variety of hydrogen.

A great interest will always remain attached to the constitution of this new Gas. In 1912 Stark⁸ suggested the hypothesis of a triatomic hydrogen, based on the electroionique conception of valency. According to this theory there is a relation existing between an electron maintained in position between two atoms which it connects by means of numerous lines of force extending towards

these two atoms. Thus triatomic chain is formed of 3 atoms maintained in position by 3 electrons.

Bohr submitted in 1913 the hypothesis of the possible existence of a triatomic molecule of hydrogen more or less stable in placing himself on the modern fundamental conception of the atomic structure and particularly on the atom of Rutherford. In 1919 Bohr⁹ studied the structure of that atom. Bohr finds the conception of triatomic molecule explainable. According to Rutherford a molecule of Hydrogen containing more than 3 atoms is not susceptible of existence.

The existence of this new gas H₃, which has completely passed out of the stage of speculation and imagination to enter into the domain of practical Science presents an immense interest from the chemical point of view. It is no longer possible to conclude the existence of this new gas with the old conception of valency, and adopting this point of view, one is constrained to admit that the whole chemistry will have to be written anew. Among the several papers that have found their place in the Scientific Journals for last many years, Dr. Venkataramiah's papers are certainly some of the most important ones. Dr. Ramiah is not only responsible for the discovery of this new Gas, but he is also responsible for finding out the best and the most practical means of preparing it. The importance of this new discovery is so great and has been felt so strongly in the scientific world that Prof. Baly described the papers of our Scientist "as without question, bidding fair to revolutionise the fundamental conceptions of Chemistry".

Born of a well-to-do and cultured family—his father being the late principal of the Maharaja's College and the present Diwansahab of the Vizayanagram state—Mr. Ramiah is not unacquainted with the difficulties that an average Indian student has to face. The rigid, morous and perhaps unreasonable regulations of the Madras University could not allow the College-student Ramiah to get his B. A. He did not know enough English! The self-confident, revolting "failed" undergraduate seemed a failure both to his exact and severe father and to the Institutions and it was only after his work brought him the due recognition from the Western scientists that the "prodigal son" found the grace of his father and the undergraduate his place of an Honorary professor in the Madras and then in the Benares Hindu University. It was on a Scientific Mission that Mr. Venkataramiah came to Europe last year and presented a part of his work, on the encouragement of the Paris professor, for obtaining the degree of the Doctorate of the state. Prof. Urbain, the president of the Examining Commission—his colleagues being Jean Perrin and Auger—at the sessions of the Judges remarked—"It is a great honour that you have done us, by allowing us, to appreciate your work. Your case is different from any that we ever met before. You are our co-worker and colleague and the only quality in which we can presume to appreciate your work is that we represent an ancient University. Your case must be an example, to our French students. In Europe, where everybody is occupied specialising in narrow limits the width of the region of your knowledge and your ability all-around in the subjects that you touch, stands in an agreeable relief".

and then before a meeting of students,—“M. Ramiah is working on and of the most interesting problems of the day. He has already succeeded in getting qualitative results. I wish him a speedy success in the quantitative work that he is carrying

on, at present. Then, he will have established beyond doubt his reputation, as one of the greatest chemists of our times.”

INDIAN PERIODICALS

Indian Education and a Proposal

S. V. Ramamurti writes in *The Young Men of India* —

It is a fact not often remembered in India that the education of the few is paid for by the uneducated many. Private philanthropy helps to some extent in the spread of education, but the bulk of the cost is met from the general revenues. The taxpayer in this country resides to the large extent of 90 per cent. in villages. He pays for our education and what does he gain in return? The large majority of men who live in the village live a life of ignorance, of poverty and of dirt. Have our University graduates done anything to lessen that ignorance? They cannot, because they carry a load of alien knowledge, neither the substance nor the form of which is assimilable by the villager. They cannot lessen their poverty, because the very large majority of our graduates do not create wealth but only seek to guard it. They have not helped to remove the dirt in villages because they have not acquired either the power of organization, or the moral enthusiasm, or the creative ability, with which disintegration physical or moral can be stopped. Abolish our universities and yet our village life will remain unaltered. The men who thought and taught in older India gripped the village minds and it is their intellectual and cultural influence that still survives in villages. The books the villager reads or hears are not made by our universities and their products. The social and moral life the villager leads is unaltered by the knowledge of our universities. If the higher education of a country is a national concern and is paid for by the villager, there is something radically wrong when the villager pays for what does him no good.

National unity in India is not mainly geographical. India is a country of long distances, diverse races, languages and creeds. But there is an intellectual and cultural unity which is the foundation of her national unity. The knowledge and culture of the intellectual classes was not isolated, but permeated the masses so completely that even now with mere tradition, an illiterate Indian of the masses is more cultured than a literate European. The education which is now supported by the country in universities and schools is something alien to the culture of the country. It is imparted mainly in a foreign language which about 99 per cent. of the people do not understand. Its gospel is European. In literature, philosophy, logic, and history, India furnishes enough of material for

study. But it is English literature, European philosophy and logic and European history that are mainly studied in our colleges. A young man who studies a few books in English philosophy is a graduate, and is given a decidedly higher status than a Pandit who studies as high philosophy in Sanskrit or Tamil. So, too, in literature. The result is that the prestige of Indian knowledge is ruthlessly put down. The confidence of the Indian in his own country's achievements becomes weakened. Thus while 99 per cent. of the people possess only the remnants of the ancient culture, the present day leaders of the country are men following a different culture which has the prestige of power. The intellectual and cultural unity of the country was split up tending towards national disintegration. And yet the cry for more and more universities goes on. Several universities have been started in the last decade or two. The desire for omphala is on Hindu and Muslim cultures gave rise to the Benares and Aligarh Universities. The need for the vernacular as the medium of instruction gave rise to the Osmania and it is hoped, the Andhra Universities.

The present system of education gives the wrong training to men. Education does not help in life, it often hampers, the writer says.

Roughly speaking, primary education is for peasants, secondary education is for artisans, and university education is for artists. An artisan requires a more live intellect than a peasant. The peasant gains by long experience a knowledge of the simple laws of nature and waits on nature. The artisan gains from training a knowledge of the simple laws of the dominance of mind over matter and repeatedly copies. The artist evolves new laws and new qualities and creates. Our universities, instead of developing artists, have been schools of intellectual coolness.

The majority of our graduates are absorbed in the subordinate ranks of Government service. Their numbers are growing rapidly while the needs of Government service are not. Hence the large class of the unemployed. It is a waste of money and labour to produce the numbers of graduates that we do. I would rule that he who would function as an artisan should be debarred from entering the university course and that a graduate should be prohibited from becoming a clerk or clerk-equivalent. If in Government service, graduates can hold only executive appointments of the grade of a Deputy Tahsildar and above, the numbers of

graduates can be cut down. India has no need for large number of mental artisans with the training of a graduate. It is no use therefore to produce them. Only men who are likely to be artists should be permitted to enter on the university course.

And those whose vocation requires not a highly intellectual training should receive the artisan's or a peasant's training as the case might be. The primary education, which concerns 90 per cent of India's population, should be based on a sounder curriculum. The writer makes two proposals to give the masses a better education and utilise the university men for the uplift of the villagers.

The first is that in the primary school should be taught two books. One is to contain a little of each of different sciences which a villager needs - a little of physics, of physiology, of hygiene, of meteorology, of astronomy and so forth. The second to convey what may be called the emotion of history. It should give them an idea of what India has stood for in the centuries, what it is driving for, what is the ideal it is seeking to achieve. This should include religion.

But he does not give a solution to any Hindu-Muslim Problem that might arise as a result of carrying his proposal into effect. Anyway, he makes use of the graduates in the following way.

Every graduate, after he passes his examination, should serve a period of probation for six months. His business would be to go about villages in a prescribed area. With a small bundle of clothes, he could walk from village to village and stay a few days in each, telling the villagers the essence of what he had learnt. At the end of the period he should present the university an account of what he had taught and what he had learnt.

In Bengal numerous educated men are following the above ideal voluntarily. Some have done good work. Their experience might help to give shape to the writer's ideas.

Indianisation?

The *G. I. P. Union Herald* says regarding a recent affair concerning the appointment of train conductors on the I. P. Ry.

The train conductors are required to work on the Bombay-Poona Mail and Express Service and do the checking and collecting of tickets and to look to the convenience of the passengers. When the posts were first created they were given to Europeans and Anglo-Indians. During the last year however a departure was made from that long established practice and four Indian Ticket Inspectors of more than 10 years' service were promoted to work as conductors. Everybody then thought that this change was a permanent one and that these appointments would no longer be the sole

privilege of the Europeans and Anglo-Indians as of old. We however were soon disillusioned. In February last these Indian Conductors were asked to revert as Ticket Inspectors and the posts were again filled in by Europeans and Anglo-Indians. During the period these Indians worked as conductors not a single complaint was received against them and so far as we know the Indian Conductors have acquitted themselves creditably in the discharge of their duties. What then can possibly be the ground for asking them to revert to the posts of Inspectors? This action cannot be justified on the ground of economy, because from what we know the new incumbents are drawing salaries nearly double of what the Indian Conductors were drawing. Nor can this action be defended on the usual plea of special qualifications. The new conductors have no special qualifications to boast of. Some of them, from what we know, were not even in Railway service ever before this. If efficiency was the test the Indians had passed that test. We see now ground whatsoever to justify these appointments in suppression of the Indian Conductors.

The Glory of the Crocodile

India is famous for making gods out of friend or foe without discrimination. The case of the crocodile readily proves how even a pest can find an honourable place among people whose one obsession is to deify things and grovel before it. S. T. Moses gives us an amusing and interesting note on the crocodile in *The Quarterly Journal of the Mythic Society*. We quote portions from it.

Of the living saurians of to-day, if the recently recorded survivors of the extinct genus *Dinosaur* are excluded, the crocodile is easily of the first magnitude. Its dense horny covering usually considered bullet-proof is described by Job in the 41st chapter. The Leviathan, however, which occurs in two other places in the Bible stands for a sea-monster in *Psalms* civ, 26 and for a snake in *Isaiah* xxvii, 1.

The terror-striking aspect of the crocodile combined with its destructive power is enough to secure for it sanctity among men timid by nature or even otherwise. It is sacred to the Egyptians who consider it a fitting emblem of God because of two features. The eye of the crocodile, as in that of birds, is covered by a thin transparent membrane which made the ancients believe that the crocodile like God can see without being seen. The tongue of the crocodile being fixed to the floor of mouth can neither be raised nor protruded. Hence the crocodile was believed to be tongueless by the ancients who saw in it a resemblance to God who never stands in need of speech but merely ordains all things by His will. The crocodile, according to the Hindus, is the vehicle of Nirudhi, the regent of the south-west point of the compass.

A crocodile is said to be responsible for making Sankaracharya an ascetic. He had long wished to become one but his mother was against it and once when they were bathing in the river near Kalladi off Angamalai he was caught by a crocodile.

He then cried out to his mother and wanted her permission to die as an ascetic and thus depart to peace. No sooner had she said that he was already an ascetic than Sankaracharya miraculously escaped from the crocodile and lived to be an ascetic. Even Mahadeva is said to have been bitten by a crocodile for a reference to it is found in a mantram used by Mannans which begins, "Even as the swelling of the holy foot of Mahadeva due to the bite of a crocodile has subsided."

In Egypt there is a belief that crocodiles harm no people during the seven days sacred to Apis. In Kerala it is believed that no member of the Valluvai caste, a caste famous for the beauty of its women, is ever harmed by crocodiles. A common form of "trial by ordeal" is to make the accused wade through or swim across a crocodile-infested river or tank. Two such scenes of trial are the Muthalapula (Crocodile river) near Anjengo and a tank attached to the Pagoda at Palliport fifteen miles north of Cochin. In Africa men are believed to transmigrate after death into crocodiles and "Fetichmen" are credited with assuming the form of crocodiles to maim or kill their enemies. No such belief is current in South India, though immense sanctity is attached to the crocodile. It is in Kerala, however, that crocodiles are fed and feted in tanks or rivers attached to certain temples. Any attempt to kill these sacred animals is believed to result in the penalty of the irreverent.

The chief places in Kerala where sacred crocodiles are kept may now be mentioned. At Ponnala is a rock-cut cave and a Hindu temple to which a tank is attached where a crocodile lives in royal but single state. Palliport has already been mentioned. Tripayar on the western bank of the Ponnani has a famous temple, the property of which consists solely of crocodiles adorned with gold and other ornaments. It is a religious duty on the part of the pilgrims to feed them. Last year, I am told, one of the sacred brutes escaped from the temple precincts but was brought back with musical honors, headed by a procession of devotees. At Madai—the railway station is known as Palayangudi—the temple has a pond where many young crocodiles and one or two large ones live. Their daily food is given by the Pidarane, the priests of the temple. Once a year when the grand annual festival of the Kavu is on, a huge metallic vessel full of rice cooked in milk and sugar and other eatables is placed on the brink of the pond. The senior crocodile draws the vessel into the water and all of them partake of the offerings. The vessel was usually returned a day or two before the succeeding annual festival by a crocodile placing it on the edge of the pond. Some four years ago, there was no sign of the vessel—my informant is sure some irreverent rogue forestalled the priest and stole it away—and so the offerings are now given in large leaf-plated baskets.

The Christian Church of To-day Prabuddha Bharata says:

It is our opinion that the Christian church of to-day does not truly represent the Master and his ideal. And it is also the testimony of many Christians even that Christ, the Crucified Saviour, is not to be found in the church. Fraud, political wire-pulling, theological jugglery, bigotry and

superstition, they say, are some of the many undesirable vices that characterise the church. Of course, there are exceptions. We quote here the remarks of Count Ilya Tolstoy, the son of the famous Russian idealist. He says, "Neither in America, nor in Europe there is any real Christianity. Churches are everywhere full of rank insincerity, nauseating hypocrisy, grossest sham. In the continent the churches are a veritable instrument of oppression in the hands of the government." It is indeed a very pessimistic picture if it is literally true.

The decadence of the Christian church is due to many reasons, of which infatuation caused by material prosperity and race-pride of the people of the West is among the primary ones. The church is nothing but one aspect and department of a community. When the community has gone down in its outlook upon life, the church, however lofty its ideal, cannot maintain its pristine purity; it must come down. For it is from the community that the church recruits its members. So the decadence of the Christian church is only one side of the general degeneration that has come over the West.

Silt Clearance Cooperative Society

Ghulam Haidar gives an account of the above in the Punjab in *The Bombay Cooperative Quarterly*. The institution may find an useful place in the economy of Bengal, says Mr. Haidar.

One of the most useful forms to which co-operative principles have been successfully applied in the Punjab is found in co-operative silt clearance societies, their main object being to arrange for the silt clearance of water channels and their improvement in other respect.

In the south-eastern districts of the Punjab, there are numerous inundation canals owned by either a single landlord, a number of landowners, or by Government. In the absence of any organization and through lack of interest on the part of irrigators there has been great economic waste resulting in the aggregate in very serious loss to the community. Canal water has been wasted because it is no one's interest to prevent such wastage. Only well-directed effort and organization can cure the evil and the most suitable form of such organization in present conditions is the co-operative.

In 1920, Khan Sahib Malik Fateh Khan Nun, Deputy Registrar, suggested the formation of silt clearance societies as the solution of this important problem. The first society was started in the Multan district in the year 1920. In 1921, two more societies with 46 members and Rs. 929 as working capital were added to the number and from 1922 onward there has been steady progress. The number of societies rose to 12 with 126 members and Rs. 1,230 as working capital during that year. The benefits derived from this form of co-operation have been direct and immediate, and agriculturists even appreciated the idea, by taking to this type of co-operative activity in larger numbers. In the following two years the movement extended to all districts where there were inundation canals. By 31st July 1923, there were 18 societies with 302 member and Rs. 3,91 a-

capital, and 13 societies with 409 members 4,257 as working capital on 31st July, 1924. Group of these societies is situated in the District. The figures given below have been taken with the revenue records and every care has been taken to ensure their correctness —

31-7-22 31-7-23 31-7-24 31-7-25
the existence of societies. 975 940 1,420 2,615
irrigated, in acres :—

31-7-22 31-7-23 31-7-24 31-7-25
the existence of societies. 372 860 1,136 1,222

There were 5 societies with, 74 members upto July 1921 and 9 with 145 members on 31st July 1925. It is estimated that the members have paid to the extent of Rs. 120 Rs. 307 and 14 per individual, respectively, during the three years from the increased acreage of 100. On the other hand, the annual expenditure on silt clearance is nominal, say Rs. 10 per individual member. These societies aim at the education of people to secure co-ordination of land and discipline over recalcitrants.

These institutions are registered under the Co-operative Societies Act. Any landowner or tenant is eligible for admission to membership. Shares are not sold, and the liability of each member is limited to Rs. 20. The full authority vests in the general meetings which are held twice a year, once in the first of June when annual contributions are received and the second before the first of January when the time for silt clearance arrives. The general meeting elects a managing committee to control the business, this committee acts as an organized system for clearing the channels and has the work done either by the members or at their cost. All disputes touching the business of the society are referred to the committee. All profits go to the reserve fund.

These societies seek to replace a haphazard style of irrigation by an organized system. The channels draw water from inundation canals formerly cleared up and were cleared very irregularly. They did not begin to run till late in the season and had a short supply. They are now cleared up and better so that the water runs sooner and the supply is greater. In consequence, the irrigated area was increased, likewise the area of land. The net gain to the members amounts to several thousands of rupees. The societies are increasing in popularity.

The benefit is, however, apt to be lost when non-member cultivators instead of clearing their own channels apply to the Canal Department to have their channels cleared from channels. The main obstacle to expansion is the apathy of the people. The difficulty is to instil into them the idea that well-organized efforts will bring results, will improve economic condition and moral welfare, and they need not be so poor as they are. The agency of most of the irrigators presents another obstacle.

In the Shahpur District, these obstacles have been successfully surmounted by constant teaching; at all the landowners and tenants of land for irrigation from the channels concerned have been admitted, leaving none to cause mischief. Strict control and strict supervision have been the success. Illiteracy remains, but it may

gradually be overcome by co-operative education and patient teaching.

It is no exaggeration to say that this type of society is more beneficial than the credit society. The value of organized self-help has been appreciated and recognised. Under similar circumstances, this beneficial form of co-operation can be tried everywhere. The careful application of co-operative principles to agriculture will add to the economic interests of the country.

Value of Discipline

Mr. M. B. Dixit writes in the *Volunteer* :—

"An undisciplined army is a rabble". Time and again India has learnt to its cost the truth of this adage. Whether at the fields of Panipat or Plassey, warring with Moslem hordes or the English, the lack of discipline has been the ruin of the Indian. Throughout her long story there is no lesson which has been so constantly hammered on, and as often left unheeded. Cleo (the muse that presides over history in Greek Mythology) weeps that her teachings are wasted, and all her endeavours end in nothingness. India refuses to profit by history. She had no use for her. It is not that Indians do not realise the truth that organisation is the backbone of all social structure and national regeneration. But they only pay a lip homage to it. And they will not bestir themselves to find out means and methods of organisation.

It is too late in the day to preach the benefits of organisation. It is futile to illustrate them with examples from the bee-society and plant or animal life. That is a sad academic exercise and in no way fitting to the hour. We have only to open our eyes and look around to see the havoc wrought by our indiscipline and dis-organisation. There is dissension and dis-union everywhere. Petty cliques and parties are rampant and chaos holds the day. To those 'base uses' have we come—we, who boast a civilisation that colonised the plains of Peru and the hills of Mexico.

The recent victory of the Government on Regulation III of 1818 in the Legislative Assembly is a glaring example of our disorganisation. When all the accredited representatives of the Nation behave in that fashion, there is great cause for despair. This is not the place, nor the time, to go into a discussion about the utility of defeating the Government. But had those members who were in the city only attended the Assembly, the Government could not have won.

This only illustrates that the members were not acting together. They were not disciplined. Such a thing is an impossibility in a well-organised body. The state of that country is indeed, hopeless where each individual rides his own horse and sounds his own trumpet. India has yet to learn many things from the Occident. And not the least among them is discipline.

What would have been the condition of Great Britain or France at the first onslaught of the German Arms, had they not been disciplined Nation? To be disciplined is to be prepared—and prepared for the worst. Organisation keeps up the morale of the nation. Without discipline there may be fits of national upheavals but substantial regeneration is impossible.

The truth of this was witnessed during these recent years. After the first tide of Non-co-operation was over, the Nation has again sunk back and entered on her traditional sleep. Had there been sound organisation such a hopeless state of affairs would not be possible.

The only *Isam-ban* (infallible) way of awaking and keeping awake and when once awakened is discipline. You may, like it or not, that is the only way. Discipline, no doubt entail some sacrifice. Licence must go, unbridled freedom must go. Individual freaks and caprices must go. But the thing to be gained at this cost is National Independence. Will you do it?

International Labour Organisation

Mr. Abdul Hamid gives an account of the above in *The Indian Review*. We quote portions from it.

This organization is an adjunct of the League of Nations and is concerned with the questions affecting labour all over the world particularly those touching the working classes and their welfare. Its main object is to seek an improvement of the conditions of labour. The object for which the International Labour Organization was called into being are set forth in the preamble to the charter of this organization, which is contained in the Treaty of Versailles. The text of the Preamble is as follows:—

Whereas the League of Nations has for its object the establishment of universal peace, and such a peace can be established only if it is based upon social justice.

And whereas conditions of labour exist involving such injustices, hardship and privation to large numbers of people as to produce unrest so great that the peace and harmony of the world are imperilled, and an improvement of those conditions is urgently required as for example by the regulation of the hours of work, including the establishment of a maximum working day and week, the regulation of the labour supply, the prevention of unemployment, the provision of an adequate living wage, the protection of the worker against sickness, disease and injury arising out of his employment, the protection of children, young persons and women, provision for old age and injury, protection of the interests of workers when employed in countries other than their own, recognition of the principle of freedom of association, the organization of vocational and technical education and other measures.

Whereas also the failure of any nation to adopt humane conditions of labour is an obstacle in the way of other nations which desire to improve the conditions in their own countries (Here follow detailed provisions for the establishment of this organization.)

56 countries of the world including India are now members of this Organization. Representatives which include non-officials are sent every year from India to attend its meeting. The permanent organization consists of

1. The general Conference of the Representatives of the members
2. The International Labour Office controlled by the Governing Body.

The decisions of the Conference take the form either of Draft Conventions or of Recommendations.

Any Convention ratified shall be registered by the Secretary-General of the League of Nations and shall only be binding on the States Members who ratify it. It has also been laid down that no decision taken by the Conference shall in any way lessen the protection afforded by the existing legislation of any country to the workers concerned.

The functions of the Industrial Labour Office include the collection and distribution of information on all subjects relating to the international adjustment of conditions of industrial life and labour and particularly the examination of subjects which it is proposed to bring before the Conference with a view to the conclusion of international conventions and the conduct of such special investigation may be ordered by the Conference. It prepares the agenda of the meeting of the Conference. It edits and publishes in French and English a periodical paper dealing with problems of industry and employment of international interest.

Inadequacy of Veterinary Doctors in Bengal

Next to the produce of the land, cattle wealth forms the most important item in the catalogue of goods which enable humanity to live and live well. In Bengal the condition of cattle is worse even than that of its Malaria and Kala-azar stricken population. This is due in so small measure to the dearth of suitable cattle experts. Mr S S Ahmed Chairman of the Reception Committee of the Fourth All-India Veterinary Conference Calcutta, whose address appears in *The Indian Veterinary Journal*, says in the course of the same address

Allow me to mention in passing that Bengal has its own peculiarities, the area is vast being 1,20,000 square miles, the number of cattle though poor is also not small the cattle Census Report of Bengal (1924) putting it down to 2,47,24,234 this includes 81,18,235 cows mostly indifferent milkers, which is not surprising when we think of (a) the great dearth of pasture lands (b) want of good Breeding Bulls (c) slaughter of prime Cows (d) retention of useless ones (e) prevalence of epizootic diseases and inadequate staff to control the same (f) ignorance, poverty and prejudice of rrvots and cultivators.

No wonder the public Health Report put down Infant Mortality for the year 1924 at 184 per 1,000 births. It is very sad to think that many lives are cut short from poverty of milk the only food of babies and children.

There is a vast field for improvement of this state of affairs. If you gentlemen can after deliberation arrive at any line of action which in your opinion will help us in solving this burning question. I am sure the general public of Bengal will greatly appreciate your efforts and you will also help the premier province of India to save its children from dreadful diseases which after all, attack and

away only those who do not get vitamin in food in infancy and so fall easy prey for want of resisting power. Pure milk, well-bred strong bullocks and fertile soil were assets of Bengal in her golden days. Let Bengal get back and Malaria, Kala-azar, Tuberculosis and a host of other diseases will disappear like before the rising sun.

I have a lurking fear that you from the Punjab, United Provinces and Madras who have favourable conditions and being unacquainted with Bengal might think us idle, but, gentlemen let me be frank and assure you that it is not so.

The veterinary aid in this province consists only one Director, no Deputy Directors, two Assistant Directors, eight Inspectors and 120 Veterinary Assistant Surgeons spread out for the whole of Bengal (I have not included the College staff or the Glanders staff here)

So it comes to 2,06,035 cattle for one veterinary Assistant Surgeon and his hands are more than full

- (I) Inoculation of cattle
 - (II) Inspection of the animals of the local bodies who employ him
 - (III) Attending fairs and outbreaks
 - (IV) Devising means to prevent the spread of zoonoses and
 - (V) Office work
- Surely these are more than enough for his work

It is a matter of very great regret that there are only 145 breeding bulls of sorts for the whole province

We, as you gentlemen know very well, have to depend entirely on cattle population for milk and the plough. The net crop area is 2,11,69,800 and the number of plough cattle 99,53,772 which computes it at about 40 bullocks to hundred

People not knowing our condition may advise employment of motor tractors and other mechanical farm appliances but our landholdings small and scattered and our farmers terribly conservative and poor and I can emphatically say the welfare of our province is linked up with the welfare of cattle and we should put our heads together and think out a plan of action

It is no Joke to be a Prince

Indian Princes have been deprived of their power by the British, but they still retain much of their wealth. Much wealth and proportionate want of responsibility has made the type of the Indian chief which specialises in "having a good time" in India or in London or Paris as the case may be. The following advice given by Lord Curzon to Ruling Chiefs, which appears in *The Garland*, should prove salutary to our "aristocrats".—

A Native Chief cannot remain a frivolous or irresponsible despot. He must justify and not abuse the authority committed to him. He must be the servant as well as the master of his people. He must learn that his revenues are not secured

to him for his own selfish gratification but for the good of his subjects that his internal administration is only exempt from correction in proportion as it is honest and that his gadi is not intended to be a Diwan of indulgence but a stern seat of duty. His figure should not merely be known on the polo grounds or on the Race-course, or in the European hotel. His real work his princely duties lie among his people. There is the difficulty but the necessity of maintaining a clear line between public and private expenditure and remembering that the resources of the State are to the people and not the chief, and it contributed in one form ought for the most part be given back in another

Untouchability and the Maha-Sabha

At a juncture when Hinduism is fighting for life against Christianity on the one hand and Mohamedanism on the other, the attitude of the high-caste Hindus towards the untouchables is of the greatest importance in deciding whether Hinduism will survive the struggle. The following note appearing in *the National Christian Council Review* deserves the attention of the Hindu Maha Sabha in connection with the problem of untouchability:

While the best sense of the educated Indians of today is in favour of the complete removal of untouchability, there are disquieting evidences to show that the forces of reaction are at work for preventing any change being effected in the *status quo* of the untouchables. The latest exhibition of his reactionary tendency is the uproar created in the sessions of the Hindu Maha Sabha at Delhi last month over the adoption by a majority of a resolution which ran as follows: "This session of the Hindu Maha Sabha appeals to the Hindus in general to remove all restraints which are at present imposed on the so-called untouchables in the way of their use of public schools, public wells and public roads, and in their attendance at public meetings. This Conference appeals to the authorities of Hindu temples to provide facilities for Devadashan." At the sessions of the Sabha held in 1925 in Calcutta, we remember the forces of orthodoxy nearly succeeded in making the resolution on untouchability a dead letter by adding qualifying phrases such as 'according to Shastric injunction' and 'as far as possible'. This year's resolution was intended to be a bolder pronouncement. It was acceptable to a majority, but the vigorous opposition it has raised leaves us in serious doubt as to the attitude of the higher castes in general to the untouchables. It is clear, however, that the spirited controversy the question is raising in the rank of the Maha Sabha and the Sanatana Dharma will not allow it to rest here. It is not in any spirit of light-hearted criticism that we refer to this controversy in which, apparently, Hindus alone are concerned. The whole country, and not Hindus only, are vitally interested in the issue, as it affects the welfare of about sixty millions of our countrymen. The removal of such disabilities will be all the more enduring if it comes as the result of a

movement from within the Hindu community. The share of Christian missions in giving the first impetus to this movement and in doing constructive work among the depressed classes is acknowledged on all hands. Missionaries should rejoice that a battle, which in the early years had to be fought single-handed by them on the very outskirts of Indian social life, exposing themselves to unmerited slanders and virulent attacks, is now carried on valiantly by Hindus themselves in the very citadels of orthodoxy.

The Menace of the Mulla

Even Mahomedans are not blind to the danger of leaving millions of their fanatical coreligionists in the doubtful care of the Mullas. *The Islamic World* says:

The Mullas have done tremendous harm to the cause of Islam. They have invariably created difficulties in the path of reforms. They have disfigured the beautiful teachings of the Holy Prophet, and made them disgusting. They have twisted the simple tenets of Islam so as to serve their selfish ends. The masses who follow them are ignorant, and fall an easy prey to their machination. The Mullas have practically enjoyed an absolute sway over the minds of the whole Islamic world and are, to a great extent, responsible for the degeneration that has crept among Muslims. It is, however, a healthy sign that Muslims are now opening their eyes and have begun to see the Mulla in his own original plume.

Education and the Teaching of Fine Arts

In connection with the proposed establishment of a Hindu University for South India, Prof. P. Sheshadri writes in *The Educational Review* in appreciation of the idea regarding the inclusion of Music, Painting and Architecture in the curriculum. Prof. Sheshadri says:

It is hoped that the idea of providing for the

teaching of the Fine Arts will appeal to many as very desirable reform. It may be pointed out here that the Benares Hindu University has already laid down courses in Painting and Music for the special benefit of girl-students, and the recent University Reform Committee in Bombay has also recommended the inclusion of these subjects in University courses. It is hardly necessary to say that the latter subjects will be taught essentially from the Hindu standpoint, some very praiseworthy attempts having been made in recent years to revive the study and practice of the Hindu style even in architecture in many parts of India.

He also says:

I would propose that the University should start teaching two of the Hindu sciences, Ayurved and Jyotish, branches in which Hindus have great achievements to their credit, either in the Faculty of Oriental Learning or in a separate Faculty of Science. A striking feature of the teaching of these two subjects in the University should be the combination of the scientific methods of the West with a knowledge of the best and most comprehensive ancient Hindu theory in each of them.

Indian Students in Great Britain

We take the following from the same journal:

According to the latest report issued by the High Commissioner for India, the number of Indian students at the various British Universities is as follows:—

London 360
Cambridge 117
Oxford 86
Edinburgh 166
Glasgow 62
Manchester 51
Bristol 24
Sheffield 21
Leeds 17
Belfast 13
Aberystwyth 4

The legal profession is overcrowded in all parts of India, but in spite of that there were as many as 583 Indian students registered at the Inns of Court.

FOREIGN PERIODICALS

The Golden Game of Diplomacy

Diplomacy is an expensive game and nations spend huge sums annually to support people, who live in the capitals of other nations as ambassadors. *The Living Age* gives us (from the *Neues Wiener Tagblatt*)

an idea of what it means (or rather meant before the War) to be an ambassador. Very often ambassadors spend fortunes to be popular and sometimes the fortunes are their own. As:

If a diplomat of recognized ability is not able with his private means to maintain an establish-

cent on the scale demanded, he is sometimes given a special allowance for that purpose. This happened, for example, when Count Beust was appointed ambassador of Austria-Hungary in London. That gentleman had no private fortune, so the Government appropriated money to enable him to entertain suitably at the British capital. Our country (Austria) had been previously represented there by prince Paul Esterhazy whose great wealth had enabled him to make the Embassy one of the most brilliant social centres of the great metropolis. Even the Esterhazy fortune, however, could not stand this drain indefinitely and after the Prince resigned he lived most economically in retirement for many years in order to restore his depleted resources. He had spent what was for those times the huge sum of three million guildens (or nearly one and a quarter million dollars) to represent his country in a becoming manner.

Of the various courts in Europe the czar's court was the most expensive.

The keenest rivalry existed there as to who should give the most brilliant and expensive entertainments. It caused no remark when Prince Gortchakofski brought the most famous reuter in Paris to St. Petersburg for a single souce or when prince Yusupov, at a ball in his palace, gave as favors a diamond-studded powder-box to each lady guest and a solid-gold cigarette-case to each gentleman. Even more famous was a party given by a fabulously wealthy mining man from the Urals, which included a drawing for prizes where the principal winner received half a million rubles.

On Combs

We are all familiar with combs, both as an instrument to keep the hair tidy and as an ornament to adorn the ladies' coiffure. *Chambers's Journal* gives us the following account of combs in different times and places —

The earliest specimens that have been discovered and from time to time deposited in the British and Continental museums, belong chiefly to the second (or Memphite) Egyptian Dynasty, which dated from a period some 4000 years B.C. They are usually made of wood (some times, however, of bone, ivory, or gold), with long roughly-formed teeth placed wide apart. In the case of combs with a single row of teeth, occasionally rude attempts at decoration of the back have been made, by the carved bull or one of the many gods. A specimen in the Paris museum is shaped like a half-moon, and it is evidently must have been intended to be worn in the hair much as in the present day, and not merely as a toilet implement for disentangling.

Coming down through the ages, we find from the authorities that both the Spartans and the Romans were very careful of the manner in which their hair was arranged, and this fastidiousness was a means confined to members of the gentler sex. It is chronicled that before going into battle it was customary for the soldiers to comb and arrange their locks with the utmost care, and almost with the solemnity of some religious rite.

At a little later period, however, we find that quite a variety of combs—made of wood, bone, ivory, gold, silver, or mother-of-pearl, and of many shapes—were used by Roman women to make ready the hair for the elaborate coiffure affected, and to retain the tresses in place when once put up. Most of the combs of the period which have been discovered and preserved appear to belong to the time of the Roman occupation of Britain, and they vary very considerably, both as regards shape and the materials of which they are made. There is one specimen, remarkably well-preserved, in the Guildhall museum, which has a wooden handle. It was unearthed during excavations near the Stock Exchange many years ago.

The combs of the succeeding periods of our history down to the Middle Ages which were in common or general use were coarse-toothed, and not usually of a very ornamental shape or style. The noble classes, however, had them of great beauty, exquisitely carved, sometimes with allegorical scenes, sometimes with sporting, and at others with more conventional designs of flowers and fruits. They were often very large, and, one would think, too blisome to wear.

On coming down to the end of the eighteenth century it will be found that high, tortoise-shell combs—many of which have been preserved in families as well as in museums—were rapidly taking the place of more elaborate and elevated forms of coiffure, and coming into general use as hair ornaments. They came to us from Italy and Spain, the women of those lands having for some time previously realised the picturesqueness which was possible in their adoption.

Some of the Spanish combs of the ago differed very little from those still worn to ornament the hair, sustain the tresses in place, or pin on the graceful mantilla. They were long-toothed, elaborately carved, and were, owing to the extreme width of the back, frequently as much as nine or ten inches in length. The designs were often extremely elaborate, some of the most beautiful being those in which mythological figures were introduced, or fern patterns formed the basis.

But Europe is not alone the place where combs are worn and made. Some of the early Oriental combs which have been preserved for us are wonderfully beautiful, although as a general rule the designs are somewhat too elaborate and even intricate for Western tastes. Indian combs are more especially notable for this kind of decorative work. In China may be found examples of rare artistic merit almost alongside those of a most primitive nature. The Japanese, ever noted for delicacy of art, do not affect combs of great elaboration or those having much wall-space to cover. The backs are usually of small dimensions, and consequently asprayed of cherry blossom, a lotus, a trail of leaves, a lizard, or some similar single design is generally favoured.

East and West the comb is found. Indeed, one of the most interesting features connected with most articles of feminine dress or adornment is their universality. The lady of fashion in London has her combs both for use and for ornament, the Parisienne places in her beautifully arranged coiffure a comb of tortoise-shell set with real gems or *diamants de Paris*, as the case may be, the Indian lady has hers of ivory or gold, the Japanese hers of turtle-shell, ivory,

jade, or lacquer, and the South Sea maiden, often guiltless of fashion as regards dress, combs her hair with a rough substitute made of fishbones or sharks' teeth, or clumsily fashioned from wood

Essentials of Political Success

John Maynard Keynes writes in *The New Republic*

The political problem of mankind is to combine three things, economic efficiency, social justice, and individual liberty. The first needs criticism, precaution and technical knowledge, the second, an unselfish and enthusiastic spirit, which loves the ordinary man, the third, tolerance, breadth, appreciation of the excellencies of variety and independence, which prefers above everything to give unhindered opportunity to the exceptional and to the aspiring. The second ingredient is the best possession of the great party of the proletariat. But the first and third require the qualities of the party which, by its traditions and ancient sympathies, has been the home of economic individualism and social liberty

Indian Political "Leaders", please take note

Lord Reading Appreciated

Cecil Kaye appreciates Lord Reading's work in India in a note in *The Asiatic Review*. He chooses the "Before and After" way to prove his case. Says the writer—

When Lord Reading took up the reins of government, the first session of the Reformed Councils had just closed, and the new dispensation was entering on its trial. The conduct of martial law administration in the Punjab was still an open sore, the Khilafat agitation was at its height. Mr. Gandhi, at the zenith of his power, had just begun the collection of the crore of rupees that was to form the financial backing of his non-co-operation movement, and that did, in fact, provide the money for the recruitment of the "National Volunteers," who were the direct cause of so much of the violence that followed the trouble with the Akali Sikhs had attained great proportions, the Nankana massacre having occurred only six weeks before. The Afghan situation was still unadjusted, with a deplorable effect on the situation on the frontier. In the year 1920-21 there had been no less than 391 frontier raids, resulting in the death of 153 persons and the kidnapping of 56 others, important military operations were proceeding in Waziristan. There had been a conspicuously bad monsoon in 1920 the price of wheat was soaring to unprecedented heights, trade was in the lowest trough of depression, the balance against India amounting during the year to no less than 79 crores of rupees, the attempt to keep up the exchange value of the rupee by the sale of "reverse Councils" had disastrously broken down, and it had fallen alarmingly, the finances of India were thoroughly disorganized the financial year having ended, a few days before Lord Reading's arrival, with a deficit of 20½ crores of rupees. Now, when he lays down his office, the Reformed Constitution

has survived the early peril of a complete break down, and is visibly beginning to work; the Punjab troubles are forgotten, the Khilafat agitation is irrevocably dead: the non-co-operation movement has withered away, and the power of Mr. Gandhi had departed the Sikh dispute is settled. A treaty has been signed with Afghanistan, the frontier is quiet, and raids have ceased. There are still troops in Waziristan, but only on a "peace footing." There have been five successive good monsoons, prices have fallen, trade is improving, the "visible balance," is greatly in India's favour, the rupee is steady at over 1s. 6d and the budget shows a substantial surplus.

And let us add. As soon as Lord Reading leaves India, Communal Riots Break Out in Calcutta. Or are they due to the arrival of Lord Irwin? Mr. Cecil Kaye seems to us to be not only a rare judge of the Indian situation but a veritable Ready Reckoner of causes and effects. His way of looking at the National Volunteers, the Punjab troubles, etc., is also interesting

The Best Literary Work of the Year

The following is taken from *Public Opinion*

The Hawthornden Prize for the year has been awarded to Mr. Sean O'Casey for his play 'Juno and the Paycock,' now appearing at the Fortune Theatre. The prize goes to the author (who must be under forty years of age) who in the judgment of a committee of literary men has produced the best work of the year in imaginative literature. It was presented to Mr. O'Casey in the Eolian Hall by Lord Oxford.

"Lord Oxford, who made a delightful speech of appreciation, prepared the way for the announcement by a few remarks on the state of the drama. He said that in all the domain of imaginative literature there was no department in which it seemed to him not only we but all the rest of the world were so far behind as in the production of new works of enduring quality and character in drama," says the *Manchester Guardian*.

"There was no department in which we were in more need of a fresh outlook and new departures and the playgoers—one of the most intelligent classes in the community—had become heartily sick of the state, monotonous reproductions of the sex problems with its triangles, its complexes, its more or less thinly disguised indecencies, both of language and situation.

"We shall all hail (he said) the prospect of emancipation from this too prolonged and now outworn interlude in the history of the drama. During the last twelve months we have had relief and a revelation in the discovery of a young man who satisfies the conditions of the prize, and who has produced a work which I do not hesitate to describe as the most moving and impressive drama we have seen for ten or perhaps twenty years—'Juno and the Paycock.'

"The play (he went on to say) has had the advantage of the incomparable acting individual and collectively of what he believed to be the

finest company of actors on any stage in Europe at this moment—those who had been nurtured and trained in the Abbey Theatre at Dublin.

"But great as Mr. O'Casey's debt is to the actors who have every possible advantage of artistic appreciation of his ideas and of his characters, we who have seen the play will agree that in the delineation of character, in the rich variety and appropriateness of the dialogue, in the invention of situations, in pathos, and in humour it is, in the most adequate sense of the word, a great work of art."

East & West Compared

The Living Age reproduces an article by a person of the name of Mortimer Standing which originally appeared in the *Month*. The author attempts to prove himself well versed in things Indian by citing the fact that he had been a private tutor in India and had lived among Indians for a long time. The views propagated in the article are mostly of the ignorant-fanatical missionary type and would deserve not the slightest attention but for the fact that Mr. Standing published them in 1925 A.D., when most people are better informed than he would like them to be on India and the game of misrepresentation has become an impotent and obsolete institution. Mr. Standing's type retains for these reasons the same interest for us as do the "misguided savages" of Africa and Polynesia for Christian intellectuals. Mr. Standing says

After an intimate contact with Indian social life, there gradually presented itself to the writer's mind one fundamental and all-inclusive difference. It is not easy to express it in one sentence; but if the attempt had to be made it would run something like this: "The fundamental difference between the civilizations of Europe and Asia lies in the fact that the former has the Christian Middle Ages behind it, while the latter has not." By the term 'the Middle Ages' we refer to a very definite influence, unique of its kind, a *Zeit-geist*, if you like, not to be found in any other part of the world.

Without particularizing further, we may say that for a thousand years the spirit of Europe was moulded by organized Christianity. The moulding influence of the Church during this period was so stupendous, so complete, so enduring, so omnipresent in its effects, that for the most part we pass unconscious of it, nor can we ever properly realize it until we pass beyond its borders into a pagan world that has never been under its sway.

He evidently forgets or does not know, that religious renaissance in India commenced with Buddha continued down to Rammohan Roy and that the spiritual backbone which enabled Indians to resist several on-

slaughts by arrogant foreign powers was not developed in a day. Our "middle ages" stretch a bit longer than that of the West, and when we fully emerge from it, as we are doing now, we hope to produce better intellects and spirits than Mr. Mortimer Standing. Mr. Standing goes on:

Taken collectively the moral tone of Europe as expressed in our institutions, conventions, and ethics, is vastly superior to that of the Orient. Hence the average European—through no merit of his own—is born into a loftier vision of life with its ideals and obligations than the average Oriental.

This needs no comment. The average Oriental can safely let the average Westerner enjoy his moral attainments.

Then we are treated to a few choice experiences of the higher men in India, e.g.—

An Englishman, new to India, stands on the verandah of his bungalow, and there heaves in sight a fat and oily Banya-merchant coming to display his wares. The Banya ambles easily along, carrying nothing but his well-fed body: behind him and bearing the burden of his goods there staggers a half-naked woman. She is merely a beast of burden, and he regards her as such. And no one, except the Englishman, seems to have any misgivings that this is not a very right and proper arrangement: not even a Westernized Indian with his B. A. degree at Bombay University.

We do not praise the Bania. We feel for the staggering woman. But we must say that of all the staggering and half-naked women in India, fully seventy-five per cent work, not for the fat Bania but under English mine, mill and plantation managers. But they do not shed bitter tears for these women in spite of being educated outside Bombay. It may be that the profound thinker, Mr. Standing, believes that these women are *made to work* against their will. It is not so. Most of them *have to* stagger about, because the British "Conquest" of India has made the Indians rather poor. If the Bania carried his load himself the woman would starve, while Mr. Standing's countrymen feast at first class restaurants. Westerners ignorant of India also need to be told that in this large country it is the exception rather than the rule for women to carry loads: it is men who generally do it.

Mr. Standing is also a politician. He says.

When I went out first, I confess that it seemed to me that the only fair and logical course for England to take was to grant India self-government. But, in coming into closer contact with the actual conditions, I began to see things in a very different light. The practice of self-government can only be safely intro-

duced to a people which already possesses embedded, as it were, in the very texture of its mind, certain fundamental notions as to the nature of mankind. And here again one comes across a profound cleavage between the East and West.

Centuries before the doctrine of the equality of man became a political catchword in the eighteenth century, the mind of Europe had been schooled to the idea that all men were of equal value in the sight of God. For a thousand years, the Church had persistently taught this doctrine, driving it home through the labors of millions of priests in every corner of Europe, driving at home so completely that men found nothing extraordinary in a peasant being raised to the Papacy or a king being flogged barefoot and bareheaded, through the streets as a penitent.

It was the work of the Catholic Church that abolished slavery. Such an institution was by its very nature, incompatible with the spirit of the doctrine that all men are of equal and infinite value in the eyes of God. It was this teaching too which prepared the way for and made possible the practice of a true democracy.

But this slow maturing of the common mind on the subject, the gradual raising of it to a new conception of the nature of mankind through the pressure of a unified and omnipresent Church, India and the East generally have never known.

Slavery was not an Indian institution nor was there at any time equality among Europeans. In *Buddhist India* by Rhys Davids, the writer will find that there were no slaves in India in those days, and even wage slavery was looked down upon. Hence the writer's conclusions are ridiculous. The writer indulges in further irrelevancies of the following type:

On several occasions I have asked Indians if they could play the piano, and they have replied in the affirmative. On being asked to perform they have, to my great astonishment, seated themselves solemnly at the piano and proceeded to play a tune *with one finger only*. There was, apparently, not the slightest sense that anything was missing, and the other Indians present applauded these strange recitals as very meritorious performances, which doubtless they were from their point of view.

He does not find fault with Indians for their inability to use knives and forks for eating, nor for their lack of Western clothing and indifferent knowledge of the English language! How thankful we should be to him!

• A Thirteen-Month Year

The Woman Citizen gives the following
A thirteen-month year is being proposed—each

month to have twenty-eight days, and a special holiday (Year Day) on the 365th day. The new month would be put in between June and July. Each month would begin on Sunday, so that corresponding days in any month would always fall on the same day of the week. The convenience in accounting and figuring, i.e. a score of daily details is obvious. As January 1, 1928 falls on a Sunday, it is suggested this would be a good time to begin. The plan—called the Cotsworth plan—is endorsed by Professor C. Marvin, chief of our Weather Bureau among numerous others.

A League of Nations Committee of Inquiry will soon meet to consider this and other proposals for calendar reform.

Arabia's New Master

The Literary Digest says

The man to be watched in Arabia, because he is destined to loom large in the history of that country, we are told, is Abdul Aziz Ibn Saud, the Sultan of Nejd. His proclamation as King in Mekka says the London *Economist* marks an epoch in the history of Arabia and indeed of the Islamic world, which can not be a matter of indifference to the British Empire. Twenty-five years ago this weekly recalls the present conqueror was an exile in an Arab principality under British influences at the head of the Persian Gulf, while to-day it is noted:

He is master of all Arabia, except Kuwait, Oman, Yaman and Transjordan at the four corners. The union of the major part of the Arabian Peninsula under a single effective sovereignty is a rare and potent event. When it was achieved by the Prophet Mohammed, and more recently by Abdul Aziz Ibn Saud's great-grandfather Abdullah, it was preceded by a religious revival and followed by a military expansion beyond the bounds of the Peninsula. Up to date, Abdul Aziz has deliberately repeated his great-grandfather's work. He has revived the puritanical Wahabi version of Islam, which inspired the earlier Ibn Saud and his followers, and in the name of this creed he has reconstituted his grandfather's empire in a steady series of success, which culminated last year in the capture of Mekka and a few weeks ago in the capitulation of Iddah—the last foothold in the Peninsula which remained to the Hashimite rulers of the Hejaz.

"Under British auspices an agreement regarding jurisdiction over tribes and seasonal tribal movements in search of pasture has been concluded between Ibn Saud of the one part and our two Hashimite proteges, King Faisal of Irak and Amir Abdullah of Transjordan of the other part. Their father, King Hussein of the Hejaz, was never amenable to reason, and in consequence he and his son Ali after him have now lost the throne of the Hejaz to Ibn Saud by force of arms."

GLEANINGS

Realistic Camp-Fire Girl Made of Butter

A Camp-Fire girl modeled in butter won first prize for artistic and ornamental display of confectionery products at a recent fair in Spokane, Wash. Miss Helen Kane of Spokane, who posed for it, wore the gown, moccasins and honor beads of a Torch Bearer, the highest rank in the organization.

Camp-fire Girl modeled in butter

Howard Fisher, of Portland, Ore., made the figure, which was declared excellent both in its detail and in its general artistic effect.

One-Man Submarine Dives 500 Feet

A diving suit weighing half a ton and equipped with electric lights and a telephone was used recently for the first time in the open sea in efforts to salvage the British submarine, *M-1*, sunk in 240 feet of water in the English Channel. German inventors volunteered the use of the apparatus which, tests showed, could be used in 500-foot depths.

One-man Submarine

The strange new suit, shown in detail above, is built of aluminium alloy and resembles somewhat a submarine in its interior mechanism. Arms and legs are given flexibility by ball and socket joints. Tanks, filled with water, give the diver the weight to sink into the sea at 250 feet a minute.

No surface air is needed, the suit carrying oxygen enough to last three hours. A mask over the mouth absorbs exhaled carbonic acid. Air pressure equal to that at a depth of 30 feet is maintained constantly. Without the necessity of adjusting the body to changing pressures, a diver in the apparatus can reach in two minutes three times the depth reached by a diver in an ordinary rubber suit in 45 minutes.

Communication is maintained by means of a steel hoisting cable carrying three independent telephone wires. When this cable is fouled, the diver can detach it and reach the surface by "blowing" the water from his ballast tanks with compressed air, thus lightening his weight.

America's First Scientist

More than 2,500 years ago, there lived on the American continent a great scientist, a genius who

This ancient Mayan calendar, now deciphered, reveals a system of measuring time more accurate than any other the world has known.

made startling discoveries and formulated important principles in mathematics and astronomy that antedated by centuries the first attempts of the fathers of Western modern science to peer beyond the veil that shrouded them from knowledge of their world.

No one knows the name of this wonderful ancient savant. It may remain forever a mystery. His fame, though, is made everlasting by his amazing work, the purport and importance of which were discovered recently by Dr. Herbert J. Spinden, distinguished archaeologist of Harvard University.

Dr. Spinden, by deciphering the inscriptions on the ruined temples and crumbling stone houses found in Guatemala and Honduras, has proved

definitely that the Mayas who built them were a highly cultured, civilized people.

That these people inhabited the western hemisphere centuries before Christopher Columbus' time has been known, of course, but it remained for Dr. Spinden to fix definitely the time at which these early Americans reached their highest state of culture, which was in the seventh century after Christ. And now he has finally succeeded in checking up the Venus calendar of the ancient Mayas with the true astronomical positions of the planet Venus in the sixth century before the Christian era.

The inscription on this richly carved stela at Cotpan, Honduras, marks Mayan culture at the height of its expression.

These latest investigations prove beyond doubt that the mysterious unknown scientist developed by abstruse mathematical calculations and observation of astronomical phenomena, a system for measuring the passage of time that is more accurate than any other method. In fact, this amazing man was the constructor of a machine for time-keeping that worked without error for almost 2,000 years! This marvelous machine was destroyed by fanatical priests during the terrible Spanish Inquisition. This act of insensate vandalism was directed by Bishop Landa, who was also responsible for the burning of all the native records of the Mayas. Afterward, he was recalled to Spain and placed on trial for his cruelties.

Dr. Spinden's recent discovery makes it possible to translate the dates on the ancient inscriptions into the Gregorian calendar we use to-day. All of these records show vaguely yet unmistakably the influence of the great man whom Dr. Spinden calls "a figure grand and mysterious as Zoroaster or Buddha at the beginning of history in Persia and India."

The Mayas at this time lived on plains where

a six-month period
rain every year
great fertility
the soil, permit-
the people to
two crops a
if their planting
and reaping were
properly timed. The
necessity for accurate

"The sun engine will come when the price of combustibles greatly increases."

"It is possible to make a concrete house in a few hours."

"The world doesn't need more inventions just now, until general intelligence has increased so men can be had to operate what we have."

"What new lines of research am I engaged in? Many. Wait until I've caught the fish."

"My favorite inventions—phonograph, moving pictures. I like the phonograph because I love music. The motion pictures are my only theatrical diversion on account of my extreme deafness."

"I now sleep from five to six hours. The quality is still perfect."

"I eat very little. The amount of power one can get out of a piece of a toast is marvelous."

"The number of men in every nation, per capita, who are honest, humane, and intelligent is increasing. This number is a measure of our civilization. The Lord appears to be in no hurry."

Dr. Herbert J. Spinden of Harvard, who recently revealed the existence of a master scientist on the American continent in 613 B. C. Dr. Spinden is now on his fifteenth expedition to Yucatan, where he is deciphering more of the strange monuments left by the long-vanished race of Mayas. Sighting the sun from one of these markers to another, told the Mayas the time of year.

ing in planting the crops was the incentive which resulted in the marvelously precise time-keeping system.

"Hundreds of native dates found on Mayan monuments and temple walls have been translated into our calendar," says Dr. Spinden, "and evidence of their highly scientific methods and extremely accurate results which they obtained in their calculations increases with further research. The Mayas reached practically the same figure for the true length of the year that we use to-day. They made calculations over vast stretches of time. Their calendar was more accurate than our own, which has an error of one day in 300 years."

How this great nation fell from the heights of grandeur, archaeologists do not know. Its passing, one of the tragedies of history, for while some 10,000,000 cultured people inhabited Yucatan and Central America in the days of the mysterious great scientist, less than 4,000 ignorant, impoverished Indians now are all that remain of the Mayas.

"One of the Most Human of Men" Thomas A. Edison as He is Today

A chunky, middle-height figure, careless of dress, he trots about spryly, hatless most of the time. A melonlike forehead, now thatched as Pike's Peak, a ruddy complexion, gray eyes that often close and dream. A high-pitched voice that may rise or become a bit nasal. Boyish, slangy in manner and talk, always unconscious of self. That is the great Edison at 79.

EDISON SAYS—

"There is no limit to the invention of fully automatic machines. Man will work less and less."

Thomas A. Edison

Have You Seen Them Any Bigger?

CLIMB AND READ

You need a tall step-ladder and a moving pair of eyes to read the world's largest book, exhibited recently in New York City. Here (on the next page) is Bertha Green, of Greenville, S. C. scanning its pages, which are 10 feet tall and seven feet wide.

KING OF BANJOS

It takes three men to play this giant banjo built by Roy Hearn and A. Caro Miller of San Jose, Calif. It is 10 feet tall. The head was made from a 32 inch bass drum, and the strings are heavy piano wires.

LONGEST CHIP

One of the longest chips ever cut, as shown in the picture recently came from

LOST IN A CHAIR

She's a girl of normal size in the world's largest office chair. It took two men to lift her there, for the gigantic chair is nearly 11 feet high and more than six feet wide.

WOULD FILL A HOUSE

Part of the wall of a Chinese rug factory had to be

torn down before this immense rug could be removed. It was woven for the Cincinnati Business Men's Club, where it covers 920 square feet of floor space. Comparison with the men will give an idea of its size.

a turbine bucket wheel in the shops of the General Electric Company, Schenectady, N. Y. The steel chip is 157 feet long and an inch in diameter.

BIG AS A CHIMNEY
Here is the largest pin

an organ so powerful that its music can be heard for five miles. It was completed recently in a park in Los Angeles, Calif. The pipe, made of lumber three inches thick, is 32 feet long and three feet square at the large end. A 50-horsepower electric motor supplies power for playing

From a Weakling to a Hercules

A delicate, curly-haired lad of 16 stood with his father before the marble statues of ancient gods and heroes in Rome. Wide-eyed, he marveled at the sculptured ideals of manly power and physical perfection. He compared his own pitifully frail body—the frame of a weakling—with the bulging muscles and

to my own. If you will pursue the same rigid discipline I have pursued."

To prove that what he said was so, he offered himself as an exhibit, and he gave to the world the first really scientific system of physical culture, based on the very methods he had used to build his own body.

His eight ways to grow strong are

1. For the sides: Bend the body sideways from each hip, as shown without moving the lower limbs. Alternately bring right and left forearm under the upper arm, with wrist rolled beneath arm-pit.

2. For shoulders and chest: Bring arms full to front in line with the mouth, keeping elbows straight and head well back. From this position throw both

Eugene Sandow and his eight ways

careful symmetry of the heroic figures before him. And in his heart he made a silent vow that one day he would be like them—one of the strong and mighty.

That was nearly 50 years ago. Just the other day there died in England the amazing fulfillment of that ambition—Eugene Sandow, a man admired and honored by the world as the greatest strong man of modern times.

Often have I heard Sandow say to his admirers: "You, or any other average man, can become not only an athlete, but you can acquire strength equal

arms back in line with shoulders, returning them quickly to front again.

3. For biceps. Turn inner sides of arms to the front, and alternately bend each arm at elbow, bringing dumb-bell close to shoulder.

4. For biceps and triceps. With arms in line with shoulders, alternately bend arms up and inward until dumb-bell is over shoulder.

5. For chest, back, arms and abdomen. Support body on arms and toes, alternately raise and lower body by respectively straightening and bending arms.

6. For abdomen: Lie flat on back, raise both legs simultaneously with knees quite stiff.

7. For shoulders: Bend both forearms upward from elbow, alternately extend each arm over head, bring the elbow back close to side.

8. For forearms and wrists: With arms extended horizontally, turn hands quickly on axes of wrists front to back, then back to front.

A Lesson to Reckless Drivers

A Lesson to Reckless Drivers

He is a Whole Jazz Band in Himself

Sicily specializes in wandering musicians who play half a dozen instruments at the same time. The picture shows a one-man band, Taormina. Observe how this itinerant artist uses

A One-man Band of Taormina

his whole body. A toss of his head starts bell tinkling, a stamp of his foot booms a big drum. With his mouth he plays pipes, his hands play an accordion and he has drums and a cymbal.

NOTES

Cooch Behar Affairs

We should be only too glad, should it be found that the information on which the representations and petitions on Cooch Behar were sent to the authorities in British India were false, was incorrect. In supporting these petitions in our last issue we did not, of course, intend to support or give credence to every statement or prayer contained therein or to the "bad rumours" therein referred to. Briefly put, in the main, the prayer which we supported is that it should be ascertained whether the person who was appointed on May 24, 1905, guardian to the minor Maharaja of Cooch Behar and his younger brother and the Controller of the Household is the same person who was the "native Secretary

"Mr A" in the notorious Midland Bank blackmailing case in which a Mrs Robinson was involved. Should it be found on inquiry that he is the same man, we support the other prayer that he be removed and another person, possessed of sufficient moral and intellectual qualifications, be appointed in his place.

Our reason for supporting these prayers is that if the guardian to the young princes and the Controller of the Cooch Behar royal household really is a man of the antecedents referred to above, the innocent princes and their mother are likely to suffer and also be prejudiced in the eyes of the public through no fault of theirs. We are anxious that the princes should be brought up under the influence of a guardian of the highest character available, and that even the most malicious persons should not find it easy to disseminate unfounded and "bad rumours" leading the parties concerned.

When in our last issue we referred to the circumstances in which the Government might be justified in intervening to make arrangements for the upbringing of minor princes independent of the influence of the king and other female relatives, we were under the impression that in the present case the choice of a guardian had been made by Her Highness the Maharani and that it had been of doubtful wisdom. We should not have should our impression be wrong in these respects, i.e., we should be glad to be informed that the guardian is not the "native

Secretary" to "Mr A", but that it unfortunately he be the same man, we should be glad to be informed that Her Highness did not select him. For, it would be difficult for us to hold that the party really responsible for the selection of a person of such antecedents for such an office was possessed of sufficient maturity of judgment and sense of responsibility to be able to exercise the right kind of controlling and guiding influence on the princes to an adequate extent.

In conclusion, we may be permitted to say that we have discussed these matters only because of their public importance.

An Official Letter on Cooch Behar Affairs

An officer of the Cooch Behar State has sent us a copy of the letter which he has addressed to the Editor of "Ananda Bazar Patrika," a Bengali daily which had published a Bengali translation of a petition "purported to have been submitted to the Viceroy and Governor-General of India" by some subjects of the Maharaja of Cooch Behar and some comments thereupon. As we did not publish the whole or any part of this petition, though we referred to it and gave our general support to such petitions, it would not be quite relevant for us to publish in extenso the Cooch Behar officer's letter to the Editor, "Ananda Bazar Patrika." Nor do we quite appreciate this officer's reasons for his desire that his name and designation should not be published but that at the same time "there is no harm in stating that you received the information officially from a certain officer of the State who is able to give you the correct information. You can use this as a sort of communique from the State."

This "communique" states that a petition without date was addressed to the Viceroy through the Governor of Bengal.

"The so-called signatures did not appear on the body of the representation but were contained in loose sheets of paper attached to it. The Government of Bengal returned the representation to the first signatory with an endorsement that it should be submitted through the Political Agent, Cooch Behar State and authenticated by the signatures of the memorialists on each sheet."

The Cooch Behar officer then states how he found that many of the signatures were forged and how many of those whose alleged signatures are to be found in the sheets attached to the petition have petitioned the Cooch Behar authorities, protesting their innocence and complete ignorance of the petition to the Viceroy and praying "that the culprit may be detected and punished."

The Cooch Behar officer asserts that the petition to the Viceroy is the work of a certain person who "was expelled from the State by the late Maharaja Bhup Bahadur for his misconduct and disloyalty," and "who bears a private grudge against the State and the Raj family and the household."

That a petition of some sort was sent to the Viceroy is clear, but really by whom we are not told. On the correctness or otherwise of the various other statements made by the officer we are not in a position to pronounce any opinion. Nor does it appear axiomatic to us that a person banished from British India or an Indian State is necessarily guilty. Neither is it self-evident that statements made by disgruntled persons are necessarily all without any foundation. As persons who are prosperous under a certain state of things are not likely to perceive or give out what is wrong with it, the public and the State have to a great extent to depend for information relating to the other side of the medal on disgruntled individuals. By saying this we do not, of course, imply that everything that grievance-mongers say must be swallowed indiscriminately. Their statements must be sifted as carefully as those of other people.

The Cooch Behar officer says nothing relating to the contents of the petition. That is only natural, and we do not blame him for it. Nor does he say anything about the representation and petition of Rai Saheb Panchanan Varma, M. L. A., from which we made extracts in our last issue.

"A Forgotten Movement"

Under the above caption *The Guardian*, a Christian weekly journal of public affairs published by the Rev. Principal P. G. Bridge of Calcutta, publishes an editorial article which ought to receive attention at the present moment. Its first paragraph runs as follows:—

We shall attempt the bold task of examining the Hindu-Muslim situation whose shadow lies

across the pathway of Indian progress. Unfortunately no political party has ever attempted elucidation of the elementary facts. In the meantime hate and prejudice have their sway, making the way of every patriot more difficult, if not impossible. We have no solution to offer, but may be in a position to interpret in some measure the problem, which we shall attempt in historical bearings.

The writer then draws attention to the Moslem loyalists' attempt to demonstrate the loyalty of his community at the expense of the Hindus, in the following words:—

A prominent though not influential Moslem, in the course of the debate on the Bill to repeal Regulation III of 1818, made the statement that not one of his co-religionists had been arrested under the provisions of the Act in Bengal during the recent anarchical troubles. What the precise object was which led to this statement we are not aware, but presumably a demonstration was needed to show that the Moslem community was loyal, thus throwing into relief the disaffection of the Hindus of Bengal.

It is added:—

It is singular that through the first seventy-five years of the nineteenth century, at least as far as Bengal was concerned, the features of unrest were largely Moslem. Regulation III was used to place under restraint Moslem agitators, and the educated Hindu Bengali on the other hand was a powerful bulwark of British rule. The movement which focussed this Moslem anti-British sentiment was the Wahabi movement, whose name almost has been forgotten save for the prominence given to it since the War by Ibn-i-Saud, the King of Nejd, at present the conqueror and the *de facto* ruler of the Hedjaz.

The article then gives a short description of this movement.

The history of the Wahabism in India was revealed in the proceedings of five historic trials for sedition, in Amballa (1865), Patna (1867), Maldah (1870) and Rajmahal (1870). The last trial in 1871 just before its last stages in the Calcutta High Court led to the assassination of the Chief Justice, and four months later the Governor-General was mortally wounded by a fanatic Moslem convict in the Andamans. Surveying this seditious movement, Sir William Hunter in his book *The Indian Mussalmans*, published in 1873, so summarises the situation:—

"The Bengal Muhammadans are again in a strange state. For years a Rebel Colony has threatened our frontiers, from time to time sending forth fanatic swarms, who have attacked our cantonments, burned our villages, murdered our subjects, and involved our troops in three costly Wars. Month by month, this hostile settlement across the border has been systematically recruited from the ranks of Bengal. Successive State Trials prove the existence of a network of conspiracy has spread itself over provinces, and that the bleak mountains which beyond the Punjab are united by a chain of trade depots with the tropical swamps through which the Ganges merges into the sea. They disclose an organisation which systematically levies on the

men in the Delta and forwards them by regular trains along our high-roads to the Rebel Camp two thousand miles off. Men of keen intelligence and untold fortune have embarked in the plot, and a skilful system of remittances has reduced one of the most perilous enterprises of treason to a safe operation of banking."

Some of the concluding paragraphs of the article are worth reproducing.

As we look back on the history of the Warai movement in Bengal, a brief description of which we have attempted, it is clear that the unrest can be explained by (1) religious, (2) historical, and (3) economic causes

(1) All acts were done in the name of religion. The leaders were fanatics—some had their inspiration in pilgrimage, others declared that it was impossible for them in the face of the direct teaching of the scriptures to accept non-Muslim rule in the country. From a *Dar-ul-Islam* India had been converted into a *Dar-ul-Harb*. Two courses were therefore open to the true believer—Jihad or Holy War, Hijrat—that is, flight from a country where Islam did not rule.

(2) Islam has had a great history in India. Islam at one time had converted her (at least for a short period) into the most powerful Muslim State in the world. Thousands of families all over the country had been brought up in the tradition of a ruling caste, such as the Nawabs of Bengal, or of Oudh,—they and their courtiers and many others had looked to the Emperor of Delhi for employment in the Army, in the Civil Administration, or learned no less had the patronage of the mighty and the doctors of sacred learning had expounded the law in the Courts of Justice. All those opportunities were now exhausted and avenues of employment were closed. The decay of this ruling class was accelerated by their own conservatism and failure to accommodate themselves to the new situation. It was among these, particularly the learned, from whom the leaders for the new movement were discovered.

(3) Lastly, the Muslim peasantry in Bengal were swept into the movement. They were suffering from a sense of injustice, as their destinies had largely passed into the hands of powerful Hindu landlords. Further, all financial transactions of the countryside were controlled by Hindu merchants, to whom the law as now interpreted and enforced by the British Courts of Justice gave the fullest protection. Is it very extraordinary that this new religious movement was accepted with enthusiasm by a suffering Muhammadan peasantry?

In trying to discover the genesis of the present Hindu-Moslem troubles, we must look beyond the immediate causes. Then and then alone can we find out and apply the right remedies. The paragraphs quoted last from *The Guardian* article may be of some help in this direction

Dr. Moonje at a Hindu Conference.

It is reported that in the course of his presidential address at the Punjab Pro-

vincial Hindu Conference Dr. B. S. Moonje advocated the abolition of the practice of child marriages generally, and "urged that all castes of Hindus should have equal rights, equal privileges and equal status in society, and no caste superior or inferior to others."

He was perfectly right in doing so.

He also pleaded, among other things, for the organisation of volunteers and the establishment of gymnasiums and *Akharas* for training volunteers, particularly in *lathi* and sword play

"The Cuckoo of South Africa."

Recently a Mr T G Strachan, the Labour member for Maritzburg North in South Africa, delivered a bitter and uncompromising address in connection with the Asiatic Bill.

"The Indian is the cuckoo of South Africa," emphatically declared Mr Strachan. I do not know much about bird life, but I understand the cuckoo raises its young in the nests of other birds and when the young become sufficiently strong they oust out the original owners and ultimately kill them. The Indian is the cuckoo of South Africa and he has got into the wrong nest. Slowly but surely he is killing the original owners of this nest. There can be no question about that."

Were the whites "the original owners of this nest?"

Mr Strachan added —

I want to approach this question from the standpoint of what it means to the future generations of South Africa, what it means to the children coming after us, what it means for the public health of the European, and what it means for European civilisation in South Africa.

"I do not wish to approach it from the ethical standpoint, because I would not have a leg to stand upon, but I do wish to impress upon this or any audience that from the economic standpoint something should be done, in Natal at all events."

It is because he avoided the ethical standpoint that

He declared that if making conditions so unpleasant for the Indians that they would be obliged to leave South Africa meant racialism, then he pleaded guilty to being a racialist. He advocated the policy of reducing the Indian population to the "irreducible minimum," and quoted some striking figures to show the grip Indians had on Natal, and the way they were ousting Europeans from the economic field.

Bishop Talbot and Racialism

It would restore, to however small an extent, even a confirmed pessimist's faith in

human nature to find even in South Africa at least one man like Bishop Talbot, who gives expression in the March number of the *Kingdom* to his "dismay at the trend of present South African legislation at the expense of the native." He declares —

"I cannot think that the need to protect the white worker from being swamped by native labour justifies the introduction of the principle of the colour bar into the law of the land. The passing of the Bill by the Assembly is an evil omen for the future. It is not only a question of its actual provisions nor its administration, but its symbolic character. It will symbolise the inherent inferiority of the native and the resolve to use him only as a means to white convenience. I think it is a blind and essentially tyrannical measure, and if it is finally ratified it will have inevitably disastrous results to the true peace and wealth of South Africa."

"It makes it worse that the bill includes Indians with natives in its scope. There are in India, and there may well be in South Africa, Indians who though of dark skin are on a level with the finest flower of European culture. That an able and gifted son of India should be debased on the ground of colour from rising to his fullest development and capacity is a great wrong and it brings out into added relief the injustice done to the Bantu peoples." [Quoted by *The Guardian*]

The Natal Witness has recently declared itself against the Asiatic Bill, and observed —

"If the Indian were not an Indian, there would be no two opinions as to how he should be dealt with. His children would be sent to school, his housing conditions would be improved. Partly by force, partly by example and encouragement, the Indian should be raised from his present position. But because these men, whose fathers we have invited and enticed to come here are not white, we propose to force them down still further."

The Cape Times also does not now like the Bill.

South African Asiatic Bill Delayed

A statement on the position in South Africa has been issued at Simla announcing that the Union Government have accepted the offer of the Government of India for a conference to arrive at an amicable solution of the Indian problem.

The Union Government has impressed the view that public opinion there would not view with favour any settlement which does not hold out a reasonable prospect of safeguarding the maintenance of western standard of life by just and legitimate means. The Conference is expected to meet before the end of the year.

Its proposals would be subject to confirmation by the two Governments. In the meantime the Union Government have decided subject to the approval of Select Committee and Parliament, not to proceed further with the Asiatic Bill until the results of the Conference are available.

Subsequent to the publication of this state-

ment a Reuter's message to the following effect was published —

Subsequent to the statement on the international status of South Africa Dr Malan with the special permission of the House moved the adoption of the report of the Select Committee which approves of the agreement reached, recommending that the Bill be postponed until the results of the conference were available and that subsequent legislation to be enacted be retrospective to the date when the Bill would otherwise have come into force.

The House adopted the report without further discussion.

Whatever the final outcome may be, all parties, the South African Government, the Government of India and the Indian settlers in South Africa, may congratulate themselves on this happy result. For this due credit must be given to General Hertzog and Dr Malan, to the Government of India and its Paddison deputation, to Dr Abdur Rahaman's Deputation, and, last but not the least, to Mr C. F. Andrews. With supreme faith in the righteousness of our cause and faith even in the South African white man's nature, he has worked prayerfully and incessantly for a righteous settlement. A growing consciousness of the certainty of India becoming self-governing and strong at no distant date must have also helped the South African authorities to arrive at a correct decision.

Number of Independent Moslems.

The total number of Moslems in the world is 230,000,000, of whom 190,000,000 are under European rule. That leaves forty millions or four crores of Moslems who are independent. Nearly five times as many are subjects of European nations. If there be any real state-men among Indian Moslems they ought to ponder over the causes of the decline and fall of Moslem kingdoms and empires. Blaming others will not do. Nor will it be of any use to envy the progress made by the Hindus in some directions. It should be remembered that the number of independent Hindus is much smaller than that of independent Moslems.

Wish Father to the Thought?

The following precious bit has been cabled to the dailies in India from London —

In the foreword to the "History of British India by an Indian Mohammedan published by Pitma"

Theodore Morison, dealing with the difficulties of transformation of an autocratic Government of India into a popular Government, says that even among Europeans, if unpractised in popular government, representation plays strange tricks. He records that in the elections to the first Indian Legislative Council, Vendee returned four representatives, three of them being Christians and one a Jew. Yet a few months afterwards the people of Vendee rose to a man to overthrow the king and the church.

Similar anomalies may exist to-day in Indian assemblies, and Sir Theodore Morison wonders what the unrepresented masses are thinking for example, what the untouchables think of the Swarajists. He says that some day a gust of passion may sweep through the depressed castes and impel them to some wild jacquerie. In that wild hour, if it ever comes, India will have not an elected Assembly but a strong executive. The important question is not whether the executive is composed of Englishmen or of Indians, but whether it is capable of acting promptly and vigorously, confident of official support.

One would like to be assured that Sir Theodore's foreboding in the last two paragraphs quoted above is not an unconsciously metamorphosed wish.

Similar apprehensions (or hopes?) have been expressed by other British imperialists. But what have men of their ilk done actually for the depressed classes during 170 years of British rule to avert such a calamity? And why do they not recognise the work done by many high-caste men, often at great sacrifice, for these classes? Why, again, has the British Government (*not* the Swarajists) neglected the untouchables unrepresented?

The New Dewan of Mysore

His Highness the Maharaja of Mysore has shown commendable creed-blindness in appointing Mr Muza M Ismail, B.A., B.L., B.E., C.I.E., Dewan of Mysore. In congratulating him on his appointment, Mr J. B. Rao wrote partly as follows, on behalf of the Swarajya party of the Congress Committee, Bangalore —

No doubt, Mysore had wanted a Diwan born on its own soil and his Highness the Maharaja has appropriately selected you for the post.

We are aware that we in Indian India are generally 30 to 40 years behind our brethren in British India. Every one in this State therefore wishes that you will try to bring about rapid progress in our State by giving the people more education and bringing our Representative Assembly to the stage of those in British India, if not more."

Mr. Muza M. Ismail, B.A., B.L., B.E., C.I.E.,
First Muslim Dewan of Mysore
Photo by R. Venkoba Rao, Srirangapatna

Mr Ismail replied, in part —

"I can only assure you in reply, that I shall be actuated by an earnest desire to do the right and that my sole ambition will be to do some abiding service to a State which we all love so well."

U P Provincial Hindu Conference

The Second Provincial Hindu Conference held at Lucknow passed unanimously a resolution moved by a Sanatanist asking for the removal of untouchability and for such measures in pursuance of it as throwing open of public places like Schools and Colleges, Temples and Wells for the use of untouchables. In his speech favouring the Shuddhi movement Swami Shraddhananda entered into a historical survey of the ways and means of conversion adopted by the Semitic religions. Supporting himself with facts and figures, Swami told the audience that there were one crore Musalmans and thirty-four lakhs Christians who still retained the mode of living that they had before conversion from Hinduism. The first need was to bring back these people to the faith they originally belonged to. The Catholic and Vaidik Dharma would surely assimilate them.

"Support Indian Industries"

It is said that at the suggestion of Mr A. B. Datta of Calcutta Sir B. N. Mitra, the member in charge at Delhi, has asked the Director-General of Posts and Telegraphs to use the motto "Support Indian Industries" to obliterate postal stamps. A similar slogan, "British Goods are the Best", has long been in use in Great Britain in a similar way for propaganda work for advancing the cause of British industries. It is only right and proper that the same method should be used in India.

Indian Postage and British Penny Postage

We have shown in our last issue that the Japanese, though wealthier than the people of India, pay postage at lower rates than ourselves. But men in power are generally impervious to arguments. At his recent conference with the Indian Merchants' Chamber in Bombay,

Sir B. N. Mitra observed on the subject of reduction of postal charges that, as he had already explained fully on several occasions in the Assembly, reduction was not an economic proposition at the present moment. The only way in which it could be done, was by means of a substantial subsidy from the general taxpayer's pocket to the Indian Posts and Telegraphs Department. He could find no justification for this subsidy and he doubted whether the Chamber would seriously support such a subsidy.

Assuming the correctness of Sir B. N. Mitra's conclusion that the Indian postage rates could at present be reduced only by means of a substantial subsidy from the general taxpayer's pocket, we fail to see why such a subsidy would not be justified. From 1850-51 to 1923-4 Indian Railways have involved the Indian Treasury in a net loss of 3228 crores of rupees and the losses are still growing. As it cannot be contended that the Indian Post Office does not benefit all classes of people in India which the Indian Railways do, or that the Indian Railways are an unmixed blessing which the Post Office is not, we do not see why, if the Indian taxpayer's money could be spent to subsidise the Railways, it cannot be spent to subsidise the post office, at the rate of, say, not more than a crore per annum for a few years. The fact is, the railways are a means of exploitation of India by the British people and have also an imperialistic strategic value. And so such huge losses, aggregating to 323 crores in 73

years, could be incurred for them, but a comparatively very much smaller sum can be spared for the post office, because the exploiters are in a position to pay the present high rates.

That a low rate of postage, in addition to being an indirect means of spreading knowledge, has an industrial and commercial value will appear from the renewed attempt being made in England to secure a return to penny postage.

At a meeting of the Imperial Communication Committee of the British Empire League at the House of Commons in mail week, over which Sir Henry Page Croft, M. P., presided, the following resolution, proposed by Sir John Cockburn, and seconded by Sir Harry Britain M. P., was unanimously adopted: "That in view of the fact that the Dominion of New Zealand has re-introduced full penny postage and that a step in this direction has been recently made by the Union of South Africa, this committee once more urges upon His Majesty's Government the vital importance to the development of British industries and intra-Imperial trade of an early return to penny post throughout the Empire."

The British Empire is far more extensive than India and Burma combined. If it be a business proposition to carry letters and small packets over land and seas for thousands of miles for one penny or anna, surely it would not be unbusinesslike to carry letters for half the amount and postcards for a quarter of it from one end of India to the other. If we became masters in our own household as the British people are in theirs, penny post-cards and two-penny letters would at once become business propositions.

The Late Sir K. G. Gupta

By the death of Sir K. G. Gupta at the age of 75, India loses a man of ripe experience of administrative affairs and a person who was sincerely devoted to the cause of religious and social reform and progress. He was one of the earliest Indian members of the Indian Civil Service to enter it (in 1879) by the open door of competition. At the competitive examination he stood second in order of merit. He was the first Indian to become a member of the Board of Revenue. On account of his seniority and great ability he was entitled to become the Lieutenant-Governor of Bengal, having already served as Commissioner of the Orissa Division. But owing to the crime of not being a European, he was placed, instead, at the head

Sir K. G. Gupta

Photo by R. Venkata Rao, Srirangam

a fisheries department. Subsequently he was one of the two Indians to become the first Indian members of the Council of the Secretary of State for India in London and on golden opinions of Lord Morley, then Secretary of State, for his great knowledge and ability. After retirement, he was appointed a member of the Esher Committee on Army reform, and wrote an able minute in dissent. He was an ardent advocate of Indianisation of the Army, without which, he thought, Home Rule would be a mere name.

He was a member of the Brahmo Samaj and did much, by contributing to its funds and taking part in its deliberations, to promote the cause of liberal religion and social progress.

According to *The Inquirer* of London, his high intelligence, wise judgment and energetic discharge of business secured his promotion to positions of high responsibility, the Lord Morley holding the highest opinion of his ability and sagacity. In a small and frail body manifested great spiritual force, though consis-

tently discreet he was always eager for reforms and the raising of his race. There can be no doubt that Sir Krishna Gupta's peculiar gifts of mind and temper greatly contributed to the trust which has been increasingly manifested by British statesmen in the self-governing capacity of the race of which he was so noble a member.

The Late Rao Bahadur Parasnis

Rao Bahadur Parasnis of Satara, whose death has been recently announced in the papers, cannot be said to have died full of years, though honours he had won in his own line of work, which was historical research. He founded the historical museum at Satara, and collaborated with Mr. Justice Kinkaid to produce a *History of the Marathas*. He was a devoted student of Indian history, particularly of the Maratha period. He would be remembered for the original research work he did and for his splendid collection of manuscripts at Satara.

The Late Pandit T. Ganapati Sastri

The name of Pandit Ganapati Sastri of Trivandrum is known to students of Sanskrit all over the world. He served successively as Librarian of the Travancore Palace Library, Principal of the Sanskrit College and Curator of the Department for the publication of Sanskrit works. In the last capacity he collected and published many valuable and rare manuscripts, forming part of the "Trivandrum Sanskrit Series," ninety books of which have been published.

Before the Pandit's discovery and publication of Bhasa's plays, "*Mricchakatika*" or the Toy Clay-cart, reputed to be by King Sudraka, was considered to be the earliest Sanskrit drama, composed at about 200 B.C. Pandit Ganapati showed that Bhasa's works were of earlier date. His other great work was his edition of Kautilya's *Arthashastra*, by which he won the Ph.D. degree of Tübingen University, Germany. The Government of India bestowed on him the title of Mahamahopadhyaya in recognition of his scholarship and ardent and unremitting labours, in the cause of Sanskrit learning.

"Women and Children in Indian Industries"

The paper on "Women and Children in Indian Industries" which was read before

the Royal Society of Arts in London by Lady Chatterjee, O. B. E., M. A., D. Sc., has been deservedly praised as a very balanced one. It was a comprehensive study of the position in India with regard to women and children in industry such as had really never been quite approached before. Sir Purshotamdas Thakurdas observed after listening to the paper that it was a matter for congratulation that the case of the women workers of India should have been put forward by a lady so well acquainted with Indian conditions and possessing such wide sympathies with the women of India.

Lady Chatterjee

Lady Chatterjee had a good deal to say about the provision of creches, maternity benefits, and various other branches of welfare work. She declared quite emphatically that many of the problems arising out of the employment of women and children could not be dealt with satisfactorily until women were appointed as Factory Inspectors. A beginning has been made in Bombay, but nothing has been done in this respect elsewhere. There is greater need in India for such inspectors than in more favoured countries. The women of India are largely illiterate and in many cases are

living away from their kith and kin. How they secure for themselves the full advantages of the legislation passed in recent years unless there are women inspectors?

Among other reforms Lady Chatterjee advocated the provision of facilities for recreation and education classes for half-timers and adults. The Compulsory Education Acts only apply, except in Madras and the Central Provinces, to children below the age of factory employment. Measures are needed which will secure that children employed in factories shall have facilities to continue or begin their education.

In view of the fact that Indian industries have to compete in a world market it is not to be expected that the earnings of the men alone will keep a family even according to the present low standard of comfort. The general exclusion of women from industrial employment would inevitably lower the standard of life still further. The poverty of India is such that practically all women except those belonging to the higher class are compelled to work. In the general interest of the community and of the workers themselves, said Lady Chatterjee, it is essential that the conditions of the employment of women and children should be strictly regulated by law and practice and that there should be ample safeguards for the protection of their health and the maintenance of their moral ideals.

Indian women inspectors should certainly be appointed in all provinces where women work in factories.

The North-Western and North-Eastern Frontiers of India

There was a time when the North-Western Frontier was inhabited by the followers of Buddha, as is mostly the North-Eastern Frontier even now. But the residents of the former were converted to Muhammadanism by force. Since their adoption of the creed of the Crescent, those people have lost their meekness. The inhabitants of both Frontiers carry knives, daggers, etc., in their belts. But while the former use them in homicidal frays and raids, the latter use their weapons for the peaceful purposes of lopping branches from trees, cutting orchids and flowers, or peeling fruits. Thus while crimes are a daily occurrence on the North-Western Frontier, where the jails are full of convicts, the North-Eastern Frontier is comparatively free from such crimes, so much so that the Darjeeling jail did not contain, even a few years back, a sufficient number of prisoners to carry on the jail industries. For that purpose, therefore, convicts were transferred to the Darjeeling jail from some of the jails in the plains of Bengal. This is a very good illustration of the influence of religion on the character of a people.

Why Partiality Is Shown to Muhammadans

Some of the Britishers in India are partial to Muhammadans, for they consider it politically expedient to govern India on the policy of "Divide and Rule." But it is not merely political expediency which makes them favour the Muhammadans. It proceeds from "household" considerations. The menials of the Britishers in India, such as butlers, cooks and other household servants, are mostly Muhammadans. X

A Means of Increase of Indian Moslems

The Musalmans in India are in a minority. To increase their population some of them have suggested that as their religion allows polygamy and the keeping of concubines as well, their co-religionists should take advantage of it, and have as many children as possible. This method seems to many of them to be the royal road to make India a Moslem country. How will this appeal to those in the West who are advocating birth-control?

Those Musalmans who have suggested the increase of their numbers by polygamy and concubinage do not take into consideration the economic factor of the case. How will they feed the increased number of children if they propose to bring into existence in these days when the struggle for existence is no less acute in India than in other parts of the world? The increased number of Mahomedans for whom proper education and childhood may not be provided, are not likely to be useful citizens but would most probably develop anti-social tendencies against property and persons. For this reason thoughtless multiplication of population is not desirable. X

The Hindu-Muhammadan Problem

The Muhammadans, while in political power in India, found that they could not rule without the Hindus. Hence their level-headed sovereigns became tolerant and removed those disabilities of the Hindus which some of the fanatic rulers had imposed on them. The most invidious *jazia* tax was abolished by Akbar. But Aurangzib reimposed the tax on the Hindus. The verdict of history is that the decline of the Moghul Empire commenced with Aurangzib. Provid-

ence, which has always saved Hindus from annihilation, brought into existence the Mahrattas and the Sikhs, who dealt a blow to the powerful Moghuls from which they could not recover. The task left unfinished by them was completed by the English. The establishment of British rule in India was providential. There is providence in history, and thus it was that the fabric of the mighty empire raised by the valour of Babar and the wisdom of Akbar crumbled at the mere touch of the foreign Christians. Thus ended the oppressive and intolerant rule of those Moslem rulers who were effeminate and degenerate.

The Christian rule of the English endeared itself to the people of India by its spirit of toleration and by at first not openly trying to proselytize them to the creed of the Cross. The missionaries were not allowed to settle in any part of the then British India or preach the Gospel to the heathens. But when the British Government departed from this principle, then took place the mutiny at Vellore and the Indian Mutiny of 1857, which made the British profess strict neutrality in their Government of India. So long there was hardly any Hindu-Muhammadan problem in India.

The few battles which the Christians fought with the Muhammadans in India were of a few days duration in each case. But such was not the case with the Hindus. The Maratha wars, the Gurkha wars and the Sikh wars showed that, though nominally India was under the Moghals, the Hindus had not lost their martial spirit or military discipline. Hence the Christian Britishers respected the Hindus and because they preponderated in number, therefore some of the far-seeing British statesmen considered it politically expedient to make friends with them by even humouring their superstitions.

Then the outbreak of the Indian Mutiny in 1857 made the Britishers exclaim that "The Muhammadan religion must be suppressed." No stone was left unturned to carry this threat into execution.

But as the Hindus were becoming more educated in Western science and arts, they began to demand their political rights and privileges. This made some of the short-sighted English officers in India excite the jealousy of the Mahomedans and try to pit them against the Hindus. They thought the existence of their rule depended on the the Roman maxim of "Divide et impera".

This seems to have been their policy since the inauguration of the Indian National Congress. Lord Dufferin was the Viceroy and Governor-General of India when the Congress held its first session in Bombay in 1885. His Lordship was a shrewd diplomatist and had dismembered a portion of the Turkish empire and brought it under the control of England. It was therefore that he loved the Muslims.

He was not ashamed to play off the Muhammadans of India against their Hindu neighbours by pandering to their vanity by describing them as the descendants of "those who formerly occupied such a commanding position in India," etc., etc.

Since then has commenced the Hindu-Muhammadan trouble of modern times. Unfortunately the number of turbulent men is so large amongst the Muhammadans that they have taken advantage of the avowed declaration of policy of Lord Dufferin and have commenced the persecution of the Hindus, and by so doing they think they will win the favour of the British officials. Efficient steps have also not been taken so far to put a stop to the Hindu-Muhammadan riots which are taking place in different parts of India.

Wanted a Commission on Hindu-Muhammadan Fracas

A Commission or Committee should be appointed to record the opinions and evidence of persons of both the communities as to the causes which lead to frequent riots. The Commission should give a history of all the Muhammadan riots in India since 1871, when there was a riot between the Muslims and (not the Hindus, but) the Parsis. The Commission should also inquire into the measures which Government have taken to put a stop to these riots and whether the steps taken were just and fair and did not show partiality to the followers of one creed at the expense of the other.

The Khilafat Question

Mahatma M. K. Gandhi and his followers committed a great mistake in having made the Khilafat question one of the planks of their non-violent non-co-operation movement. It was a tactical blunder to have done so.

Half a century ago, when Gladstone was

lecturing in England to drive the Turks and baggage out of Europe, some of the stay-at-home Englishmen expressed their alarm at his utterances, for they were afraid that these would offend the Indian Muhammadan subjects of the Queen and might make them revolt against the British Government in India. It was with reference to this fear that Professor Freeman, the well-known historian, used the expression "Perish India." The cause of humanity was considered to be of higher value than the possession of India. But when the Turks were almost driven out and baggage out of Europe, there was a revolt of the Indian Muslims against the British Government. Attempts were made without doubt to inflame the fanaticism of the Muslims, which made some of them leave India to go and settle in Afghanistan and some other Muhammadan countries, with results well known to all.

No, the destruction of the Khilafat has made Turkey ring out the old and ring in the new spirit of the age. Kamal Pasha's revolution is welcome for the cause of humanity, for it will in course of time make the fanaticism of the Muhammadans a thing of the past and lead them to progress in all directions.

Mr. and Mrs. L. K. Elmhirst's Work in England

The following telegraphic message gives the latest information about Mr. and Mrs. Elmhirst's work in England—

London.—Mrs. Leonard K. Elmhirst, formerly Dorothy Whitney Straight, whose second marriage took place in April of last year at Old Westbury, L. I., has purchased a tract of 1000 acres in Devonshire, where she and her English husband intend to establish a large vocational school for the teaching of various trades for boys.

Mr. Elmhirst, of an old Yorkshire family, was educated at Cambridge and then took a post-graduate course at the Cornell Agricultural School. He went to India to engage in educational work. The couple met at Cornell, to whose sociological work Mr. Straight, as she then was, gave 1000,000 dollars. On their arrival in England several months after the marriage they bought Dartington Hall, a mile and half from Totnes, Devon, with the adjoining land on which their educational work is to be carried out.

The Hall is the old estate of the Champeney family and is on a high hill overlooking the River Dart, surrounded by an Elizabethan garden. When it was purchased, however, it was sadly in need of repair. Mrs. Elmhirst, who is not very strong, has been resting on her doctor's orders, but

entering too heavily into the work for the vocational school.

Mr. Elmhirst's excellent pioneering work in connection with the Agriculture and Rural Reconstruction Department of Viswambharati at Sriniketan, Surul, is well-known.

By the by, we were rather surprised and amused not to find in Mr J A Spender's interesting article on Sriniketan any reference to the work done there by Messrs. Elmhirst, Kalimohan Ghosh, Santosh Bihari Basu, etc Who could have been Mr. Spender's informant?

Italy Pays Homage to Germany's Intellectual Victory

Signor Mussolini has a real vision for a greater Italy whose glory is to surpass the greatness of ancient Rome. He fully realises at his vision can be fulfilled only through the activity of the whole of the Italian people. Italy is poor, and she will have to assert her superiority in the field of industry and commerce as well as in the field of international diplomacy. Italy must learn from all quarters, even from Germany, her former enemy. A Milan dispatch of Feb. 4, 1926, says —

"Eighteen thousand volumes, mostly scientific publications recording Germany's achievements in science and industry during the war, have been received by the Italian Government on account of Germany's Reparation bill."

This shows the far-sightedness of the Italian Government, and at the same time it proves, beyond all doubt, the tremendous attainments of the German people in the field of science and industry. During the world war, under the most unfavourable circumstances, Germany with her eighty millions of population, produced 18,000 volumes—mostly scientific publications.

We often hear about India's greatness, but on the above standard she is lagging several leagues behind Germany. If India is to hold her own she must have to adopt means to increase the scientific and industrial efficiency of the nation; and the most important and urgent need is to raise the standard of Indian universities.

T. D.

Meaning of Signor Mussolini's Visit to Tripoli

After the successful settlement of debt negotiations with the United States and Great Britain, Signor Mussolini has taken active

steps to consolidate Italy's colonial expansion and has announced his intention of visiting Tripoli. [This intention has since been carried out.] The following Rome despatch throws some light on Fascist Italian ambition as an imperial power —

In opening the present session of Parliament, Signor Mussolini spoke of reviving the glorious traditions of the Roman Empire, to make this century an Italian Century. The significance of his words is being developed by the events of the last few days. The Fascist idea of re-creating Rome as an Imperial Capital has already reached the stage of action, and schemes for restoring the colonial power of Italy are going on publicly.

The premier has announced that he will go to Tripoli next month in company with the Colonial Minister, and spokesmen for the Duce have made clear his motives. General Verne has announced the formation of an inter-Ministerial committee composed of the Ministers of War, Navy, Colonies and Foreign Affairs for the furtherance of colonial development. The idea is elaborated by Signor Cantalupo, Under-secretary for the Colonies.

"We seek to strengthen the prestige of Italy wherever possible between the straits of Gibraltar and the Suez Canal, and from the Canal to the Gulf of Aden," says Signor Cantalupo. "The policy of Italy in Africa is dictated by her special situation as a young nation, at present poor in colonies, but destined to a great future. Italy should occupy the same position in Africa as she holds in Europe. The great problem of the next few decades will be to assure the transport of white troops to Africa for the inevitable struggle between the powers for the hegemony of communications from the Cape to the Mediterranean."

While European nations are seeking for colonies in Africa, the Indians in Africa are being sought to be driven out by the South African Government. For a Greater India—Indian nationalists should formulate a policy which will entitle Indians to have their own colony in Africa and the equal right to travel and settle wherever they want. This may not be accomplished now, but a far-sighted colonial programme for India is needed.

T. D.

Italian Progress in Ship-building

"An important event in the annals of the British Mercantile Marine will take place on February 26, when the first large high-speed, oil-driven ocean liner to sail regularly from a British port will make her maiden voyage. This vessel is the Royal Mail Steam Packet Company's Asturias, of 22,500 tons gross. The Asturias is wholly a British production. Precisely similar installations will be fitted in her sister ship, the Alcantara, and in the new Union-Castle liner, Carnarvon Castle, recently launched.

Noteworthy as these ships are, however, they will be surpassed, both in dimensions and power, by two Italian liners—the Saturnia and Urania—

building at Trieste, and also intended for the South American trade. They, too, will have double-acting engines, but their gross tonnage is 23,500, and their horse-power 21,000. An even bigger motor-ship is building in the same country, this being the quadruple screw *Augustus*, 33,000 tons gross and 31,000 h.p.

When a nation can challenge British superiority or even becomes a rival of Great Britain in the field of ship-building and merchant marine, then it cannot be denied that it has made a very marked progress. Italians do not belong to the so-called Nordic group of Europeans, and they are working under the great disadvantage of lack of raw materials and comparative national poverty, yet in every field of human activity, particularly in industry and commerce, they are making such a tremendous progress that they are surpassing their former superiors. It is not astonishing that the Italians will excel in ship-building and navigation, when we remember the wonderful feats of navigation and commerce performed by the Italians during the centuries when the so-called Nordics were in a semi-civilized state. In the automobile industry, electrical engineering, aeronautics, as well as the textile industry, Italian products are ousting manufactures of other countries from the Near East and South America. India like Italy had her wonderful merchant-marine, sea-borne commerce and industries. To-day in Italy the Government is led by a great genius, Signor Mussolini, who is aiding Italian national transportation systems and industries to capture the world-market, whereas in India, the British Government does not want to see the rise of an Indian merchant marine and industries which will rival those of Great Britain. However, the march of Italy should serve as an inspiration for Indians. Indian scholars and industrialists should visit Italy to study her methods. *Indian politicians always talk of Maxims, but the time has come to study the New Italy under Signor Mussolini.*

TARAKNATH DAS

Rome, Italy, March 1, 1926

Prehistoric Civilisation in Sindh

According to Sir John Marshall, Director-General of Archaeology in India, the remarkable discoveries made at Mohenjo-daro in the Larkana district of Sindh have revealed an entirely unknown civilisation which flourished in the valley of the Indus about 5000 years ago. In his opinion, though it

is unlikely that anything would be found at Mohenjo-daro as magnificent as the royal tombs or temples of early Egypt, neither Egypt nor Sumer of the third millennium B.C. has yielded anything at all comparable to the average type of citizen's house now being unearthed in Sindh.

Conventional Pipal tree with antelope heads on a seal from Mohenjo-daro

The drainage system, in particular, is extraordinarily well-developed. Every street and alley-way and passage seems to have had its own covered conduits of finely chiselled brick, laid with a precision which could hardly be improved on. The use of lime mortar appears to have been unknown at this period in India, and in any case there is no lime-stone in the neighbourhood. Mohenjo-daro from which lime could be burned nor is there in Sind any bitumen such as was used as a cementing agent in Mesopotamia was for this reason that the joints of the brick-work laid in the water channels had to be so finely worked.

Figures of Bulls on two seals from Mohenjo-daro

In Sir John's opinion,

.... this Indus civilisation must have developed and flourished in Western India for untold centuries. It extended over an immense area including so much of the Punjab, Baluchistan, and probably Rajputana and countries even further to the east. The term Indo-Sumerian let it be said has been provisionally adopted merely as indicating the close cultural connection between prehistoric civilisation of the Indus and that of Sumer, not as implying that the people of these two regions were of the same stock or spoke the same language.

About the finds in Mohenjo-daro Sir John Marshall writes:—

What is particularly striking and not a little astonishing about these finds is the great difference in the quality of their technique. Rough pieces of chert, for example, which served as knives and scrapers, have been found

A well and paved bath-room in an Indo-Sumerian house at Mohenjo-daro

hundreds all over the site and these vessels are as crude as such object could well be. But mingled with them, and contrasting strangely with their primitive appearance, are finely made objects of gold and blue lacence and exquisitely engraved seals, such as could only have been turned out by people possessed of marked artistic ability as well as great technical skill. In the construction of the buildings themselves, far superior to anything of the kind in later India.

The dwelling-houses have a "modern" character.

Most of the buildings are divided into good sized rooms furnished with their own wells and bath-rooms, floored over with brick, and provided with covered drains connecting with larger drains in the streets. The existence of these roomy and well-lit houses, and the relatively high degree of civility denoted seem to betoken a social condition far in advance of what was then prevailing in Mesopotamia or Egypt."

The gold ornaments are so well finished and so highly polished that they might have come out of a Bond Street jeweller's shop today rather than from a prehistoric house of 5000 years ago."

The seals, of which photographs of three are reproduced, show the high artistic skill of these ancient people. Most of the seals of which we have seen reproductions bear figures of the bull. One has the figure of an elephant. One, which we reproduce, has a conventional picture of the sacred pipal tree and two antelopes' heads springing from its

Remarkable Indo-Sumerian drainage 5000 years ago at Mohenjo-daro

stem. Whether it was a symbolic picture, and, if so, what the symbolism meant, have not yet been even conjectured. For, the pictographic inscriptions on the seals have not yet been deciphered. As probably many, if not most, kinds of alphabet originated from some kind of picture writing, epigraphists would probably find it interesting to establish, if possible, some kind of connection between the oldest Indian scripts and the Mohenjo-daro pictographs.

Two statues have been found hitherto, one being of alabaster and the other, which we reproduce, of limestone finished with a veneer of fine white plaster. It shows the statue of a bearded man, with the upper lip shaved, eyes inlaid with shell and the patterning on its robe picked out in red ochre. According to Sir John Marshall,

"Both of these statues portray a type of man unlike the modern Sindhi—a type with low receding forehead, prominent nose, thick lips and narrow oblique eyes. But whether these features were generally characteristic of the citizens of

An Indo-Sumerian Statue from Mohenjo-daro.

Mohenjo-daro, sufficient materials are not yet available for us to determine."

We do not know what type Sir John means by the modern Sindh—there are many types in Sindh, but our impression is that we have seen similar types of men in Upper India and the Bara Bazar quarters of Calcutta.

Says Sir John Marshal.—

That this great civilization which is now being revealed was no mere provincial off-shoot of Me-

sopotamian culture, but was developed for countless generations on the banks of the Indus and its tributaries, is becoming more and more manifest as our excavations advance. Who the people were, who evolved it, is still an open question, but the most reasonable view seems to be that they were the pre-Aryan (probably Dravidian) people of India known in the Vedas as the Dasvus or Anshus, whose culture was largely destroyed in the second or third millennium B. C. by the invading Aryans from the north just as the older Aegean culture of the Mediterranean (which in some respects bears a striking resemblance to this culture of Indus) was largely overwhelmed by the invading Achaeans.

The illustrations to this Note are reproduced from the *Illustrated London News*, which our acknowledgements are due

Fascism in India

If you have not got real sensation news, invent them. That seems to be the motto of jealous imperialistic scaremongers. Witness the following clipping from an American paper, heading and all,—

"INDIAN FASCISTS WORRY BRITAIN

(Tribune Press Services)

LONDON, Mar 27.—The India Office has been ordered to report on the activity of Fascists in India, particularly among the Indian princes and aristocracy. Official Britain is much worried by reports of the activities of Italian agents in India and by visits of Italian professors and others to Indian princes.

A large number of Fascist clubs are said to have been started in Bombay and Calcutta among the landholders of Bengal and other provinces. Efforts have been made to start similar organizations among the Zamindars of Bengal and the Taluqdars of Oude."

We are not aware of any activity of Fascists in India,—perhaps because we are neither Indian princes nor Indian aristocrats.

We know of the visits of only two Italian professors to India, viz., Prof. Finichi and Prof. Tucci. The former has been in India after lecturing on subjects relating to ancient Indian scholarship, philosophy and religion, mostly at Santiniketan, and also at the Dacca, Benares and Calcutta Universities. *En route* to Italy, he spoke at Bombay and wherever he spoke he spoke on subjects which only Indologists and educationists are interested. It was no part of his business, public or private, to see Indian princes.

Prof. Tucci is still at Santiniketan. He is an Indologist and Sinologist combined and is doing professorial work. He also is

neither the leisure nor the inclination to go about seeing princes.

Those who are envious and jealous and are themselves adepts in the arts of intrigue see or conjure up bogeys where none exists.

Some time ago an Italian gentleman delivered a lecture in Bombay on some non-political subject. We do not know whether he is a professor anywhere.

So far as Calcutta and Bengal are concerned, we do not know of "a large number of Fascist clubs"; in fact, we do not know even of one. We hope our readers in Bombay and the United Provinces will very kindly tell us whether these terrific things have sprung up there.

We were at first credited with having Bolshevik agents in our midst, we have now some (invisible) Fascist agents. We want more variety. Who are scheduled to come next?

The Bengal Muslim Party

Sir Abdur Rahim and his followers have joined themselves into the Bengal Muslim Party. For any Muhammadan, and particularly for Sir Abdur Rahim, to form such a party cannot surprise anybody. But what is amusing is that he has felt it necessary to camouflage it as something other than what it is. For the party speaks in the opening paragraph of its manifesto in the most liberal and nonsectarian tones.—

The working of the Government of India Act, states the manifesto, which is a first step towards the establishment of responsible Government in the country has made it abundantly clear that there is imperative need for the formation of a political party which will think in detail for all sections and classes of the people—Muslims and Hindus, Anglo-Indians and Christians, the ryots and labourers, the depressed classes and untouchables—with a view so to improve the economic and intellectual condition of all, and to secure such a distribution of political power among the general population that domination by a class of monopolists and the intelligentsia may become ultimately impossible.

There is no question that such a political party is or would be the ideal one. But will Sir Abdur Rahim and his colleagues state their qualifications, credentials, antecedents and past achievements to convince people that they sincerely desire and would be able to "think in detail for all sections and classes of the people" mentioned in their manifesto? Have these Moslem leaders ever helped even the Moslem ryots and labourers

of Bengal when in distress owing to famine, flood, earthquake, tornado, etc.,—not to speak of other ryots and labourers? Have these Moslem leaders any non-official educational organisations even for Moslems alone like the organisations conducted mainly or solely by non-Moslems for the benefit of Moslems as well as non-Moslems?

We should be glad indeed to believe that Sir Abdur Rahim has undergone a "sea-change" after his celebrated Aligarh speech and become a broadminded nationalist. But supposing he had changed, would it not have been better for him to give some concrete proof of the fact before making lofty professions of the most liberal and advanced political principles?

He speaks of domination by a class of monopolists and intelligentsia. The word 'monopolist' can really apply with greatest appropriateness to the Britishers and Anglo-Indians. But the Midnapore knight is not the man to tackle or offend them. And he speaks of 'a class', not 'classes'. Therefore, he means that the intelligentsia are the monopolists, both form one and the same class, and they are the educated Hindus. But he will find that in some provinces the educated Hindus occupy a far smaller number of Government posts than their education and number would entitle them to; e.g., in the U.P., where Moslems form only 14 percent of the population, but hold a much larger number of posts in the provincial and lower executive and police services than the Hindus. Perhaps, therefore, the knight is thinking of Bengal. But here, too, the public services are not a Hindu monopoly. But we shall deal with this point later on.

Sir Abdur Rahim wants to put an end to domination by the intelligentsia. Does he then want to establish the rule of the *un-intelligentsia*? That would certainly be a new thing in politics and constitution-making. For even in Soviet Russia, which is said to be and have been under proletarian dictatorship, Lenin, Trotsky and others, who were the real leaders and rulers, were members of the intelligentsia. Even his best friends cannot claim for Sir Abdur Rahim the great virtue of being illiterate or unintelligent. So in the new order of things heralded by his manifesto, he must, by a self-denying ordinance, retire from public life, and leave the Rahimian constitution to be run by the *un-intelligentsia*.

For it is not probable that he would stoop to retain power by pretending to be a dunce.

The second gem which we are privileged to cull from the manifesto is worded thus. —

For this purpose it is necessary to adjust all political and administrative measures to the varying circumstances and differing aptitude and outlook on life of the various elements of the population as moulded by their respective religions, culture, history, traditions and customs. It is by this means alone that in the existing conditions in India, will it be possible to evolve a strong, self-reliant and prosperous Indian nation.

Strictly and logically interpreted, the first part of this paragraph ought to mean that political and administrative measures should not conform to any approved modern ideals or principles of political science, but ought to suit the differing idiosyncrasies, traditions, tastes, prejudices, superstitions, etc., of the various elements constituting the population of a country. Obviously then, the same kind of government or administration would not be to the liking of different classes, creeds, sections, races, etc. What, then, are government and administration to be like in India? Should it be autocratic, despotic, bureaucratic, aristocratic, theocratic, oligarchic, democratic, republican, mobocratic, matriarchal, patriarchal, etc., at one and the same time? Will Sir Abdur Rahim kindly vouchsafe a little more light? Most probably, of course, his verbiage means that in Bengal Moslems must have the lion's share of political power, of posts in the public services, of scholarships in educational institutions, of accommodation in the same, etc., merely because of their numerical preponderance, with the result that the Hindus, Christians and others are to be deprived of what their superior education and ability entitle them to.

The second sentence tells us that Sir Abdur Rahim's way is the way to evolving a strong, self-reliant and prosperous Indian nation. That is entirely and absolutely false Communalism is the greatest obstacle in the way of nation-building.

The Bengal Muslim Party wants a Federated India consisting of autonomous provinces. We would not object to autonomous provinces with joint electorates electing candidates according to their political principles and ability, not according to their religious beliefs. We want communal representation to be knocked on the head once for all.

Progressive Tendencies and Bye-path Ancient or Mediaeval Obscurantism

The Bengal Muslim Party's man says :—

We affirm our firm belief in the necessity of Indians keeping abreast of European nations in Arts and Sciences, and we are opposed to isolating India from the progressive tendencies of the time, shunting her into the bye-paths of ancient mediaeval obscurantism.

So do we.

But the Party forgets that communal representation in elective bodies, division of public appointments on the basis of the numerical strength of religious communities, separate creedal universities, etc., themselves the antipodes of all progressive tendencies and must have the effect of shunting India into the bye-paths of old-obscurantism. Sir Abdur Rahim should discover a modern progressive country where these creedal and communal things are before he talks of progress.

As for keeping abreast of European nations in Arts and Sciences, he will excuse us for saying that such talk does not come with good grace from the lips of those who fight shy of competing even with their Moslem countrymen in the intellectual field, but want the largest share of political and official loaves and fishes merely because they are in the majority. Will Sir Abdur Rahim tell us what incentive there can be for Moslem youth to keep abreast of European nations in Arts and Sciences when an ordinary Moslem B. A. or even a Moslem Matriculant would, under the system of division of appointments according to the numerical strength of communities, secure Government posts which would be denied to brilliant B. Sc.'s and Ph. D.'s of the best Universities in the world?

"Government of the People, by the People, for the People."

The manifesto goes on to observe :—

To achieve the above end we as representatives of the Muslim community which comprises 10 per cent of the population of 26 millions, have constituted ourselves the Bengal Muslim Party. We have been led to form this party not in any spirit of narrow communalism or religious exclusiveness but because, as inheritors of a great democratic social system, with our outlook unembarrassed by the limitations of caste and untainted by untold disabilities we feel that special responsibility rests on us to contribute our best to the realisation of the

ideal of government of the people, by the people for the people.

The Party is self-deceived. It has been formed in a spirit of narrow communalism and religious exclusiveness. Islam certainly has a democratic social system, but its feeling of social equality, such as it is, is not co-extensive with all mankind or even with the entire population of this country, but is confined to the Muslim community. Moreover, there is, in practice, caste among Indian Moslems, and in many places they have, on many occasions, combined to keep members of the Hindu depressed or untouchable classes deprived of the use of public wells, etc. Even apart from that, the division of men into Muslim and *Kafir* is in spirit similar to the division into the groups of touchables and untouchables.

Sir Abdur Rahim says, he is out for government of the people by the people for the people. We say, he is out for Muslim ascendancy. To decide whether we are wrong, we propose a simple test. Let the principle of communal proportionate representation be logically and strictly applied in all provinces and in the central legislatures. That is to say, whether the Moslems be in a majority or in a minority in any province, they are to have representation exactly in proportion to their numbers, neither more nor less. Would Sir Abdur Rahim agree? We throw not. The principle he stands for is, "Heads I win, tails you lose." Where his community forms a majority, he wants proportionate representation, where it is a minority, he wants effective or adequate or proper, that is, excessive representation. Pray, why are Hindu, Christian, Sikh, Jain, Buddhist and other minorities not to have effective, i.e., excessive representation? And if all minorities are to have more than their proportionate share of representation, how are majorities to have their just share of it?

No; communal representation cannot be worked out in all its details with any regard for justice, consistency and logic. It is a mischievous idea and must be given up.

The causes which retard the political and economic development of the Muslim community of Bengal and seriously affect their general welfare ought certainly to be removed. But there is no short cut to such development and general welfare. The Muslim community must work as hard as other communities. They should take advantage of the educational facilities which exist for all, and create others for

themselves as the Christians and Hindus have done

Acceptable Items in Sir A. Rahim's Manifesto

We accord whole-hearted support to the following items in the Bengal Muslim Party's manifesto —

To strive for the revision of the Meston Award in order to obtain for Bengal an equitable financial arrangement with the Central Government so that the Province may have for its needs adequate sources of revenue capable of expansion and development.

To promote measures for improving the economic condition of the people and the sanitation and health of Bengal, special attention being directed to the needs of villages.

To promote measures for the industrial and agricultural development of the Province.

To promote measures for redressing the just grievances of the *ryots* and secure to them stability and security of tenure, and to improve their conditions of living.

To improve the condition of the labouring classes and with that view to promote sound factory and trade union legislation and other necessary measures.

Unacceptable Items in Muslim Manifesto

We certainly want that steps should be taken "to bring about an early revision of the Government of India Act with a view to place the Indian constitution on such a basis as is best calculated to lead to the establishment of full responsible Government with dominion status in the British Empire." But we are entirely against the separate representation of religious communities, either by joint or by separate electorates. Communal representation, instead of easing the tension of feeling between different religious communities, has been an added cause of communal quarrels, fracas and riots.

Whatever the creed of the minorities in any province or in the country as a whole, they can best secure their own welfare and progress by joining in the march of progress of the people as a whole, not by harbouring the false notion that they are separate classes with separate interests.

Representation Proportionate to Numerical Strength

Even if the advisability of separate communal representation were admitted, the

number of representatives of each community should be proportionate, not to its total numerical strength, but to the total number of voters it has. Therefore, the separatists should state how many voters they have and how many voters the non-Moslems have, and then work out the proportions. If they want representation exactly in proportion to the number of persons of their community of both sexes and all ages, they should first get a law passed giving the vote to human beings of both sexes and all ages, from infants upwards, the parents exercising the franchise as proxies for their babies. But as such an extension of the franchise would not be attainable in this unpoetic age, the next best thing to strive for would be adult universal suffrage, without any literacy or property qualification. Before that is done, all talk of separate representation proportionate to the numerical strength of the communities is unreasonable.

Distribution of Government Jobs According to Numerical Strength

The Bengal Muslim Party want the number of Muslim employees under the Government and other public authorities to be proportionate to the total numerical strength of the community of both sexes and all ages.

There is no doubt that if the Government and other public authorities had the power and the desire to give jobs to all inhabitants in Bengal irrespective of age and sex, then Moslems would get 2,54,86,124 posts and Hindus 2,08,09,148 posts. That would satisfy the Muslim demand. But Government and other public authorities have not got so many jobs at their disposal, and it would be rather too romantic and Utopian for this matter-of-fact world to make even babies in arms public officers. The next best thing which might be attempted would be to provide jobs for all literate persons of any age and sex; because, unfortunately for the Muslim Party, literacy is being more and more insisted upon even for police constableness. Now, there are in Bengal 29,16,996 literate Hindus and 12,99,548 literate Muslims of all ages. Therefore, if all literates got jobs, they would be distributed between Hindus and Muslims in the ratio of 29 to 13.

As, however, minors are not generally employed in public service and there is only

a very small number of posts for women, it may be roughly correct to say that public jobs are given to literate males of the age of 20 and upwards. The following table shows the number of Hindus in Bengal these ages who are literate in the vernaculars and in English:—

	Literate	Literate in English
Hindus	1855576	377856
Musalmans	917630	81803

Therefore, of posts for which mere literacy is required, Bengali Moslems would be entitled to half of what the Hindus would be entitled to and for those for which literacy in English is required Moslems would be entitled to a little more than one-fifth of what the Hindus would be entitled to.

But every one knows that for the public services, even for junior clerkships, copyistships, more than mere literacy in English is required. For such posts graduation can be had in plenty. The greater the unemployment among such men, caused by preference for less qualified Muslims, the greater would be the danger to the State.

For these reasons, the claim to posts proportionate to their numerical strength put forward by the Muslims is quite mischievous, absurd and unjustifiable. But any absurdity and injustice is possible under "divine right" rule.

What would be best for the people as a whole and for Moslems also is the employment of the fittest, irrespective of race, creed and caste. Let the physical, moral and intellectual tests, required for office, be laid down openly, and Bengali Hindus and Christians would be ready to abide by the results of competition in the country with Britishers and others according to these tests. Moslems would do well to accept such tests. No community can be advanced by securing undeserved jobs by favour or on the strength of a resolution carried by a snatch vote in an unrepresentative assembly.

Merely because public service is public service, there ought not to be distribution of public jobs according to creed and numerical strength, irrespective of comparative merit.

Let us take the position occupied by Moslems in the independent professions, where there can be no charge of favoritism or Hindu nepotism and intrigue. According to the census of 1921, in Bengal 177369 persons

workers and dependents) depend on the medical profession, western and indigenous. Of these 141325 are Hindus and 31718 Moslems. Law maintains 50,731 Hindus and 5002 Moslems. Even the profession of religion maintains 275604 Hindus and only 38,093 Moslems.

So, in fields where education is required and there is 'open door to talent,' every one being free to capture as much "custom" as he can by his ability, Moslems have not been able to win even a quarter of the work. This will show how unjust it is for them to claim a large fixed proportion of public jobs on the strength of mere numbers. Let them by all means get even all the jobs by merit; the objectors, if any, would then deserve to be condemned as wicked and envious fools.

The Bengal Muslim Party will admit that the principle which applies to the whole should apply to its parts. So, as Muslims claim a preponderant share of public jobs on the ground of their numerical superiority alone, the illiterate section of that community, which forms its vast majority, should have the largest number of the Government posts claimed for that community, the next largest being given to mere literates, and so on. That is to say, the largest number of clerkships and other Government posts reserved for Moslems should be given to illiterate Moslems, the next largest to those who are merely literate and the smallest number to Muhammadan 'M. A., B. L.'s', 'M. A.'s' 'B. L.'s' and 'B. A.'s'. The Bengal Muslim Party should not complain of such an arrangement, as with them number is the most important factor, not quality, and as all the posts reserved for them would, under the arrangement suggested above, go to Muhammadans.

The High Court and Judicial Appointments

The Bengal Muslim Party want that the High Court should be relieved of administrative and executive duties with reference to the Judicial Services. This implies among other things that the High Court Judges are not competent to choose the best men for the judicial services. Who are fitter, pray? Suppose it were ruled that the education department should not appoint teachers and professors, the medical department should not appoint physicians and

surgeons, and so on, but that the Inspector General of Police should make all such appointments, and the Excise Department should appoint Judges and Munsifs, and the Veterinary Department should appoint Engineers and High Court Judges!

A Muslim University for Bengal

We are not in favour of a Muslim University for Bengal—we have never advocated denominational Universities of any sort. But if brought into existence, they have, of course, to be tolerated. As grown-up persons of all creeds have to live and work as neighbors and fellow-citizens, they should be educated together in their early years and form friendships, know each other's good points, rub off each other's angularities, and grow into liberal, tolerant, and broad-minded cultured persons by mutual emulation and imitation. Narrow-minded religious extremists are not wanted.

Muslim students should, if necessary, be helped liberally with freestudentships and scholarships.

There is also pecuniary waste in having separate educational establishments for different creeds, as arrangements, equipments and staff have to be unnecessarily reduplicated.

The Muslim community should certainly have a voice on the administrative bodies directing and controlling different grades and kinds of education. Their membership on these bodies, to be won by merit, should bear the same ratio to the total number of members as the number of their educated men bears to the total number of educated Bengalis.

The Muslim Party want "that Muslim students derive benefit in proportion to the population of the community." We are not aware that in Government and State-aided institutions Muslim students do not enjoy the same facilities for admission as other students. They are as free to join them as others. But perhaps Muslims want that a fixed large proportion of seats should be reserved for them in these institutions. Such an arrangement may be given a temporary trial as a special concession and encouragement to them, provided that if by a certain date before the commencement of the session all the seats be not taken up by them, students of other creeds would be allowed to occupy the seats remaining vacant.

We understand that there is a desire among some Moslems that 54 per cent. of the total educational grant from the public purse should be spent for the education of Muslims. We do not understand how Musalman education is proposed to be separated from non-Muslim education from the primary to the University stage. Of course, even if practicable, which we doubt, such separation would be highly undesirable and injurious. It would, moreover, be very wasteful.

While on this point, we should like to ask a question. If public revenues are to be apportioned between different classes and communities for their educational or other benefit, it would be only just and proper that each community should have a share proportionate to the amount which it contributes to the revenues of the Government. That being the case, the question arises, what is the amount paid to the Government by the Muslim community? Can it be ascertained? If so, would it be 54 per cent of the total revenues? If not, if Muslims do not pay 54 per cent of the total revenues, how can they justly claim a 54 per cent share of any allotment, educational, or medical, or sanitary, or agricultural, or any other?

The public are entitled to have an answer to these just questions from Sir Abdur Rahim, the ex-Chief Justice of Madras.

The private colleges and schools of Bengal founded and run by non-Moslems, and they form the vast majority, could not be bound by any arrangements made with regard to Government and aided institutions. Nor could the University endowments made by non-Moslems be compelled to reserve proportionate facilities for Muslims. They must create their own separate similar facilities.

The Official Version of "Cooch Behar Affairs"

The authorities of the Cooch Behar State have placed us in possession of the facts contained in the following letter:

"I write to you with reference to an article in the April issue of your magazine, *The Modern Review*, headed 'Cooch Behar affairs' which has come to the notice of the Council of Regency of the Cooch Behar State.

"The article in question is calculated to mislead readers of your magazine as to the facts of the situation. It makes reference,

inter alia, to two petitions said to have been submitted to Government, the one by Rai Sahab Panchanan Barman and the other by a number of Cooch Behar subjects, and it gives extracts from the first-named petition. It appears to be necessary to explain here that the State is being administered during the minority of H. H. the Maharaja Bhup Bahadur, by a Council of Regency under the general control of Government and that the Government keeps in close touch with the administration of the State and is well aware how the administration is being carried on. As regards the petition said to have been submitted by Rai Sahab Panchanan Barman to Government, that petition was not submitted through the Regency Council and as it was apparently submitted so far back as 11 June 1925 and as no reference regarding the subject-matter of the petition has been made to the Council of Regency by Government it would appear that Government has ignored the petition, if actually submitted, as not meriting serious consideration. As regards the other petition, viz, the one said to have been submitted to Government by a number of Cooch Behar State subjects, I would inform you that careful enquiries have elicited the fact that practically all the signatures were forged and that the petition was in fact a bogus petition and was not submitted by a large number of State subjects, as your article would lead readers to believe. Further the enquiries indicate that the bogus petition was engineered by one individual out of malicious motives and it is significant that that individual did not himself sign the petition.

"As regards the employment in the State of Nawab Khosru Jang and Nawabjada Abdul Karim Khan, it may be pointed out that these two gentlemen, who both belong to Indian States and are highly connected, were given appointments by the late Maharaja Bhup Bahadur before the Council of Regency came into existence and that the subsequent appointment of Nawab Khosru Jang as Tutor to his Highness the Maharaja Bhup Bahadur was sanctioned by the Govt. of India. The continued employment of Nawabjada Abdul Karim Khan, who was secretary to his late Highness and a member of the State Council during His late Highness's lifetime, did not require the sanction of the Govt. of India. Your article is calculated to lead readers of it to think that the two gentlemen in question were given appointments in the State for the first time by the

Agency Council after the death of the late Maharaja and it gives no indication that the appointment of Nawab Khosru Jang as Tutor to H. H. the Maharaja Bhup Bahadur was made with the cognizance and approval of the Government of India."

We print the facts stated in the letter exactly as sent to us, without any comments. The reader will be able to arrive at his own conclusions by a perusal of this letter and of the notes on this subject already printed earlier in this issue and in the last issue.

"The Indian National Party."

The first week of April saw the formation in Bombay of a coalition named "The Indian National Party." Its members consist of Liberals, Independents, Responsive Co-operationists, Nationalists and Conventionists. The resolution by which it was formed runs as follows —

I (a) This Conference resolves that the party to be known as the Indian National Party be and is hereby formed.

(b) The object of the Party is to prepare for, and accelerate, the establishment of Swaraj or Full Responsible Self-Government in India, such as obtains in the self-governing Dominions of the British Empire with due provisions for protection of the rights and interests of the minorities and the backward and the depressed classes.

(c) The Party will employ all peaceful and legitimate means, not including mass civil disobedience or general non-payment of taxes.

(d) Amongst other parliamentary methods open to it, the National Party will inside the legislatures resort to Responsive Co-operation or opposition or co-operation as and when necessary and it will carry on intensive propaganda work in the country in furtherance of its objects. The National party may promote, as occasion may demand, movements of individual or group resistance to authority, for definite objects, on particular occasions, in particular localities.

(e) In pursuit of its objects, the Indian National Party will work in co-operation with any other party or political group which has the same object in view, and whose methods are consistent with the policy of this party.

(f) While the party is of opinion that the Constitution embodied in the Government of India Act of 1919 is inadequate and unsatisfactory, it will utilise it to the fullest extent it can (including acceptance of offices) both to accelerate the revision of the Constitution, as well as to ameliorate the condition of the people and to advance their interests in every possible way.

(g) The Party will, to the best of its opportunities, strive for the political and economic uplift of all classes, castes and communities, alike in the rural and urban areas, and will, in particular, work for the removal of untouchability and the amelioration of the condition of the backward and depressed classes.

(h) The Party will seek, by every means in its power, to promote unity among the different communities.

(i) Every person who has attained the age of 21 and signifies in writing the approval of the policy of the Party, will be eligible to be a member of the Party.

The National Federation.

It appears that the first week of April saw the birth of another political group or party to be known as "The National Federation." Most of its members were also members of the newly formed Indian National Party. The constitution of the Federation is briefly explained as follows. —

The members remain in their respective political organisations, but unite in a common effort to obtain Indian freedom.

The Federation defines Swaraj as full Dominion status as claimed by the resolution of the National Congress of 1921. It accepts Responsive Co-operation, wherever useful, for advancing the interest of the country and all forms of constitutional agitation against proposals inimical to these.

It supports the Commonwealth of India Bill now on the official list of the Labour Party in the British Parliament, and recommends that any amendments thought desirable by the Council of the Federation should be sent to the Amendment Committee of the Labour Party and to be moved when the Bill is in the Committee of the House.

It would seem from the above that the new Federation differs from the new National Party mainly or only in according support to the Commonwealth of India Bill and has been formed for bringing about its passage through the British Parliament.

Swarajist-Responsivist Agreement.

When the Liberals, Independents, Conventionists, Responsivists, and old Nationalists were deliberating in Bombay to form the "Indian National Party" with a view to united action among them, efforts were also being made to bring about a reunion of Swarajists and Responsivists. Those efforts culminated more than a fortnight later in a conference of the leaders of the two parties at Sabarmati, Mr. M. K. Gandhi and Mrs. Sarojini Naidu being also present. The conference adopted the following as embodying its decision on the points specially discussed.

"It is hereby agreed between the undersigned subject to the confirmation of the All-India Congress Committee that the response made by the Government shall for the purposes of clause (A)

nd (B) of resolution 2 B (4) of the all-India Congress Committee, dated 6th and 7th March, 1926, be considered satisfactory in the provinces [power, responsibility and initiative necessary for the effective discharge of their duties are secured to the Ministers and the sufficiency of such power, responsibility and initiative in each province shall be decided in the first instance by the Congress members of the Legislative Council of that province subject to confirmation by a Committee consisting of Pandit Motilal Nehru and Mr. M. R. Jayakar. It is further agreed that the said Committee will decide all disputes about the selection of candidates in the Congress Provinces of Bombay, Maharashtra, Barar and the Marathi C. P.

"This agreement has been subscribed to by the undersigned in their individual capacities and it will be submitted for ratification to the executive of the Swaraj and Responsive Co-operation parties. It will be placed for ratification before the All-India Congress Committee which is being convened on the 5th and 6th May next at Sabarmati (Ahmedabad)."

This statement is signed by Mrs. Sarojini Naidu, Pandit Motilal Nehru, Lala Lajpat Rai, Mr. M. R. Jayakar, Mr. N. C. Kelkar, Dr. B. S. Moonje, Mr. S. Aney, Mr. D. V. Gokhale and Mr. Agale — see Press.

DEFINITION

Note — Clauses (a) and (b) of the Delhi resolution referred to above were as follows: — That Congressmen in the Legislature shall (a) refuse to accept office in the gift of the Government until, in the opinion of the Congress, a satisfactory response is made by the Government, and (b) refuse supplies and throw out the Budgets until such response is made by the Government unless otherwise instructed by the Congress Working Committee.

We doubt if under the Government of India Act, as it is at present more power, responsibility and initiative necessary for the effective discharge of their duties can be secured to the Ministers than they have had already. In any case, it seems to us that the all-India Congress Committee meant more a "satisfactory response" than what it would hereafter be interpreted to mean according to the agreement. To that extent the agreement is a triumph for the Responsivists and a climb-down for the Swarajists. But this fact need not elate the former, nor should it deject the latter if by a combination of their forces the two parties can bring about a reform of the "Reforms" before 1929.

This reunion of the two parties definitely attaches the Responsivists from the new Indian National Party and to that extent weakens it.

When Civil Disobedience Is Not Civil Disobedience.

Civil disobedience is undoubtedly one of the methods of constitutional struggle for

civic and political advancement. British history proves it. Lord Hardinge presumably knew the meaning of the expression when he declared the Indian civil disobedience movement in South Africa constitutional. Opinions will, of course, differ as to when and under what circumstances civil disobedience may be resorted to.

By sanctioning movements of individual or group resistance to authority for definite objects on particular occasions in particular localities, the new National Party supports the principle of civil disobedience, though it has declared itself against mass civil disobedience or general non-payment of taxes. If the groups of civil resisters be large and many, and if the localities where they dwell be also large in number, what would be the difference between such a state of things and mass civil disobedience? The line will have to be drawn somewhere. How many groups of what numerical strength each in how many localities at a time will *not* constitute mass civil disobedience according to the law-givers of the National Party? Of course, if they mean that *all* inhabitants of British India must not simultaneously have recourse to passive resistance, they need not have laid down the law at all. For such a thing is improbable, though not impossible. So far as our knowledge of history goes, mass civil disobedience of this universal character never took place in any country.

Running of Candidates by Hindu Mahasabha

We are opposed to the running of candidates for election to the legislative or other elective bodies by the Hindu Mahasabha. Hindus who hold various kinds of political opinions and are members of different political parties, are members of the Hindu Mahasabha. It cannot, therefore, favour any candidate holding one kind of political opinion to the disadvantage of another candidate of different views, both being its members. If it does so, its membership and importance are likely to decrease.

The proper sphere of work of such associations is social, religious, and, if need be, economic and educational. No doubt, on the rare occasions when some social or socio-religious bill is on the legislative anvil, the Sabha should try to make its influence felt. That it should do by representations, agitation, and conference with the Hindu members of council.

Hindu and Christian politicians have all along rightly opposed communal representation. If the Hindu Mahasabha now runs candidates of its own, it would be practically going in for communal representation. That would be an evil, and if the Mahasabha's efforts succeeded, there would be very few members of legislative bodies left to work for the welfare of the people as a whole and build up the nation. No doubt the Hindu Mahasabha's nominees would profess (and they may do so sincerely) that they would think and work for the good of all communities, but in practice their interest and activities are bound to be circumscribed. The Bengal Muslim Party's manifesto also begins with a declaration of very liberal principles, but the details mentioned later on reveal what its real aim is. We do not want a similar Hindu party in India or in any province. Our councils and politics should not be dominated by religious or theological extremists of any creed.

Our Frontispiece

During the ninth month of the Muhammadan year Muslims fast in all daylight hours. The period of fasting ends when the new moon is first seen. In our frontispiece to this issue a Muslim lady is represented as looking for the new moon on the last day of the month of Ramadan. The festival of *Id* follows the next day.

Difficulties in Publishing the May Number

Owing to our offices, press and residence being situated within the area badly affected by the Calcutta riots—they being in fact within the danger zone, and owing to all our employees being residents of the affected area, we have had great difficulty in bringing out the present number of the *Modern Review*. We do not wish to give any harrowing details. It will suffice to say that shootings and deaths have taken place more than once within some yards of our offices and press as well as our residence. All our friends will, therefore, kindly excuse our shortcomings of any description relating to this issue.

The Calcutta Riots

The Calcutta riots originated in what may be called "religious" dissensions. But at its later stages no religious question was at issue. Fanaticism has, no doubt, been in evidence throughout. But if the hooligan element had not taken advantage of fanatical outbursts, the riots and cowardly assassinations would not have lasted so long and been so widespread.

Communal hatred has had certainly much to do with these most lamentable happenings. But that is not the only cause. Expectation of loot is an important cause on all such occasions. This is clear from the hooligan element repeatedly making the wealthy Barabazar business quarters their centres of attack. The inoffensiveness and unpreparedness for defence of the Marwari and other traders make them the chief victims.

The unprovoked murders of innocent Hindus and Muslims, old and young, male and female, are most cowardly and diabolical, the knife and dagger wounds being mostly on the backs of the victims.

The destruction and desecration of temples and mosques cannot but be condemned by all right-thinking men. The destruction of mosques is a new feature of such riots. In the matter of the destruction of places of worship of other religious communities, the record of the Hindus has hitherto been clean. It is much to be regretted that it has now been tarnished. Mosques have no doubt been destroyed or desecrated from a feeling of revenge and in retaliation for the destruction of temples. But no Hindu, not even a Hindu godma, ought to have given way to such feelings of revenge and retaliation. The destruction of temples by Muslims also calls for condemnation, but not for fresh condemnation, as with a section of them it has been a centuries old practice. We do not know what the feelings of this section of Muslims have been at finding that a similar section of Hindus has paid them the sincerest tribute of admiration by imitating them. But our opinion is that both Hindus and Moslems ought to be ashamed of the destruction of places of worship.

It is with far different feelings that one records that in some localities Hindus and Moslems combined to defend both temples and mosques. The reports in the papers of the protection and rescue of Muslim in-

dividuals and families by Hindus and of Hindu individuals and families by Muslims are equally welcome. It is also encouraging to find that in the very few localities where mosques were threatened, Muslims succeeded in baffling the wicked attempt.

The attacks on temples were more numerous and determined. They were repulsed in most cases. Bengali young men—students and others, distinguished themselves greatly in repelling these wicked attacks. In fact, it was their courage and united front which emboldened the up-country Hindus in many localities. Similarly, in defending many quarters Bengali young men took the leading part. Some times they had to patrol the streets at night and on the danger signal being given, charge the aggressive mobs. Firing has sometimes had to be resorted to, that is to be regretted. Owing to the breakdown of municipal conservancy arrangements, Bengali young men and boys have also swept and watered streets, flushed drains and disposed of refuse.

The English-owned and English-edited papers have tried as much as possible to ignore or minimise the successful efforts made by the people themselves to defend their hearths and homes and temples. These papers would have liked very much to see the people merely crying abjectly for help without being able to do anything themselves. Of course, the people want the help of those who are entrusted with the duty of maintaining law and order—they have a right to such help. For whatever help has been given by the police and the military, they are entitled to due praise. On the whole, they have been latterly helpful. But that is no reason why the spirit of self-help manifested in deeds by a practically unarmed, if not disarmed, people should not be duly recognised.

It has been found that of those engaged in frays, the Muslims were more often armed with knives, daggers, swords, and other edge weapons, and the Hindus with cudgels, pieces of bamboo, old iron rods, etc. This is perhaps due to two reasons. Hindus have in the past been subjected to house searches by the police more often than Muslims, and have in the past, therefore, not procured or kept edge weapons. In the second place, Muslims being given more to meat-eating and consequently slaughtering animals, edge weapons are

more often kept and used by them. A few well-to-do Hindus keep guns according to the Arms Act. Unlicensed revolvers have been found in the possession of some members of Muslim mobs with which they have killed and wounded even some policemen.

Probable Causes of Renewal of Riots.

Some points in connection with the riots have been brought out by a third party, namely, the editor of the Christian weekly, *The Guardian*, in the following sentences—

However, looking back over the events of the week, it is possible to make certain comments on the position of affairs. In the first place, it is remarkable how quickly the two communities organised themselves to protect their sacred edifices—the more responsible elements of each took their share in this defensive work. In the second place, the assaults which resulted in serious loss of life and limb were the work of hooligans, Hindu and Muslim, of which Calcutta contains a very large number. The operation of the Giondas Act itself is an indication of the wide-spread nature of this evil. The Hindus, it is curious to note, used sticks or iron rods as instruments of offence, the Mussalman roughs on the other hand used knives very largely. In the third place, the aggressive Hindus were almost entirely non-Bengalis—usually upcountrymen, whereas the Bengali Mahomedan was involved. In this connection it is interesting to record that the young Bengalee of the student class not infrequently shewed great gallantry in rescuing an unfortunate person from the assaults of hooligans, and his chivalry was extended to both communities. In the fourth place, the Mahomedan has had a nasty surprise. He has despised the Hindu for his supposed lack of courage, but disillusionment very quickly followed after the very first hour of rioting. We have great sympathy with the Muhammadans as a backward community. Throughout India they are in the economic grip of Hindu merchants, from the commercial magnate on the one hand, to the village money-lender. They are outclassed in every walk of life—save as tenant farmers and labourers. The leaders of the community are painfully conscious of the handicap from which it suffers, and the present Government has allied itself with them in their demands. The bogey of Muslim unrest and turbulence, and the possibility of the alliance of Indian Muhammadans with their Asiatic co-religionists has been conjured up, with the result that during the last decade the Muslim had only to threaten and the Hindu capitulated. The later history of communal rioting, be it in Delhi, Nagpur and now in Calcutta, demonstrates that the Hindu can hold his own when it comes to the test of brute force.

The mention by the Christian editor of *The Guardian*, of the "nasty surprise" and "disillusionment" of the Mahomedans,

with whom he has great sympathy, leads one to conjecture that the "nasty surprise" and "disillusionment" of the latter may have had something to do with the recrudescence of the riots and the acts of murderous assault on individuals by individuals, after things had quieted down. Had the rowdy section of the Moslems been able to carry everything before them, as had hitherto been the case on most similar occasions, had only temples been damaged or destroyed but not mosques also, and had only many Hindu shops, firms and houses alone been looted but not a small number of Muhammadan shops also, the feeling of revenge and retaliation would not have smouldered and blazed forth again. But it is only a conjecture. It also seems to us that the inflammatory writings of three vernacular Moslem newspapers of Calcutta which excel in purveying false news and the sensation-mongering of one Hindu newspaper were responsible for the recrudescence and continuance of communal disturbances. The Government and the police authorities cannot have been unaware of this fact. But we are not aware that the papers in question have even been warned. The practical degradation of Rai Bahadur P. C. Lahiri, the able Deputy Commissioner of Police of North Calcutta, who dealt with the first series of outbreaks energetically, as far as he was allowed to do so, and quelled them, had, we presume, also something to do with the second series of outbursts of violence. The more so, as it is rumoured that that was done at the instance of a well-known Muslim leader. Mr. Lalit's humiliation must have acted as a damper on many Indian police officers and encouraged a section of the rowdy element. The fact that some Hindu religious or festive processions were either prohibited or stopped, but Kabuli and Peshwari Moslems were allowed to take a musical procession along the streets with impunity in spite of official orders to the contrary, must have emboldened some of the hooligans.

Attitude of the Government

When the riots first broke out, the police showed masterly inactivity for the first two days. Even after that period, some looting of houses and murderous assaults took place

within the cognizance of the police and the military without their doing anything to stop them. Nothing was done to raid and close some eating-houses and other dens whence, the police were definitely informed, hooligans came out to attack unwary passers-by, to hide themselves there again after doing their nefarious work. Latterly, of course, the police and the military have shown more promptness and rendered good service.

So far as the Government of Bengal are concerned, it does not seem to have taken the situation at all seriously. Sir Hugh Stephenson came down from the cool heights of Darjeeling for a day or two, went up to them again, and condescended to revisit Calcutta for a brief period. His Excellency the Governor did not show even as much concern or activity. He might as well have remained in England and received hourly news of arson, rioting, plunder and bloodshed by wireless. Even the English-owned and English-edited papers of Calcutta have had to point out that he ought to have been in Calcutta throughout. The Europeans in Calcutta began to bostir themselves only when beef and mutton became scarce, and their business began to suffer appreciably. Before that it seemed as if they had been witnessing the strengthening of the foundations of British rule and exploitation.

Riots of No Use To Any Community

The unspirituality, immorality and wickedness of these communal riots may not be realised by all. But it may be understood by all that from the worldly point of view, neither the Hindu community nor the Muslim community, as a whole, derive any advantage from riots and bloodshed. If they were a fight for supremacy, the prize being the establishment of Hindu Raj or Moslem Raj, the motive, though condemnable, could be understood. But they are nothing of the kind. They serve only to rivet the chains of slavery round our necks more firmly. And politics apart, both Hindus and Moslems of all classes are involved by them in great pecuniary loss, and have to suffer in life and limb and in other ways. It is only some hooligans of both communities, if they do not get killed or maimed, who are gainers to some extent.

Accidental Timeliness of the Riots

The present year's April disturbances in Calcutta happened in the nick of time, as if scheduled to do so, to enable British imperialists and exploiters to impress on the mind of the new Viceroy at the very beginning of his rule the cogency of the argument that communal riots prove our unfitness for self-rule. But these riots take place not under *our* rule but under *British* rule. Therefore what they prove is the futility and failure of British rule, not our unfitness for self-rule.

Funny and Tragic Division of Labour

It is a very funny and tragic division of labour and of functions that the British people have great power to create conditions favorable or unfavorable to communal harmony and also have the power and the weapons to maintain law and order; but that we alone are held responsible for communal riots and our inability to maintain or restore law and order! A great parade is made of the fact of European soldiery quelling riots after the failure of other measures. But it is forgotten that Indians possessed of similar arms and powers could do the work as well or better and more quickly.

"Is There a Hidden Hand?"

Dr. Mrs. Besant's *New India* asks, and adds:—

The resumption of rioting in Calcutta, while it is most deplorable, seems to argue the presence of a mischief-making agency secretly at work. Communal riots usually flare up very quickly, like the fire of stubble, giving vent to easily aroused passions, and die down equally rapidly. The resumption of rioting, after 12 days' respite, before the memories of the ill deeds recently perpetrated have scarcely begun to fade from men's minds, when, indeed, they would be expected to be full

of grief and contrition and plans for the prevention of any repetition of the incidents at a later date, is as unexpected as it is unprecedented in recent times. It looks more like a deliberate, cold-blooded campaign, interrupted for tactical reasons. The Calcutta events convey one moral: British power, held to be indispensable for India's protection, is unable to guarantee the safety of life and property of peaceful law-abiding citizens in normal circumstances. Sir Abdur Rahim and his Muslim co-adjutors cannot entirely escape responsibility for the untoward happenings in Calcutta, as their inflammatory communal propaganda must have contributed to the production of an atmosphere favorable for such outbursts.

A strong rumour is current in Calcutta that in the course of a search the police have found inflammatory leaflets in the house of a leader. If the rumour be true, it may give a clue to the identity of the hidden hand, if any; if not true the Government should contradict the rumour.

Communal Tension and the Duty of Hindus

Hindus should cease to think of and treat Musalmans as *mlchchhas*. They should not try to interfere in any way with the sacrifice of cows in mosques and private Muhammadan houses, even if visible from roads and other public places. The sacrifice of goats and buffaloes is repugnant to Vaishnavas, Jains, etc., nevertheless meat-eating Hindus sacrifice them openly.

Extent of Communal Riots in India

The prevalence of communal riots in India will be understood from the fact that in British India there are 500042 towns and villages, in not even a hundred of which do such riots occur in the course of any year. We should not have exaggerated notions about their frequency and prevalence.

YOGA-MIMANSA

—Edited by—

SHRIMAT KUALAYANANDA (J. G. Gune.)

The journal is a quarterly organ of the *KAIVALYADIHAMA* recording scientific researches in Psychophysiology, Spiritual and Physical Culture etc., with their application to Therapeutics. Each number covers 80 pages of the royal 8vo. size including 16 full page illustrations. The matter is divided into four different sections so as to meet the needs of all types of readers. The journal appears in the middle of January, April, July and October. Second year begins with Jan. 1926.

Annual Subscription per volume and single copy respectively India, Rs. 7 and 2; America, \$ 3.50 and 1; other Foreign Countries \$ 15 & 4.

N.B.—First volume complete, will sell for the original price to the end of April 1926. Afterwards it will cost: India Rs. 9, America \$ 4.00, other Foreign Countries \$ 17. Single copies not available.

A FEW APPRECIATIONS.

"The issue before us is a valuable and interesting production and fully justifies the unique place and importance of the journal in the realm of modern scientific and philosophical literature The printing and get-up of the journal is fine, as befitting a scientific journal recording great truth."

—*Current Thought, Madras.*

"From its general appearance and get up of the journal and the matter it contains one can see that the work is in able hands and in time the institution will be as useful and popular as the New York Institute of Science."

—*United India and Indian States.*

"Yogic culture is looked upon as something mysterious and secret. This endeavour to bring it before the popular gaze and to interpret it in the light of modern sciences is altogether unprecedented in this country."

—*The Kesari, Poona.*

"Your attempt to explain Yogic physical culture in the light of modern sciences has my heart-felt sympathies."

—*Prof. Manikrao, Baroda.*

".....I have gone through the book carefully and have found the researches very interesting"

—*Mahamahopadhyaya Kavray Sen, M.A., L.M.S., Cuttack.*

".....Your excellent journal is a new venture of its kind and I have read it with interest"

—*A. C. Bishard, M.R.A.S., London, Calcutta.*

".... I have only had time just to glance at it, but I am already convinced that it will be of great service to serious students of Yoga in the West."

—*G. R. S. Mead, Editor of the Quest, London.*

NEW BOOKS

INDIAN NATURE AND EDUCATION

With special reference to India by A. S. Wood-
burn of the Madras Christian College. Rs. 6-8-0.

A new contribution to psychological science
compiled with special reference to Indian con-
dition and problems and with most of the illus-
trations drawn from Indian school life. A book
for all educationists and thoughtful people.
Just published.

SCENES & CHARACTERS FROM INDIAN HISTORY

As described in the work of some old masters—
compiled and edited with historical and explana-
tory notes by C. H. Poyne. 6s.

A brilliant little book that brings life into the
pages of history.

'The book will be found a valuable support to
lessons on the history and geography of India'

—*Statesman*.

SPIRITUAL VALUES IN ADULT EDUCATION

Some studies of a neglected aspect by Basil
A. Yeaxlee. 2 Volumes 25s.

A work of theological, philosophical, and
sociological importance 'This book is most valu-
able and informing'

—*Pioneer*.

AN ECONOMIC HISTORY OF ENGLAND 1066-1874

by Charlotte M. Waters 7s 6d

A compact book of unique authority 600
pages long.

The book is beautifully and profusely illustrated

THE OXFORD BOOK OF ENGLISH PROSE

Chosen and Edited by Sir Arthur Quiller-Couch
pp. xx+1002

Ordinary paper, 8s. 6d. On Special India Paper
10s 6d

Handsomely bound in dark blue cloth with
gold lettering. This book was published in Eng-
land on the 25th anniversary of the publication
of its world-famous sister volume The Oxford Book
of English Verse

Published at the same prices and in the same
style and is now available in India

This book, the most ambitious of its kind, con-
tains 600 extracts and carries the reader from the
beginning of English Prose to its modern develop-
ment at the hands of such as Conrad, Hardy and
Lytton Strachey.

"Letters, journals, speeches, translations.....
historical, and novelists, philosophers, political,
moral and metaphysical, essays, criticisms, natural
history, sport and battle, the Prayer Book and the
Authorised Version.....the book deserves an en-
thusiastic welcome."

KRISHNA AND THE PURANAS

Essays on the Origin and Development of Vaishnavism

BY SITANATH TATTVAHISHIAN.

Elegantly bound in cloth. Rs. 1-8.

To be had of the author at 210-3-2, Cornwalli Street, Calcutta and of Dr. Ramkrishna Rao, Principal, Pithapur Maharaja's College, Cocanada, Dist. Godavari. The book traces the history of Vaishnavism from Vedic times to that of Chaitanya, gives the teachings of the Vaishnava Puranas and the literature of Bengal Vaishnavism, shows the bifurcation of the religion into the old and the new school and draws lessons from its success and failure.

Padmapurana and Kalidasa, by H. Sarma, M.A., with a foreword by Dr. M. Winternitz. Rs.

A Work of exceptional interest and Outstanding importance

Now Ready! Now Ready!!

Rigvedic Culture

By DR ABINAS CHANDRA DAS, M.A., PH.D.
*Author of "Rigvedic India" and Lecturer in Ancient Indian History and Culture,
 Calcutta University*

Demy 8vo. About 600 pages Well bound in Cloth, gilt With Illustrations and Maps.
 PRICE RS. 10/- NET.

A FEW OPINIONS

The Asiatic Review (April, 1926), "Supplemented with an excellent bibliography and copious index, 'Rigvedic Culture' should prove of great interest to the Vedic students on account of its attempted re-construction of the life actually lived in Rigvedic times. It is a volume of 561 pages, and Mr. Das, as lecturer on Ancient Indian history and culture, is to be congratulated on his zeal, industries and learning."

The Statesman (16 May, 1926) "Mr Das follows the European method and has given us a detailed picture of Vedic life—what Vedic men thought is of importance, but history wants to know also what they did. Mr. Das

sets out with ample learning the organization of their society, their ways of living, their agricultural practices, sports, war and all else that may be looked for in a treatise on antiquities. He has drawn on many sources for his material, and has rendered a service to history and Sanskrit scholars."

The Hindu (Madras)—"A volume of outstanding eminence, and a very valuable contribution towards the building up of the grand palace of ancient Indian History. The volume is one of arresting interest and displays erudition and acumen of remarkable type. It marks a new stage of achievement by modern Scholarship."

Principal S. Ray's New Sanskrit Works

1. Bhavabhuti's Uttaracharitam

PROF. A. BERRIEDALE KEITH, *Edinburgh University*, says :—

"I have looked through your book in order to see whether there are any suggestions which I could usefully make to secure greater adaptation to its purpose. It seems, however, that the mode in which the work is performed is well adapted for its purpose, and I note with satisfaction the effort to render the text into effective English. The explanations seem well adapted to secure comprehension of the text, and certain new renderings deserve serious consideration."

PROF. E. J. RAYSON, *Cambridge University*, says :—

"I have read with great pleasure and interest. The commentary and notes are admirably clear."

S. Ray & Co., 90-4A, Harrison Road, Calcutta.

Beware of Scented Hair Oils Sold in the Market.

DO you know that most of the so called Scented Hair Oils sold in the market contain many injurious Chemicals in order to preserve them for some years? Besides that some Scented Hair Oils which are usually sold in large bottles are made entirely of Lubricating Oils which are very injurious for the head and hair. Why buy so called Scented Hair Oils sold in the market?

Scented Hair Oils, having medicinal properties, are made because they are made from pure Coconut, Castor, Castor, Groundnut, Gingelly and Olive Oils. These Oils are very efficacious in promoting the growth of hair, stop the falling of hair, increase the brain power and memory.

QUESTION OF COST.

IF you prepare Scented Hair Oil with our Mahar Pine Scent, your total cost will be about from Rs. 1.50 upward to produce 16 Ounces of Scented Hair Oil according to the Odour and Strength of the Scented Hair Oils desired. Now think of what you pay for the ready made Scented Hair Oils sold in the market. You pay Rs. 1 for 4 ounces of the ready made scented hair oil. If you prepare your own Scented Hair Oil at your own home with our Mahar Pine Scent, you will get 4 to 5 times of high quality scented hair oil at a fraction of cost.

The Haft Paikar or Life of King Bahram Gur and the Seven Stories told by his Seven Queens. Translated from the Persian with full commentary by Prof C. F. Wilson, Ph.D., F.R.S. 2 vols. (1889) 1921. 32 sh.

All linguistic difficulties have been solved by Prof. Wilson in his commentary over 2000 notes in which much historical and geographical information can also be found.

1. THE ECONOMIC HISTORY OF ANCIENT INDIA

Recommended by the Faculty University for C. M. A.

by Dr. John K. Winters, Chairman, and Prof. Carl

311 pages Price Rs. 3

2. THE LEAGUE OF NATIONS. Price Rs. 2.

The *International Secretary-General* of the League of Nations writes from Geneva. It seems to contain a very clear, well-written and interesting account of the principles and work of the League and should be particularly welcome in India.

Mr. Meston says: "Your work was badly wanted in India where the value of the League is widely known. You give an admirable description of its purposes, its spirit and its achievement. I hope your book will be read by a very large public."

To be had of the Author, 5-2, Ananda Dutt Lane, HOWRAH P.O.

MONEY WILL BE RETURNED IN CASE OF FAILURE

Raj Rajeshwari Talisman The wearer of this charm is sure to be blessed with sound health, great wealth, high fame and numerous profitable ventures in attaining earnings, honest friends and lucky children free from the sin of blood-donations. "SOME" OF THE OPINIONS

D. N. CHAKRAVARTI, P. A. Khelpura H. L. School
 Finally writes: I have pleasure to inform you
 that your Rao, Rao swari and Sarbamanjari sah-
 s have given me the marvellous plot which I
 had dreamt before I have had no faith of
 in things before but you have had indeed given
 my ideas now.

R. C. CHANDRASEKHAR, 15-11-1970 writes ~ I shall never forget you in my life for the benefit I got from your 'Nalagruha' and 'Raj Raso' and 'Tali-rangis'.

Md Lakub Ali Mohendgom Putabarna Bangal
 I have secured good effect beyond expectation
 from your Nabagruha and Garva-Rak ha 'Too'
 both.

SANTINIKETAN

President :—Rabindranath Tagore

New session re-opens 1st July. Residential institution in healthy surroundings (free from Malaria), 99 miles from Calcutta, with a supply of good drinking water and fitted throughout with electric light. Well equipped hospital. Extensive play-ground. Experienced staff of residential teachers and professors with high academic qualification. Special facilities for general culture. Well equipped library consisting of a unique collection of oriental and continental literature.

Vidyabhavana (Institute of Research)

Facilities given to earnest research students in the following branches of Indology: Vedic and Classical Sanskrit Literature, Pali and Prakrit, Indian Philosophy, Buddhism—Indian, Chinese and Tibetan, Indo-Aryan Linguistics, Bengali Literature, Hindi Literature: Regular instructions provided for the following languages: Classical and Modern Chinese, Classical Tibetan, French, German and Italian.

A very limited number of students will be admitted this term.

Sikshabhavana (College Department)

Arrangements have been made under which Regular students of the Santiniketan College (both boys and girls) may sit for the B.A., (Pass & Hons) and I. A. Examinations of the Calcutta University. Following are the subjects for which tutorial guidance is provided:

B.A. (Pass & Hons)—(1) English (Pass & Hons.) (2) Bengali (3) & (4) Sanskrit (Pass & Hons.) Pali (Pass & Hons.) Linguistics (Pass & Hons.) French, German, Philosophy, History.

I.A.—(1) English, (2) Bengali, Urdu, (3) Sanskrit, Pali, Persian, French, German, (4) & (5) Logic, History, Mathematics, Botany.

Pathabhavana (School Department)

Regular students of this department may sit for the Matriculation Examination of the Calcutta University as private students. Special attention given to Manual Training, Art, Music, Sports and Games. Separate teaching arrangement for infants under an experienced educationist. Girls look after the food, amusements and comforts of the infants.

Naribhavana (Women's Department)

Separate establishment under a qualified Lady Superintendent. Special provision for training in Music, Art, Needlework, Domestic Science, Sick-nursing and Cooking.

Kalabhavana.

ART SECTION—Provision made for painting, decorative work, wood block, litho-printing, and artistic book-binding. There is a small art museum and decent library attached with this department.

MUSIC SECTION.—Regular instruction given in classical and modern Indian vocal as well as Instrumental Music.

A limited number of students (both boys and girls) will be admitted into all these departments.

Applications for admission should be accompanied by certificates of good character and mark sheets and must reach the office before the 16th June.

CARPENTRY
TANNERY
WEAVING

SOCIAL SERVICE WORK IN VILLAGES

Boys of 15 and 16 are earning, after one year's training, Rs. 25 to 30 per month in weaving.

Poultry is very paying, if followed scientifically. It does not require much capital.

Carpentry and Tannery offer a handsome income and there are hardly any good
 centers of some education

Land offers a good income if only one would work it

The new term begins from June 1.

For further particulars apply to—

Sriniketan-Sachiva, Sriniketan, P.O. Surul, Bõlpur.

All the branch offices are equipped with eminent physicians who attend to all who go there for medical help, free of charge.

WORKS OF PROF. JADUNATH SARKAR, M. A.

AURANGZIB

50 years' eventful history, and a life's task in research.

Complete in 5 vols. sold separately, Rs. 16.

Vols. I & II together (Second edition)

Reign of Shah Jahan and War of Succession, Rs. 5.

Vol. III. Northern India, 1658-1681, 2nd ed. Rs. 3-8

Vol. IV. Southern India, 1646-1689, Rs. 3-8.

Vol. V. (1689-1707) Rs. 1.

Based mainly on original contemporary Persian sources, viz., the Mughal State Papers, daily bulletins of the Mughal Court, the letters of Aurangzib and his contemporaries, (more than 5,000), Marathi bakhars and letters and the Assamese buranyas, besides contemporary Factory records of the English, French and Portuguese.

H. BEVERIDGE.—"Jadunath Sarkar may be called *Primus in Indis* as the user of Persian authorities for the history of India. He might also be styled the Bengalee Gibbon."

VINCENT A. SMITH.—"You are doing first-class work. I have the highest opinion of your learning, impartiality and critical ability."

W. FOSTER, C. I. E.—"It is easily the best authority on the period with which it deals."

Studies in Mughal India

320 Pages. Rs. 2.

Contains 22 Historical Essays on India in the 17th century and Mughal civilization in all branches.

ASIATIC QUARTERLY REVIEW—"A series of essays of the most entertaining description."

INDIAN ANTIQUARY—"All the essays are brightly written and several contain information not hitherto available in English."

Mughal Administration

Second edition, size more than doubled.
Rs. 3.

A study of the administrative system of the Mughal Empire, the Departments, the functions of the chief officials, the provincial administration, its influence on the peasants, the legacies of the Mughal Empire, the causes of its downfall,—Emperor—aristocracy—State factories, farmans.

SHIVAJI

Second edition, revised & enlarged. Rs. 4.

PIONEER.—"Probably the only really first-class piece of work in English on Maratha history published during the present century."

H. BEVERIDGE.—"Jadunath Sarkar.....All his works are good, but perhaps the best of them is Shivaji. It is full of research and gives a striking picture of the birth of the Marhatta nation." Based on an exhaustive use of all the available original materials—Persian, Marathi, Hindi, Dutch and English—most of which were unknown to Grant Duff. Shivaji's character and achievements, and the Maratha institutions and system of Government are discussed in two long chapters 45 pages."

Anecdotes of Aurangzib

English translation, notes and a long life of Aurangzib
2nd. Ed. Re. 1-8.

The work is exceedingly interesting and valuable, as it throws much new light on Aurangzib and exhibits his pithy sayings, and his principles of government.

Ahkam-i-Alamgiri

Persian Text of Anecdotes, 2nd ed. Re. 1.

Chaitanya

2nd ed., Greatly enlarged. Rs. 2.

Original life of the greatest Vaishnav saint of Bengal, with an old portrait.

C. F. ANDREWS.—"The book is of surpassing value. The picture drawn of the saint is one of extraordinary beauty."

Economics of British India

4th edition, (1917), 384 Pages. Rs. 3.

The handiest and most accurate description of India's economic condition and problems. "An indispensable *rade mecum*." (MODERN REVIEW)

Later Mughals, 1707-1739

By William Irvine, I.C.S.

edited and continued by Prof. SARKAR.
2 thick vols., Rs. 8 each, sold separately.

Prof. P. E. ROBERTS—"A contribution of first-rate importance, certainly will always remain one of the chief authorities for the period. A piece of work done with amazing thoroughness."

K. R. Qanungo's

SHER SHAH, Rs. 4.

The authoritative history of the great Pathan,

JAT HISTORY

Vol. I. (down to 1782) Rs. 3-8.

An original contribution to Indian History in the 18th century, with a foreword by Jadunath Sarkar.

Why invest in Teas ?

BECAUSE :—

1. Tea Shares defy all investments in the shapes of dividends and Premiums
2. Several Indian managed Concerns have been paying dividends varying from 50 per cent to 400 p.c.
3. Only industry in which Indians specially Bengahes have proved very successful.
4. There being ready buyers always, Tea shares are very easily negotiable
5. A few shares provide for a family permanently
6. The whole world buys most of its requirements from India.
7. Tea grounds in certain parts of India only where Rainfall is over 100"
8. Prospect of Tea gardens is gradually increasing.
9. Being agricultural industry peculiar to certain districts only the trade is bound to maintain its position in future.
10. The investment is the safest and most profitable, leading the nation towards constructive work.
11. Only 4 p.c. of the produce of such a highly paying industry is claimed by Indians, the balance 96 p.c. goes to other nation.
12. It calls for organized efforts to nationalise this industry.

Agents wanted all over India for sale of shares of the Madhabcherrah Tea Estate Ltd., owning an old garden and having 8 p.c guaranteed dividend paying shares with prospect of dividend up to 100 p.c. at least within a few years.

The Historical Works of Major B. D. Basu, I. M. S. (Retired).

1. Rise of the Christian Power in India.

Five volumes Rs. 5 each; Postage Extra.

The Author has explained in the preface why the British Power has been called the Christian Power.

LATEST OPINION

"CURRENT THOUGHT" WRITES.—"Major B. D. Basu in his *Rise of the Christian Power in India* remarks that not only did India pay for all the wars which enabled the British to establish their empire at all the surplus revenue of India was drained out of the country to pay dividends to the Christian merchants constituting the East India Company.

"We have already reviewed the first three volumes of *Rise of the Christian Power in India* in terms of the highest praise. The last two volumes are as interesting and instructive as the previous ones. These five big volumes will keep Major Basu's name as a great historian. In the last two volumes the author carries his story still further ..

"One has to admire the critical method and the deep insight with which Major Basu carries on his discourse. All the five volumes are full of references and those who question the truth and authority of his statements (which may seem very revolting at the first instance) have to verify the notations given by him. The English writers from almost the same materials, had given us a dark picture. Major Basu now presents the other side of the shield, basing his statements on the same materials. It is a pleasant reading, when we turn from the dark picture as painted by European writers to this able defence by Major Basu, who, however, is not blind to the defects of Indians. He, therefore, remarks that the Britishers could not have acquired political supremacy in India but for the help they received from traitors amongst Indians. It is really a problem why there were so many traitors in India. Our author observes that it has been lack of patriotism which to some extent accounts for it. With it also comes the want of forethought and fore-sight and self-aggrandisement."

2. General Index

to Major Basu's "*Rise of the Christian Power in India*," Five Vols.
by Gangacharan Roy Choudhury, M.A., B.L.

Cloth, Gilt Letters, Rs. 2.

A very handy, convenient and useful book for those who have purchased Major Basu's Monumental Work as well as for those who may do so hereafter.

3. Story of Satara.

A true history of how Satara was annexed and its Raja deprived of his Sovereignty.
Rs. 10; Postage Extra

4. History of Education in India under the Rule of the East India Company.

The author has shown that English Education in India was first begun by the Indians themselves, and that when the Government took it up, it was done with selfish motives. These motives have been laid bare from official papers, Rs. 2-8, Postage Extra

5. History of the British Occupation of India

By N. Kasturi, B.A.

Cloth, Gilt Letters, Rs. 3.

This is a summary of "*Rise of the Christian Power in India*" by Major B. D. Basu, I.M.S. (Retired), in five volumes. Those who may not be able to afford to buy the bigger work and others who may wish to have some idea of its contents should purchase this book. It is furnished with an index and a list of references to the bigger work.

All public Libraries, All University Libraries, All College and School Libraries, All Libraries of Educated Indians should possess these valuable works. They supply the corrective to our incorrect knowledge of Indian History. The Author supports his conclusions by copious extracts from official dispatches, Parliamentary papers and proceedings, and the works of British and other European Authors, which few Indian Libraries possess.

RAJAH RAMMOHUN ROY'S MISSION IN ENGLAND

(Based on Original records)

By Brajendranath Banerji, Author of BEGAM SAMRU, etc.

This book throws a flood of new light on the most important chapter in the life of the Maker of Modern India. The unpublished records of the Government of India have been thoroughly ransacked and the full history of Rammohun's embassy to England on behalf of the poor Emperor of Delhi,—the obstacles he met with in India, how he overcame them—what he did in England—has been here published for the first time. The petition drafted by the Rajah for the Mughal Emperor is a literary treasure written in a masterly style and with the most cogent reasoning, which has been recently discovered by Mr Banerji and printed in this work.

SARIBADYARISHTA—Rs. 3 per seer (ideal blood-purifier tonic of the day)

H. E. Lord Lytton, the Governor of Bengal says : "I was very interested to see this remarkable factory which owes its success to the energy and enthusiasm of its proprietor, Babu Mathura Mohan Chakravarty. The preparation of indigenous drugs on so large a scale is a very great achievement. The factory appeared to me to be exceedingly well managed and well equipped, and I hope that it may continue to prosper." 11-5-3.

H. E. Lord Ronaldshay, ex-Governor of Bengal says : "I visited the Sakti Oushadhalaya (Dacca) on June 17th, and was shown everything by the proprietor Babu Mathura Mohan Chakravarty, B. A. I was very much interested in all that I saw, and was astonished to find a factory at which the production of medicines was carried out on as great a scale ... Babu Mathura Chakravarty seems to have brought the production of medicines in accordance with the prescriptions of the ancient Shastras to a high degree of efficiency." 17-7-30.

H. E. Sir Henry Wheeler the Governor of Bihar and Orissa says : "I had no idea that the manufacture of indigenous drugs was carried on upon so large a scale. The whole thing bears marks of enterprise and success." 30-7-30.

Benhabendin S. C. R. Das says : "I desire to place on record my high appreciation of the work of this factory. The business is carried on in an orderly and organized manner. Supervision leaves nothing to be desired. I congratulate the proprietor on the success which this business has already attained." 24-10-32.

WAR AND PEACE

A CONVERSATION

(REV.) WENDELL M. THOMAS, JR., (B.S., M.A., & T. M.)

Time: Any time since the latest war.

Place: Any place in the U. S. A.

CONSERVATIVE You fellows seem to think favor war. Far from it. War is hell. Believe me, I've seen enough of it to know that! But the way to stop war is to prepare against it by building up an adequate defence.

RADICAL But man, weren't the big powers all armed to the teeth when the cold War broke out?

CON. No. Germany alone was prepared, and her first easy victories make that perfectly plain. If the Allies had been prepared, Germany wouldn't have dared to stir.

PHILOSOPHER. What do we mean by "preparedness?" It seems silly to say that Britain with her invincible navy and France with her magnificent army were not prepared, if indeed they were not as prepared as Germany. Preparedness, you see, is wholly relative. No matter how all the peoples of the earth sweat blood to increase the efficiency of their war machines, one particular nation or group, according to the law of distribution, is bound to be the best prepared. This one, like Germany, will be called "prepared" all the rest, like the Allies, relatively unfit to fight, will be called "unprepared." As long as militarism lasts, then, nations or groups but one must be inevitably unprepared; hence, according to our own theory, the world will always be in a state of war.

CON. You can't meddle with the law of distribution, the world abhors a vacuum. If you want peace, prepare for peace. In a world of peace, nations are

prepared for, when they want to prepare against. The way to stop war is for every one to refuse to fight under any circumstances.

CON. Oh, you're talking about Heaven. I'm talking about this old earth. As long as human nature remains what it is, nations will go to war. It's a necessary evil. Our business is simply to keep so strong that no nation will want to go to war with us.

LIBERAL. You're assuming that human nature is something fixed, and fixed pretty bad, at that. As a matter of fact, human nature is a bundle of possibilities. Within limits, society can call forth what it will. You and a savage headhunter are both human; but social environment has made the big difference. By deliberately cultivating peaceful social attitudes, society may give peaceful instead of warlike expression to our natural impulses. But it's a big educational task. I don't agree with our radical friend that war can be abolished by conscientious objectors.

RAD. Don't misunderstand me! Not one must the individual disarm his heart and his mind by refusing to fight, but society must disarm by getting rid of its main competition in economic imperialism based on selfish capitalistic exploitation.

LIB. May be so. But mere wholesale condemnation won't build up a solid peace. Stopping war is a job, that's all. And we've all got to tackle it. It will take time, money, effort, organization. We must utilize the League, the World Court, the Churches, any unifying agency we can lay our hands on. We must work for a revision of history text books, responsible press, cooperation in industry

amelioration of race contacts, the liberation of art, a substitute for war, the economic boycott of international outlaws, and all the rest.

RAD. That's all very well. But while you are slowly building up your peace machine, another war will come and smash it to bits, and civilization likewise! You can't sail north by south! There is little use in working for peace with one hand, while you hold on to war with the other.

LIB. Who's holding on to war?

RAD. You are! If war should come now would you fight or not?

CON. I don't know about our liberal friend, but I can tell you what I'd do. If the old flag were fired on, I'd be the first to enlist!

RAD. Wow, listen to the eagle scream! "My country, right or wrong!"

CON. Don't try to be funny. Some people still love their country, and I'm one. You, no doubt, are all-wise, and know when the country is right or wrong. I don't. But I do know what's right for me, and that's my patriotic duty. And when the enemy appears I'm willing to do my bit for God and Country.

PHIL. If patriotism is the supreme motive why "lug in" God?

CON. You border on blasphemy! What do you mean?

PHIL. Please excuse my "shop talk." I mean, are God and country the same?

CON. What a question! Of course not. God is a Spirit. The country is land, people, government, business,—you know what the country is.

PHIL. I mean while obeying the government, is it possible to disobey God?

CON. It's possible, I suppose, but in our country we don't have to worry about that. The flag and the cross are intertwined. God has always been on our side.

LIB. So we fondly believe! The trouble is every nation cries, "God is on our side!" In truth, however, God is supreme above all nations and any action that is really right must express the will of the universal loving God, not the mandate of some particular competitive government.

RAD. Sounds good. But again I ask you if war should come now, would you fight or not?

LIB. Well, I frankly place loyalty to religious conviction above loyalty to country. I earnestly hope that the time may never come when we shall have to use force against any

other nation. But I believe we must still by a policy of moderate preparedness hold our selves in readiness to take up arms, if despite our best endeavors to avoid it, this is nevertheless necessary. Yes, some special occasion may possibly arise when I would feel it my Christian duty to fight.

RAD. Ha! Just as I said! Holding on to war with one hand. "Best of both worlds," eh? A radical in talk, a conservative in action. Christian duty! What did Christ say? "Turn the other cheek, love thy enemies!"

CON. Don't be a literalist. I am a great admirer of Jesus, but these commands are to be taken as ideals, not as strict rules for real life. If we tried to follow them now, people would take it as a joke,—think we were fools.

LIB. The teaching of Jesus is neither rigid rule, nor yet mere impractical ideal, but penetrating insight into good living, prophetic intuition of God's will for men, a neat grasp of a whole practical system of action. "Turn the other cheek," for instance, is the poet's vivid way of saying, "in all aspects of life, overcome evil with good, even tho it involves sacrifice."

RAD. Thank you for expressing so finely my own deepest sentiments. When our conservative friend called me a literalist he uttered a vile slander. "The letter killeth, the spirit giveth life." No one authority do I blindly follow, but freely seek truth from all of God's prophets, sages and seers. As a matter of fact, they all agree that evil can be overcome only by good. But how can you express the same sentiment, and still hold on to war?

LIB. Now who's slandering? Don't keep telling me I "hold on to war!" I simply recognize that on occasion, the organized force of a nation truly in the right may be an instrument in the hand of the universal God of love, an instrument for overcoming evil with good.

RAD. But man, how can force be an instrument for good, when it is, by its very nature, evil? God is love. Force is the opposite of love. Love is the free expression of personality. Force is the cramping suppression of personality. As long as force is used, love has no chance.

CON. Do you mean to tell me that it is wrong for a policeman to beat up a thug?

RAD. Yes. I admit the way of love will involve agonizing sacrifices at first, but when it finally wins out we'll have a new and better world.

PHIL. Imagine a family in a canoe in the middle of a lake. One of the boys starts rocking the canoe. He refuses to heed words of warning. Is the father wrong in forcing him to stop?

RAD. No. Of course not. Here force is simply love in action, seeking the common good.

PHIL. Then why isn't the force used by the policeman simply society's love in action, seeking the common good?

RAD. Well,—I guess you're right. I'll grant that when all other methods have failed, force may be used in love as the servant of the common good.

PHIL. But, as long as force serves the common good, isn't it in that special capacity *always* justified? What is all progress in industry, science, and government by the mechanism of force used by humane intelligence, or love, in the service of the common good? Force is not essentially destructive, not the opposite of love. True, its most spectacular human manifestations have been destructive wars. And reacting in disgust from such a display, you have naturally condemned force wholesale. But force itself is simply an instrument, a means to an end. If the end is wholesome and harmonious, its force is good; if the end is selfish and disruptive, its force is evil.

CON. It's easy enough to talk about the common good and harmonious ends when only a family or a city is concerned. But in the complicated life of nations, who knows what is the common good? All we can do is to play fair, and fight only when attacked.

LIB. But, precisely because the life of nations is so complicated, it is silly to say "play fair, and fight only when attacked," as tho a nation were a street urchin. To be sure, nations no less than persons should be held morally responsible for their acts. But we must recognize that for most purposes it is viciously misleading to treat a nation as a person. It is not a separate body, but a complex section of a complex civilization. Its government is not the sole controlling force, but merely one of a vast number of interacting forces, commercial, industrial, educational, and all the rest. Moreover, in modern warfare, an effective defence involves attack.

RAD. Will you yourself then kindly give us an instance of when it is right to fight?

LIB. A nation may justly fight to uphold the mandates of the League, or the rulings of the World Court.

RAD. I'm not talking about the future. In time, the League may become democratic and potent, and the World Court more than an ideal. What to do now?

LIB. Just as a policeman may fight to uphold the law of the land, so also the armed force of any nation may fight to uphold international law.

RAD. International law! Mostly a farce! But even suppose it be taken seriously,—it won't cover every situation. What then?

LIB. In that case well, frankly, I don't know.

PHIL. Well, let's see. We have all agreed, I believe, that force is good only as a means to harmony and peace. The only question is when does force lead to war, and when does it lead to peace? Most of us would agree that a *police* force leads to peace.

LIB. Yes.

CON. Of course.

RAD. Provided the police force is unarmed.

CON. An unarmed police force? What nonsense!

RAD. My dear fellow, are you ignorant of the fact that the splendid London police carry no guns?

CON. What do they carry?

RAD. No weapons at all. Oh, I guess they do carry clubs.

CON. Aha!

PHIL. Well, perhaps we could all agree that a police force using a studied minimum of violence is a sure means to peace.

RAD. Proceed.

PHIL. Our aim, then, is to establish an international police force.

RAD. Not so fast! A civil police force, I admit, makes for peace,—at least roughly. But a world force of conscripted humanity with its airplanes, gas bombs and battleships under the control of a League of Powers would prove a monstrous and tempting weapon. No! If all the governments and peoples spent a tenth as much time, effort and money on promoting peace as they do preparing for war, we shouldn't need an international police force.

PHIL. Shouldn't we? Why not? A police force is essentially not a source of violent compulsion, but *an organization of intelligence for peaceful regulation*. You yourself just now declared that the London police were unarmed. I agree that we should leave no field unexplored in seeking to promote peace. But an international force is not

so much a substitute for a peace drive as its practical result. I admit it may be poorly organized and unnecessarily violent at first but it will be far superior to the present method of settling disputes.

RAD. Perhaps. But at present we have no such force.

PHIL. True. If we are to find a guide for the present we must go deeper. On what does police force rest?

LIN. Law.

COX. You mean law rests on police force?

PHIL. You're both right. Law and police force support one another. But both rest on the life of the actual community, on the "common good." Not clubs or statute books, but *satisfaction in the community and dread of social ostracism* is the basic peacemaker that controls the actions of particular individuals or groups. Accordingly, if force is to be used in the service of peace, it must be based on a *community of interest*. War is essentially wrong not because it employs force or causes suffering, but because it is a ridiculously ineffective instrument. It doesn't accomplish its purpose. In claiming to be a method of settling disputes, of settling them, mind you, it claims to be an instrument for peace. Its actual effect, however, is to hold off peace. Dividing society into separate groups, it destroys the community, and thus deprives itself of the basis for peaceful settlement or reconciliation. The end of war is not a settlement but an agitated exhaustion. On the other hand, *any force that ends in reconciliation is good*.

RAD. But how can we be sure that the force we use will indeed end in reconciliation? Force is a terrible and dangerous instrument, and its actual results may be far different from our peaceful aim. "The end does not justify the means."

PHIL. Exactly. Our means are justified not by well meaning ideal ends, aims, or "good intentions," but by their *actual ends, results or social consequences* spreading on and on in all directions.

COX. But we can never know these results beforehand. We can only do our duty. What else is there to guide us?

PHIL. In dealing with nature, we can, to a large extent, foretell results. This achievement is the fruit of science. In dealing with society, it is, of course, neither possible nor desirable to foretell exactly every minute event. But it is indeed

possible and supremely desirable to foretell the main trends of crucial choices; and this I grant we are unable to do with sufficient accuracy to insure successful living. This failure is due to the lack of social science, with its store of facts and precise methods. Yet even now, we can, to some extent, foretell trends. We are not wholly without a guide. And our duty is not to follow blindly a traditional system of passion and prejudice, but to use that guide.

COX. What guide?

PHIL. The little social science that we do possess; our present grasp of the law of cause and effect in human activity. We know at least that a social event does not drop down from the sky, but is the inevitable end or consequence of the materials, aims and means employed.

LIN. The material, of course, is human nature.

PHIL. Yes. And our aims and means must be such as to call forth from this human nature peaceful results. First, as to aims. Since real peace, as we have seen, is based solely on community of interest, *our deliberate aim in any particular situation must be the common good*. If it be "to uphold national honour," "to defend our boundaries," "to protect our citizens" resident in a foreign land, "to safeguard our economic interests," "to punish an arrogant government," "to enforce international law," "to make the world safe for democracy," or any aim whatever short of the common good, we may feel perfectly sure that the actual ends or consequences of the force we use will be a crop of moral diseases, instead of the healing adjustment of peace. Of course, we must use subordinate aims, but we must know from experience that they are consistent with the common good.

LIN. But how can we discover the common good?

PHIL. It is not a thing or an idea that someone can discover, not some distant goal that we can see and work for, but *the harmonious present living of everybody concerned*, a general working satisfaction roughly expressed in a favourable "public opinion." Mark well, the common good is *present living* and it requires the cooperation and sympathy of everybody.

COX. You speak of "general satisfaction." Now, if the U. S. troops should force a big

band of Mexican brigands to stop their plundering or if the Powers should force the Turks to stop the periodic habit of massacring the Armenians, I should strongly approve. But it is rather humorous to say that this use of force would "satisfy" the Mexicans or the Turks.

PHIL. It wouldn't. Only if such brute force were fulfilled by a humane education that would transform the offenders into orderly and sociable members of the civilized community, and thus *satisfy the problem in general*, they would themselves be satisfied.

RAD. Then why use brute force at all? Why not use this socializing education in the first place?

PHIL. Good. This brings us to the question of *means*. Indeed, we should use education from first to last. Since an end is not some distant goal, but the continuous, growing and inseparable consequence of the means employed, it is ridiculous to expect a humane end to result from brutish means. *Co-operative education, or in other words, a liberal and practical religion, is the great humanizer and peacemaker. Brute force is of service only as a bodyguard to protect the work of friendly education from the degraded assaults of those impervious to its immediate influence.*

COV. But suppose Japan should grab the Philippines, or swoop down on the west coast of the U S A. Wouldn't the latter be justified in offering armed resistance?

PHIL. No. The Japanese are neither a primitive tribe nor a band of outlaws. Such an action would be the result of an accumulation of mutual mis-understanding. The proper course would be not to intensify the ill feeling by bitter resistance, but to eli-

minate it by scientifically overcoming the difficulties that caused it.

RAD. Yes. The Japanese forces might seize a few public buildings, but unless the U S resisted, there would be no bloodshed. Besides, upon feeling the whole world's disapproval of her arbitrary and unavenged aggression, Japan would withdraw if for no other reason than to avoid a general suspicion and boycott.

COV. Before we finish our discussion, let me say that I still believe in preparedness. For safety's sake we should keep an army and navy. But I see now how they might be turned chiefly to peaceful uses, employing force only for protection.

LAW. Yes. But our main job is to work for international understanding and co-operation. If the forces of each nation were gradually merged in an international police force, this organization could progressively dispense with weapons as it progressively took up such work as public order, relief, reclamation, sanitation, and elementary mass education.

RAD. The tap root of war is large-scale economic exploitation for profit. Heroic appeals to defend the country are mere camouflage. We must smash organized industrial selfishness. In the meantime we should openly continue to encourage the attitude of non-participation in war under any circumstances. *War is always wrong—not because force is wrong; I see that fallacy now—but because in war force cannot possibly be used in the service of the common good.* This is the ideal to strengthen and guide us in our work of remaking the actual world.

AMERICA JOINS THE WORLD COURT

By SUDHINDRA BOSE, Ph.D.

Lecturer in Political Science, State University of Iowa

THE United States Senate has recently voted to put America into the international court system. The Senate has stipulated that all the forty-eight members of the League of Nations must indicate that they accept the

conditions of the American joining. And if they do, America will be an adherent of the Geneva tribunal on America's own terms.

It is to be noted, however, that the Senate resolution which offers to join specifically

provides that America may withdraw. In fact a lusty campaign has already been started on the World Court with a view to prepare public opinion for a withdrawal. Although it is too early yet to say with any certainty if the Senate will rescind its action, it is apparent that the popular opposition against the World Court is growing. And it is within the bounds of possibility that if there are enough no-courtiers in the next Congress it will reverse and nullify its action on the Court. The pro-court forces, it is calculated will then return to the obscurity from which they came and return to stay. Who knows?

The last votes for the World Court in the Senate do not seem to represent the conviction of the American citizens. Twice they

befuddlings of sanity that the country has ever seen." In listening to the promiscuous speeches of some of the professional advocates of the World Court prophesying millenium, I could not help feeling that they were carrying on a propaganda of lies. But lies did not make me marvel. I know politicians male and female, English and American. What fetched me was not all the gaudy lies, but the apparent ease with which a few alien-minded politicians forced the United States Senate to repudiate its lifelong policies and traditions, and drag the country into the League Court.

They are gifted fellows, these pro-courtiers. They fail to see, or else decide to ignore patent facts. A sober inquiry into the

have rejected the League of Nations and everything connected with it. In the election of 1920 and again in the election of 1924, they gloriously buried the League of Nations and everything related to it under a crushing avalanche of ballots. The fantastic international program of Dr. Woodrow Wilson, who was intoxicated by the servile adulation of Europe, was twice repudiated by the American people.

The Senate has now set aside this solemn referendum, pushed the United States into the World Court and along the road of the League of Nations. Some of the Senators suspected that there had been improper use of money to influence Congress. A millionaire publicist was alleged to have "founded and supported with his cash 281 organizations to din in the congressional and administrative ears." The promotion of the World Court thus furnished with secret funds, has been declared to be "one of the most thoroughgoing

origin and nature of the Permanent Court of International Justice, which enjoys the ingratiating name of the World Court, will uncover that it is not really what it purports to be. One would infer from its alluring name that it is nothing but an altruistic, idealistic, broad-visioned institution whose sole purpose is to deliver from its serene height, impartial, pacific judgments upon all mankind. Is that so? But that is also claimed, or used to be, on behalf of the Permanent Court of Arbitration at the Hague. In what respect is the new court better than the old one at the Hague?

The *Christian Century* of Chicago has repeatedly asked.

"What dispute of ours is there, actual or potential, which we would not wish to take to the old Permanent Court of Arbitration at the Hague but which we would be willing to take to the new permanent Court of International justice at the Hague?"

There has been no honest answer to the

question. Why? Here are a few facts which will bear thinking about.

Burrs under the Saddle

Court To Aid Spoils

The convention of the Hague in 1899 established a Court of Arbitration, of which America was a member. The second Hague convention (1907) established the permanent Court of Arbitration, of which this country was and is still a member. Then came the little European unpleasantness of 1914. Following the Armistice, Woodrow Wilson took to Paris a plan for a League of Nations. That plan had no reference to a League Court. The English government insisted that the League have a Court, and one was provided. Article 14 of the Covenant of the League says in part.

"The Council of the League shall formulate plans for the establishment of a Permanent Court of International Justice."

The United States Senate rejected in 1920 membership in the League and the Court to be created by it. The Senate verdict was fully confirmed by the people in two presidential elections. The League issue was completely snowed under. Instead of ratifying any portion of the iniquitous treaty of Versailles, a separate peace was concluded with the nations with which America was at war.

The great mass of the American people has no faith in the League of Nations, the protector of the booty gained in the late war for democracy. The League, from the American viewpoint, is an effort on the part of a few imperialistic countries to maintain a strangle-hold upon the rest of the world. And the so-called World Court is a creature, a direct agent, of the League.

"According to the theory of International Law."

Said Senator Shipstead

"Property belongs to whatever nation can take it

This is the law of the wolf-pack. As a result of the last war, certain nations obtained a vast amount of loot, acquired under the terms of treaties signed at the point of the bayonet by conquered nations. A part of the business of the world court will be to hold that property thus acquired was legally acquired. But such a decision cannot be based upon justice. Therefore, the court is misnamed when it is called a court of 'international justice'. The law of conquest is a part of international law. This is the law this court is to sanctify with its benign decisions by deciding that to the scheming, swift and cunning belongs everything they have the power to take. A court based upon such a law cannot be either a court of justice or a tribunal for peace."

They're hoping it will end in Marriage

The World Court is not an independent free judicial organization. Its main jurisdiction is absolutely controlled by the League of Nations: it is under the dominion and political control of the League. The League

selects the judges, it pays the judges, it fixes the salaries of the judges, and it awards the pensions of the judges. They are elected for nine years and are eligible for re-election. The League may call upon this Court at any time for advice upon any question or dispute which the Council of the League sees fit to submit to it. That makes the Court the consulting legal adviser of the League, which only the League controls.

The Court is a subsidiary of the League. Note that every judge in the Court can be removed at the end of nine years by electing some one else. Note also that the Court can be recast, if its decisions fail to meet the approval of the League. And the *Official Journal* of the League declares that the Court is "a most essential part of the organization of the League of Nations." Under the circumstances it will be to the interest of the judges, if they are human enough to desire their nine fat-salaried jobs, not to run counter to the wishes of the League—their master. The alleged World Court is, first and last, only the League's court. The Court is the League, and the League is the Court. The two are one. Can such an outfit be called a benign independent tribunal of international justice?

How the World would be run by Mussolini

The Permanent Court of International Justice has eleven judges and four deputy judges sitting at the Hague. It is a court

with no law to govern it, except that made by itself. Senator Borah, Chairman of the Senate, Foreign Relations Committee, remarked

Fireworks in the Pipe of Peace

"It is a court without any body of law, and a court to which no nation can take a wrong-doing nation without the wrong doing nation's consent. Suppose some powerful nation sees fit to violate right as against a small nation—to take its territory, for example—the small nation cannot appeal without the consent of the wrong-doer."

In other words, the League Court is a lawless court playing a game that has no rules.

The old permanent Court of Arbitration at the Hague is an international court. It has a permanent panel of one hundred and thirty international jurists. The United States, like any other sovereign nation, can submit a question to this court for decision. From the large panel of judges, America may select two, its antagonist select two, and the four together choose the fifth to make up the Court. In this way the impartiality of the court is safeguarded: the majority of the court is neutral to the dispute.

The Hague Arbitration Court, unlike the World Court, does not decide a case upon whatever principles happen to strike the judges' momentary fancy. The Arbitration Court tries to settle a dispute according to well established principles of International

Law. The judges of this court have to their credit fourteen successful settlement of cases between 1902 and 1912. Why is not the Hague Arbitration Court enough? The main purpose of the League leaders, the loudest

Wonder if the Judge is Biased?

champions of the World Court, is not too subtle to discover they have it in the back of their heads that the adherence of America to the Court would bring this country closer to the door of the League. The Courtiers are the Leaguists. Their great expectation is that once in the Court, America will be pushed into the League foot by foot, inch by inch. The Court is but the back door to the League. That is what the Courtiers have in their hope chest.

COURT A WAR-TRAP

The hyper-sentimentalists claim that the sole object of the World Court is to prevent war, and to advance peace. They say that the Court, the international Holy of Holies, will make "the hand of justice stay the sword of the mighty". This is a lovely lyric. A realistic study of the covenant of the League of Nations leaves, however, little room for doubt that it has given to the world not a court of justice, but a court of arms. The fact is that the World Court, the child of the League of Injustice, legalizes war and deliberately contemplates the creat-

ing of war in given contingencies. In discussing the specific features of the League, which carries the implication of war and not of peace, Senator Knox once remarked: "In this alleged instrument of peace, war is legalized in seven cases and made compulsory in three."

Let us take a closer look at the pacific architecture of the altruistic organization at Geneva. To carry out the provisions of the Versailles treaty, the League of Nations has a carefully planned program for making wars. Paragraph 1, Article 12, of the covenant of the League of Nations reads:

"The members of the League agree that, if there should arise between them any dispute likely to lead to a rupture, they will submit the matter either to arbitration or to inquiry by the Council, and they agree in no case to resort to war until three months after the award by the arbitrators or the report by the Council." (Italics mine).

The war is here legalized with the only reservation that there should be no act of hostility until three months after the decision of the Court, or report of the Council.

Paragraph 1, Article 13, of the covenant of the League of Nations states

They've decided on the Oarsman, but there seems to be some question about who is going to steer

"The members of the League agree that, whenever any dispute shall arise between them which they recognize to be suitable for submission to arbitration and which cannot be satisfactorily

settled by diplomacy, they will submit the whole subject matter to arbitration."

Article 16 of the covenant of the League provides :

"Should any member of the League resort to war in disregard of its covenants under Article 12, 13, or 15, it shall ipso facto be deemed to have committed an act of war against all other members of the League.

"It shall be the duty of the Council in such case to recommend to the several governments concerned what effective military, naval, or air force the members of the League shall severally contribute to the armed forces to be used to protect the covenants of the League" (italics mine)

Here we have sanctions for war over disputes among the member nations of the League. This is not all. War is also provided for non-member nations who refuse to use the machinery of the League and bow to its will. Article 17 of the covenant declares :

"In the event of a dispute between a member of the League and a state which is not a member of the League, or between states not members of the League, the state or states not members of the League shall be invited to accept the obligations of membership in the League for the purposes of such dispute, upon such conditions as the Council may deem just. If such invitation is accepted the provisions of Articles 12 to 16, inclusive, shall be applied with such modifications as may be deemed necessary by the Council.

"If a state so invited shall refuse to accept the obligations of membership in the League for the purposes of such dispute, and shall resort to war against a member of the League, the provisions of Article 16 shall be applicable as against the state taking such action."

This is to say, the big powers, who are the big bosses of this idealistic society, may high hat the little ones. And the little ones must not squeal.

The World Court is the tool of the League of Nations, and

"The League of Nations is the enforcer of the Court's decision and of its own decisions by force of starvation, by force of blood, by sanctions, by might of an attempted universal Tower of Babel concealing but aiding and abetting the rise of a new and greater force-ridden, force-bearing Europe."

Such is the contribution of the Court and the League to the peace of our planet. The charm of high politics is indeed the charm of fraud.

WHY HOBBLE MILLENNIUM ?

The United States Senate, in voting for the World Court, was not wholly unmindful of the lurking dangers inherent in the Geneva

international system. It carefully provided for several reservations, which stipulated among others that America does not in any way adhere to the League of Nations, that it is not bound by advisory opinions of the Court if it has not asked for them, that it denies the jurisdiction of the Court over many cases, especially those related to the Munroe Doctrine, and that it has the right to withdraw at any time it pleases

To millions of Americans these reservations seem quite sensible ; but they are also quick enough to perceive that the reservations display half-heartedness, suspicion, and distrust. "If this court is all that is claimed for it, why reservations ?" asked Honorable James Reed, "Why don't we go into the Court entirely without reservations ? Why put hobbles on the millennium ? Why must we crawl half way through the transom of this sanctuary of virtue and happiness ? No, we don't want to be sanctified." Americans have seen enough specimens of European idealism in the past seven years to be "overly" enthusiastic about them.

The League of Nations, viewed from this side of the Atlantic, is only a holdback and a check to true ideals of justice and peace. Think what it has done for Morocco, Egypt, Syria, and Mosul. Consider how the Indian opium problem has been handled. Look also at China

"Every nation which is engaged in transgressing upon the rights of China, every nation which is engaged, in exploiting the natural resources of China, every nation which is engaged in exploiting human life in China, is a member of the World Court"

China is not allowed to hail any one of the transgressors before the Court and get the decision of the Court upon any question with reference to its rights. The League of Nations is a League of Nuisances and the International Court of Justice—alias World Court—is a sham on peace.

The "high moral purpose" of the League and the Court is to legalize international banditry and to maintain white supremacy. The big imperialists have made the League to stand guard over the swag. Theirs is the program to advance white aggression, and to keep down the struggling black and brown and yellow races. Why should a nation with a soul to save join such a League of Injustice ?

March 12, 1926.

SOME PROBLEMS OF AGRICULTURE AND ECONOMIC REORGANISATION

By NARESH CHANDRA SENGUPTA M.A., D.L.

THE appointment of a Royal Commission for investigation of agricultural problems in India would have roused greater interest in Bengal if the terms of reference to the Commission were wider and embraced an exhaustive enquiry into all economic problems connected with agriculture. An honest student of problems of agricultural improvement in Bengal must admit that the fundamental fact of the agricultural condition of Bengal is its land system. So long as the present land system continues, all talk of any massive improvement in agriculture must be utterly futile. Yet this is a problem which is outside the proper scope of the Royal Commission.

I shall try to examine some of the outstanding agricultural problems in Bengal at the present day and show how the whole thing hinges on the land system.

AGRICULTURAL RESEARCH

There can be no doubt that improvement of agriculture can only be achieved by a well-organised system of agricultural research. The phenomenal advance in agriculture in America has been very largely the result of such research.

Our Universities have totally neglected this department of study, but for years past the Department of Agriculture in Bengal has turned its attention to research work of a fairly high order. With the exception of the introduction of one or two improved varieties of seeds, however, all this research has led to no results. It would be worth while to enquire into the reasons why.

First of all, the researches of the Agricultural Department have turned out to be more or less of an academic character and entirely out of touch with the actual everyday problems of agriculture in Bengal. In America the farmer comes to the scientist in the Agricultural Department or the laboratory with his problems and the scientist sets to work on the practical problem so presented. The Bengal Department is seldom favoured with such enquiries. Its experts find cut problems for themselves and it is not surpris-

ing that they sometimes evolve solutions which have no earthly use for the agriculturist in Bengal. I can cite an instance. Mr. Finlow, then fibre expert in Bengal, set to himself a problem of evolving a better process of jute extraction. After years of effort he evolved elaborate machinery for which the agriculturist had no use, and which no mill-owner cared for. The problem did not touch the felt needs of the country and the solution therefore proved barren of results. The experiments with water-hyacinth for the production of phosphate manures also led to a similar debacle.

I do not say that this is typical of agricultural research in Bengal. But a great many researches have been carried on which are of this character, and the reason for all this waste of resources is the total want of rapport between the Department and the agriculturist.

With the peasantry in their present condition such rapport must ever be out of question. The poor down-trodden ignorant agriculturist is not likely to approach the Department with his problems. He hardly knows how to formulate them. He is so much taken up with finding means to make both ends meet to worry about much thinking about abstruse questions as to the causes of his troubles.

One of the first requisites of success of a scientific agricultural department is a body of responsive husbandmen who would be not only intelligent and literate, but also fairly well-off. Such a class does not exist and is not likely to come into existence in the near future under existing conditions.

So much for this aspect. But all research and knowledge of the Department is not equally academic. They know some practical problems and have something to tell cultivators about how to plough lands to better purpose or use superior manures or follow other improved methods. But the agriculturists do not show much signs of profiting by this knowledge. It is not because they are hide-bound by prejudice and are slow to

adopted improvements. On the contrary they are eager to adopt them. But the Department can teach little to the agriculturist which he can turn to use with his small fragmentary holdings and a smaller working capital. The Department can tell them a lot of excellent things which would be of great benefit to them if they had much larger holdings and a great deal more of capital. In the absence of that, there is nothing that the Department can tell them which would be of the slightest use to them. I have it on the authority of one of the most capable heads of the Department in the past that, given the present small holdings and the negation of working capital, the Bengal agriculturist knows all that the Department could tell them about agriculture under these conditions, perhaps a great deal more.

THE LANDOWNER AS A CONNECTING LINK

One might suppose that the landowners whose properties comprise fairly big tracts of land could form a connecting link between the Department and the peasant. He might be expected to get some practical knowledge of agricultural problems and formulate them to the Department and carry the information about improvements to the agriculturist. But such land-owners have to be sought not only with a lantern, but a microscope to boot, and where they exist, they are very largely powerless.

The reason is not far to seek. The owners of land recognised by law as proprietors are the zemindars and talukdars whose interests have in many cases filtered down to middlemen of various grades. They have little interest in and less knowledge of agriculture and it is not for sheer perversity that the zemindar is so ignorant. Even if he wanted to do much he could do little, for he is not really the owner of the land of which he is the proprietor. He cannot touch it so long as it is held by a raiyat. The raiyat has the exclusive right of possession and cultivation and so long as things go smoothly the zemindar or middleman has no right to anything but the rent, which again depends very little upon the outturn. It is not surprising therefore that these rent-receivers, misnamed proprietors, specialise not in knowledge of agriculture, but in a proficiency in the thousand devices by which the rent could be eked out by all sorts of collateral demands on tenants in the shape of *naxars*, *abwabs*, &c. And any one

who knows the tenure-holder and the proprietor in Bengal knows how great adepts they are in that art.

The result is that the elements of ownership of land in Bengal are divided in the most uneconomic way between the actual cultivator and the rent-receiving middlemen. The raiyat has not the means to improve, the rent-receiver has no inducement. The latter finds it more profitable to study the intricacies of the tenancy laws relating to the enhancement of rent and to be on the look-out to increase his receipts. He has capital, but it is not worth his while to invest it on improvements. And, to be just to him, he has not always the liberty to invest it on improvement of agriculture if he wanted to, unless the raiyats all agreed to let him do so.

DIVIDED OWNERSHIP

This divided ownership of land is one of the causes which lie at the root of the agricultural backwardness of Bengal.

The Permanent Settlement of 1793 recognised the zemindars and independent talukdars as the actual proprietors of land. This in itself did not mean the abrogation of the existing customary rights of the raiyats of the village in their holdings. But a great cloud was thrown on their title in the absence of any legal security against invasion of their rights. And the evil assumed such proportions that in 1859 an act was passed giving a small recognition to the rights of settled raiyats. The development of this process led to the passing of the Bengal Tenancy Act of 1885. The principle of these enactments was to secure the actual cultivators of land against unlimited exactions of zemindars and to give them reasonable security of tenure. This result has been largely, but not wholly secured by this piece of legislation.

One, probably unexpected, result of this piece of legislation was to give the security of tenure, not to the actual cultivator but to persons, who can only be styled middlemen. Raiyat's holdings passed into the hands of persons who did not mean to cultivate and were not capable of cultivating them. The profits of cultivation were growing first most notably as a result of the introduction of jute. An inevitable result of this was that the raiyat might make some substantial profit by subletting his holding instead of cultivating it himself. Under-raiyats who held a subtenancy

under the raiyat came into existence and grew in number. Another institution which has come to be more largely favoured is the burgadar or the bhag-chashi, who cultivates the land on condition of giving a share of produce to the raiyat whose holding he cultivates.

In this way a large quantity of land is now being cultivated by men who have no right to the raiyat. The tenure on which these actual cultivators hold the land is of a more or less precarious character. The under-aiyat, in the absence of a custom, which is difficult of proof, has nothing like a permanent interest in land. The burgadar or bhag-chasi has still less. The result of a series of decisions of the Calcutta High Court is that a burgadar may or may not be a tenant. If he is a tenant, he is an under-aiyat, except when he holds under a proprietor. If he is not a tenant, he is merely a servant, remunerated by a share of the produce. In this case, he is less than a tenant it will. So that in these cases, the protection which the Bengal Tenancy Act sought to give to the actual cultivator, is now being enjoyed by virtual middlemen, while actual cultivators continue in a most precarious state.

The effect of the tenancy laws was to create a dual ownership in land. Some elements of ownership belonged to the Zemindar and talukdar, but others belonged, permanently and independently of the zemindar, to the raiyat. Then again, while the raiyat's rights were divided between the raiyats and under-aiyats and burgadars, the proprietor's interest was similarly subdivided between the proprietors and tenure-holders of various grades.

Since the Permanent Settlement, the rights of the rent-receiver had considerably increased in value. When the Decennial Settlement was made, the share of the zemindar was roughly fixed at 10 per cent of the rental. At present those receipts amount to a great deal more. Taking the lands of Bengal as a whole the rental per acre is about Rs 3, while the Government revenue paid per acre is only 10 annas or about 20 per cent of the rental. The proportion of the rental now retained by the zemindar and the middlemen is therefore more than 80 per cent. In fact, it is even more. For out of the total land on the basis of which this average is worked out, a large quantity is Government land on which the Government collects a much higher percentage of revenue. Roughly speaking, therefore, the zemindars and middlemen are now retaining about 90 per cent of the rental.

What would be natural under these circumstances followed. The zemindar found that the surplus of his income was large enough to enable him to sublet his rights to other persons. Thus subordinate taluks were created, most of them at a permanent rental. These again, when they became more profitable, were again sublet and so on till in some districts there are as many as a dozen intermediate interests between the zemindar and the actual cultivator.

RESULTS OF THE PRESENT SYSTEM

The result of this process has reacted in a very unwholesome manner on agriculture. The result has been, on the one hand, to split up tenant's holdings to uneconomic fractions and on the other hand, over large areas of land to divide the zemindar's interests amongst a vast number of tenure-holders, each of whom often holds a very considerable area of land through tenants.

One result of this is that though as much as thirteen and a half crores of rupees out of the total rental is retained by middlemen, very little of it is available for agricultural improvement. The bulk of this vast sum is consumed in maintaining the army of middlemen and their families. The surplus income available is divided in such minute fractions over a vast population that no amount of organising effort will ever get together enough to spend on ambitious agricultural schemes.

Another result of this is that no one has a real effective interest in the improvement of land or the capacity to attempt it. The occupancy raiyat, who is himself a cultivator, has an enduring interest, but he lacks resources and knowledge. Besides, if he did improve, the landlord would be entitled to a share of the proceeds—to how much of it, is a matter which can only be settled by expensive litigation. The zemindar, who is too far off, has a very remote interest and if he had the desire, he could seldom effectuate it because the cultivating raiyat and, in many cases, scores of middlemen have rights which cannot be interfered with.

CONSOLIDATION OF HOLDINGS IMPRACTICABLE

Let us take a simple instance. Consolidation of holdings is a simple measure which would improve agriculture. But suppose the zemindar wanted to consolidate the

holdings of his raiyats by redistributing the lands. He cannot do it unless all the raiyats concerned consent. On the other hand, raiyats cannot do it, even if they could arrange a scheme by mutual exchange, because that would mean a transfer of holdings, which could not be done without the consent of the landlord.

This would be so in the simplest case. But the facts are seldom so simple. It is a comparatively rare thing that large compact areas of land are held by the same proprietor. Even in those cases in which the areas are compact, the owner is often not one person but a large number of joint proprietors. A single one of these by standing out might frustrate the whole scheme. Besides, at the present moment, in most districts of Eastern Bengal the lands of each village are distributed between a number of different estates bearing different *towzi* numbers. It is not as if each of these estates has a compact plot of land to itself. The lands of each estate lie scattered about and run into one another. In such cases no consolidation of holdings is possible unless all these various estates can be taken into the scheme and all their lands are redistributed. This means the consent of a very large number of owners of the different estates, some of them again held by tenure-holders of various grades.

Then again there is the question of redistribution of lands between the different revenue-paying estates. Unless this is done there is bound to be confusion. Each landlord is liable to pay revenue for his own lands and the lands may be sold for arrears of revenue. So that unless the readjusted holdings are redistributed between the several estates in compact blocks, there will always be a confusion in that each man would be paying revenue for some lands not in his possession, and such lands would be liable to be sold for his arrears. But there is no legal procedure by which a readjustment of the lands as between the various estates can be made so as to bind the public exchequer.

A BLOCK TO PROGRESS

This is only one small illustration of the way in which the complexity of land tenure and the divided ownership of land tends to block agricultural improvement. No scheme of agricultural improvement, however promising on paper, can yield large results until this is got rid of. The only sensible way of

doing it, and the only one which would make land improvement schemes possible would be to make the actual cultivator the undivided proprietor of the land he cultivates. This would mean the buying off of present owners and middlemen. Or the result may be achieved in a less perfect manner by reducing the present rights of these men to an incorporeal right to the rent without ownership of land.

INDEBTEDNESS AND POVERTY OF CULTIVATORS

A really searching examination of the question of the poverty and indebtedness of the peasantry in Bengal would lead us to schemes regarding a lasting remedy which also lead us back to this same conclusion: that the proprietary right in the land must be vested in the peasantry as the first step.

The question of the poverty and indebtedness of peasants has never been approached in a broad and comprehensive spirit. On superficial examination it is easy to attribute it to the improvidence of the peasantry. I do not for one moment deny that they do not spend their income in a truly husband-like manner and that on some occasions they become very extravagant. But I have no doubt that the extravagance of the tenant has been outrageously exaggerated. The extent of their expenditure on anything but bare subsistence cannot assumedly be very great and on the other hand, in comments on their extravagance it is often forgotten that wholesome money is spent on preventable items: these poor people deny themselves the most elementary creature comforts. Often they live in wretched hovels, their clothing abbreviated, sometimes below the limits of barest decency, and their food, where they have a belly-full is always the lowest and the coarsest and the poorest stuff. The Bengal peasant is remarkably sober; he seldom drinks. He spends next to nothing on luxury. Even if we leave out of account the fact that some expenditure beyond the barest necessities is a condition of comfortable existence, if we set off the amount which they misspend against the self-denials which they impose on themselves in the matter of bare necessities we should perhaps find that even if the peasant saved all that he spends on ceremonials he would hardly have enough to keep himself on a very modest standard of comfort.

That indebtedness of the agriculturist is due to improvidence is therefore a grotesque exaggeration of facts. The real reason must

be sought deeper down. The fact is that at the present moment the agriculturist has not enough out of the profits of cultivation left to him to leave him a surplus for use in hard times. What remains to him after paying the debts at ruinous rates of interest to the *mahajan* and the rent of the landlord hardly suffices to maintain his family through the whole year, far less pay for the expenses of the next year's cultivation. So that in most cases he has to run to the *mahajan* every year and in the vast majority of cases he is seldom able to pay out his creditors.

UNECONOMIC HOLDINGS

This position follows from several circumstances, first among which I shall refer to the fact that so many of the cultivators are tied to uneconomic holdings. By a progressive subdivision of holdings tenants have been reduced to the cultivation of very small holdings, the earnings from which cannot enable him to pay his way. The deficit he makes up by being himself out as a labourer when work is available by such other shifts and in most cases by borrowing. The debt incurred under such circumstances could not possibly be repaid and unless he is lucky enough to find a very lucrative employment otherwise, he is sold out

SUPPLEMENTARY OCCUPATION

The only way in which cultivators of such holdings can save themselves is by some other occupation. In past times such work in various shapes was available. The labour force of each village who were, almost all of them, cultivators, were also called upon to render all other services to the villagers and to supply them with all their necessities in the shape of clothes, utensils, ornaments, houses, playthings, &c. This provided ample occupation for all. The facilities of communication which have placed foreign manufactures within easy reach have deprived the village labourer of most of his cottage industries, which they had worked in many cases, to a high degree of perfection. The villager now gets most of his articles of daily use from outside and mostly from foreign countries.

On the other hand, notably in the jute-producing districts, there has been a remarkable rise in wages of the agricultural labourer. That implies that there is plenty of work for

him and a comparative scarcity of men. This may be regarded as some compensation. But, it is to be feared that the net gain to the agriculturist in this way is illusory. The demand for labour is in part quite normal, but a great deal of it is due to the fact that a great deal of land has passed out of the hands of the agriculturist into the hands of those who do not work themselves. It is these men who are the largest employers of agricultural labour and whose demands have swelled the wages of the cultivator. A great deal of this rise therefore represents so much expropriation of the actual cultivator.

THE VICIOUS CIRCLE

Even where a tenant is cultivating a holding which is not uneconomic, he sometimes finds himself in the inescapable clutches of the money-lenders. This is the result of past debts and the burden of bloodsucking rates of interest. If in a bad year or for urgent necessity a cultivator borrows some money from the *mahajan*, he is lost. The capital of the debt with interest eats up his surplus and makes inroads upon his resources for maintaining his family. So then he has to borrow again or leave the debt growing at a tremendous pace. By the magic of compound interest with frequent rests, ten rupees rapidly mounts to a hundred, and it seldom goes down.

There are at the present moment thousands of tenants cultivating profitable holdings, who are nevertheless hopelessly in debt, for no other reason than that they have past debts. After payment of these they have not the means to carry on and must borrow. The result of this vicious circle is that they sink deeper and deeper in the mire. Given just a breathing space—a few years' release from the old debts, they could pay off and be on the way to prosperity. But the past debt sits on them like the Old Man of the Sea and slowly but surely strangles them to death.

THE REMEDIES

These facts are well-known and efforts have been made in the past to remedy the evils. I do not doubt the honesty of these efforts, but I cannot admire their statesmanship. What is wanted is a bold imagination, boundless courage and a ruthless pursuit of programmes generously conceived. The efforts hitherto made have not made the slightest attempt to strike at the root of the evil.

They have only touched the outermost surface of the malady.

CO-OPERATIVE SOCIETIES

Among these efforts the most successful has been the establishment of Co-operative Credit Societies. By providing cheap credit these societies have helped to save a great many agriculturists from absolute ruin. But they have not removed indebtedness. The village societies are still predominantly debtors. And the capital is still mostly lent by non-agriculturists, the deposits from agriculturists being wholly negligible.

Debt is still there, as well as the conditions which make it inevitable. The societies by themselves cannot create conditions which will prevent indebtedness.

Besides, the only persons whom these societies can help are those who are not hopelessly within the clutches of money-lenders. The men who are badly in debt and who have not enough surplus of assets left to them to create a sinking fund cannot be touched by these societies—no society will be registered where the statement of property and debts does not disclose a sufficient surplus of the former. The cultivator whose holding is an uneconomic asset, but who nevertheless could manage to get on minus his debt will never be touched by these societies.

The societies hitherto formed have been exclusively confined to perfectly solvent parties to whom it has given great relief. So long there has been progress, because there has been a large number of such men who have not yet been exhausted. When these have been exhausted the further increase of these societies must stop.

The extent of the problem and the limitations of Co-operative Societies can be gauged by reference to some figures. No reliable data are available for the total agricultural debt of Bengal. The figures which are available for different districts are for different years. But in Faridpore, Major Jack found the total agricultural debt in 1916 to be 160 lakhs. After about ten years, the total loan capital of all co-operative societies in Bengal in 1925 is only about 170 lakhs, which is approximately the amount of the debt in a comparatively small district in the province.

But, it has been said, the societies are

making some headway and as against the pessimism of Major Jack, Mr. Ascoli and Sir Daniel Hamilton, it has been pointed out that there was rapid expansion of these societies before the war, though, since the war, the progress has not been so rapid. At this rate, it is suggested, these societies could cover the whole of the debt in say twenty-five years.

But they won't. The reason is that soon these societies will reach a stratum of cultivators whom it cannot help, because they have not enough assets to balance the debts. That will be the bedrock. Below that the co-operative movement on its present lines can never expand. That large residuum of incurable indebtedness will always remain unless something drastic is done. Co-operative credit, therefore, is only a palliative of indebtedness. It is no cure.

INTEREST ACT

Another remedy of which much fuss has been made has been the attempt at a reduction of the rate of interest by legislation culminating in the Interest Act. Assuming that economic laws were so easily susceptible of deviation by legislation, and that the rate of interest was actually reduced by legislation it would yet be only a palliative.

But even this is not possible. Those who pin their faith in drastic legislation limiting the rate of interest forget that at least such legislation can only affect a very small quantity of the total debt—the very small percentage of it which has to be realised through courts. The bulk of the debt of our people is paid out of court. Even the law of limitation is seldom a bar to the realisation of such debts. The Interest Act or any other law of the like nature will not give relief to the hundreds of thousands of poor debtors who never go to court and are too honest to refuse the payment promised.

COTTAGE INDUSTRIES

A far more profitable scheme is to develop cottage industries to utilise the surplus labour of the agriculturist. Apart from the question of agricultural indebtedness, the development of cottage industries is a question of very great importance by itself. And a really earnest and determined effort to promote these industries on a large scale would be welcome. But though much has

been said about the development of cottage industries, little has been done and the great efforts for the spread of *charka* and *khaddar* stands out as the only programme of any extensive character yet followed. I am a great believer in cottage industries, but personally I have grave doubts whether the present extension of the *charka* has any chance of being a permanent asset.

As I have said, the development of cottage industries is a great desideratum. And there is no doubt that if by this means the surplus labour of agriculturists could be utilised it would add to their health and reduce their indebtedness. But that is no reason why agriculture by itself should not be a self-supporting industry. To say that we must look to cottage industries to remove the indebtedness of cultivators, is to admit that agriculture must be a losing concern to the cultivator. I should most strongly insist on the contrary, that the economic organisation for agriculture must be such as would make it possible for agriculture to be carried on at a profit. Let cottage industries add to that profit, but it would be a suicidal policy for the nation to let agriculture be a drudgery for the cultivator—an employment without adequate remuneration.

THE REAL REMEDY

Palliatives are good enough in their own way. Patch-work has its uses as temporary shifts. But if agriculture is to be placed on a really sound footing we must make up our mind to attack this problem of indebtedness at its root—reorganise agriculture on a system which would make indebtedness anything but inevitable for the cultivators, but would, on the contrary, leave enough working capital in their hands.

READJUST THE HOLDINGS

For this purpose we have to eliminate the uneconomic holding in the first place. This can only be done by a complete readjustment of holdings in each village as a whole. The effect of this readjustment should be that each tenant should have all his lands in one block. Holdings which are too small for profitable cultivation should be enlarged by clippings from very large holdings or by a consolidation of two or more uneconomic holdings into one.

This could be effected to some extent by

mutual exchange. But there must be some amount of cruelty or compensation to be paid to the cultivator whose holding is reduced. As far as possible this readjustment will proceed on the basis of existing possession. But, where necessary, possession will be disturbed and some men having small holdings will probably have to be bought off.

There must be legal authority provided for compulsory readjustment and, where a readjustment of holdings has been made on this basis, there should be a law providing for a minimum area for a holding below which subdivision will not be permissible. The law of inheritance will have to be modified to this extent.

A less simple scheme, but one which has the merit of following the line of least resistance and has also great collateral advantages, would be to make the same redistribution by organising the whole body of cultivators of a village into a co-operative society which will redistribute the land among the members. This will be a slow process and people will take a lot of teaching before they agree to it. But if this could possibly be done, the result would be a great advance, for it would make cooperative agriculture possible.

But either of these schemes of readjustment presupposes the elimination of the *zemindar* and the middleman. So long as they exist and have a finger in the pie, a scheme of readjustment is as little possible as a scheme for consolidation of holdings.

MORATORIUM FOR EXISTING DEBTS

Apart from uneconomic holdings, the problem of indebtedness still exists, as we have seen before. Unless you lift the present burden of debt upon the tenants you cannot put them on the way to better days. For the only way to improve their condition is to husband the small surpluses of agriculture through cooperative banks so as to build up a working capital for agriculture. So long as the present debts exist they will suck in all that there is in the nature of surplus.

I do not plead for a measure on the lines of the ancient Romans for the abolition of all debts, but I think it a practical proposition to suggest that there should be a moratorium in respect of such debts for so long as is necessary to enable the agricultural capital to recoup itself. So long as creditors are given ample security for their debts and are also allowed reasonable interest during the

noratorium, say at the court rate of 6 per cent, such a proposal can by no means be characterised as spoliation.

I propose that the advantage of the noratorium should be given only to such debtors as form a cooperative society and the society should be given the power of controlling the produce of the members so that there might be a sinking fund gradually built up. If sufficient time is given, I think it will be possible for these societies in this way to pay off all old debts in time with interest, as well as to build up a substantial working capital of its own.

Simple and easy of execution as this scheme would be, if we were dealing with cultivators on the one hand, and creditors on the other, the presence of the zemindar and the middleman who have large rights of control over tenants disposing of land in any manner, makes it complex and difficult of execution. To enable this scheme to be carried out with the least possible difficulty, therefore, the landlord will first have to be eliminated.

ELIMINATE THE LANDLORD

I am aware that the suggestion would be considered revolutionary in Bengal and altogether outside the range of practical politics. But if, as I hope I have been able to establish, the agricultural prosperity of the country is impossible so long as the fractional ownership of the landlord weighs upon the land, I think that supreme national interest requires the elimination of the landlord as such.

What I should suggest, however, would be no scheme of spoliation or expropriation of the present landlords and middlemen without compensation. The landlord would not really suffer in his pocket from accepting the scheme.

My suggestion is *firstly*, that the claim of the landlord for rent should be *declared to be fixed in perpetuity*. I am even prepared to concede that in consideration of this perpetual fixity of rent the landlord should have an enhancement of rent to the extent of four annas in the rupee, spread over, say, ten years.

Secondly, subject to the payment of this rent the *raiayat* should be declared to be the proprietor of the land, the landlord's (and middlemen's) rights being reduced to an incorporeal right—a rent-charge which shall be the first charge upon the land in respect of which it is due. *

Thirdly, there should be a provision by which the *rent-charge* may be compounded for by paying a capitalised sum not exceeding fifteen years' purchase of the rent. Option should be left to the *raiayat* only thus to purchase the rent. I expect that with the organisation of co-operative societies the purchase will proceed rapidly.

The capitalised rental should be apportioned between the various grades of middlemen and the zemindar in proportion to their interest, subject to a *reduction of the capitalised value of the Government revenue*, which will be paid to the Government, so that when there has been a liquidation of the rent-charge, the lands will be held by the *raiayats* free of rent as well as of Government revenue.

Side by side with this process there should be a programme for consolidation and readjustment of holdings on the lines indicated before. It would also be necessary to pass appropriate laws against alienation of lands to non-agriculturists and fixing the minimum size of holdings. An effective anti-alienation law would be to lay down that when land is purchased by a person which he does not cultivate himself or by hired labourers, the person actually cultivating the land should be deemed to be the actual proprietor subject to a rent-charge.

THE PROSPECT

The result of the entire process would be to divide the whole land of the province among real peasant proprietors, mostly organised into co-operative societies, each owning an economic holding and having sufficient capital and credit to cultivate the lands properly. The cultivators will then cease to be a body of dumb-driven cattle but be sturdy and vigorous yeomen, not exploited by every man with a little capital, but capable of dealing with the world at arms' length. They would give an amount of strength and prosperity to national life which nothing else will achieve.

It will, moreover, withdraw from the soil the burden of an enormous population of idle people who live on the labours of others. The present-day zemindars and middlemen, who should have had liquid capital in their hands instead of land, will perforce seek other means of investing their capital and thus add to the wealth of the country in industries and commerce.

At the present moment, land is the great

sink into which all the capital of the country, no matter how acquired, is inevitably drawn. Everybody who acquires wealth by trade, industry or a profession invests it in land in some form. And, in three to four generations, the investment is wasted away—the landed property is sold and purchased by another, who has acquired his purchase money in some other way. In other words, the whole of the capital invested by a predecessor is eaten up unproductively by three or four generations of successors. This huge

waste of the country's resources is the inevitable result of landlordism and it is a story which you find repeated everywhere.

This will have to be stopped. The propagation of a race of idle drones living on other peoples' labours has to be put an end to and they have to be turned into useful citizens giving valuable service to society. Their gradual expropriation, as suggested above, seems to me to be the only way to achieve this end.

BRITISH EXPANSION IN TIBET

CHAPTER IV

Motives for British Expansion In Tibet

By TARAKNATH DAS, M.A., PH.D.

WE have already noted that British expansion in Tibet was actuated with the political motive of keeping Russia away from there and at the same time strengthening her position on the northern border of India.*

Annexation of Bhutan, Sikkim and Burma and partition of Siam, has had the same

the greater part of the resources of China would mean Russia hanging over India on the northeast, as she is now on the northwest by sheer weight able to shake to its foundations British rule in India. And in the Far-East she would be supported by European Allies."

* Mr Colquhoun writes of the British fear of Russia and India—"The year of 1902 or 1903 at the latest, will see European Russia connected by the iron road with Vladivostok and Port Arthur, and the New Siberia, which he held to include Manchuria, will have fully entered on its great career as the coming country of the twentieth century. Russia will be enabled to prosecute her plan. Corea and northern China will be acquired and gradually step by step, by means of railways (favored always by France in the South, and probably covertly, if not openly, by Germany in the North), she will extend her influence southward until the Yangtze is reached, and there a connection made with the sphere of French influence.

"Russia, whose strength has hitherto been entirely on land, now aspires to be a Sea Power. And in Manchuria she has a coast, coal and a maritime population,—excellent material for making sailors and her presence on the Pacific Ocean and the Chinese Sea must give a great impetus to the aspiration for a navy. It may be taken for granted that having so much, she will want more ports in other quarters, and in many quarters of the globe.

"Russia, once on the upper Yangtze, would involve a second and eastern Indian frontier problem for Britain of an infinitely more serious character than the western, for the utilization of

"And what will be the effect if this process be continued until one day Russia is mistress of China, as well as paramount in Afghanistan and Persia? On the north-eastern frontier the British can only defend India by introducing a counter-balance in China itself by developing the Yangtze basin, which contains the greater part of the resources of the empire and half of its population, and by controlling south-west China, where lies the access to Burma, and through Burma to India. This would afford Britain a proper base and line of defense on the upper Yangtze, which combined with her sea power and control of the great Chinese railway, would enable her to hold her own.

"How to oppose by means of diplomacy, and if necessary, by force of arms, the policy of Russia and France, not improbably supported covertly by Germany—that is the problem that faces Britain and must be of immense consequence to the United States. There is no disguising the fact that a period of intense energy is about to begin and must be met by preparedness. It is time, therefore, that Britain and the United States should interest themselves and decide on some common plan."—Colquhoun, Archibald, *Overland To China* (New York Harper and Brothers) 1900, page 457-459.

motive of keeping France away from the south-eastern border of India. British expansion in Tibet in an opportune moment was nothing less than an expression of British imperialism.*

It was England's policy that Tibet, Russia and China must not form a combination. For by securing control over Tibet the influence of the Buddhist world could be used through the Dalai Lama in favor of Great Britain against Russia and China †

* (a) "It is to be hoped that Lord Curzon will not be contented as his predecessors were, with half-way measures. Unless Tibet be placed in the same relation to the Indian Government as is Sikkim, the whole question is certain to crop up again in a more threatening way for a less opportune moment, and the men and money to be sacrificed now or next spring will have been thrown away to no purpose." *Mission to Tibet* by E. J. Dillon, *Contemporary Review*, January 1904—pages 123-142.

(b) "We cannot leave Tibet as it stands. We must be in a position to make arrangements with its rulers and to compel them to abide by such arrangements. A frontier state with which we have many relations, which is the Holy Land to many of our Indian subjects, and which is the buffer between us and the great power of Russia, must be brought within our policy. And at the same time there must not be any conquest, nothing which could be interpreted as interfering with that delicate and evasive thing, the integrity of China. Our rights are so clear that there can be no shrinking from their enforcement." *The Spectator* February 13th 1904—page 217.

(c) "Perhaps the best hope of peace is that exaggerated report of Russian defeats will float up to Lhasa and will influence the governing Council to promise that in the future they will keep the treaties." *Ibid*—page 138.

(d) "The internal politics of Tibet have for us only an intellectual interest but if Russia began exercising influence as she seems to have admitted to Lord Lansdowne that she was doing—we should instantly know the facts and should be in a position, whenever necessary, to strike hard at Lhasa. The situation, it must be remembered, is not exactly what it was when the expedition was first organised. Russia will not be very active at Lhasa for the next ten years. She is a long way off even if she keeps Manchuria. Her only object in going there must be to menace India, and we have many means of striking back without entering upon an unknown world. The two things indispensable are that we should know, and know accurately, all that occurs at Lhasa, and should convey to St. Petersburg a clear assurance that we regard the seclusion and independence of Tibet as indispensable to the safety of the Indian Empire."

(e) "...The situation is a most embarrassing one. All the more because the immediate course to be pursued is so peremptory. We must go to Lhasa whatever may be the consequences." *The Spectator*, June 18th 1904.—page 946.

† It is an imperative necessity to consolidate the success obtained in Tibet, and to make strenuous efforts in order to prevent in the Far-East,

The expansion of British power in Tibet, became a significant part of British diplomacy in the Orient not only to check the Russian advance towards India, but also to control the Yangtze Valley completely, to counteract Russian and French designs in China and "for the stability of the Indian Empire."

Sir Claude McDonald, the British Minister at Peking, took definite steps for this purpose, on February 9th, 1898, by an exchange of notes with the Tsung-Li-Yamen. In the note he says —

"...I shall be glad to be in a position to communicate to Her Majesty's Government a definite assurance that China will never alienate any territory in the provinces adjoining the Yangtze to any other power, whether under lease, mortgage, or any other designation. Such an assurance is in full harmony with the observations made to me by Your Highness and Your Excellencies." *

This assurance was provided for on the 11th of February by the Chinese Government. But further demands came from the British Government in the form of extension of her Hongkong territory, and also the extension of the lease for 99 years. An understanding was reached by the Convention between Great Britain and China on June 9th, 1898, the terms of which, in part, are —

"Whereas it has for many years past been recognised that an extension of Hongkong territory is necessary for the proper defense and protection of the colony, it has been now agreed between the Governments of Great Britain and China that the limits of British territory shall be enlarged under lease to the extent indicated generally on the annexed map. The exact boundaries shall be hereafter fixed when proper surveys have been made by officials appointed by the two Governments. The term of this lease shall be (99) ninety-nine years."

It was the time when struggles among Powers for establishing spheres of influence in China were in full swing. The theory of special spheres of influence in Asian countries, particularly in China, by the dominant countries, in violation of the sovereign rights of the nation was accepted by many scholars in the West as inevitable. The real meaning of the establishment of spheres of influence in China was nothing less than the partition of China in course of time. As an eminent American historian puts it —

"Great Britain would take the broad valley of

another successful coalition of the three oppressive Powers—the Tsar, the Dalai Lama and at their command, the Son of Heaven"—The policy of the Dalai Lama, by Alexander Ular. *The Contemporary Review*, January 1905.—pages 39-50.

* Herstlet's China Treaties, Vol. 1, pages 119-20.

the Yangtze-Kiang for British Capitalists to develop. France would take Kwangtung; Germany part of Shantung; Russia and Japan would divide the north between them. Within its own "sphere of influence" each nation would maintain order and protect and encourage its industrial capitalists in operating railways, mines and mills. Perhaps the powers would one day politically annex their "spheres of influence."*

We find some of Great Britain's statesmen advocating the policy of reducing the Yangtze Valley to the position of the Nile Valley. To Mr Colquhoun

"it seems clear, in view of Russian advance southward, that, if British influence is to be asserted in the Yangtze region, the connection of the Upper Yangtze by rail with Burma must be undertaken and carried through without delay. And the assertion of British influence in the Upper Yangtze is a vital necessity for the preservation of India. To allow Russian influence to grow up in the Upper Yangtze would add another and infinitely more serious frontier and endanger the stability of the Indian Empire."

He further adds,

"There is no more reason why she (Great Britain) should be afraid of dealing with the Yangtze basin than the Nile basin!"†

The actual step taken by Great Britain during and since the opium war seems to indicate the correctness of Mr Colquhoun's statement. The westward march from the side of Hongkong, the northward march from the side of Upper Burma, and southern and westward economic penetration from the side of Shanghai and the control of means of transportation of the Yangtze region by way of river communications and railroads were progressing; and also we see in the British march towards Tibet a step to realize the same objective. The expansion of British power in Tibet is then a necessary consequence towards the control of India and a march towards south-western China.

Though political motives dominated the British expansion towards Tibet, economic motives were no mean factor. Such authorities as Rockhill, Waddell and O'Connor all agree as to the immense riches of Tibet. She is rich in gold deposits.

"For thousands of years, gold has been washed out of her surface soil by the crudest processes from every river which has its source in the Tibetan Plateau, gold is washed. Every traveller refers to the vast extent of the abandoned mines

.... from which probably not even one half of the gold upturned has ever been extracted."*

There is an abundance of pine, silver fir and other valuable timber in the Chumbi Valley. The lakes and rivers of Tibet contain plenty of fish which are caught with line and net. The Tsampo is full of fish, and the existence of the fishing villages on the shores of Yamdonk lake seems to imply a regular industry. The fish are preserved by being split, cleaned, and then dried in the sun.

"The Caumbi Valley, for instance," says Mr. Fraser, "possesses a warm, dry climate and produces barley, corn, apricots, and apples in abundance. At an elevation of 15,000 feet above the sea level round about the Lake Dangra, there are well built villages and richly cultivated barley fields. The fauna, too, is varied and abundant, but the mineral wealth of the country is said to be literally inexhaustible. Gold, which will attract work-men and traces men to the North or South Pole, abounds in such quantities and so widely distributed as to attract a large population as soon as it can be worked. Among other minerals found in Tibet are, iron, borax, salt, quick-silver, and lapis lazuli"†

* Holdrich, *Tibet the Mysterious*, p. 329.

† Fraser, *David Marches of Hindustan*, London 1907, p. 75.

The real motive of the Tibet Expedition according to Mr Barkatulla is as follows: "The real reason for England's advance on Tibet is the influence of high finance on the colonial policy of Great Britain. Travellers and explorers, in spite of strict vigilance on the part of the Tibetan authorities have succeeded during the last decade in discovering the mineral wealth on the roof of the world." Sathol and Thok-Jalung in South-Western Tibet possess rich gold deposits in considerable quantities. These places lie, roughly speaking, some three hundred miles east of Simla in British India. The yellow metal is found in the hill ranges lying between the thirty-second degree of east longitude. Thok-Jalung is only some sixty-three feet above sea level, and not far from the source of the river Indus, which cleaves the Himalayas in its course through Ladakh and Kashmir into the plains of Western India.

"Some two hundred miles to the eastward of Thok-Jalung, in the lake-region in the chain of hills just north of the thirty-second parallel, there are also several gold fields. These are the Thok Amal, Thok Marshara, and Thok Daurakpa deposits. About a hundred miles still farther to the eastward are the Sarka Shyar gold fields, lying right across an explored tract from the north-west that joins a route running nearly due south from Lohnor to Lhasa across ranges of mountains, a pass over one of which is 19,600 feet above the sea-level. Again, to the north of this region, among the northern spurs of the Kuon-Lun range, which forms the dividing line between Tibet proper and Chinese Turkestan, there are several important gold fields. Chief among these are those of Akka Tozh, at the head of the Ginkema river, one of the tributaries of the Cherchen that flows into Lohnor; the P'apa gold

† Colquhoun, Archibald: *Overland to China* (New York, Harper and Brothers) 1900, page 415, 341.

Such a country as Tibet, which is politically so important and economically so lucrative, and herself too weak to maintain her sovereign rights, according to the present practices of international morality, must fall under the domination of a strong Power. England was most favorably situated to grasp the problem and act on it. For

fields, between the Mst and Moldja rivers, which lose themselves in the Tarim basin, and the Sorzak mines on the Nia river, which also ends in the Tarim basin. The last two of these lie in the neighborhood of the route from Kaskar, near the Russian frontier, through the Yarkand and Khotan to Lohor, at an average altitude of less than five thousand feet, where it meets the route south to Lhasa and others in western China.

"When expedition after expedition, which had explored some region of the Hermit Kingdom, returned to India with exciting stories of fresh discoveries of gold-fields, the imagination of men of high finance—the natural collaborators of the British Foreign Office, was wrought to the highest pitch. There was, therefore, at the return of every exploring expedition, an outburst of agitation, "On to Lhasa" in the Anglo-Indian press. In order to justify the British forward policy in the eyes of the civilized world, there were invented, and widely circulated, wild stories of broken treaties, of Tibetan incursions and outrages on British subjects captured and tortured, of Nepalese Yaks carried off, of studied insults devised by Russian emissaries in Lhasa. And directed at the Indian Government through the witless person of the Dalai Lama etc. In 1898 the agitation for the conquest of Tibet had already attained sufficient importance, but the British Government was at that time occupied in

"a Tibet which is closed to England and open to Russia, which is a vassal state of China where ever our (English) people chance to have concessions to demand or rights to enforce, but is quite free and independent when it is dealing with Muscovy, cannot be tolerated so long as politics is not conducted on the principles of The Sermon on the Mount."

the conquest of the Egyptian Soudan, and consequently, could not well take up a fresh enterprise. Nor did the agitation of 1900 lead to any practical results, owing to the South African War.

In 1903, however, the long sought opportunity arrived. Russia, the only Power in Asia whose diplomatic protest in reference to the integrity of the Chinese Empire could be effective, was herself embroiled in a war with Japan over the question of Corea and Manchuria. And China, whose territory, both in the East and in the West, was the object to two great European Powers, was powerless.

The treaty (the Anglo-Tibetan Agreement) which is invalid in the eyes of international law, fully discloses by its terms the real motives which were at the bottom of the British invasion of Tibet. The mineral wealth of the forbidden land, like that of the Transvaal, has been the dominant factor, as pointed out before, in all the dealings of Great Britain with Tibet. What wonder is it, then, that no fewer than nine mining companies were formed in London to work and exploit the gold-fields of the north-western Tibet, even before the British army made its entry into the Lami capital?

The British Invasion of Tibet—by Mohammad Barkatulla *The Forum* (N Y) July—September 1905, pages 128-140.

BRITAIN'S OBSOLETE PARLIAMENTARY SYSTEM

By MAJOR D GRAHAM POLE

(Hon. Secy., British Committee on Indian Affairs)

WE are apt, in this country, to pride ourselves on our wonderful constitution and our Mother of Parliaments, which we think should be a model for the whole world to copy. Lord Birkenhead, speaking as Secretary of State for India, in the House of Lords last year, told India that we thought we knew something about framing constitutions and indicated that India should be grateful to us for the wonderful constitution we had given

her—a constitution, by the way, that would not be tolerated in this country for a single session. And yet, in spite of all that our constitution and Parliamentary procedure leave much to be desired. Go, almost any day, to any Committee Room of the House of Commons and you will find large maps—almost covering the expansive walls. These have been specially drawn on a large scale to show how it is proposed to link up some villages in Wales or Scotland with tramway

lines, or gas, or something that they are likely to know much more about locally than any committee of the House of Commons is likely to know even with the assistance of all the eminent Counsel and experts who have to be engaged at great expense to the local authorities and industries to argue both for and against the scheme proposed. These committees, and their name is legion, clog the wheels of Parliamentary procedure and prevent time being given to the thousand and one considerations that ought to occupy the attention of a real Imperial Parliament.

The recent all-night sittings of the House also draw attention to another and out-of-date custom of the House of Commons. Formerly the House was filled, to a great extent, with practising barristers. Politics offered such a good road to the plums of the profession that all lawyers were anxious to become M.P.s. But they did not want to give up their lucrative practices. So it was arranged that questions should be taken from 2.45 till 3.45 and that the real business of the House should not be started before 4 o'clock in the afternoon. That suited the lawyers, who could be in the Courts from 10 o'clock until 4, and then come on to the House of Commons.

There are fewer lawyers now. The electors are rather chary of them as a rule, but the hours remain sacred as the laws of the Medes and Persians. The Law Courts have long vacations, and Parliament rises for even longer periods. The result is that only a fraction of the subjects that ought to be discussed, can be discussed, and, as has happened lately, the House

has sat continuously for 34 hours out of 48. There are no intervals for meals. Consequently Members go out when they wish and most members are conspicuous for their absence from the debating chamber, although they roll up from the smoking room, the library or the dining room when the Division bell rings. They then go into the Division Lobby pointed out to them by their party Whips without, very often as I have occasion to know, being able to say what the vote was or how they have voted. All this requires complete over-hauling. No private business or public company could possibly be conducted on the lines of His Majesty's Government without finding itself very quickly in the Bankruptcy Court.

No man can be expected to sit from 3 o'clock in the afternoon till 7, 9 or 11 o'clock on the following day and still be able intelligently to follow or take part in the discussion, especially when all-night sittings are apt to take place on consecutive evenings and in consecutive weeks.

The House should sit at 10 o'clock in the morning, rise for lunch for an hour, and adjourn at 5 or 6 o'clock. That would be how it would be arranged if we were sitting down to establish it now. But we love precedents, and the best reason that we can usually give for doing anything is that our fathers have done it before us. We lack imagination, and we are so conservative as a nation that we dread changes. But changes must come in this matter or otherwise the clogging of the machine will cause it to break down altogether.

ENGLAND AND THE WORLD*

THESE twelve essays are the outcome of the International Moral Educational Conference of 1922 where a desire was expressed that the history taught to all the nations of the world should have regard to the position of each nation in the international order, what each nation has gained from, and given to the others in the course of its evolution.

* *England and the World: Essays arranged and edited by F.S. Marvin, London, Oxford University Press, 1925. 10s. 6d.*

The first two essays deal with the earliest civilization of England and the Roman conquest, and the third is an extremely brief and totally inadequate survey of the middle ages. The next two papers treat of England in the sixteenth and seventeenth centuries. The second of these papers ends thus:

"It is curious to see how slowly and with what difficulty the States of Europe came to accept liberty either in its political or in its intellectual aspects ... as a result of hard experience they had to recognise that enforced religious unity raised more difficulties than it solved, and that the partnership

of the people in power, though it seemed to threaten the solidity of the State, was in fact a source of strength and a security of stability and order. That must be reckoned among the greatest discoveries of the human mind.... For we have now discovered that freedom of thought, freedom of worship, freedom of criticism, the participation of the people in the work of the government, instead of leading to anarchy, the ruin of law, constant change and fluctuation in government, is really the sole basis upon which an ordered and stable state can be built. The appearance of permanence and of order which despotism gives has been proved by history to be wholly fallacious, it is liberty that is the real antiseptic of corruption, and the recognition of that has been one of the great achievements of the last century."

With the death of Queen Anne, says Dr Gooch in the chapter on the eighteenth century, "the throne lost every scrap of mystical conservation, and the divine right of kings was buried in her grave." Hindus and Moslems in India, and particularly communal fanatics, should ponder the following passage and try to realise its significance in the upbuilding of the India of the future.

"In the process of empire building the dominant principle is the struggle for existence in the life of the mind it is mutual aid. The cultural record of a great community calls up the vision of a cistern fed by pipes running in from different corners, while others carry off the fertilising stream to every point of the compass. It is a story of giving and getting, of rising and falling, of continuous renewal, of creation and imitation. The unity of Catholic Christendom was broken by the Reformation, and for five or six generations religion was an apple of discord, not a bond of union. With the cooling of the theological temperature at the end of the seventeenth century it became possible gradually to restore the cultural contacts of the past and the eighteenth century registers an enormous advance. Countries were more ready to learn from their neighbours, and national cultures were enriched by grafting and cross-fertilization. The ennobling conception of European civilization as a cooperative achievement, a joint heritage a common responsibility dawned on thoughtful minds like Lessing and Herder, Hume and Voltaire, Turgot and Condorcet. The distinction was no longer between orthodox and heretic, but between the civilized man and the barbarian."

The same writer contributes the chapter on the nineteenth century and proceeds to note that the enfranchisement of the urban worker in 1867, of the agricultural labourer in 1884, and of women in 1918, completed the machinery of political self-government and that England's greatest gift to the world was the spectacle of the successful operation of free institutions. Democracy had been strengthened in various directions. "The Crown has gradually lost every vestige of political power, the House of Lords has subsided into a debating society, the press is cheap and free, religious equality is complete, Trade Unions have been legalised, elementary education is universal and free, and finally, as Dicey used to remind us, we are governed by the Rule of Law."

Of the British Empire, that is, the self-governing Dominions, Dr. Gooch says as follows:

"The British Empire is anchored in an ever-increasing degree to the same principle of

government by consent on which our domestic liberties are based. The Durham Report forms a landmark in history, and the affectionate loyalty of the Dominions to the mother-country is a tribute to its far-sighted wisdom. The liberal tradition at home and abroad postulates a certain confidence in the sanity of human nature, at which cynics and pessimists may mock but which has justified itself at home and abroad. The most striking act of faith in the annals of our Colonial Empire is to be found in Campbell-Bannerman's grant of self-government to the newly conquered Dutch Republic of South Africa, and never was a statesman more richly rewarded than when Botha and Smuts held the subcontinent firm during the hurricane of the Great War. It was the crowning glory of Gladstone's career that he devoted his last efforts to the task of reconciling Ireland, and if Home Rule had been granted, as he wished to grant it, freely instead of grudgingly, before instead of after the rising of Seinn Fein, the results would have been more satisfactory. *If free institutions are to produce their full healing effect, they must be given in the right spirit and at the right time.* (Italics ours.)

Dr Gooch closes his instructive survey with the following words:

"The eighteenth century was the age of cosmopolitanism the nineteenth of nationalism. The task of the twentieth is to find a synthesis which combines what is best in the one-sided ideals of its predecessors, and allows every branch of the human family to find security and self-realization in the larger life of mankind."

The most unsatisfactory chapters of the book so far as constructive thinking is concerned, are those which treat of the British Commonwealth and of England's dealings with the backward races. The right solution is evaded, and there is a palpable disposition to avoid a clear issue on the most vulnerable points, and the repetition of the commonplaces of the imperialistic press takes the place of vigorous thinking. The Backward Races "will be found chiefly in Africa, where our responsibilities have been largely increased since the war by the transfer of vast territories" to England as the mandatory Power. This makes it necessary for the writer to expatiate on the doctrine of trusteeship first enunciated by Bunsen and taken up by politicians who want to continue the old exploitation under a new name more in accordance with the ideas prevailing at Geneva. It is a pity that the editor, who is a writer possessing the gift of fruitful generalisation, should have nothing more fruitful to suggest than the sickening hypocritical platitude that "the responsibility which trusteeship involves lies on the shoulders of every man and woman of European race in Africa." These words have a familiar ring in our ears, and we know to our cost that what is everybody's business is nobody's business and this diluted responsibility amounts in practice to nothing, and as Mr. Marvin elsewhere says, the ideal actually attempted to be pursued in relation to the backward races is "to dispossess them completely and exploit their land, using them merely as the human instruments," and to treat "the coloured or backward man merely as a tool."

Colonial expansion is sought to be justified by saying that "it is not for the general good of the world [as if that is, or ever was, the object of the exploiting nations] that vast tracts should be left

to the unimpeded occupation of a few scattered tribes." But if that be so, how can the 'white Australia' policy, with only a narrow strip of the continent occupied by whites, be defended? Here Mr. Marvin falls back on the theory that the white races bring the blessings of civilization with them. "Science and the power of applying it collectively to the improvement of our life and conditions are the simplest measure of the advance or backwardness of a civilization." The growth of systematic knowledge (Science) and the mental and moral energy necessary to apply it distinguish the white races. "Science and energy, through the agency of Western man, have increased the productivity of the soil, improved the conditions of life, and promoted intercourse and order, wherever advanced and backward people have shared possession or cooperated in work." But admittedly "Japan has gone ahead by admitting this leaven from the West". Why then is also she excluded? And does not the root cause of India's exclusion from South Africa lie in the fact that the Indian settlers were "cooperating in work" with the white colonials only too well, ousting them, in fair competition, from trades which they formerly monopolised?

Mr. Marvin reminds his readers that "every man should be treated as an end in himself" and that the savage, though backward relatively to other races, is himself full grown, with mature, deepest instincts and passions, and his own way of treating his own juniors and inferiors. Hence, though racially immature and needing education like a child, he is, as an individual, adult and responsible and must be given freedom to act and develop on the lines of his own nature." His advice therefore is that "the superior race must therefore cultivate knowledge and sympathy, if its task is to be well done, and the inferior must have sufficient freedom to develop on its own lines, with help and guidance from the more advanced. The mutual relation is a form of trusteeship, similar to, but not identical with, that which prevails between adults and minors in the same community."

This blessed word, trusteeship, has furnished the imperial races with a very useful weapon to deceive each other, but like the 'white man's burden' of which Kipling sang, 'trusteeship' will not go down with the backward races, and will not satisfy "the rising discontents and aspirations of the native population of Africa."

Incidentally we may mention that at the outset of his essay, Mr. Marvin draws a clear distinction between the Asiatic and the backward races, but in respect of the remedy he suggests, it would seem that the distinction is without difference and is a matter of fine phrases only, for the principle of trusteeship brought into prominence by Burke in his attack on Hastings is said to have been "endorsed for all time" [of course for the perpetual benefit of the exploiting races] "in the administration of subject peoples" of Asia and Africa alike. The shade of Burke would, we believe, have turned in his grave if it were to know the uses to which that word would be put by his interpreters bent on perpetuating the white domination. It is true that the Oriental races are inferior to the West in scientific education and material strength, as Mr. Marvin says, but he also speaks of their historic past

'in many points more venerable than our own' and of their ancient cultures. Of China, he says, that at one time it was "an example to Europe in many of the highest qualities and attainments of the human spirit," but "it fell behind in the race by the non-acquirement of science". Do these cultured Oriental nations deserve to be placed under the heel of European domination *alias* trusteeship? And what does their 'guidance' in the following passage amount to but merciless exploitation so long as their victims are not strong enough to resist with success?

"They are passing under the stimulus of Western thought into a state of national self-consciousness and scientific organisation, and our function, while preserving their historic features, is to hold them together and guide them during the inevitable evolution."

But the real truth has been told by another writer who, writing on England in the East, says that "no civilization, whatever its claims to superiority, has hitherto supported itself without adequate military power", and the humiliating though sanctimonious imposition of Western trusteeship can be repudiated by the Eastern nations only by developing that power. If, like Japan, they succeeded, no European historian will have to speak of that blessed word being "endorsed for all time" in relation to these and even when they do not rise above the level of the tribes of Arabia or of Afghanistan in civilization, no guidance, similar to that which prevails between adults and minors, will either be offered or tolerated, and the benefit of trade with the Western nations will be more correctly appraised, and it will be more universally recognized that "trade is a civilizing and binding tie when carried on between equals on honest terms, it is a fraud and degradation when forced on ignorant inferiors, sometimes at the cannon's mouth, as in the Chinese wars of the 'forties and 'fifties".

Many writers have pointed out the liberal policy followed by the Latin races in their colonial administration, and Mr. Marvin adds his own testimony thus "from the first our method of dealing with coloured men differed in one important tendency from that of the French and southern European nations. All Western Europe shared the guilt of slavery. But whereas what are called the 'Latin' races have cultivated 'fusion' we have on the whole pursued the policy of 'separation', with educational work and co-operation in the same legal and civic system gradually extended. Thus South America is largely peopled by men of mixed descent from aborigines and Europeans and the French incorporate their Arab and Negro subjects in the Chamber and the Army as far as possible on equal terms. But throughout the Anglo Saxon world the policy of 'reservations,' of separate life and territories, has been followed and is being still extended, and intermarriage has always been discouraged."

The difficulty of the problem of the Empire is alluded to, but no solution is suggested except that "the hope of the future lies in avoiding the absurdity of logic." And all the writers who have dwelt on the subject, including the editor himself, have given logic the go-by, and have not dared to face the position of India

in the British Commonwealth, and the only indirect reference to the subject is to be found in the following passage. "The control of immigration, it is recognized, is a subject for colonial and not imperial settlement, yet its results may yet be of general effect." As for the British part of the Commonwealth, peopled with white races, one writer writes in the following strain: "This group of the British Commonwealth, bound together only by custom, tradition, and by sentiment, is the greatest gift of England to the world. Equality of partnership, co-operation in common ideals, these things if they are realised, will provide the greatest object-lesson in international peace. But it is a gift which has yet to make clear its value. The common ideals have yet to be proved, the power of co-operation is not yet fully tested." Again, "The Empire has indeed not yet proved its position. For England and the colonies alike there are problems to overcome of which the solution is not yet apparent. One point is clear when such difficulties arise in the future, they must be overcome without force, without breach of the principle of democratic control, by virtue of goodwill. It can hardly be contested that such a system in working would rightly be regarded as a great contribution from England to the modern world. It would be solid ground for hope of international peace. But can it be achieved?" The whole question is thus left in doubt.

The chapter on England in the East is by Professor Dodwell of the School of Oriental Studies, London, and on the whole, it well repays perusal. The chief distinguishing features between England and India, according to him, are that the former is mainly industrial, while the latter is mainly agricultural and that there, the State has shaken itself free from the Church, whereas King, Priest and King God were familiar to us till quite lately, and "the social and not the political organisation hardened into permanent form." The want of a spirit of nationalism, and the instability of Asiatic states have been ascribed by the learned Professor to the following cause: "Above all, whereas physical nature has formed Western Europe into a number of small and compact compartments, in Asia natural boundaries are few and there is nothing to obstruct the march of armies and the flow of civilizations over areas incomparably greater than those of any Western European State. This last has reacted on the character of Asiatic States. So far as our experience extends, free political institutions arise and develop in small, well-defined, and well-protected areas. But what of the United States of America? No doubt this is not the sole condition, but it is certainly a powerful factor, and its absence a strong obstacle. But this condition was just the one lacking to the early Asiatic civilizations—the states thus brought into being were of indefinite extent,—either very great and always tending to fall to pieces or encircled by a ring of other states, pressing closely on each other, without preordained boundaries, and at constant war, then, too, all the great states that arose were tested again and again by the peril of barbarian invasions from the steppes and deserts of Northern and Central Asia; so that what between Timur Lenk and Jenghiz Khan on the one side, and a never-ending cycle of expansion, fissure, and redintegration on the other, the states' main preoccupation was either defence

or conquest, and the individual citizen was usually a member of so vast an agglomeration as precluded the development of those common ideas and feelings which form the basis of nationality. This makes one essential difference between the history of Asia and that of Europe. The latter produced a considerable number of well-defined nationalities existing within well-defined geographical areas, whereas the former produced a small number of loosely knit civilizations corresponding with more or less unstable empires. And secondly, as I have said, the Asiatic states did not produce consolidated political institutions. In one region we find what looks like the germ of city states, but the germ disappears without developing"

"Agricultural societies are always characterised by stability rather than progress, and when they are grouped in such large political units as the geographical conditions of India permitted and even encouraged, the mass of society was such that no individual could stir its inertia. The position was that of our own Middle Ages, but intensified a thousand fold."

This analysis of Indian history and the stable condition of Asiatic thought cannot be brushed on one side as altogether imaginary, nor can we ignore the truth that underlies the following sentence: "It has been Britain's role in Asia to be at the head of those who have disturbed the hereditary quietude that for long ages had been broken only by the rise and fall of dynasties." Professor Dodwell thinks that the scientific method "is the one great gift of the modern world to man. It is playing in India, and indeed in all civilized Asia the same part as Greek thought played in Medieval Europe. The latter shook the bases of society of the Church, it prepared the way for the Reformation, for the emancipation of thought for the development of industry, for modern democracy. In like manner before our eyes the Asiatic world is undergoing the same painful process. The old conception of the kingship is fast disappearing, the acquiescence on which oriental societies reposed is being sapped, the slender rivulets of trade have swollen into great rivers—either abandoning or destroying the homes of former industry upon their ancient banks. But some strong stimulus of this sort was necessary to set Asia once more on the intellectual quest."

What the writer says of China applies equally to India. "Great as was the Empire of China and ancient as its culture it was in a military sense feeble and in a political sense ill organised. For many centuries no additions had been made to the Chinese store of practical or theoretical knowledge." In another chapter, it is said of the international character of European science, "the weaver's shuttle passes backwards and forwards, each country learning and teaching, giving and getting, till the pattern of the world becomes plain to our wondering eyes." But where is India's place in this pattern that is being woven by international cooperation? Her contribution, with the exception of one or two well-known figures, is almost nil.

Professor Dodwell throws a new light on what he calls the humanitarian movement which transformed the spirit of the Company's administration and resulted in the introduction of English education by Macaulay's Committee of 1834. "One might have supposed," he says, "that the development of this new and enlightened policy would have been accompanied by a check in territorial

expansion. But that was not at all the case. On the contrary, the British dominions [in India] expanded faster than ever. . . . Before 1910 the Company was declaring that no honourable accession of territory was to be declined. Evidently it was felt that the development of an honest and improved system of administration, combined with the new educational activities, furnished a moral justification for annexation. Thus the humanitarian movement, in its origin opposed to conquest, came at a later stage to contribute arguments for the extension of dominion. It is not for nothing that the continental nations regard England as the most consummate of hypocrites in international politics.

The revival of Asiatic self-consciousness, the reaction against European influences and control, is called by the name of 'the Revolt of Asia'. From our present point of view the problem may be shortly stated thus—whether the Soviet Government will succeed in organizing the states of Asia into an alliance inspired by an intense hostility to Europe and its civilization or whether under the leadership of the English-speaking peoples the East may be brought into friendship and co-operation with the Western world. Professor Dodwell observes further: "The time is certainly approaching when under the constructing influences of modern communications the two types of civilization which exist today must assume an attitude of definite friendship or hostility." That is no doubt true, but Asiatic co-operation cannot be secured by the policy of distrust followed in India and of humiliation in South Africa where as the establishment of a naval base at Singapore is a direct challenge to the nations of the Far East. "The only bridge across the fissure which for so long has separated the two great groups of peoples" is, according to the learned professor, the cultural influence of the East upon the West as well as the renaissance of Asia under the stimulus of Western knowledge. "The contemplation of that remarkable system of Indian society which long seemed the one thing permanent in a world of change, familiarity with customs separated by worlds from our own and with peoples utterly unlike ourselves, these and many other influences have obliged us to shake off something of our island narrowness and self-content and have given a steady impulse in favour of wider views of humanity and its future even when the effective influence of our own ideas and civilization has been steadily increasing." The renaissance of Asia under the stimulus of Western knowledge, the application of scientific method, and of common tests of knowledge and common standards of morals [not entirely European, let us hope] will in the writer's opinion, enable Asia and Europe to co-operate.

In the chapter on the League of Nations, contributed by Mr. Marvin, he draws attention to 'our prominent position in the League of Nations'. The British Empire has six seats in the Assembly of the League of Nations and by the terms of the covenant one permanent place in the Council. This gives us in each case something like a ninth of the membership on the present basis, but in actual weight far more. But it must not be supposed that the vote of the six members for the British Empire is necessarily cast as one. Complete freedom of decision prevails, and the British Empire delegates discuss questions together as a little

Assembly within the Assembly itself." "We made an able Frenchman head of the International Labour Office, just as the French and other nations loyally support an Englishman as general Secretary of the League. But in the working of the office and in the place which industrial, financial, economic and financial questions take in the whole work of the League, English influence is decisive." That being so, and England having gained most of all the belligerent nations as a mandatory power under the League, she has no objection to "listen sometimes to the fervid discourses of those who deal more readily in the abstract than we do ourselves." A veiled contempt for such idealism is natural to the Englishman whose "turn for practicality" has taken the fullest advantage of this 'great idealist experiment.' "There is no lack of idealist oratory, and with the French interest in the Committee of Intellectual Co-operation, and with the expected advent of the Germans this year (1925), the forces of abstract thought will be greatly strengthened. In general terms the English function in the League is to infuse it with a practical spirit gained by centuries of experience in dealing with similar problems on a limited scale. We have to co-operate in a frank and cordial way with others to whom abstract ideas, whether of humanitarian or national import, are much more real and urgent than they ever seem to us." "England in politics, and France in language and general culture, have led the world," but "as a link of nations and torch-bearer of politics, she (England) leads them all and this is her vital function in the League of Nations."

With England thus playing the leading role in politics and commerce in the League of Nations, 'the reconciliation of patriotism and the larger allegiance to mankind' is easy for her. "They are Devon-men, but Englishmen still more, and as Englishmen, proved members of the Empire, and as members and builders of the Empire they now share in six votes for the management of the common affairs of the world in the League of Nations." Mr. Marvin is therefore well satisfied, and can complacently declare that "love and understanding of mankind find their best roots in love and understanding of home and country. One grows from the other and the larger attachment need not in any way dwarf or hamper the latter." Animated by this spirit of unctuous self-glorification, he repeats the parrot-cry that, though India no doubt will have self-government in its own good time, "we naturally and rightly insist that the goal must be reached by safe and progressive stages and not by revolution."

According to Mr. Marvin, "we had from the eighteenth century onward been quoted and followed as an example in self-government by other nations 'struggling to be free'. In the art of self-government, in preserving an unbroken political unity, without a revolution for 250 years, and gradually extending the system to our offshoots and dependencies, in this we stand alone. . . . our prominent position in the League of Nations we count for so much in the stability and progress of the world. . . . for the League of Nations exists to generalise the peaceful progress [i.e. progress which does not interfere with the exploitation of the backward races of Africa and the Mosul oil fields] which is characteristic of English history. . . . The practical spirit is the spirit of compromise. . . . Hence those trained in the English school of 'prac-

tical politics' have many special aptitudes for service in the League of Nations. . . . We maintain on the whole a continuous policy in foreign affairs, and therefore go into the League of Nations... as a steady force," which means, no doubt, that England is there to see to it that the League does not allow claims of abstract justice to override her interest or convenience.

The last chapter is headed 'The child's approach to Internationalism', and therein Mr F. J. Gould points out the way in which the teacher has to proceed and the child has to be taught if the moral unity of mankind is to be brought about in some remote future. In many respects though the references to India are few, the writer seems to us to be endowed with really sympathetic insight, of which the evidence is far from being common in the rest of the book. The writer begins by affirming that "to children learning history, every foreign nationality must be introduced in human, vivid, and picturesque terms." The European and American missionary and the English political traveller and retired Anglo-Indian bureaucrat, between them, give us exceedingly picturesque stories of Indian life, but they love to dwell on all the black spots and paint us by preference as semi-nude aborigines, and, knowing nothing of our life from the inside and writing always with a motive, they produce caricatures which pass for truth in the homeland and create greater estrangement instead of furthering the cause of unity. In the day of the final reckoning between the East and the West they will no doubt have their dues meted out to them. In the meantime all honour to those who, like Mr Gould, try to heal the breach by sympathetic appreciation. "India, especially, possesses

so rich and ample a store of lovely legend and ethical evangel that it is a grief to think how little of it is known to the schools and even churches, of this island to-day." "It is useless to sigh over the lost opportunities of past teachers of history and to lament that, for example, they occupied time with the Black Hole of Calcutta that might have been better devoted to a portrayal of Indian village life, and Indian arts and crafts. Instead of sighing I would sooner render thanks to one man and one woman. The woman is Miss Margaret Noble, a London infants' school teacher who went to teach girls in a back lane of Calcutta, and who, in her book *The Web of Indian Life*, acted as prophetess of the Hindu soul, and disclosed to profound charms of devotion and imagination to us of the West, and who has narrated for children the *Cradle Tales of Hinduism*. The man is Romesh Chunder Dutt, once Prime Minister of Boroda who, in easy English verse, has recited the chief episodes of the wonderful old epics, the *Mahabharata* and *Ramayana*. . . . this most fascinating story is beloved, even as a gospel, by many millions of our British commonwealth fellow citizens in India, and our children ought to know it at least as effectively as they know (or their history manuals know) the events of the Indian Mutiny. In brief, I would affirm that it is now one of the most pressing and solemn duties of the teacher to open up a knowledge preparatory yet vivid, of the far-reaching Indian civilization. India is destined to form one of the largest links in the final chain of human unity, and to neglect India would be as foolish as to neglect France in a survey of the evolution of Europe."

POLITICS.

THE PROBLEM OF HINDOO-MOSLEM UNITY

ROUND TABLE CONFERENCE AND ADJUSTMENT OF MUTUAL RELATIONS

By MOULVI WAHED HOSSAIN, B.L., M.L.C.

The bloody riots and sanguinary conflicts between Hindus and Moslems in Calcutta have created an extremely anxious situation. The feeling of tension seems to be widespread. Sudden outbursts of hooliganism at intervals, secret murder and the sense of insecurity of life and property remind us of the troublous days of Karim and Chitoo, Tantia Topi and Akbar Khan. The general panic and terror, which still prevail in the second city of the Empire, resemble those which prevailed in the period of interregnum which saw the downfall of the Moghul Empire and the rise of the British supremacy in India.

Our surprise is, how can the dark days of the Pindari reign of terror be brought about in the noon-tide of British power in India? Sometimes the most un-expected things happen, but it is certain that the present state of affair is not going to last long.

However, the present outburst of communalism in the country has given rise to various opinions. The pessimists think that Hindu-Moslem unity is an impossibility. The optimists take these communal ebullitions as passing phases of Indian life, and attribute them to the manipulation of some interested persons for serving their own purpose. But

there are some men of light and leading who honestly believe that there can be no real unity between followers of the two creeds so differently placed as regards their education, culture and temperament. According to them unity is possible only when both the races will come up to the same level of education and intelligence. Consequently, according to this view, Hindu-Moslem unity is a question of time.

ADJUSTMENT OF MUTUAL RELATIONS

Now, let us examine the problem without any bias or prejudice. There is some force in the argument that unity presupposes equal conditions of life. Two communities in a state of different degree of education and culture, may live in amity and peace without harbouring ill-will to one another so long as there is no clash of interest. But as soon as class-interests come into conflict, the feeling of amity disappears, and class antagonism occupies its place. This is a truism and is equally applicable to those cases where the two classes of persons are placed on the same level of intelligence and culture. Thus it is the conflict of class-interests which gives rise to the feeling of antagonism. Therefore the argument based on the equality of conditions of life loses much of its force. Now, the question is how to avoid the conflict of interest, either class or communal? I think there are two ways of avoiding the conflict of interests and bringing about Hindu-Moslem unity. (1) One is by leaving the adjustment of mutual relations to the natural process of self-adjustment; and (2) the other is to settle the differences by conscious recognition of mutual rights. If the matter is left to the natural process of self-adjustment, it will take time—indeinitely long time—to attain the happy consummation. In the meantime the conflict of interests will lead to the rancorous growth of rabid communalism. The present state of communal feeling prevailing in the country and the clash of interests leading to the occasional outbursts of antagonism clearly demonstrate the utter futility of the process of self-adjustment. Moreover, political exigency requires speedy adjustment of mutual relations and cannot wait for an indefinitely long period. Therefore, the second alternative requires our serious consideration. The principle of conscious recognition of mutual rights is based on the policy of "give and take,"—surrendering some rights which one enjoys in excess, and

acquiring those rights hitherto denied to him. Thus by conscious recognition of just and legitimate rights of all communities the conflict of interests may be avoided, and the period of self-adjustment shortened. But such a recognition requires the strength of mind and broad out-look of the men of light and leading of all communities and a strong desire for speedy settlement of communal differences. It is perhaps then that we shall be in a position to say that we are acting on the principle of justice, equality and fraternity.

The talk of a Round Table Conference for settling mutual differences seems to be based on the second alternative. The representatives of various communities will do well to sit round a table, discuss the various questions affecting their rights, and then arrive at a common understanding by recognising mutual rights. This will have a two-fold effect—(i) it will sweep aside the fog of suspicion which now clouds the mind of both the communities, and (ii) it will enable each community to know exactly the place and position it occupies in the Indian polity. The task is no doubt difficult, but the difficulty should be grappled with with a determination.

While on this subject I should like to point out the attitude of Islam towards non-Moslem communities. It is well known to students of history that when foreign countries came under the sway of Islam, the Moslem Rulers (Khalifas) had to deal with the rights and privileges of different communities, notably with those of the Christians, the Jews and the Persians. The Christians used to take out their cross in procession accompanied by music. Hazrat Omar, the second Qaliph, allowed it with necessary safe-guards. The following edicts issued at the time, throw a flood of light on the subject. (1) Regarding the blowing of conchs and ringing of bells. (*Naqoos*) the *firman* says:—

"The *Zammi* (non-Moslems under the protection of Islam) may blow conchs or ring bells any time they like during the night and day save and except the times for prayers." *Kutab-ul-Kheraj*, p. 86.

N. B. Naqoos is a sort of conch for calling people to congregational prayer by the Eastern Christians.

(2) Regarding processions with the cross (*Salib*) the *firman* says

The *Zammi* are entitled to take out their cross

in procession except by the congregations of the Moslems *Kitab-ul-Kheraj*, p. 80.

(3) Regarding the driving of swine, the prohibition runs thus

The *Zimmis* should not drive swine from their quarters through the quarters of the Moslems.

With the exception of limitations similar to those stated above, almost all the treaties concluded by Hazrat Omar and his generals with the conquered countries, granted to *Zimmis* (non-Moslems) full liberty of religious observances and full security of life and property. One of the clauses of the treaties concluded with the non-Moslem inhabitants of Jurjan, Azarbaizan, Muqan, &c., runs thus:

"Security is granted to their life and property and religion and customs (*Shari'ah*), and no alteration will be made in any one of them" — *Idh Tibri*, p. 2650, also p. 2662

To avoid tediousness I refrain from citing more instances from history and turn to the original source of the *Quran* and the *Hadiths* to ascertain the attitude of Islam towards the non-Moslems living in the same country or in the same neighbourhood. The following four sets of passages will clearly illustrate the real attitude of Islam towards its neighbours and the underlying principles regulating the mutual dealings concerning social and religious matters.

Referring to the non-Moslems and their religious differences, the Holy *Quran* says —

1 I am commanded to establish justice among you. God is our Lord and your Lord, our works will be imputed unto us, your works will be imputed unto you, *let there be no wrangling between us and you*, for God will assemble us all on the last day and unto Him shall we return. Chap. XIII

(2) Say: O unbelievers, I will not worship that which ye worship, nor will ye worship that which I worship. Neither do I worship that which ye worship, neither do ye worship that which I worship, ye have your religion, and I my religion. Chap. CIX.

(3) If God had so pleased, they had not been guilty of idolatry. We have not appointed thee (the Prophet) a keeper over them, neither art thou a guardian over them. *Refrain not the idols which they invoke besides God lest they maliciously revile God without knowledge*. Thus we have prepared for every nation their works, hereafter unto God shall they return and He shall declare unto them that which they have done — Chap. VI

(4) Wherefore we commanded the children of Israel that he who slayeth a soul without having slain a soul or committed a wickedness in the earth, shall be as if he had slain all mankind, but he who saveth a soul alive, shall be as if he had saved the lives of all mankind — Chap. V

(5) Make not God the object of your oaths that ye will deal justly and be devout, and make peace

with men, for God is he who heareth and knoweth. — Chap. II.

II

Referring to mutual relations, the Holy *Quran* says —

1 Show kindness to your parents and to relations and to orphans and to the poor and to your neighbours who are your kinsmen and to your neighbours who are strangers and to your familiar companions and to wayfarers, and to the captives whom your right hands possess (be they your slaves or horses or other domestic animals), for this is what God loves, and He does not love the proud or vainglorious who are covetous and recommend covetousness unto men. Chap. IV

(2) O true believers, observe justice when you appear as witnesses before God, and let not hatred towards any one induce you to do wrong, but act justly, this will approach nearer unto piety and fear God, for God is fully acquainted with what ye do — Chap. V 11 and 12

(3) Do good to the creatures of God, for God loves those who do good — Chap. II 91.

(4) Sympathy and assistance for your people must be shown in deeds of goodness and piety, but you should not be helpful to one another for evil and malice — Chap. V 3

(5) And slacken not your zeal for the sympathy of your people. And be not an advocate for the fraudulent and plead not for those who defraud one another. Verily God loves not him who is deceitful and criminal — Chap. IV 105.

(6) The person who violates his brother's right is *not a believer in the unity of God*

(7) No one of you is a believer in God until he loves for his brother what he loves for himself.

III

Referring to the mode of living and behaving with one another the Holy *Quran* says —

(1) There is much good in concord and agreement — Chap. IV 12

(2) And live peacefully with one another — Chapter VII 1

(3) Turn away word or deed which is vain and frivolous with what is better and then the person between whom and thyself was enmity, shall become as it were thy warmest friend — Chap. XLII 31

(4) Let not men laugh other men to scorn who haply may be better than themselves, neither let women laugh other women to scorn who haply may be better than themselves. *Avoid entertaining frequent suspicions, for some suspicions are crime*. Pry not into other men's failings, neither let any of you traduce another in his absence, and fear God, for God is relenting and merciful — Chap. XLIX 11 and 12

(5) They are the doers of good who master their anger and forgive others when it is proper to do so. — Chap. III 128

(6) The recompense of evil is only evil proportionate thereto, but if a person forgives and this forgiveness is exercised on the right occasion so that matters amend thereby, he shall find his reward from God. — Chap. XLII, 38.

(7) Feed the hungry and visit the sick and free the captive, if he be unjustly confined. Assist any person oppressed, whether Moslem or non-Moslem.—*Hadis*.

(8) Verily God instructs me to be humble and lowly and not to be proud and that no one should oppress another.—*Hadis*.

(9) Do not say, if people do good to us we will do good to them and if people oppress us we will oppress them, but determine that even if you do not receive good from people you will do good to them, and if they oppress you you will not oppress them.—*Hadis*.

(10) All God's creatures are his family, and he is the most beloved of God who tries to do most good to God's creatures.—*Hadis*.

IV

Regarding the rights of and respect due to women the Holy Prophet says —

(1) *Paradise lies at the feet of thy mother*. The rights of women are sacred, see that women are maintained in the rights attributed to them. Do not prevent your women from coming to the mosque. The best of you before God and His creation are those who are best in their own family and best to their wives. A virtuous wife is man's best treasure. Fear God in regard to the treatment of your wives, they are your helpers, you have taken them on the security of God and made them lawful by the words of God. The woman is the sovereign in the house of the

husband. The world is full of objects of joy and delight and the best source of delight is a pious and chaste woman.—*Hadis*.

(2) God enjoins upon you to treat women well, for they are your mothers, daughters and aunts.—*Hadis*.

(3) Women are the twin halves of men.—*Hadis*.

(4) And respect women who have borne you, for God is watching over you.—*Quran*, Chap IV, 2.

(5) The adultery of the eye is to look on with the eye of lust on the wife of another, and for adultery of the tongue is to utter what is forbidden.—*Hadis*.

(7) I swear by God, there is not anything which God so condemns as His male and female servants (i.e. men and women) committing adultery.—*Hadis*.

Comments are unnecessary on the four sets of passages quoted above. They contain the Qur'anic injunctions and the authentic precepts of the Prophet as to (1) how Moslems should behave with non-Moslems even in matters of religious differences; (2) how to live in peace and concord and adjust mutual relations without entertaining suspicion; (3) how to assist and sympathise with one another and do good to God's creatures who are His family, (4) how to respect women who are our mothers, daughters and aunts; for "*Paradise lies at the feet of the mothers who have borne us*"—says the Prophet.

THE NEW GREATER ITALY AND SIGNOR MUSSOLINI

By DR. TARAKNATH DAS, M.A., PH.D.

(This article has been prepared after the writer's recent visit to Italy and study of the "Life of Benito Mussolini" by Signora Margherita G. Sarfatti)

TO understand the real spirit and future possibilities of the new and greater Italy, we must first visualise, if we can, the significance of Italian contributions to human progress, since the glorious days of the Roman Caesars, and the present-day activities of the Italian nation under the guidance of Signor Mussolini and the Fascists.* Suffice it to say, for the purpose of our present discussion, that the people of the Mediterranean region made most of the fundamental and basic contribu-

tions in the fields of Law, Government, Art, Science, Literature and Religion of the Western people; and possibly, on the whole, the people of Italy lead them all. Roman Law, the Roman Empire (the glory of which inspires British statesmen to compare the British people and the British Empire as the heirs of ancient Rome) and its administration, Italian paintings, sculpture and music extort the admiration of all. As to-day Italy has her Marconi and others, so in the past Galileo and others have aided Science. The history of Italian literature is an epic. Rome has been and is the fountain-head of organized Christianity, the Catholic Church, whose

* The word "fascist" is derived from the "fasces" or bundles of sticks carried by the lictors of ancient Rome as symbols of authority. It implies unity and authority.

history covers the major part of the cultural history of the Western people. May it be said here that the Catholic Church was the most important factor to bring about intellectual and cultural unity of all Europe as an entity. After my travel and observations, Italy of the past looms large; I do not hesitate to say that without full appreciation of Italy, through sympathetic study, none can adequately understand the spiritual and cultural significance of the Western Civilization.

In the glorious past of Italy lies the seed of the new Italy. This seed has taken centuries of adverse circumstances to grow into a plant, and it is now bearing rich fruit. As early as the days of Dante, the great Italian saw the vision of it. The Italian patriot Machiavelli, who is the real father of modern statecraft among the people of the West, wrote the much misunderstood "Prince" as a message to an Italian Prince who would undertake the work of Italian Unity. Centuries later, Mazzini, the prophet of Italian Unity and Independence, the most forceful exponent of the ideal of nationalism and "Duties of man to God, Country and Humanity", in the nineteenth century, from whose writings many Indian patriots have received inspiration to serve their own cause, Garibaldi, the warrior-leader of the Italian War of Independence, Cavour, the statesman without whose sagacity, it would have been impossible to secure international support for the cause of Italian Independence, and King Victor Emmanuel, the advocate of constitutional monarchy, played their roles, supplementing one another to bring about a free and independent united Italy, the fore-runner of the new and greater Italy of to-day and of the future. As in Asia, modern Japan has attained her present status as a World Power politically, militarily, navally, financially and industrially within a short time, so in the case of Italy, which was for centuries under Austrian domination, her accession to the present status as a World Power is rather significant and dramatic, and this has been brought about through Italian efforts and sagacity in international politics. To-day Italy is the third colonial power in Europe, next only to Great Britain and France. About ten millions of her children, living outside the confines of the mother country, are engaged in founding a Greater Italy whose voice will be heard the world over and whose might will be respected by all nations of the world. At the end of the World War, the condition

of Italy was most unstable on the verge of anarchy and chaos. Great Britain, France and the United States ignored Italian demands while framing the Treaty of Versailles. But it seems that a miracle has happened; and through some magic power, the great people have awakened to their responsibilities and great destiny; there has come such a transformation of Italy, that to-day the revealing might of the Italian people has forced other nations to recognise that no important question of international politics in Europe can be harmoniously and amicably solved without the consent and co-operation of Italy. Certainly this change is the achievement of the Italian people, but through the great leadership of Signor Mussolini "Il Duce" of the Fascists and the present Premier of Italy.

To-day even Great Britain is catering to the new and greater Italy to secure the support of the latter in British Mediterranean, Near Eastern and African policies by ceding territories and making favourable debt-settlements. Great Britain has ceded a part of Kenya and Jubaland to Italy; she has supported Italy in the recent Italo-Egyptian boundary dispute which has been settled in Italy's favor. Great Britain has agreed to the Italian debt-settlement by which Italy will pay only £4 to a £1 of indebtedness. Indeed in making this generous financial settlement with Italy, political considerations have played a very considerable part. Before the settlement of the Anglo-Italian Debts, Sir Austin Chamberlain, the Foreign Minister of Great Britain, took the initiative to meet Signor Mussolini at Rapallo; and on December 29th 1925, these statesmen discussed the situation in the Near East and in the Balkans, because of the recent Russo-Turkish Agreement and Neutrality Treaty concluded at Paris, after the Turkish refusal to accept the decision of the League Council on the Mosul question and came to some kind of cordial personal understanding. Mr. Churchill, the British Chancellor of the Exchequer, speaking on the occasion of the signing of the Anglo-Italian War Debt Agreement, on January 27, 1926 made the following significant statement —

"My colleagues in the British Cabinet, in leaving a wide discretionary power in those negotiations, desired me to take into consideration not only the purely financial aspects, but the whole course of

* "Il Duce" means Chiefs and Superman.

happy relations with Italy in the immense task with which we have been associated both in war and in the period of reconstruction"

The Times (London) of February 5, 1926, in an editorial defending the Anglo-Italian Debt Settlement frankly acknowledged that political considerations played an important part. It said:

That general political considerations entered into the settlement is not improbable. Signor Mussolini went so far as to describe it yesterday as a *"political act"* which will strengthen the traditional friendly relations between Italy and Great Britain.

According to a Reuter despatch of Feb. 1, 1926 from Rome, Signor Mussolini observed that the settlement of the Italian Debt to Great Britain *"makes one confident that there will be an even more intense Anglo-Italian cordiality in all those fields in which the activities of the countries collaborate to the advantage of civilization and the world"*

Before the Locarno Pact was signed, Italy's co-operation was sought by the Powers, particularly Great Britain, because it was evident that Italy's co-operation with Russia and Turkey might badly upset the whole situation in the Near East and the Balkans. Italy has assumed the leadership of a movement so that the Latin races, especially France, Italy and Spain may co-operate in the solutions of problems involving mutual interests. This became markedly evident when Signor Mussolini vigorously upheld the Italian claims in the Tyrol, and served notice on Germany and the League of Nations, to the effect that under no circumstances would Italy allow any nation or group of nations to dictate to her. Signor Mussolini, on that occasion, boldly but significantly called upon the French statesmen and people to co-operate with Italy so that 80,000,000 or more Latin people of these two countries would be able to check the new Pan-German menace. In the Tyrol controversy with Austria and Germany, Italy won, because Germany could not secure British support which she hoped for, as British statesmen did not dare to antagonise Italy. It is very significant that the last session of the Mandate Commission of the League of Nations held its sessions in Rome. It is every day becoming apparent that in spite of the promises of Sir Austin Chamberlain and Mr. Briand to Drs. Luther and Stressemann, regarding the assignment of some colonies to Germany as mandates on behalf of the

League of Nations, Germany will not succeed in securing any mandate unless Italy agrees to such an arrangement, after satisfying her (Italy's) own colonial demands or securing certain concessions. It may also be safely asserted that in the proposed Disarmament Conference of the League of Nations, Italy's unmistakable voice will be heard and her influence will be appreciably felt by all nations, particularly the great nations of the world.

Benito Mussolini

New Italy's ability to assert herself in World Politics, is the best evidence of her internal strength, because no weak nation without *actual power* can ever command respect and recognition in international politics. To day, Italy is no more torn with fanatical, factional and political quarrels and party strifes tending to civil war, and this change has been brought about by the activities of the Fascists under the leadership of Signor Mussolini, who places great importance on creating a new world-consciousness among the Italian people. His dramatic

trip to Tripoli, just after the recent and most lamentable attempt on his life by a British Peeress, Lady Gibson, at Rome, is not an act of self-aggrandisement, as many of his opponents will try to interpret it, but intended to create a spirit of "sea consciousness" among the Italian people. It is to remind them that the Roman Empire of the past was a Sea Power, and there was a time when the maritime activities of the Italian people were an inspiration to the rest of the world. It is to drive into the minds of the Italians the significance of Sea Power and colonial Empire, if Italy is to play the role of a great Power. Mussolini's spirit can be better understood from the following extract from his speech delivered some years ago when he assumed the position of the president of the Council and Minister of Foreign Affairs. He said —

Mazzini

"Fascism ought to become the watchful guardian of our foreign policy. I think that Fascism ought to train up a generation of new men without provincialism or local feeling, who would *feel* the Italian problem, who would hold it to be a problem of self-consciousness, of expansion of Italian prestige, in Europe and in the world, and to attain this object would adapt both minds and methods. If Italy wishes to play a guiding part in the destinies of the world, if Italy has the pride which she ought to have, she should prepare herself now, she should assemble a band of technical experts of students who would bring devotion and efficiency to the examination of special questions, and at the same time she ought to awaken among the great mass of Italians an interest in foreign policy. Only by these means can Italy become a great nation, and, what is even more important, while presenting herself to the outside world as one united complete whole, preserve and safeguard her political unity at home.

... It is necessary to force Fascism to its front and to turn it away from quarrels in order that it may become the power of our foreign policy. A hard and grateful task, but a necessary one. Either it will become this, or Fascism will cease to have any object."

Space will not permit me to present a comprehensive analysis of the life and ideals of Signor Mussolini, the greatest living statesmen. He has been described a tyrant, a tool of capitalists who had suddenly assumed the role of an ambitious Dictator while he is looked upon by millions of Italians and foreigners as a "super-man." Mussolini has many bitter enemies. But it must not be forgotten that all great men in the past had enemies and anyone who will try to accomplish extra-ordinary things breaking up established customs and prejudices and the power of traditional hierarchy of a country will be bitterly opposed and unjustly maligned. The Free Masons, the Anarchists and Communists and some professional liberals and a few sincere persons (out of their convictions) are opposed to Signor Mussolini and the Fascists, because he has had the courage to apply strong measures to crush their power which has not been for the best interests of Italy and at the same time he has introduced some extraordinary reforms to bring about desirable changes in every walk of Italian life. As a matter of principle, Signor Mussolini does not approve of any Secret Society, particularly of a Secret Society which meddles in national and international politics. He also does not believe in any religious body, *as a religious body*, entering into politics and thus dividing the country on the question of creeds. Italy is a Catholic country and Signor Mussolini recognises the place of religion and church in all organised society, and has again made the Catholic Church the State Church of Italy, but he is sternly against the Church or any order of the Catholic Church meddling in Italian politics. He has been opposed to the Masons because it is an undisputed fact that they intrigue in national and international politics. Signor Mussolini is not afraid of the Masons or the Clergy, but he feels that for clean politicians there is no need of any secret society. Signor Mussolini has broken the hold of the Bolsheviks in Italy, and his methods have been far more considerate than those of the Bolsheviks in Russia. British Labor, which is very loud to condemn

Mussolini and the Fascists, should be reminded that they have practised far worse brutalised persecution in India, Egypt and South Africa for the sake of furthering British Imperialism and "whitemanism"

To be sure, Signor Mussolini, at a very critical time of Italian history, adopted stern measures against those whom he thought to be advocates of chaos, under the guise of liberty. But he did this to insure peace and to give the Italian people a chance to work and to increase national prosperity. He never approved of vandalism and persecution. As early as 1921, faced by intolerable pretensions of some groups (of fascists) which were not sufficiently held in check by their local chiefs, Mussolini's warning broke forth in bitter reproach --

"The nation turned to us when our movement appeared as a liberator from a tyranny. The nation will turn against us if our movement takes the guise of a fresh tyranny... The nation needs peace to recover, to restore itself, to fulfil its highest destinies. You do not understand, you do not wish to understand, that the country wishes to work without being disturbed. *I would enter into alliance at this moment with the devil himself, with Anti-Christ if that would give this country five years of tranquillity of restoration of peace.*"

It is needless to say there is less crime, less riot, less violence, such as lynching, bank-robbery, murders in broad day-light, in Italy than in the United States of America. Let us say very frankly that under a Fascist regime, which makes Italy a unit and which does not allow any place for communalism, localism or special privilege, there would be no possibility of a riot like the Hindu-Moslem riots which happen in India. Such happenings would be crushed with iron hands and with effectiveness, and the fomenters of such riots will not enjoy liberty.

Mussolini is not a tool of the capitalists. He is for the Italian people, irrespective of class and occupation. He has seen with his own eyes, the chaos, the workers of Italy brought about in the industrial life of the land when they tried to run the industries. He is not blind to what has happened in Soviet Russia. *He is for the working people, but he insists that as long as the workers have not the necessary efficiency to run industries, they must not ruin the industrial life of a country. He feels that there is yet much to be learned by the workers from the capitalists, and the capitalist civilisation has not yet played its full role, but it is in its infancy and has infinite possibilities.* As an idealist he does not believe in the theory

that "economic interpretation of history" or material gain is all of life. After all, within the short space of time he has had power, Mussolini has shown what can be done for the masses of the country without talking of "communism" and other impractical things. It is in Italy, it has been made possible to have such legislation as will make it impossible for the industrialists to use "lock out" against the workers, neither can the workers indiscriminately strike to paralyse industry. What recently happened in America in the coal industry, what is happening in England in the same industry and the lock-out of the Indian mill hands by the Indian capitalists can never happen

G. Garibaldi

in Italy. Go and see Italy of to-day and you will find the masses are more contented, because they have work to do and everyday the standard of living of Italian peasants and workers is on the road to a higher level. Lastly, let this be kept in mind that when Mussolini was put in power, he had the support of more than five million Italians who come from all classes, and the majority of them come from the working people. To-day Mussolini has a greater following in Italy and his power rests upon the consent of the people.

Mussolini is a leader of men, and he knows the masses, and when he "lives dangerously" and scorns all fear, he tries to live up to the ideal of a true leader who is to lead and not to cater to the whims of the mob. "Masses despise those who have not the courage to be that which they ought to be." He once said --

"I am a leader who leads, not a leader who follows. I go—now and above all—against the current and never abandon myself to it, and I watch always, above all, for the changing winds to swell the sails of my destiny."

None should think that Signor Mussolini the son of a village blacksmith, has risen to the present position of a supreme leader, by mere accident. On the contrary, the great Italian leader has made super-human efforts to reach his present position. In fact, he did not seek the position for the sake of a position and honor, because although he is now living in a palace, he would be quite content to live in a hut and lead an obscure life, if that would help him the better to gain his goal of making Italy

Cavour

great. From his very childhood, he made the best of the revolutionary republican idealism, inherited from his father. He utilised the "prison-like discipline" of a Catholic institution of higher learning for several years, where he led the life of a serious student. He worked in various capacities of a common worker while attending the Swiss Universities, to increase his own efficiency. He had to go to jail on various occasions in his own country and in Switzerland, as he was a revolutionary socialist. He went to Germany to get his first-hand knowledge of German culture and efficiency. He worked as a teacher, journalist and editor and above all, always from his very childhood he was a leader of men. As a student of Political Science and Government he earned his Doctor's degree by presenting his most original thesis on Machiavelli. He

is a master of various languages and philosopher who studied Buddhism more carefully than many Buddhists have done.

Mussolini was a revolutionary socialist but he was not a dreaming internationalist. When the World War broke out, on the issue of War and the part the Italian people should play in it, he broken his relations with the Socialist party of Italy. The Italian nationalists were in favor of entering the War on the Austro-German side, and regular socialists were talking about "peace at any cost" and for the sake of internationalism Mussolini expressed his views in favor of absolute neutrality, and, in case of necessity (for securing National Unity), war against Austro-Hungary. He raised his voice against the official socialists in the following way—

"Do you believe that the State of to-morrow Republican or Socialist Republican, will not make war if historic necessities—internal or external—make it necessary? And who will guarantee you that Government resulting from the revolution will not have to seek precisely a war of its own baptism? And shall you be against war which should safeguard your revolution our revolution? To refuse to distinguish between war and war, and to presume to offer the same kind of opposition to all wars, is to give proof of a stupidity bordering upon the imbecile. Socialists of Italy, listen! It has happened at times that the letter has killed the spirit. Do not let us keep the letter of the Party if that means killing the spirit of Socialism."

It is rather extraordinary that today the Red Army of the Soviets is there to justify the prediction. The Socialist Republic had to create a formidable Red Army to safeguard the Revolution. Signor Mussolini had to give up his relations with the Socialist party to live up to his convictions. None should think that Signor Mussolini gave up his convictions of the ideals of Socialism although he resigned from the Socialist party.

Mussolini was one of the few who knew the real meaning of "Italia Irredenta"—the unredeemed Italy, and to him the sacred emotion of nationalism was not mere talking nationalism. So, as early as July 26, 1914 Mussolini wrote, "There could be no question for a single moment of going into the war on the side of Austria." On July 27, 1914, he further wrote

"The moment Italy showed inclination to bre neutrality in order to back up the Central Powers the Italian Proletariat would have but one duty we say it out clearly and distinctly—that of rising in rebellion."

Later on he declared for armed neutrality for Italy to safeguard herself from reprisal and wrote

"We felt that it would have been absurd to urge that Italy alone should remain unarmed while the whole of Europe was a forest of bayonets. We admitted that we must keep in readiness to defend ourselves from possible Austro-Hungarian reprisals. Our admission may lead us far, it may lead us, at least, to see that we must offer practical resistance to that war which would free us for ever from all possible future reprisals."

Later on he made it clear that Italy must work for achieving complete Italian unity by recovering those regions of Italy—Trento and Trieste—which were then under Austrian control. He wrote:—

"It would be absurd to judge all wars alike. If this is a question of war on Austria-Hungary, the Socialist Party will not oppose it. Neutrality to the East is one thing, to the West another. The point at issue is to complete Italian Unity."

The great Italian patriot was urging Italy to enter the war against Austro-Hungary not to make the "world safe for democracy", but to complete Italian Unity. He was aided by a few people and among them were Corradini and Gabriele d'Annunzio, the great poet. Slowly Mussolini's voice reached the masses and it was he more than any other man in Italy who paved the way for Italy's entry into the World War on the side of France and her allies. When Italy entered the war Mussolini wrote: *"O Mother Italy, we offer thee, without fear and without regret, our life and death."*

Mussolini was never an arm-chair politician, advocating certain vigorous measures such as War, while sheltering himself at a comfortable distance from the battle-fields. He advocated War to recover Italian territories and volunteered to join the Italian army as a common soldier. He went through all the sufferings of a soldier on the battle-fields of northern Italy during the terrible winter campaigns. He was severely wounded by the bursting of a shell and he had to undergo the terrible experience of a serious operation to extract splinters of the shell which entered his body in more than thirty places.

Italy suffered tremendously during the war, because the nation was not prepared for it. Italy lost more than 500,000 men, but eventually it was Italy which broke through the Austrian line, which was one of the principal causes for Austria seeking peace. But when the war was won, owing to peculiar circumstances, the Italian statesmen met defeat in diplomacy and Italy was not given proper shares of territory to complete Italian unity and to meet her needs in

colonial expansion. Mussolini was bitterly disappointed at the lack of leadership among the Italian statesmen. They not only surrendered to other statesmen of foreign lands, but they, in a cowardly manner, surrendered to Italian Bolsheviks who created chaos in Italy. Mussolini again raised his voice for a definite policy which would change the internal and external relations of Italy for her benefit. He was asking for an Italian Revolution, and was at first supported by a few of the veterans of the War and his old associates. Mussolini was for a revolution, but he knew that revolutions are not brought about and won by renunciation and bluff. He wrote:—

Victor Emmanuel II

"When one sets foot on the road of renunciation it is difficult to call a halt, especially when one's opponents regard every act as due to weakness, and put down as cowardice what may be merely caution. I do not bluff nor talk 'hot air'.... A revolution above all things should have a mind of its own, clearly defined, only with clear ideas could the populace be won over. It should have a precise objective, a programme already laid down, so that in the hour of victory it would not fail through dissensions. Revolution is not a surprise packet which can be opened at will. I do not carry it in my pocket. Revolution will be accomplished with the army with arms, not without them, with trained forces, not with undisciplined mobs called together in the streets. It will succeed when it is surrounded by a halo of sympathy, by the majority, and if it has not that, it will fail."

Signor Mussolini saw the vision that to save Italy he would have to bring about a Revolution, and he started to organise those who would be willing to risk all they had to save their country from chaos and make her great. A handful of veterans of the World

War and some of his very dear friends stood by him, and seven years ago on march 23, 1919, the first meeting of this heroic band, was held at Milan, the birthplace of Fascism. Fascism did not seek numbers to its ranks but wanted to enlist men of courage and intelligence to its ranks, because no great movement could ever succeed without foresight and preparedness, which is an intellectual property and cannot be left to the mercy of mere numbers, but which necessitates a selection of individuals. In the first meeting of the Fascists, Mussolini gave an idea of the work before them. Among other things he said :—

"The assembly of March 23rd renders its homage first to the memory of the fallen, to the wounded and those who fought for their country and for humanity, to all who declare themselves ready to throw themselves into the task of restoring social and moral order which will be undertaken by the associations of ex-soldiers. The assembly of March 23rd declares itself opposed to the Imperialism of other nations at the expense of Italy, and to the possibility of Italian Imperialism being used to the detriment of other nations... I do not look upon revolution as an eruption, or an epileptic fit."

The Mother of Fascismo

SIGNORA SARTORI, one of the driving spirits behind Fascism: the author of the life of Mussolini

consider it should have an aim and, above all, a method. To be a revolutionary in certain circumstances may be the glory of a life, but when those who talk of revolution are nothing but vandals and parasites we must not hesitate to oppose them for fear of being called reactionaries. As to reaction and revolution, I have one unfailing standard which I apply. Every thing which matters for the greatness of the Italian people I will support. Everything which tends to lower the Italian people I will oppose. The masses ought to be educated, not flattered and played upon by demagogues. We must stand as educators, who would not seek success or popularity or salaries or votes..."

He imposed military discipline on them who wanted to join the ranks of Fascism, and worked unceasingly to unify the best

elements of the nation for the common cause of Italian greatness. He organised a solid hierarchy of men who dared to act according to the following oath :—

"In the name of God and Italy, in the name of those who have died for the greater glory of Italy, I swear that I will consecrate myself entirely and for ever to live for the good of Italy."

According to Mussolini,

The Fascist soldier must serve Italy with purity with a spirit penetrated by a profound idealism sustained by an indestructible faith, dominated by inflexible will disdaining opportunism and caution as being no better than cowardice, resolute in sacrifice as the consummation of his faith."

The Fascist Movement has been organised on the basis of efficiency and not on a communal, local or democratic basis. It recognises the fact that all men are not equal in efficiency. It wishes to impose upon Italy the rule of the wisest and the best by giving the leadership and responsibility of the Government to the most competent. It is not a so-called democracy and it is far from being an autocracy, but it possesses an aristocracy of intellect which preaches and practises that if you are superior to me in efficiency and merit, I shall obey you, if you are equal to me, I shall consult you, if you are inferior to me, you must obey my instructions.

Within a short time this militant organization of fighters and patriots of Italy began to flourish all over the country, and the followers wanted to bring about unarmed revolution by capturing Rome and thus establishing a Fascist Government. Mussolini was not a self-seeker, nor a narrow-minded formula-worshipping revolutionist. He really adopted the Principle of Responsive Co-operation with the Italian Government with the King at its head and when he was invited to form a government he agreed to do so with the aid of all, irrespective of party affiliations, who wanted to support him in his work. Had he been a lesser man, a self-seeking one, he could have become a Dictator by plunging the country into a civil war and dethroning the King. But he knew it well "to pull down is easy, but to build is difficult." He has assumed his responsibilities as a constructive statesman. His whole ambition in life is to place the Italian people on the highest plane of existence through his effort and the efficient co-operation of others. Let him speak for himself of his future programme :—

"Twenty thousand leaders, twenty thousand Condottieri, teachers, engineers, bankers, captains

industry; ten thousand functionaries, all men of the first order, thoroughly equipped experts, men who have taken science into their very tissues. That is what Italy needs. That is what I must be ready for her. From forty to fifty thousand men functioning with the regularity of clock-work. Every great calling is a priesthood which stamps with its character all a man's acts, even the least of them. Jealous of his honour, prodigal of his life—that is the true officer; high-minded, serious, almost ascetic—that is the magistrate, smart, efficient, but justice itself—that is the police official. I am talking of the fifty thousand experts whose task it would be to act as guides to the whole nation. The people are tired and sick of politicians. What they have to bring into existence is a great aristocracy of experts."

One of the first acts of Signor Mussolini after assuming the responsibility of the Italian Premier was to call upon Italy's Educational Experts to aid him to bring about national Educational Reform which would be the foundation of training a nation of experts. He appointed Professor Giovanni Gentile as the Minister of Public Instruction and under his direction a remarkable re-organization of the educational programme of the nation, from primary education to University education, has been accomplished. Army reform, navy reform and all sorts of reforms in all fields of national life are in progress now in Italy.

While transacting the affairs of State, Mussolini acts as a realist. But he is an idealist devoid of base selfishness and the spirit of opportunism. He has his supreme conviction and acts with the courage and determination of a warrior who gladly stakes his life for his cause. In Mussolini, one finds the rare combination of the statecraft of Machiavelli and Cavour, the idealism of Mazzini, and heroism of Garibaldi, and vision of a true social reformer moved not by mere sentimentalism but with the pragmatic sense of doing lasting service, through rousing the

will-power of a man to be good and great. Above all Mussolini is not a "man of one-track mind" who worships certain formulas and cannot change his position when that is needed. He does not believe that his work will be accomplished in a few months or years but he feels that future generations will have to carry it on with greater glory and efficiency so he is deeply interested in inculcating the idealism of Fascism among the younger generation, even the children of five and six, whom I have seen leading most impressive parades of the Fascists.

To me a Hindu, Mussolini typifies a karma Yogi of the *Bhagavad Gita*. He works for the sake of his ideal of greater and glorious Italy, and fights along towards the fulfilment of his Duty, and not to secure praise and personal success. A nation can become great only through the karmas of her component parts—individuals. Mussolini, the great Karma Yogi of Italy, has this vision and is pursuing the *sadhana*, with hundreds of thousands, if not millions of Fascists, and if we are to believe that work must have its effect, there is no doubt of greater glory for the new and greater Italy.

In this connection, I venture to say that India will not succeed in attaining her national unity and freedom by pursuing the phantom of Communism or the false hope of International Peace and Freedom, promised by the British Labor Party and others; nor will she gain the end by worshipping the passive doctrine of Non-violent Non-Co-operation. Indian patriots will find a way from the methods of Fascism, tempered by Responsive Co-operation, which will lead to the reconstruction of a greater India.

Rome, Italy

March 25, 1926

D. B. PARASNIS

By JADI NATH SARKAR

THE first and most indispensable condition of historical research is access to original documents. He who collects old state-papers and other sources of history, therefore, makes research possible, and he benefits unborn generations of students by saving these

unique records from destruction and dispersion. If, in addition to this, he prints the records, he confers a still greater benefit and extends that benefit to a wider circle of scholars, which may embrace the whole world.

Such a benefactor of all earnest students

of Maratha history has been recently lost to us by the death of D. B. Parasnis of Satara on 31st March last. His life was simple, uneventful, and silent. But all his thoughts, passions and energies were devoted from his boyhood to the pursuit of a single aim, which he lived to carry to fruition before his death at the age of fifty-five.

Dattatreya, the son of Balawant Parasnis, was born to an ancient Maratha Brahman family on 27th November, 1870. He read up to the Matriculation standard in the Satara

Rao Bahadur D. B. Parasnis, of Satara

High School. Even in his school days he gave a foretaste of his future pursuits by not confining his studies to his text books, but reading extensively the lives of historical personages, especially those of his native land. His strong literary bent showed itself quite early, and this school boy founded and edited a monthly magazine which called forth appreciation from some elderly men of light and leading. After leaving school, he founded and edited for some years another vernacular magazine, called the *Maharashtra Kokil*. But it was with the publication of his third monthly, the *Bharatrarsha*, in 1898 that his life's work really began. Though this periodical

had a brief life of two years only, yet 24 numbers contained priceless original records and learned reconstructions of Maratha history. An interval of nine years followed its death, and then he founded (in 1905) another and still more valuable historical magazine of the same type under the name of *Itihas Sangraha*, which ran for seven years but was at last abruptly discontinued through getting into very long arrears of publication.

Young Parasnis worked for a long time under the veteran M. G. Ranade's general guidance, among the Peshwas' Daftar (preserved in the Land Alienation Office at Poona) and prepared the materials published, in some cases, under other and better-known peoples' names. Later he published in his own name selections from these and other records as independent volumes, e.g.,

Selections from the Peshwas' Diaries

Shahu

Do do do Balaji Rao, 2 Vols.

Decisions from Shahu's and Peshwas' Daftar Sanads and Letters

Kafiyats, Yads, &c.

Treaties, Agreements, and Sanads.

Life and Letters of Brahmendra Suami

The Royal House of Tanjore

Historical Papers relating to the Gwalior State, 3 vols. (for private use only)

It was rather unfortunate that Parasnis rushed to journalism too early, instead of completing his education. For, if he had gone through a full college course, he would have gained greater confidence in his own power as a writer and boldly challenged criticism by producing mature works of his own. As it was he lived and died a collector and editor, and not a historian, though the texts he published will be invaluable to other men who will attempt history after him.

Parasnis's English works may be quickly passed over, as they were of a slight, topical character. His *Mahabaleshwar* (1916), *Saundh State* (1917), *Poona in Bygone Days* (1921) and *Panhala* (1923) were merely presentation books and fell still-born from the press. The *History of the Maratha People*, 3 vols., which bears his name along with Mr. C. V. Kincaid on the title-page, is admittedly the composition of the latter gentleman and expresses his opinions only, while Parasnis merely supplied the materials to the actual writer.

It is only by his publications in the Marathi language that Parasnis will live as an author. These form his enduring contribution.

to Indian history. His first work in his mother-tongue was the *Life of the Rani of Satara* (1894), followed a couple of years later by *The Marathas in Bundelkhand*. Then came *Brahmendra Swami's life and times* (the second portion of it being a work of first rate importance for the reign of Chhatrapati Rao I.), the *Life of Rani Bai* (of Satara), &c. Parasnisi published by instalments in his magazines several collections of state papers of the highest value to the student of Maratha history and even of North Indian history. First came the Bulky *Letters of the Rani of Satara* (*Jatren Yadi bagair*) contributed to the *Bharatvarsha* by Kashinath Sane. Then appeared in the *Itihas-samgraha* under Parasnisi's own editing, two volumes of despatches sent to Poona by the Peshwa's agent at the Court of Ahalya Holkar, and two other thick volumes containing the letters of the Maratha envoys at the court of Delhi, followed by two collections of letters written by the Peshwa's agents at Calcutta, Seringapatam, Amritsar, Jodhpur, &c.

It may not be well-known that Nana Sahib, who was the *de facto* ruler of the Maratha State for several years, had a favourite country seat at the quiet romantic village of Menauli. Most of the despatches and state papers which reached Poona in those times were taken away by him to this place, and therefore, the State Record Office of the Peshwas (at least the "Foreign" section) was not in Poona. After Nana's downfall and death, his family was ruined, and his priceless records began to perish from neglect or to be dispersed. In the course of a few generations much was gone beyond recovery. [Khan Bahadur Israel Khan, who some time that nearly half a century ago he came to recover from Menauli a portrait of Nana Sahib ascribed to a French artist.] But it was near the close of the 19th century, when Parasnisi came on the scene, he did everything possible to save and print what still remained.*

Similarly, the decay of the Rajahs of Satara (who had been reduced by Dalhousie to the status of landholders or rather pensioners) opened a wide door to the sale, dispersion and destruction of the valuable historical papers, old pictures, art objects and

relics accumulated by the house of Shivaji during nearly 200 years. In the middle of the 18th century, when the Marathas dominated North Indian politics, the Mughal Emperor and nobles and Hindu Rajahs alike sought to please the Chhatrapati by presenting him or his Peshwa with valuable pictures of the Indo-Saracen and Rajput schools, finely illuminated Sanskrit MSS., decorated swords and other curios. These found a refuge in Satara palace, but began to be dispersed in the last two decades of the 19th century.

Most fortunately for Indian history, D. B. Parasnisi stepped into the breach. He was an ordinary middle class man, without wealth, without official power and patronage, without social influence. But his heart and brain were ceaselessly devoted to saving these raw materials of history, and ultimately he did save most of them with infinite planning, patience, and versatility in the choice of means. This rich and unrivalled collection not merely of written records, but also of other valuable relics of the past, made Parasnisi's house at Satara truly the Mecca of the students of Maratha history.

The greatest disappointment of Parasnisi's life was the burning of the Holkar records at Indore; he was for no fault of his own just too late by a week to see them. After the Peshwas' records (partly preserved in the Land Alienation Office at Poona, but mostly lost from Menauli), the next in importance among Maratha historical documents were those of Indore, because the Guekwad's State-papers are very modern, (nearly all of them dating from 1802 or later), and the old records of Sindhia are said to have been cleared away as waste paper by a former governor (*subah*) of Gwalior. The Indore archives, on the other hand, were full and unimpaired. Parasnisi had been after these for many years, but the usual obscurantist and obstructionist policy of Native State officials had perversely baffled him. At last a very influential political agent in his retirement in England, heard of it and wrote strongly to the Government of India in support of Parasnisi's application, the screw was put from the top, and then the Darbar gave to fear that permission which it had refused to scholarship. With this permit in his hand, Parasnisi started for Indore, but while halting at Bombay to make some purchases he received a telegram from Indore

*Two other collections are said to have been cleared away from Menauli by Rajwade and another gentleman.

stating that a fire* had broken out in the low dark *cutchra* building where the records had been stored like grain-sacks, and that nearly all of them had perished. Such is the harvest reaped by ignorance and folly in high places.

But how to make his rich store of original sources accessible to the public? How to preserve them from the vicissitudes of a family's private property and give them to the nation? How to house them in a building worthy of their importance and proof against destruction by fire or flood? These were his anxious thoughts during the last 12 years of his life. He was himself poor and friendless. Only the custodian of the public purse could realise his dream of founding a historical museum, and he naturally approached Government. His collection had long been a common talk in cultured circles and in 1909 the Governor of Bombay (Lord Sydenham) had paid a visit to Satara specially to see it. Lord Willingdon, the next Governor of the province, had promised to build a museum for housing these historical treasures, and a site had actually been selected for the purpose on Government land, when the Great War came and stopped this along with many other good projects. But Parasnis's earnestness and perseverance were proof against every obstacle and after many years of hope deferred and anxious fear of opposition from a certain party in the legislature, the Satara Museum was at last completed in 1924. The Governor, Sir Leslie Wilson formally opened it on 3rd November, 1925,—a day which Parasnis truly declared was "the proudest and happiest day of my life."

Alas! it was destined to be very nearly the last also, because he did not survive this day by even five complete months, dying quite unexpectedly for one of his excellent health and temperate habits on the 31st March following.

In addition to Marathi and Persian MS. records, he made a very useful collection of printed books on Indian history, by a careful and persistent purchase extended over many years. Two examples may be given here. He did not know French or German, and yet in his careful thought to provide every facility to future research students in India,

he bought the French *Annales de la Compagnie des Indes* printed in 1730 and a German journal containing Dr O. Mann's long summary (in German) of *Majma-ul-tawarikh* bad as *Nadim*, which gives the best Persian account of Ahmad Shah Abdali's rise. His hope was that it would throw light on the 3rd battle of Panipat from the Afghan side, and he was sadly disappointed when I told him that the book ended before the Abdali's coming to India.

Not content with books in European languages, he also bought in England the entire mass of private letters (all autographs) written to Sir Frederick Currie, the British Resident at Lahore, during the eventful year of the Second Sikh War, by Dalhousie, Henry Lawrence, Nicholson and other makers of Indian history, with the drafts of a few replies by Currie. We can here trace Dalhousie's defence of his policy in snuffing the Multan outbreak in the beginning, but taking the risk of the revolt spreading to the whole Sikh population. There are also three other volumes of MS. letters written by Lords Ellenborough, Hardinge and other Parasnians also secured a fine steel engraving of Lord Clive (in full-blown obesity) by paying something like £20 to his descendant.

The Mughal paintings that Parasnis rescued out of the Satara Raj collection (sent from Delhi in the 18th century) and also bought elsewhere, are genuinely old and of unsurpassed value. Nobody in India can hope to write a complete study of Indian Muhammadan pictorial art unless he examines the three greatest collections of it in India, namely, the Khuda Bakhsh (Patna), the Rampur Nawab's and Parasnis's. As late as January 1925, Parasnis bought a portfolio of the portraits of Indian celebrities of the 17th century (mostly of the Deccan Muslim States, with some of the Mughal Court, including a very fine profile of the great *Sawai Jai Singh*)—which had been collected by a Dutchman in India in Aurangzeb's reign. A silly dealer had spoiled many of these by retouching and adding a modern varnish.

D. B. Parasnis had been created a *Raja Bahadur* in 1913, but he remained the same simple soul, the same passionate lover of books and historical talk, the same jolly and warm friend as before. The present writer remembers with a mournful interest a comedy in which we took part in his house in January, 1925. The Indian Historical

* The fire was real and not diplomatic. The remnant has been recently published in two thin volumes by Anant N. Bhagavat, the State archivist.

Record Commission was sitting at Poona and it had been settled that its members would visit Satara on the 3rd day. As the session terminated very early in the afternoon on the second day, some eight of us decided to avoid the rush and have a quiet talk with Parasnis by motoring to Satara that very evening, instead of accompanying the other members next day. A local gentleman undertook to inform Parasnis of our coming by telegram, and he forgot to do it. The result was the delivery of a bus-load of guests at Satara past eight on a cold January night at Parasnis's door, to the intense surprise of the host, confusion of his household and some of the guests. But Oh! the cordiality and charm of Parasnis's unflagging conversation which beguiled our time—and confusion of our dinner was served at midnight, the host and his household fasting till then—laughed it away as a good joke!

Parasnis clung to his unpublished records and the credit of first publishing them with all the tenacity and unreasonableness of a miser or a miser. Hence, workers in the cause held have often charged him with selfishness and secretive habits. Witness how he withheld the author's manuscript of the *Chitnisi Bahkar* from Rao Bahadur K. N. Sane who was editing that work, as described above in this *Review*, February 1926, p. 185. Even Parasnis's explanation, in a letter which I wrote to me only eleven days before his death, supports this view. He wrote from Poona on 20th March, 1926:

As regards Rao Bahadur Sane's remarks about me, I may point out that they are, to say the least, the outcome of his own misunderstanding. When he asked me for the loan of the manuscript I did clearly and definitely given him to understand that I was myself going to publish a critical and complete edition of the *Chitnisi Bahkar*. When he first wrote to me, the MS. was not with me but it was with my friend Mr. P. V. Mawjee, and when he enquired after some months, it was returned

to me and I do not understand what fault my friend or myself committed when we told him the simple truth. The manuscript had been secured by us after great efforts and expenditure, and it was naturally not possible for us to lend it out before we had made full use of it. No impartial and sensible man will interpret this as unwillingness on my part to help any research student. The complete edition of the *Chitnisi Bahkar* is in the course of preparation and will be out as soon as possible."

In his passionate devotion to his country's history, there could be no place for any other love in Parasnis's heart. Our countrymen, especially the young who brood over our past, are politics-mad. But Parasnis from his earliest youth shunned politics, of the familiar type, as futile, he even kept himself aloof from the Poona school of historical students whose mutual wranglings have almost sterilized their intellects and some of whom have degraded past history into an instrument of present-day political agitation. Parasnis knew the price of his conduct. Professional "patriots" whispered that he was a Government Sycophant,—a spy. But he held on to the straight single course of his life, regardless of Envy's hiss and Folly's bray, and succeeded in enriching Maratha history as no other single individual has done. His magazines not only published his own collections of records, but gave other workers an opportunity for preserving their discoveries and obtaining publicity. Sane and Raywade, besides many younger men (notably "Yaswant" or Mr. Gupta) have contributed to his *Bharatrasna* and *Itihas-Sangraha*.

When the day comes for rewriting Grant Duff's standard *History of the Maharattas* (now antiquated by exactly a century) in the roll of those who have made such a revision possible not the least brilliant will be the name of Dattatreya Balawant Parasnis.

* Is it possible now? Who can edit it half so well as Sane? Not certainly Mawji. [J. Sarkar.]

THE WATERS OF LIFE

Through the lonely night the sound of
the waters of life,
Forever flowing downward to the sea,
Bringeth unspeakable comfort to the soul
Wandering in memory.
The mystery and tumultuous anger of
heaven
Lie in their quiet song,

From far serenity of starlit mountains
They are falling the whole night long
Through dreaming hearts, through sleep
of patient woodlands,
They wind their silvery thread,
Messengers of the deathlessness of life
Even among the dead.

E. E. SPEIGHT

GLEANINGS

New Steel, Hard yet Pliant

Many of the qualities of the celebrated Damascus steel are said to be found in a modern product which an Ohio man has developed by a secret process. He combines iron and carbon in such a way that the resulting steel will bend, keep an edge of razor sharpness, is tough and can be driven through other steels without breaking. A bar of the material, fifteen inches long, was tempered to five different degrees, one end of it being

Demonstrating New Steel's Properties

hard enough to cut glass, a section was sharpened like a razor and would cut dry hair without honing or stropping, while other parts in the same bar would cut off a spike under blows of a hammer, would spring or could be bent backward and forward with the thumb and forefinger without breaking. Vanadium is an important element used in the preparation of the steel.

Home-Grown Lions

A five acre lion farm, with an annual profit per acre from each year's crop that would astonish more prosaic farmers, has, in the last six years, grown up as one of America's strangest business ventures.

Starting with a lion and two lionesses a half dozen years ago, Charles Gay the world's only lion farmer has run his shoe-string into a \$100,000 plant, a stock of eighty animals in addition to many which have been sold outright, and a business that pays a comfortable small fortune every year. A few years ago, he landed in Los Angeles with his wife, and ten dollars in his pocket his only other asset a decade as an animal trainer in the Bostock troupe in Europe.

Today his lions are performing regularly in most of the movie studios of Hollywood, or in the

imitation African jungle which he has plan his farm. Each lion used in a picture d salary of \$50 a day. In addition to this i

Mr. and Mrs. Charles Gay and a group of their lion cubs

surplus stock is sold each year to zoos, c and stage performers while hundreds of daily pay admission to the farm to see mor than eight or ten large zoos could boast.

The success of the Gay lions as perform due to his unique training methods. The a are as tame as kittens even when full-grow under Gay's direction, can be handled by th inexperienced movie actor without danger have never known a whip, prodding iron or cartridge, so are without fear of man. In training, Gay uses a little switch, twelve

farm. Instead all the animals live in the open, roaming around in large screened enclosures.

Dance on Galloping Floor

One of the features of a recent Cossack show in London was a dance performed by two men who were supported upon a platform on poles

Russian Dancers performed on platform while Cossacks rode horses at a gallop

carried by horsemen. The uprights were fastened to the stirrups and were steadied by the riders as the horses galloped along.

The Greatest Bridge in the World

Here is presented the conception of the greatest bridge in the world, which will span the Hudson

The proposed bridge between Fort Washington, New York City, and Fort Lee, New Jersey will be of gigantic proportions, as the artist has indicated in this drawing. Four years will be required for its construction. The cost will be about \$40,000,000, to be met by tolls. The New Jersey side at the proposed location is approximately fifty feet higher than the New York end. This may necessitate a cut through the solid rock of the Palisades.

river at New York City, uniting the states of New York and New Jersey and providing a passage way for hundreds of thousands of commuters.

Its single span will measure two-third of a mile almost twice as long as the center span of the Philadelphia-Camden bridge, now the longest in the world. About twelve million automobiles a year, it is estimated, will pass over this monster bridge. There will be tracks, also, for electric trains, and pathways for pedestrians.

Stadium reveals Secrets of Ancient Race

Further wonders of the ancient Maya civilization in Central America have been disclosed by the excavation of a stone citadel, occupying nearly eight acres at Lubaandum in south-western British Honduras. It is pear-shaped, nearly fifty feet high, and its summit is covered by great terraced pyramids and cement-floored plazas. The northern half of the structure is devoted to an amphitheatre where it is believed, allegorical dramas were presented to the accompaniment of weird music for the entertainment of as many as 10,000 persons at one time. Banks of seats, similar to those of a stadium, commanded a full view of the central court. The pyramids are flat-topped, unlike those found in other Maya ruins, and show no signs of ever having supported temples or palaces giving further indication that the citadel was devoted to a special purpose. Graves were discovered on some of the elevations, containing relics similar to those unearthed in burial places outside the stadium, and the bones, in no case, indicated an age of more than three or four centuries while in some instances, the burials had occurred less than 100 years ago. Objects found included spears and javelin heads of flint, axe heads, hammers, beads, mirrors of iron, pottery, grinding stones, shell trumpets and whistles. Near the surface of one of the diggings, a figurine showing a man in medieval European dress was picked up, indicating that the manufacture, of these articles must have continued after the Spanish conquest, when the Mayas were driven into the forests, killed or forced into slavery by their captors.

Cyclist Breaks Speed Record behind Motorcycle

Pedaling behind a motorcycle as a windbreak and directed through a special speaking tube attached to the driver's back, a bicycle rider in France recently shattered records by attaining a speed of seventy-four miles an hour. The motorcycle was constructed to meet the demands of the test, having a broad shield at the back to keep the wind from the racer and a streamline front of special design. So that the driver's words would be carried more distinctly through the speaking apparatus, a mask screen of transparent material was fitted over his face and around the mouth.

Cyclist breaks spread record behind motorcycle. (Inset) The guide
with his speaking apparatus.

Here Both the driver and bicycle rider wore helmets. The demonstration was staged on the Mont Chery race track near Paris.

Organic Glass

A wonderful invention, which has been secured in England by Dr. Vredernburg, is flexible "organic glass." The glass is nonsplinterable and ten

times clearer than ordinary glass. It can even be used in liquid form. Dr. Vredernburg is seen pouring the liquid glass (cold) from a bottle.

Hair raising Stunt

Static electricity is capable of other queer antics than causing howls in your radio set. At a public exhibition in Portland, Oreg., current from a static generator lifted the hair of men students who sat in chairs near by, giving a realistic imitation of what sometimes happens in registering sudden and intense fear. When the test was tried with young women who had bobbed hair, the results were no

Fear did not lift his hair. It was Static Electricity

so pronounced. Their hair straightened out but did not stand up, possibly because it had been linked by waving or similar treatment.

Caging a Python

It took eight husky men to unpack and carry to its cage a 20-foot python recently brought to the

Caging a python

London Zoo from Singapore, India. The picture of the reptile, left, firmly held by Zoo attendants on its way to the cage, gives some idea of its great length.

Life of Buddha told in Silk on huge Tapestry

Besides a huge portrait, a piece of silk tapestry measuring 30,000 square feet, kept at a Tibetan monastery depicts incidents in the life of Buddha on its intricately embroidered edges. Once a year on a bright day, the monks spread the cloth on a hillside in the belief that the display will please Buddha and give him an opportunity to see his devout followers who come from hundreds of miles around to view the tapestry.

Natives thronging to see the great tapestry of Buddha

Latest Women's Fad

Now that fashion has decreed that women's ears may be exposed, a jewelled ornament has been devised, a clasp shaped to conform to the ear and

Latest women's Fad

supporting a pendent in the center. Piercing is not necessary for wearing the trinket, and as the frame holds the weight of the center jewel, there is little strain on the ear. The entire piece is set with gems.

Artist Paints on Cobwebs

Filmy cobwebs, so delicate that a puff of wind may destroy them, are used by a peasant artist in

the Tyrol as a substitute for canvas. He paints a variety of scenes in colours on the material which is so thin that the picture is practically as

This scene is painted on cobwebs

distinct on one side as on the other. In spite of precautions taken to protect these pieces, they are likely to be torn and collectors guard them with great care.

Wall's Motion when pushed

Pushing a forty-inch brick wall with the hand to make it move sounds ridiculous, but a sensitive instrument used at the bureau of standards is able to record any motion that occurs, and in many cases there is an appreciable bending of the wall. The gauge is in contact with the bricks and

Measuring how much a thick brick wall moves when pushed by hand

is so adjusted that the slightest movement will actuate light beams in such a way that the amount of bending can be told by their displacement. The instrument, an interferometer, is employed in making exacting tests on the solidity of structures and materials.

Bullet Proof Glass

Recent tests with bullet-proof glass have shown that the material will not only turn large-sized bullets from U. S. army automatic pistols, but also smaller and more penetrating missiles from the Mauser weapon of German make. A bullet from one of these revolvers will penetrate eleven pine boards while the U. S. automatic is effective through eight, but the glass turned the smaller lead, permitting it to enter not more than one-eighth of an inch into the surface of the material. A metal-jacketed bullet was turned completely inside out and welded upon the surface of the glass in one of the tests, and a second shot failed to pierce the specimen.

A cartridge from a Springfield rifle was also turned back, although the force of the shot pulverized the outer coating of glass and the bullet apparently was vaporized. Layers of the target were separated in a circle six inches in

Cracked but not broken, specimen of Bullet-proof glass after being struck by two lead missiles

diameter around the point of impact, and this space was filled with a thin layer of lead which evidently had been condensed from the vapour. The glass is widely used for windshields, and windows of tellers' cages and pay cars.

Latest Fad in Jewelry

Held in place by a hidden silver wire, a diamond-studded arrow, to be worn on the arm, apparently pierces the flesh. In reality, the ornament half encircles the arm on the inside, the point being separated from the end of the shaft. The wire is attached underneath and binds sufficiently to keep the clasp from slipping.

Seemg to pierce the arm

Sphinx's Paws cleared of the Sand of Ages

After having been buried for ages in sand that reached far up its sides, the famous Sphinx of Egypt again stands out in its original form and beauty, as the result of extensive operations carried out by the Egyptian government to save it from entire destruction. Its gigantic paws, resting on a wide base, have been carefully brushed and are now no longer a subject of conjecture.

The removal of the sand required considerable time. To dig out the great feet alone took many days, because extra care was necessary. A high wall to protect it from future sandstorms will be built when the work of restoration is complete. Any sand that may be blown over this bulwark can be easily removed each year.

The sphinx as it appeared after the last of the sand

Workmen whose stajings are seen in the illustration, are now engaged in restoring missing parts and strengthening weak-spots. They are rushing to prevent a threatened fall of the head, the support of which has been weakened by the erosion of the back and side of the neck. When that is done, they are to restore the Egyptian beard which adorned it, and the headdress that fell off some time ago. The engineers hope to complete the undertaking in less than a year.

Socrates or Silenus

Portraiture in the Modern Sense was an ideal in art unknown to the ancients. They fashioned their busts of famous men after the ideal in which they conceived their gods. Flesh was transitory, the gods were eternal. This was a thesis defended by a German writer in *The Dial* (New York) of a few months since and if this is so the statuette of Socrates, newly acquired by the British Museum, cannot fulfil all the conditions claimed for it of showing the philosopher as he was known to his contemporaries. The statue is supposed to have been executed at least a century after Socrates's death, and if the German theory is correct, he must have figured as something of a Silenus to

'A Silenus, A Satyr To Look At'
A statue of Socrates, of the fourth century

his fellow Greeks. But the *London Telegraph* puts his case differently.

'No other philosopher since the world began has so interested the natural man. There are not a few whose philosophies have had a greater influence upon the fortunes of humanity or more profoundly affected human thought. But who now knows or cares what Aristotle was like, or how Zeno talked or what were the domestic affairs of Epicurus? These names mean systems and ideas, but Socrates is still a man. Martyrdom, to be sure goes for something, but other philosophers have died for the faith that was in them, and failed to interest posterity. Socrates commands reverence and affection from thousands who have not gone far either in philosophy or Greek. He had the advantage of a disciple of literary genius. Whether the Socrates in Plato was, even at first, a faithful portrait, may be disputed, but there is no doubt about the power and the fascination. Yet a cynic has been heard to say that the world would never have been interested in Socrates if he had not been so ugly. Good looks in a man will do little for his fame.

'True, the common, indifferent plainness is obviously no distinction. But let it get about that a great man's countenance was grotesque, and everybody has a kindly feeling for him. Such upon this cynical theory, is the popular interest in Socrates. But it needs much qualification and development to be persuasive. Socrates, as Plato tells us was a Silenus, a satyr, to look at. He was short, he was pot-bellied and fat of neck, his eye stuck out and his nose turned up, he had a big mouth and loose lips. Such is the face we know from the busts of the Roman age. But it is not as a figure of fur

we imagine him. We think not only of the satyr, but of the man who went shoeless and shirtless all the year round, who lived harder than a dog, who wandered about Athens asking every man questions, who had trances and visions who could always do what other men had not thought of, whether it was standing fast when the rest of

the Army ran away, or defying the voice of the people or disobeying the orders of a tyrant. They say that in this new statuette the well-known features are not grotesque, but show a keen intelligence. Since the style of the work is rather realistic, as we should expect of the fourth century, it may therefore be a faithful portrait."

REVIEWS AND NOTICES OF BOOKS

[Books in the following languages will be noticed Assamese, Bengali, English, French, German, Gujarati, Hindi, Italian, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Punjabi, Sindhi, Spanish, Tamil, Telugu and Urdu. Newspapers, periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazine articles, addresses, etc. will not be noticed. The receipt of books received for review will not be acknowledged, nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer, etc., according to the language of the books. No criticism of book-reviews and notices will be published.—Editor, M. R.]

ENGLISH

THEORIES OF MEMORY By *Beatrice Edgell* University Reader in Psychology, Bedford College, University of London. Oxford University Press.

The phenomenon of Memory has claimed, during the past three decades, the attention of Philosophers and psychologists alike. It has been viewed as a property of all orders of organic matter as we find in the works of Hering and Semon. The physiologist has tried to explain it in terms of neural factors as Ziehen's theory testifies. There has also been an attempt to explain memory in terms of physical and chemical factors as instanced by hypotheses of Robertson and Rignano. From another angle the disorders of mind have been found to be mainly disorders of memory. The unconscious factors that precipitate mental maladies have been postulated as the actual determinants of memory by almost all the schools of modern psycho-pathology. Side by side, there has developed a method and a technique for the study of memory as a process of reproduction, as we find in the laboratory researches of the long line of workers dating from Ebbinghaus. The laboratory work in animal psychology again, has led to the idea that memory is in its essence a muscular habit, an explicit bodily habit or implicit word habit, that persists even when the process of learning is at an end. This is the attitude of the Behaviourist. Lastly there is the philosophic problem of the status of memory in the past experience in the scheme of reality and of the ways of knowing the past,—a problem that has lately stimulated a considerable interest among Realists.

Of all these issues, the volume before us offers a short critical estimate of the biological and of the behaviouristic views of memory. It passes on to consider the epistemological questions raised by the Realist and M. Bergson. The presentation and the criticism are both admirable. There is, however, an indiscriminate blending of the epistemological with the psychological

attitudes throughout the chapters, which does not add to the value of the work. The constructive view presented in the last chapter is the least satisfactory portion of the book. The volume would interest both the psychologist and the epistemologist, but it would be of little help to either.

N. N. SIA GUPTA

TIBET, PAST AND PRESENT By *Sir Charles Bell*, K. C. I. E. C. R. C. Pp. XIV+326 with 93 illustrations and 2 maps. Oxford, at the Clarendon Press. Price 2/- net.

Sir Charles Bell served for eighteen years on the Indo-Tibetan frontier, stayed a whole year in Lhasa as an invited guest of the Dalai Lama and has published a Tibetan grammar and dictionary. In the introduction, the author very modestly puts forward these qualifications as a justification of his attempt to write about the history and politics of the Tibetans. From the fair number of references to Tibetan chronicles in the book the author appears to be well-versed also in the ancient records of the land. From a writer with such equipment and unique opportunities, one may reasonably expect a real inside view of the Tibetans. In one sense, indeed, the author has furnished it,—viz. the political history of Tibet for the first two decades of this century, with special reference to their relations with the Government of Great Britain.

A faithful servant and believer of the British Empire, an able diplomat whose services added a state about "two and a half times the shire of Wales" to the Imperial domains, Sir Charles Bell naturally enjoys telling how the British influence and prestige has been gradually increased at Lhasa, at the cost of other and therefore less beneficent Powers. The narrative is lively, interesting, and throws side-lights on different aspects of Tibetan life as well as British diplomatic missions.

Occasional insight is also afforded into the

undercurrents of Tibetan social and religious life—as for example, in the mention of the work of the Tashi-Lhunpo in fashioning an enormous image of the Lord Maitreya and the merits thereof in the eyes of a cultured Tibetan.

One misses, however, any attempt to present a complete picture of Tibetan life—apart from the political relations and cross currents. Our knowledge in this respect is not advanced one jot beyond the contributions of S. C. Das, Tsybakoff and Kawaguchi in the first few years of the present century—except through the numerous and excellent photographs, especially the fine color plates.

It is to be hoped that the accomplished author will portray in some future volume the social life of the Tibetans, with the same degree of skill he has displayed in drawing the political canvas of Tibet in the recent past.

THE FOLK LORE OF BOMBAY. By R. E. Enthoven, C. I. E., late of the Indian Civil Service. Pp. 373 with appendix and index. Clarendon Press, Oxford, 1924. Price 11/- net.

In this work the author of the Tribes and Castes of Bombay deals with the religious and magical practices and beliefs of the Bombay Presidency, excluding Sind. The survey is fairly exhaustive, starting with worship of natural objects, trees, animals, human beings and spirits and passing on to magical rites, witchcraft, interpretation of dreams and prognostications and treatment of diseases. A chapter on women's rites and another on village and field rites brings the work to a close, miscellaneous beliefs and practices being dealt with in the concluding chapter.

The information was collected through the Primary school teachers of the Bombay Presidency and may be taken to have been obtained fairly correct—at least for the particular villages and castes concerned. The editing of a mass of information from different sources has however led the author to make some general statements regarding the belief of Hindus as a whole. These, in many cases, seem open to doubt.

The compiler seems also to lack first-hand and detailed knowledge of Hindu mythology and scriptures and appears to have derived his knowledge of ethnological theories mainly from the Gazetteers and Government reports on the tribes and castes of India. The results are naturally, sometimes curious when the author tries to theorise. Thus the local practice (of Kanarese villagers) of styling the magistrate (Mr Enthoven) god and father affords an illustration of the feelings underlying much of the primitive ritual of the Presidency (p. 15). Again, "the difference between the great gods of the Hindu sacred books Brahma, Vishnu, Shiva, and the village god Maruti or the disease goddess Shitala—seems to be chiefly one of degree." The final conclusion is that "the apparently almost endless elaborations of special rites and ceremonies are the natural product of Indian mentality, which delights in subtle distinctions and is prepared for and patient of almost any extravagance." The facts collected will however prove useful to ethnologists.

K. P. CHATTOPADHYAY.

A HISTORY OF BENGALI LITERATURE. By Kumud-nath Das. Published by Das Brothers, Naogaon, Rajshahi, Bengal. 1926. Price Rs. 2. Pp. 229.

Mr. Das has removed a long-felt want by publishing this manual. The gradual development of Bengali Poetry from the Buddhist era up to the age of Rabindranath is shown with well selected illustrations. Even post-Rabindranath poets are not omitted. Chapters on Bengali Prose though not given with so much detail give an idea of development. The book will be very useful to students of Bengali Literature. The get-up of the book lacks taste and the price is too high.

S. K. D.

THE GROWTH OF CIVILIZATION. By B. Rajagopal, M.A. Lecturer in History, Theosophical College, Adyar. Theosophical Publishing House, Madras. 1925. Price Rs. 1-4-0.

In this neatly printed hand-book of 117 pages (including an Index and a Bibliography) the subject is divided into three short chapters, dealing respectively with Civilization and its growth, Western Civilization, and the civilization of India. The author's point of view is thoroughly liberal and he has not hesitated to point out the need of freedom for national growth and the need of extremists and idealists in the progress of civilization. If we have any complaint to make, it is that the different topics are massed together and hastily sketched somewhat in the style of a student's manual compiled from various sources. This makes the book less interesting than it would otherwise be, but so far as it goes it makes profitable and instructive reading.

A.

INTRODUCTION TO THE BHAGAVAD-GITA. By D. Sarma, M.A., Professor, Presidency College, Madras. Published by Ganesh and Co. Madras. Pp. 10. Price Rs. 1.

This book is intended primarily for students of College class. The aim of the book is to make the students lead a life of high purpose accepting the Gita as their guide. A good book.

THE UNIVERSE: THE THREE STAGES OF THE EARTH, THE CREATION, CONTINUATION AND ANNIHILATION. By Benode Bhumi Ram Veda-satru (Research from Ramapur, Pondicherry, Rajshahi). Pp. 2+IV+136+. Price Rs. 5-1.

The author has found the truths of Modern Science in the Rigveda and the Puranas. According to his *Sastric* calculation, the age of the earth in 1925 was 56450 years.

THE DIVINITY OF JESUS CHRIST. By the Rev. R. F. H. M. Waller, Bishop of Madras. Published by the Christian Literature Society for India. Pp. 64. Price 12/-.

Orthodox Christian doctrines.

JESUS AND LIFE TODAY. By the Rev. Charles G. G. M.A., B.D. Published by the Christian Literature Society for India. Pp. 165.

Barrow Lectures delivered in India in 1921 expounding orthodox Christianity.

THE BHAGAVAD GITA. By K. S. Ramaswami Sastri. Published by Ganesh and Co., Madras. Pp. 174. Price One Rupee.

In this book the author interpretes the doctrine in the words of Srikrishna.

IN QUEST OF GOD: By Ramdas. Published

1. *Ganesh Rau, Gourmurti Street Mangalore Pp. 1+XIII*

Describes the travels and incidents of the life of a self-less *Sadhu*

A HAND-BOOK OF PHILOSOPHY. By V. P. Patwardhan, Professor of Philosophy, New Poona College. Published by the author (311 Sadashiva Peth, Poona) Pp. 2+172 Price Rs. 2

intended for students studying philosophy for the B. A. Examination of the Indian Universities.

MANUAL OF WORSHIP. Compiled by Charlotte C. Moff. Published by the Christian Literature Society for India, Pp. 60 Price Rs. 5

Dacca University Bulletin No. X—Philosophy and History. By G. H. Langley M. A., Vice-Chancellor and Professor of Philosophy in the University of Dacca. Published for the University by the Oxford University Press. Pp. 21

A thoughtful lecture. But here 'Philosophy' means 'western philosophy' and History means 'history of the western world'

MAHESH CH. GHOSH

LETTERS OF SAMUEL JOHNSON. A Selection With an introduction by R. H. C. Oxford University Press. Price Rs. 2

This nicely got up book belongs to the World's Classics published by the Oxford University Press, and will be read with interest. The introduction adds to the value of the collection. It tells us that Johnson has never been in high estimation as a letter-writer. Many of his best letters it is true, are in the *Life*, and are familiar in that setting, but they are not there printed, or read, continuously, and, like the other components of that great code, they obey a law of subordination, and seem to shine not by their own light, but as fragments of a larger constellation. The other letters have been selected. The worth of his letters will be understood from the following—

In his letters, if anywhere, we should find the real Johnson, the Johnson whom Boswell loved and revered, though he does not quote him so often as he quotes the Autocrat of the Mitre. The letters, indeed, all the qualities which should commend the letters of a great man to the esteem and affection of his readers. They are spontaneous, and they are sincere, they abound in wit and common sense, in humour and fancy...

But when this has been said, there is yet more to say. There are, in the best of these letters, not a few passages which it would be hard to over-praise, which are as memorable as the most famous sentences in Johnson's published writings, and which it would not be easy to catch from any other writer...

Johnson's prose, when he is deeply moved, moves sometimes a harmony of thought and language, which the noblest prose rarely attains, which is not altogether unworthy of comparison with the splendours of great poetry." X.

THE APOSTLES AND THE MISSIONARIES OF THE NAVAYIDHAN. Published by Nirangan Nyogi on behalf of the Brotherhood, 3 Ramanath Mazumdar Street, Calcutta cloth bound Rs 5; paper bound Rs. 3-12.

This book contains portraits and character-sketches of Acharya Keshub Chunder Sen and of those of his co-workers and followers who are known as the Apostles and Missionaries of the Navavidhan or Church of the New Dispensation, there are two exceptions, namely, Raja Rammohun Roy and Maharshi Devendranath Tagore. The portraits are excellent, and in most cases, reveal the high spirituality of the men whom they portray. The character sketches are written in a rhetorical style. X.

BIHAR PEASANT LIFE, being a Descriptive catalogue of the surroundings of the people of that Province, with many illustrations from photographs taken by the Author, B. S. George (Grierson, I. C. S. (Retired) K. C. L. E. etc. Second and Revised Edition. Patna Superintendent Government Printing Bihar and Orissa 1926. Price Rs. 10 Pp. 29+114 111+111+111+111 One coloured map and numerous illustrations. Cloth gilt letters.

This is a very useful publication. It describes with requisite accurate illustrations and vernacular names and their English equivalents, the implements and appliances used in agriculture and rural manufactures, the domestic appliances and utensils, soils, general agricultural operations, agricultural products and their enemies, agricultural times and seasons, cattle and other domestic animals, labour, advances, wages and perquisites, land tenures, the native house, food, ceremonies and superstitions of rural life, trade, money dealings, and accounts, and weights and measures of Bihar. We have mentioned only the main divisions of the work, the sub-divisions are too numerous to refer to in detail.

The book would enable readers to form an idea accurate and vivid so far as it goes, of Bihar peasant life. It will be useful to anthropologists, agriculturists, cottage industrialists and craftsmen, etc. To the lexicographer also it will be of great help. Indian compilers of dictionaries of Indian Vernaculars often include in their works Sanskrit words which are really used in the vernaculars, but for the most part omit many genuine vernacular words used by village folk, who form the bulk of the Indian population. Of about 12,000 such words, fit to be included in Bihar dictionaries a list will be found in the index.

More than 30 years ago the writer of the present notice wrote a note on the need of compiling an illustrated list of such words in use in Bengal, in the *Dasi*, now defunct, a monthly magazine edited by Bahu Ramananda Chatterjee. He did not then know that Sir George Grierson had already done similar work for Bihar. X.

STATISTICS FOR INDIA. SHOWING CONSUMPTION OF OPIUM Per ten thousand in Sier for 1922-3. Printed at Doss & Co's Assam Printing Works, Jorhat

Publicists and students of public affairs will find this compilation handy for ready reference. X.

OPPIUM IN INDIA. Compiled by William Paton for and published by the National Christian Council of India, Burma and Ceylon, 111 Bussa Road, Calcutta.

The evidence contained in this useful pamphlet has been given by members of the Indian Medical Service, missionary doctors and Indian private

practitioners, both men and women; by educationalists of various kinds, and by missionaries. The main contentions of the Council, which we strongly support, are,

"that Government should accept the view that the consumption of raw opium in India, apart from medical prescription, is not a legitimate use that it should accept as an ideal, to which it will rapidly and steadily work, the restriction of opium to medical and scientific use..." and "that the method should be followed of registering as licensed consumers those who are addicted to the vice, and that they should be rationed in accordance with medical opinion and the results of investigation of the amount consumed by those licensed," no new names being added in future to the roll of licensed addicts.

X

ASSAM CONGRESS OPIUM ENQUIRY REPORT Published by R K Haldimani, Cinnamara, Jorhat Assam. Pp 165. Rr 1-8 Cloth boards With a map of Assam and an introduction by Mr. C F Andrews

This book is a horribly revealing document showing, among other things, how "the universal use of opium has converted the Assamese, once a hardy, industrious and enterprising race, into an effeminate, weak, indolent, and a degraded people."

To show how terribly excessive the use of opium in Assam is, it will suffice to state that the full medical requirements of each 10,000 of world's population, according to the League of Nations are six seers, but in the five upper districts of Assam the rates of consumption in seers are, Kamrup, 15,524, Larrang, 106,729, Nowgong, 173,627, Shibsagar, 110,945, Lakhimpur, 189,972, Sadiya Frontier Tract, 237,029, Bahman Frontier Tract 136,161. Frightful as these figures are, if they had been taken before the Non-operation Movement began, in 1921 they would have been far greater still, the number of seers consumed at that time being between 200 and 300 per 10,000.

X

OPIUM AS AN INTERNATIONAL PROBLEM The Geneva Conferences. By W. W. Willoughby, Professor of Political Science at the Johns Hopkins University, Counsellor and Expert to the Chinese Delegation at the conferences, etc. Baltimore The Johns Hopkins Press, 1925 cloth, gilt letters Pp 585+xxi. Price 1.50 dollars.

This is a comprehensive work by a competent authority on the international problem of opium. Although not official in character, the present volume is in the nature of a report upon the work of the two Opium Conferences recently held in Geneva, Switzerland. Being in the nature of a report, the policy has been pursued of reproducing textually the more important statements made by the several Delegations. The author has attempted to incorporate in this volume all the information that is needed for an accurate understanding of the subject, of which it is a sort of rich mine.

The main headings of the chapters are, Addiction in the United States, the Development of the International Problem, the Opium Situation in 1924 in India, British Malaya, Straits Settlements, Hongkong, North Borneo, Sarawak and Brunei, Ceylon, Siam, Macao, Indo-China (French), Netherlands East Indies, Japan, Korea, Kwantung Leased Territory, Formosa (Japanese), the Calling of the Geneva Conferences, Preparation of the Agenda

of the Conferences, China Invited to the Conference, the Organization and Rules of Procedure of the First Conference, the Chinese Situation and the First Conference, Government Monopoly, Registration and Rationing of Smokers, Exportation and Importation of opium, Miscellaneous Provisions—Prevention of Addiction, F. Considerations, Regulation of Divans, use of "Dross," Periodical Review of the Situation, Formalities as to Signing, Ratifying, Denouncing, etc., the Organization and Procedure of the second Conference, Proposals submitted to the conference, the Competence of the conference, Preparation of opium in the second Conference, the Limitation of Opium and Coca Leaf, Indian Hemp, the Production of Coca Leaf, the International control of Traffic in Drugs, Medical Needs, Definition of Codeine Heroin etc. Discussion of the Convention of China and the Treaty Powers, Chapter IV of the Hague Convention, General conclusions.

X

SANSKRIT

SADHANAMALA Vol I Gackward's Oriental Series No XXII Edited by Benoytosh Bhattacharyya, M.A. Central Library Buroda Price Rs 5

This is one of the most important books published by the Gackward's Oriental Series and the General Editor, Pandit Benoytosh Bhattacharyya, has spared no pains to present it as a model of careful collation of texts. Sadhanamala is an invaluable handbook for students of Buddhist iconography. Mon Fouche was drawn to that subject after having studied some versions of it coming from Nepal. The learned editors of the *Bibliotheca Buddhica* of St. Petersburg were eager to publish the text but the Revolution intervened and transferred the charge to our Indian scholar who has fully justified his title by bringing out the first systematic edition of the text.

Iconographic interests apart the Sadhanamala presents philological and historical problems of great importance. A popular treatise of the Vajrayana School of Northern Buddhism the Sadhanamala was highly popular with the peoples on the borderland of Aryan culture. It was translated into Tibetan from an original which seems to be Sanskrit but really Sanskrit in a state of "vulgarisation"—the grammar and the syntax being outrageously unconventional. But however unorthodox be its language the Sadhanamala seems to have preserved numerous *sadhanas* or ritualistic hymns and injunctions of the master spirits of the Mahayana School to mention among others, the *Prajnaparamitasadhana* of Asanga, the Vajra-Tara *sadhana* of Nagarjuna, the Simhanada-*sadhana* of Advayavajra, etc. Moreover, in its elaborate pantheon we find the disintegration of the primary Buddhist deities as well as the incorporation of numerous non-Indian deities with Indianised names. I found a big image of *Bhrikuti* devi in the Batavia Museum (Java). The Tara and Arya Tara characterised as "Maha-China-Krama" offer important cultural contacts between India and China. The *Lokesvara* and *Lokanatha* cults have been proved by Morfinot to be widely prevalent in the ancient Hindu colonies of Cambodia. Thus the Sadhanamala is a literary land mark in the cultural penetration of India in the Far East and Mr. Bhattacharyya has

and a great service to Indology by publishing the treatise.

A DESCRIPTIVE CATALOGUE OF THE MANUSCRIPTS IN THE CENTRAL LIBRARY, BARODA, Vol. I

The origin of the Oriental Library of Baroda goes back to 1912 when 1610 Mss. and 1070 printed books were taken over from the Baroda Vithal Chaudh collection to form the nucleus of a Sanskrit library. Since then, thanks to the liberal outlook of His Highness the Gaekward, a systematic search for Mss. were undertaken in Rajputana and Guzerat and Pandit R. Ananta Krishna Shastri also collected 20000 Mss. after an all India tour. In 1915 the *Backwoods Oriental Series* was started and in ten years nearly 30 important books on diverse subjects have been published.

The present volume is the catalogue of the Vedic manuscripts, excellently arranged and classified by Mr. Shrigondekar M. A. and Pandit Ramaswami Shastri, describing 543 Vedic works running to 1420 manuscripts.

The total collection of Mss. in the Library nearly amounts to 20000, which is highly encouraging and redounds to the credit of the organisers and workers of the Library.

MANASOLLASA Vol. I, Edited By G. K. Shrigondekar M. A. Central Library, Baroda price Rs. 2-12-0

Manasollasa is otherwise known as *Abhilashita Chintamani* and is reputed to have been composed by the Western Chalukya King Bhulokamalla Someswara (circa 1121-1138). But this stupendous work extending to about 8000 Granthas and divided into 100 chapters could not possibly have been composed by a single ruler; it might have been compiled by several scholars of the court of King Someswara as the editor surmises, while presenting only 40 chapters of the book in the present volume. But it might equally be supposed to be the compilation of generations of scholars. For the work is palpably an encyclopaedic summary of all the available works on the science of *Artha* or the *Rajya-shastra* that is why it is attributed to a royal scribe.

The work moreover was compiled in an age of huge compilations like the *Chaturvarga Chintamani*, *Hemadri*, the *Yuktikalpataru*, *Vinamitrodaya*, *Srangadhara-paddhati* and such works. To the students of *Arthashastra*, *Manasollasa* would be specially interesting because the letter seems to follow section by section the standard works on the subject like the *Kautilya Arthashastra*, the *Sukra-nisara* etc., and yet the richness of details in certain chapters, especially those relating to the positive sciences e.g., the training and treatment of elephants and horses, the testing of precious gems, embody the further observation and researches of the Hindus along those lines after the treatises of *Kautilya*, and *Sukra* were composed. Most of the original treatises on such technical sciences are lost and thanks to these compilers that a summary of their contents are transmitted to us. The compilers of the *Manasollasa* betray this technical preoccupation by incorporating a long chapter on the science of treatment and medicine (*Itasayana*). It is equally noteworthy that all the medicines are prepared from medicinal plants and nowhere the knowledge of preparation of medicines from metals is shown. This seems to be specially

striking when we remember that the use of *rasa*—a mercury and many other metals were known to the compilers of *Kautilya Arthashastra* as we see it today—and the *Manasollasa* also in two sub-sections—*Udh* and *Dhatu-rasayana*—prescribes various methods of enriching the Government treasury by the practice of *alchemy*.

This compilation of the positive sciences of the Hindus is specially interesting because "the Western Chalukyas," as the editor opines, "were never known to have been contaminated by the Muhammadan civilisation." We eagerly expect the subsequent chapters of the treatise in another volume and hope that the editor would supply us with an index of the technical terms and parallels from known treatises like *Mahabharata*, *Ratnapariksha*, so far as possible.

LEKHAPADDHATI Edited by the late Mr. C. D. Dalal M. A. with notes etc. by Mr. G. K. Shrigondekar M. A. Baroda Central Library price Rs. 2.

This book written in "mixed Sanskrit" and ascribed by the editors to the end of the fifteenth century A. D. is a curiously interesting document. Surely the ancient Hindus corresponded with one another as is evidenced from the sending of diplomatic despatches in the Great Epics, of letters in the dramas, but no systematic "Letter-writer" has as yet been published. The *Lekhapaddhati* although a late treatise and full of provincial mannerisms attests to the fact that several works existed on the subject now lost to us.

The book gives a formidable classification of letters running to over sixty heads. Several of them touch personal and domestic topics but their interest is less compared with the rich collection of letter models and draftings relating to political, military and commercial subjects. So far as the commercial draftings are concerned, the author has drawn largely from the procedure of the law courts and legal treatises.

The royal proclamations, mandates, edicts etc., and diplomatic despatches form naturally the most important section and seem to be the development of the *Sasanadhihara* section of *Kautilya's Arthashastra* and as we all know that the earliest written document that we possess are the *amrasanas* of Emperor Asoka so from the 3rd century B. C. down to the 15th century A. D., we find a continuity of epistolary tradition and style as would be evident from the letter heads like *Rajadesah*, *Sasanapatram*, *Mahamatya-bhujapatram*, *Raja Vijnaptika*, *Prati-prichha* etc.

The glossary of the technical terms at the end of the book is very useful and we congratulate the workers engaged in publishing the Gaekward Oriental Series.

KALIDAS NAG

HINDI

Vaidik Jivan By Visvanath Lalpandkar, Mahesh Book Depot, Ghaseti Barar, Ameer Price 12 as. 1925

By rearranging the mantras of the Atharva Veda, to reveal the various sides of human life the author has really done a service. He has helped to understand the aims and motives, the thoughts

and aspirations of the Aryans of those far gone ages. The explanations are lucid and elaborate.

BEHMA-NARITHA By Rupanarain Pandeya. *The Trianga Pustakamala, Lucknow* Price 12 as

This play is translated from the Bengali of Girish Chandra Ghosh.

GALPA-GUCHHIA By Rupanarain Pandeya. *Indian Press Ltd., Allahabad* Price 12 as

Mr Pandeya has done a service to the Hindi-knowing public by translating the first and second parts of the series of short stories written by Rabindranath Tagore. On the whole the work is satisfactory.

SILA DEHI By Laliprasad Pandey. *The Indian Press Ltd., Allahabad 1925* Price Rs. 2

This historical romance is translated from the Bengali work of Mr Nalini Ranjan Chaudhuri. An old story of Mahatman in Bengal forms the subject matter of the book. There are a few illustrations some of which are in colours.

ADARSA BHUMI OF CHITAU By Rupanarain. *The Indian Press Ltd., Allahabad 1925* Price Rs. 1-8

The romantic annals of Chitaur are here told with much effect. The letter of Prithviraj rendered in Hindi-verse by Mr Mathurisan Gupta adds to the charm of this work.

HIMACHAL-SANDESH Translated by Hari Suman. *Saraswathi 'Mandir' B-1 L.L. B. Saraswathi Printing Press, Meerut* Price 6 as

"The Message of the Himalayas" by Mr Paul Richard, is translated in versified form.

ARABINDO MANDIRIN Hindi. *Pustakalaya Muramba* Price 12 as

The philosophy of Arabindo Ghose as embodied in a Bengali work will reach the Hindi-knowing public through this translation.

JYOTISH PRAKASHIKA By Chaitambis Jain. B-1. *Hindi Sahitya Bhandar, Mathura* Sahitya Muramba Price Rs. 1-8

An useful hand-book of the astronomical science based on calculations with special reference to India. The charts and diagrams are helpful to students.

SURISWAR AND SAMBAT Translated from the *Ugriya* by Krishna Lal Varma. *The Trianga Dharmalakshmi Bhawanindu Agri*, Rs. 1-8

Hindi literature is enriched by this translation of Muniraj Vidya-vijay's work on the Jain Masters at the court of the Emperor Akbar. All the available sources, including some MSS. and royal firmans are laid under contribution. On the whole the work is a great success. The illustration of the stone image of Hirviyaji Suri at Mahiwa in Kathiawad adds to the attraction of the work besides many others.

SAHITYA-SIDDHANTA By Pandit Sataram Sastri. *Hindi Nirukta Kanyalaya, Bhawan, The Prayag* Rs. 2

The learned author has discussed the central topics of Rhetorical Sanskrit literature with a mastery not easily available. He sometimes differs from the old writers on certain points. The delineation of *Rasa* by the Sanskrit writers is fully exposed in this valuable work. RAMES BAST

MARATHI

RABINDRANATH TAGORE HIS LIFE AND STUD By Mr R. G. Kanade. *Graduate Tulak University, Poona*, with a foreward by Prof. N. G. Dam. M. A. Pages 350. Published by the author at 35, Shalimar Peth Poona City Price Rs. 2

Rabindranath Tagore of worldwide fame is a unique figure in Modern India. He not only combines in himself the genius and art of a poet, a dramatist, a novelist, a statesman, a social reformer and a philosopher, but is a paradox too, many owing to the amazing combination in him of some apparently opposing elements of thought clearly visible in his poems which bewilders his readers. A reader who dives deep in his philosophy needs no telling him that Tagore's is a school which has kept in its view the syncretical study of universal knowledge and this special feature pervades the whole of his thought and activities. This speciality in Tagore's life is a key, a firm grasp of which enables a reader to unravel the entanglements which otherwise lead him nowhere. The output of Tagore's literary achievement during the last fifty years also is so vast and enormous that even a voracious reader cannot pretend to have read more than a fraction of it. These and like difficulties probably deter young and enthusiastic writers from the stupendous task of writing Tagore's life and attempting an exhaustive criticism or appreciation of his life-work. Mr Kanade's volume of 350 pages can by no means be said to be achieving the impossible. It has only touched the fringe of Tagore's philosophy though his account of the life and literary works is fairly sufficient to give the reader a full idea of the significance and grandeur of the Poet's mind. Looked at from this point of view, Mr Kanade's attempt must be considered highly creditable, especially so when Bengalee, which Tagore has mostly chosen the conveyance of his thought is not his biographer's mother-tongue.

The get-up of the work leaves little to be desired.

SHIVAJI KONYA (A HISTORICAL NOVEL) By Mr. S. P. Joshi. *Publishers—P. Anjan Agency, Madhuva Chark, Poona City* Price Rs. 1-12

Marathi literature now-a-days is suffering from a plethora of the so-called historical novels especially of those of Shivajee's times. Every nook and corner of Maratha history is being assiduously explored and imagination is freely being pressed into service to make a novel look like a historical romance, no matter if in doing so one gives a severe blow to history or even knocks it down. Mr Joshi is an offender in this respect. There is nothing wrong in blending historical truth and the play of imagination to a certain length, provided you do no violence thereby to the well-known character of historical personages. But Mr Joshi has flouted this wholesome law and crossed the boundary, making his hero, Netajee Palkar, brave and trustworthy comrade of Shivajee, treacherous to his master and to the sacred faith of Hinduism. This is Netajee's vilification pure and simple. I know one English writer has similarly vilified Netajee in one of his novels published some twenty years ago. But being a Maharratta Mr. Joshi is expected to know better and it would have been well if the author had spared

stage the ill-deserved humiliation. Another thing, Mr Joshi appears to have a hobby of running and distorting words in an unnatural way, make nouns serve as verbs or other parts of speech.—which is reprehensible. Otherwise, the novel is interesting from cover to cover.

A. G. ARTI

GUJRATI

DEVANGANA, A FIVE ACT PLAY. FIRST PART. By *Murkand Katanlal Dholakia, L.C.E.*, printed at the *Gujarat Printing Press, Ahmedabad*. Thick Card Board. Pp. 163. Price Re 1-4-0 (1926)

Devangana is the heroine of this play and though carrying a *last-putra* is represented as an image of chastity. Some people see romance in everyday incidents, the preface of this book apotheosises such incidents and then launches into allegory. The style is popular.

SHRI SAMBHAM AND OTHER VERSES. By the late *Namadaskankar P. Bhatt*, printed at the *Sahitya Printing Press, Bombay*. Cloth bound. Pp. 58. Price Rs 12-0 (1926)

The verses are modelled in Sanskrit and English poems. A successful attempt of the former class, seen in those headed, "Pushpa Bana Vilas," which with the commentaries make good reading for those who like poetry of that kind. The verses are distinctly of a high order and contained promise of better work but the writer unfortunately died young.

SHRI MITRADEV. Published by *Gordhandas K. Parikh*, printed at the *Prayabandhu Printing Works, Ahmedabad*. Paper Cover. Pp. 11. Price Re 0-10 (1926)

Theosophists believe in the near appearance of the Teacher of the World. This little book says that Shri Mitradev Bhagwan has already appeared in the world and is six years old and living somewhere in Kashmir. The book contains a number of curious truths and precepts.

AMI ZIRNAS. By *Shayda*, printed at the *Jain Prakashan Press, Bombay*. Pp. 156. Cloth bound. Price 1-8-0 (1925).

"Brooklets of Nector," this is the name of the book which consists of short stories, furnishing excellent reading, for which there is a just demand at present, and which demand it meets very well.

SATIK HITOPADESHA. By *Amthalal Bulakhnam*. *Two B.A.*, Printed at the *Bombay Vaidhar Press, Bombay*. Cloth bound, Pp. 180. Price Rs. 3-8-0 (1925)

After nearly twentyfive years it is that we come across a really good translation of the *Hitopadesha*. In every way the present work is an improvement on the old one of the late Mr. Vithaldas Rajaram Dalal. It supplies many omissions and brings the translation, commentaries and other explanations up to date. An Index of the first lines of Sanskrit Shlokas is provided, and though intended primarily for use of students, it is sure to prove a help to scholars also.

SANGITHAWANI. By *Mast Mani* (1919) has been received by us. We notice new books as a rule.

IRAVATI A HISTORICAL NOVEL. By *Chhaganlal Thakordas Modi B.A.* Third Edition, printed at the *Surat City Printing Press, Surat*. Cloth bound. Pp. 308. Price Rs 2-8-0 (1925)

The book is said to have been based on a Dutch Novel. It gives a graphic description of the times of Emperor Akbar, and we feel at times as if we were re-reading all that is written about them by Faizi and Abul Fazl. The religious discourses, so much liked by the Emperor, are reproduced here, and the consequent intrigues rampant there to de-throne Akbar and put Jahangir in his place are also described. Iravati, the heroine, though neglected remains faithful to her lover. Altogether it is an interesting story well told.

K. M. J.

ORIYA

SWAGATAM OR HEARTY WELCOME. (a booklet in Oriya written in poetry and supplemented by English prose translations. The booklet was written on the occasion of The Prince of Wales's visit to India in 1921).

BAGDUT. an Ode on the Goddess of Learning dedicated to His Excellency the Right Hon. Viscount Goschen of Hawkhurst (Governor of Madras).

These two booklets have been written by Sri Lakshminarayan Deo, Jubraj of Tekali (Ganjam). The Jubraj is a lover of learning and has been making efforts to write in prose and poetry.

BHABHUTI. By late *Padmanabh Dev* and published by the *Raja Sahib of Tekkali, Sri Brindaban Chandra Harichandan Jagder*. Price Eight annas.

Padmanabh Dev was the Raja of Tekkali. This epic shows the assiduity of the late chief. Love of literature was a passion with him, it seems, and though the book is full of erotic love, it is well-written.

L. N. Sahu

THE POPULAR STAGE OF JAPAN*

By A. C.

THE history of the art of make-believe is probably as old as that of organised human society. It would, no doubt, be difficult to fix the date of the birthday of drama, but that need not detract from our enjoyment of the good drama nor hamper its progress.

The theatre was already an established institution of Western civilisation in the first millennium B.C., and the ideals of the theatre world of those days are still cherished by a large section of modern Western intellectuals

wonder and admiration. In the West as also in India in the East, the continuity of the classical forms has been lost to a great extent and, new forms, some of dazzling splendour, some of weak mediocrity and others of morbid degeneracy, have crept in which have satisfied the laws of demand and supply but not the principles of dramatic evolution. In China and Japan, this continuity has been preserved to a greater extent than elsewhere and the Japanese theatre of to-day is moved

The New Kabuki-za

Theatrical art has quite as long a, if not a longer, history in the East—in China, Japan and India. Technique, the ideals and the themes have been different from those of the West. They have also differed from country to country, so that when we come to judge of the relative excellence of the drama of the West and that of the East we notice that comparison is by no means easy. Each followed its own path of progress and attained perfection to a degree which stimulates

by an aesthetic urge which finds its origin in the misty days of the sacred dances and has obtained fresh vitality from new sources often during its long history.

Both from an academical point of view and from mere love of a good thing, a study of the history of the Japanese drama would prove highly interesting. Zoe Kincaid's book on *Kabuki*, or the popular stage of Japan, is an excellent treatise dealing with Japan's popular stage. It is a finely got up and well printed volume of nearly 400 pages and 50 plates (of which one is in colours). It gives the history of the popular stage of Japan and explains its organisation and technique and

* *Kabuki, the Popular Stage of Japan*, by Zoe Kincaid, published by Macmillan & Co., Ltd. St Martins Street, London. Price 42 shillings net. With numerous illustrations, some of which are reproduced here.

shows how deeply it is attached to the life of Japan. This "popular" institution excels in many ways, most of the so called "high" creations of the Modern World. The popular theatre or Kabuki was established more than three hundred years ago; but its predecessors, the No and the Ningyo-Shibai, from which it has drawn much inspiration, are much older. "The No or classic drama" has for its performers masked figures and the "Ningyo-Shibai" or "the Doll Theatre" uses marionettes to perform complicated ballad dramas. One could almost divide the Japanese stage into two clear-cut sections, the Religious Stage and the Popular Stage. The No and Ningyo-Shibai are mainly religious and the Kabuki stands for the popular drama. It is not that the No and the Doll Theatre attained their fullest development in very ancient times, for the No saw its greatest days in the fourteenth century and the Doll Theatre not very long ago. The

passions pictorially and not so much in words. This may be explained by the instincts of the Japanese people, which urge them to express themselves in the plastic way.

The Kabuki Horse

masked figures of the No performers and the marionettes of the Doll Theatre give representations of classical themes and express the

Nakamura Jakuyemon of Osaka, an Onnagata who imitates the acting of the Marionettes

The Indian *Ram-lila* may be mentioned in this connection, as, although its technique and craftsmanship show sure signs of degeneration, it still shows how the Indians also believed in the value of the mask in dramatic representations. The technique of the stage in ancient India is now relegated to Sanskrit texts which few study or understand and the modern Indian stage is primarily a very weak imitation of a Western prototype. Whatever is left as a remnant of the lost art shows much similarity of form and spirit with the Japanese stagecraft and a comparative study of the dramatic art of China, Japan and India both ancient and

modern, should yield valuable culture-historical material. Professor Takakusu has stated in *The Young East* that some forms of melodrama and some dances in Japan were derived from India in the last resort. In Japan mask-making is still a living art and specialists in masks show amazing artistic ability and craftsmanship.

An "actress" of the Doll Theatre

The *Ram-lila* masks and puppets are of course, crude and often ridiculous but what more can we expect from the ignorant amateurs to whom belongs the credit of keeping up the show while the "elite" spend their time in scoffing at things Indian and in making vain efforts at assimilating a strange culture?

Zoe Kincaid's book is a masterpiece of lucidity and is eminently free from blemishes, such as appearing learned, the interpretativeness, which wraps everything in a fog which would otherwise seem clear enough, quotation-mania, etc., etc. It gives a short history of the popular stage, and then goes on to take up each aspect of the stage in turn and deal with it clearly and effectively. Nothing is

Nakamura Kichiyemon as a warrior of old Japan

The Imperial Theatre of Tokyo

Built in 1911, it survived the earthquake of 1923 but its interior was destroyed by fire. It has since been restored and is at present the centre where performers from every corner of the globe assemble

azy, or uncertain, over-inflated or summarised to the extent of making a dry bone of a living thing. One must not think that using the popular theatre Kabuki would show a low standard of acting, stage management or organisation. It is popular in the sense that it is not sacred, it goes in for what the West would be called the Drama as opposed to the Passion Play. Kabuki actors are almost always hereditarily chosen and are organised in a hierarchy. Promotion and rank depend on hard work, mastery of technique and superior talent. Actor families supply most of the actors, and great actors always pass on their stage methods to their sons or adopted successors. Stage building and furnishing are also tackled with the same laborateness and efficiency as the acting. In these respects even the highly competent "Revue" managers in the West may learn something or two from the organisers of the Kabuki.

Before going into the history, organisation

and conventions of the Kabuki the author gives us a glimpse of the popular theatre, a pen picture which creates an interest in the

Matsumoto Koshiro impersonating Townsend Harris, the first American minister to Japan. The picture shows that the Japanese are masters of the art of make-up

reader to know more about this charming institution

"An indescribable dir, thoroughly characteristic of the atmosphere of Shibai—that forms part of the pleasure of theatre going—is composed of a hubbub of voices, the clatter of tea-cups, the twang of the samisen, the thunder of big drums, the cries of the vendors selling pots of hot tea, rice-cakes, or oranges to customers in the back seats of the gallery and the metallic click-lack of the *hyashigi* or wooden clappers, that signal the beginning or end of the curtain"

This reminds one of the uproariousness of the Indian theatres, where actors, patrons and *paurallahs* combine to create a fairish imitation of the Miltonic chaos.

In the Kabuki,

Long before the playgoers begin to arrive, heavy scattered drum-beats echo through the vacant theatre. This is a reminder of the old days when the drummer stationed in the *yagura*, or drum tower, beat his tattoo to announce the opening of Shibai and to hasten the people on their way.

As the time draws near,

A flute begins to shrill: next the light staccato beats of a *No* drum: the drummers cease their clamour abruptly the stage carpenters hammer and the calls of stage hands.

Among the audience

...people kneeling down on their cushions the galleries hung with many lanterns and covered with scarlet cloth begin to fill. Outside, the red and white paper lanterns decorating the under-eaves of the tea-house blow about wetly and a fusillade of vertical rain falls unceasingly upon the grey mud of the street.

Nothing prevents the Japanese from attending the Kabuki, neither rain nor typhoon. All yearn for the gay atmosphere and the happy theatre-goers throng to enter "Kabuki's dreamland."

The programme lasts from noon to midnight and Kabuki provides the audience with servants who attend courteously to all personal needs. "Hot rice and tempting viands," sake bottles, or tea pots render a sojourn to the Kabuki a thing of complex

pleasures, a comprehensive recreation. Audience do not go to the theatre to get sensations. Most of the plays are well known and the more known it is the more audience like it, for their pleasure is in the "expectancy" and not surprise. They cheer their favourite actors, make "audi-

The transformation of a maid into a fox, a Conventional make-up

remarks, such as "You did well!" "Nippon Ichii" (best in Japan) and so on.

The *Hanamichi* or the flower-way "one of the most interesting conventions of the Kabuki. Actors and pageants pass through the audience along the *Hanamichi*, making the whole theatre the stage and audience a part of the "play and player."

Interpretative music forms part of almost every play. To produce certain moods in the audi-

drummers and Samisen players are tuned to make sounds and noises to increase the emotion or pathetic effect of a scene.

Special characters make up in various ways, a relic of the mask theatre, and the style of acting is in most ways conventional. The actor must have a certain definite make-up and must not be nervous.

The Kabuki horse is a human-animal composed of two men who jointly carry the horse mask and move in a thoroughly equine manner. This human animal finds one of the traditional gaki pictures of the *nabu-narayan* or "nine-women-elephant"

in which Krishna and Radha appear. The Kabuki allows free play of individuality but the individuality must be outstanding and not merely mediocre whimsicality. The whims of great actors become the shape of conventional liberties to later generations.

ORIGIN OF KABUKI

It is an irony of fate that the nameless stage of Kabuki should have been founded by a woman. O-Kuni, a ritual dancer attached to the great Shinto Shrine of Ise, founded the Kabuki in the year 1596. She was

visiting the provinces to raise funds for the shrine and at last came to Kyoto. Here she stuck somehow and forgetting her position, married Sansaburo, a Samurai and, together, they started a new era in Japanese acting. O-Kuni's husband saw that her Shinto-dance dancing alone would not go far, so he effected improvements in it. This soon drew her "one of the most popular personages of the time." Sansaburo was a man of culture and his help went a long way to make O-Kuni what she became.

For a time after O-Kuni women ruled the stage in Japan. But the evil life they led and the bad influence they exerted on Japanese life led to the prohibition of female acting in 1629. Mixed companies attempted to give performances even after this but were put down mercilessly.

The youngmen's stage was organised after the abolition of the women's stage.

Matsumoto Koshiro in an Aragoto attitude

Dansuke established the youth's theatre in 1617 and this theatre grew rapidly. Even this theatre suffered in the hands of the Government in 1641, when a nobleman's wife fell in love with a young actor. After this we see the coming of the full-grown men's theatre, which is still going strong.

The men do not assume male or female roles indiscriminately. Some act only as women and are called the Onnagata and others act only male parts. Among actors there are the Dokegata or comedians who practise a special technique. Actors are organised in a hierarchy. There are many grades of actors, of which the first seven are important. The first class actors are given a name which means "head-of-all-acting." There are then the "without rival," the "best-best-good," the "truest-best-best good" and so on.

Ichikawa Chusha as Matsumaru in Terakoya (The village school), who sacrifices the life of his son that the Michiyane hen may survive

SCHOOLS OF ACTING

As in the creation of schools of thought and conduct in any branch of human endeavour, great personalities have played a prominent part in the formation of schools of acting in Japan. Thus the first great actors who left their mark on the Kabuki technique were Sakata Tojuro of Kyoto and Ichikawa Danjuro of Yedo. Both these actors flourished in the Genroku age (from the last quarter of the sixteenth to the first quarter of the eighteenth century), called the age of Japanese Renaissance on account of the great achievements in literature and art made by Japan during this period. Tojuro was a

person of great artistic attainment and had an extravagant way of living. He believed in being well-informed and versatile and lived up to the standard he himself set for good actors by declaring,

"The art of an actor is like a beggar's bag and must contain everything, whether it is important or not. If there is anything not wanted for immediate use, keep it for a future occasion. An actor should even know how to pick pockets."

Tojuro was at his best in impersonating common people and his ability in this department was in no small degree due to his constant study of persons and things in their natural environment. His school is known as the *real* or natural school and resembles the realistic stage of the modern West in spirit. Of course, other influences have kept it from following the path of unmixed realism.

Ichikawa Danjuro on the other hand drew his inspiration from the exaggerated representations of the Doll Theatre. He developed the Aragoto or unreal or exaggerated style of acting and made an immediate success of it on account of the atmosphere of reaction against effeminacy and sentimentality prevailing at the time. Danjuro's militaristic themes and "manly" style of acting caught the people's imagination. Aragoto reminds one of the *Tirana* in Indian theatre-craft. Danjuro was broadshouldered and brawny and his acting suited his physique.

The influence of the audience on the acting is clearly noticeable when we study the atmosphere of Kyoto and Yedo where Tojuro and Danjuro appeared. Kyoto was "quiet and easy going," Yedo militaristic and "intense." So Kyoto produced the natural and smooth flowing style of Tojuro and Yedo the demonstrative heroism of Danjuro.

Numerous great actors appeared in the Genroku age, but it is not possible here to make even a passing reference to each one of them.

We shall also have to pass over the brilliant characters who adorned the Japanese

age during the period beginning at the end of Genroku and ending in the beginning of the Meiji or Restoration era (1688-1912).

Ichikawa Danjuro the ninth was the torch bearer of Kabuki during the long reign of the Emperor Meiji, known as the Meiji era. He endured for forty-five years (1868-1912).

His immediate precursors were men of indifferent merit and he is rated as the "Saviour of Kabuki" during hard times.

Although he upheld the treasured old style of the Ichikawa line, he threw himself with enthusiasm into the portrayal of roles in a new type of play called *katsuriki*, or *new history* in which he painted characters with accuracy of detail showing the influence of Western drama and also his revolt from the inconsistencies of the *Jidamono* or historical pieces of the Doll Theatre. An actor of such great parts was not seen before in Japan, and his like may not appear again for generations to come.

ONNAGATA

To give an account of the most famous impersonators of male parts and leave those who have played female parts during the long history of the kabuki in obscurity would hardly be doing justice. The *Onnagata*, or actors taking women's parts, have contributed as much to the development of the popular stage as have those who impersonated only males. Ogino Sawanojo was the most famous *Onnagata* in Yedo during the Genroku period. He played female parts of Ichikawa Danjuro, the originator of the Aragoto style of acting. Of him it has been said, "Even the gods and Buddha would be struck with the actions of this man." Yoshizawa Ayame was the first *Onnagata* in Kyoto during the Genroku age. His sayings on the art of the *Onnagata* have been collected in book form and called *Ayame Gusa* or the sayings of Ayame. Ayame said that to play female parts successfully one must live as a woman and learn to do everything in a dainty and womanly way. He should even learn to blush if anyone were to refer to his wife and children in front of him.

"Nava-Nari-kuniar" or "Nine-Women-Elephant"

Famous for his good looks was the *Onnagata* Sawamura Tannosuke. There are other prominent *Onnagata* in the history of the kabuki, but one should consult Zoo Kincaid's book for a fuller list.

THE KABUKI PLAYS

The plays staged on the kabuki are classified into four groups: "Sewamono, plays of everyday life; *Jidamono*, historical drama; *Shosagoto*, music posture drama; and Aragoto, highly imaginary improvisations." Odori or the descriptive dance is closely allied to these.

In the plays of everyday life "human nature holds sway, the playwright selecting for his material the joys and sorrows of the people round him." In historical plays historical characters take a prominent place. But dramatisation of true historical events

was forbidden by law and playwrights let their imagination run riot to make a fictitious plot with real characters in it

Shosagoto or the music-posture dramas "combine all the Kabuki arts—plot, music, scenery, acting, movement, and colour, and represent the most sincere collaboration of the Kabuki specialists."

In Aragoto, gesture, posture, movement, costume, everything is exaggerated. The plot is of secondary importance compared to technique and symbolic expressionism.

In modern times, the influence of the West has been felt on the Japanese stage and melodrama and translations and adaptations of Western plays have become frequent. In the Kabuki the long programmes never contain only one class of play, and Aragoto, Shosagoto, Sewamono and Jidaimono combine to please the audience, just as on the Indian stage dancing, music and the inevitable mob-scene always mix with high flown rhetorical outbursts from the heroes and heroines to complete the dramatic feast.

PLAY MOTIVES

Loyalty and self-sacrifice are dominant motives of Kabuki plays. Before 1868 the conflict of duty, justice and obligation with humanity, sentiment and feeling was always there in the Kabuki play. The author of *Kabuki* gives the gist of several plays which illustrate these motives very clearly.

Love scenes and ghost scenes are very common in Kabuki plays. Socialistic propaganda also finds a place in them. The weird, as opposed to the usual and normal, seems to be preferred by the Japanese, by its frequent presence in their plays. The illustrations given by Zoe Kincaid prove this statement. The traditions of Japanese society have still a tight hold on the Japanese imagination in spite of Japan's modernisation, and the fact is best brought out by studying the play forms and play motives of the popular stage of Japan.

GLIMPSES OF BENGALI SOCIETY FROM OLD BENGALI LITERATURE

By TAMONASH CHANDRADAS GUPTA, M.A., R.L. Research Assistant,
Calcutta University

CONSIDERABLE materials, regarding the social, political and religious history of Bengal lie strewn over the pages of old Bengali literature. The administrative history of Bengal during the Mahomedan rule as also of the period immediately preceding it, gleaned from the accounts of the Mahomedan historians and copper-plate inscriptions, do not give us sufficient information about the social life of Bengal. The accounts to be found in these records are, moreover, often full of high-flown panegyrics, bestowed lavishly by the writers on their patrons, the Rajas, whose cause they avowedly espoused. The court parasites have often times given accounts of things which may, at best, be taken as half-truths and unfortunately the historian of Indian life and culture has, at the present-day, to depend mainly on these materials, which are quite inadequate for historical purposes.

In the old Vernacular literature, the reader is carried through a jungle of legends, mythical stories and crude rustic fiction which are apparently far from being reliable materials for history.

But a closer observation reveals that this literature of legends and imaginary stories often bear the throbbings of life, and in the crude performance one can feel the pulse of the people,—their ideas and inspirations, their manners and customs, sometimes with a greater accuracy than in the state records and inscriptions. Underlying these legends there is life with all its lights and shades. In these accounts the eyes of a true historian will discover precious materials which, supplemented by official records, the great value of which cannot be ignored, will enable him to reconstruct the social and political history of the country on the solid basis of a true scholarly research.

In the poems like the *Dharmamangal*, the *Chandi Kavyas* and the *Maunasa Mangals*, the *Sunya Puran*, *Gorakshajay*, *Sivayanas* and the *Mymensingh ballads*,—the poets sometimes derive the subjects of their treatment from actual facts, and, however much their accounts may be found tinged with poetic colourings, there cannot be any interested advocacy for a political cause, clouding their vision. The historical plays of Shakespeare give us far better glimpses into the social and political epochs of the English people than the voluminous accounts on the subject, left by the historians.

This is more or less true in regard to our vernacular poems also. The difficulty that confronts us in the field is the task of separating facts from fiction. All that is wanted, therefore, is a historian's critical judgment capable of distinguishing truth from fiction and of arriving at a scientific conclusion.

It is not possible in many cases to assign exact dates for want of materials, as also for the remoteness of a period to which the incidents belong.

But time may come when all available materials might be arranged in a chronological order, but it would now be quite premature to make any attempt in this direction.

So, periods should now be considered in two main divisions, namely, Pre-Mahomedan and Post-Mahomedan. The poets, though most of them belonged to the latter period, sometimes left accounts of facts which may be distinctly traced to the Hindu Epoch. The subjects treated here roughly cover a few centuries—possibly those between the 11th and the 16th centuries. Of this period the last two centuries were most prolific in producing a large mass of literary materials.

Each of the subjects mentioned here says something new and, as such, requires careful study. These items are but a few of the many, each of which in view of the special importance attaching to it, deserves elaborate treatment.

So far as religion is concerned, the country showed a marked tendency, especially during the Mahomedan rule towards a transition from Buddhism to the present-day Hinduism. If we trace the course of religion from the 10th down to the 11th century we see the Mahayana form of Buddhism holding the people in its sway. Although various other cults,—the Dharma cult, for example, counted

many adherents simultaneously, still it must be admitted that most of them had an element of Buddhism in them. Such was really the influence of Buddhism in those days, that the Dharma cult, which possessed an extensive literature of its own, comprising, among others, the *Sunya Puran*, the *Dharmamangal* poems and the *Maynamati* songs, is supposed by many as being an off-shoot of Buddhism. The quarrels between the rival cults, e. g., between the Sun and the Dharma cults, fill up some forgotten pages of our history. The Sun-cult is still traceable in the tenets of *Grahacharyas* and the *Bratakathas* (viz., of *Itural*). Although some zealous Hindu *Rajas* of the sun dynasty did much to revive the *Pauranic Hinduism* as it exists to-day, Buddhism was still there in some form or other among the masses. In spite of the degeneration of its old ideals, the legacy of moral sentiment of Buddhism was not altogether lost to the masses. The *Bratakatha* of *Malanchamala* bears evidence of this fact. With the advent of the Mahomedans, Buddhism finally lost its lingering hold upon the people, and out of its ruins, grew up the present form of Hinduism, revived and remodelled by the zealous Brahmin reformers who particularly laid stress upon the observance of purity in social practices, or *Achara*, as it was called, evidently with a view to counteracting the evils, arising out of contact with alien people, people professing a different religion. Perhaps it was *Vaisnavism* that sounded the death-knell of Buddhism in this country.

Though Buddhism gradually declined in this country, we cannot forget its great merits. The theory of cosmogony, it is to be observed, as expounded in the *Sunya Puran* of the Dharma-cult, bore resemblance to the idea of creation, propounded in the *Rigveda*.

The idea of action * once again exercised a more powerful influence over the minds of the people than that of complete surrender in every thing to gods, fostered by the prevailing cult of devotion which became subsequently the guiding factor in the life of the people of this country.

In the *Maynamati* songs we find the son putting his own mother into boiling oil. *This is evidently an un-Hindu sentiment and

* For example we may mention the characters of *Lausen*, *Kaludon*, *Lakha*, *Ranjavati*, *Maynamati* and a host of others to be found in the Buddhist literature, such as the *Dharmamangla* poems and the *Maynamati* songs.

every Hindu will feel abhorrence at such an instance of monstrously unthial conduct. This we trace to the degenerate Mahayana form of Buddhism when the theory of action exercised its sway over the minds of the people. The belief that mystic rites and mantras could work wonders may be traced not only in almost every page of the literature of the Dharma-cult but also in the literature of the Hindu religion, as illustrated by the legends of the sages, e.g., Durvasa, Biswamitra and Bhugu. Throwing one into boiling oil had also its parallel in the story of Sudhanna of the Mahabharata. Karna's sacrifice of his son Brisaketu to satisfy a Brahmin guest in the familiar story of the Mahabharata has its parallel in the Buddhist story of Lanchandira.

All these tend to show that perhaps the forms of Hinduism, then prevalent, were considerably influenced by the Buddhist ideas and beliefs as a result of which the Bengali recensions of the Mahabharata and the Ramayana are specially intermingled with such grotesque narratives. The Agni Pariksha (or fire-ordeal) of Sita has its parallel in the stories of Behula and Khullana of the Manasamangal poems, and the Chandikavyas which are apparently imbued with the Buddhist ideas. The Tapasya or self-mortification of Ravana of the Ramayana story corresponds to the self-mortification of Lausen and Ranjavi of the Dharama songs.

The manners and customs prevailing in the country during the period under review were most peculiar, disclosing an admixture of foreign elements in them, due to some extent to Buddhist influences. Examples are not rare to show the prevalence of many non-Hindu manners and customs in the country in bygone ages. Thus, when a daughter was given in marriage to a young man, her sister or sisters were also given to him as dowry together with a number of maidservants. This we find in the case of Aduna and Paduna, the two daughters of a certain Raja, in the Manik Chandra Rajar Gan, evidently composed before the Mahomedan domination. Another custom, namely, that of trial by ordeal, was peculiar, and may be supposed to be an outcome of Buddhist influences, though parallel cases may be found in the Ramayana and the Mahabharata. This custom had a striking similarity with a similar practice prevalent among the Anglo-Saxons of England prior to the Norman conquest. The Maynamati songs, the Chandik-

kavyas, the Dharmamangala poems and Manasamangal poems are full of these examples of trials by ordeals.

The custom of keeping a written document (Jayapatra) from a husband, going abroad for a long period on trade purposes by his wife under certain circumstances, was most peculiar. This was done to save the wife becoming enceinte and giving birth to a child during the absence of her husband (generally a merchant) from calumny. Chandra the merchant, is said to have executed such a document in favour of his wife and we have reason to believe that it was held perfectly legal in the Law Courts in those days. This throws a flood of light on ancient ways of life and points to an age when a wife was not under the complete subjugation of her husband, as in later days. The spirit of free love, free movements, and self-culture among women, as found in the recently discovered Mymensingh ballads, speak of an age quite different from the one that followed.

The keeping of trained dogs by the rich and giving them names show that they were once not regarded as untouchable. In the Maynamati songs we learn that King Govinda Chandra kept trained dogs, named them and made necessary arrangements for their comfort. The songs, composed before the advent of the Mahomedans into this country, refer to a period, when society was not influenced by orthodox Hinduism of later days.

That the merchants in the past enjoyed a status equal to that of the king is sufficiently illustrated in the Manasamangal poems and the Chandikavyas. Why and how they came to lose this exalted position require careful investigation. Bangsidas, the celebrated poet of Manasamangal, who flourished in the 16th century, made mention of passports being used by the merchants, duly signed and sealed by the King.

Bengal was once famous for her efficiency in the art of ship-building and her commercial activities established for her a high reputation worthy to be remembered. Besides such foreign works as 'The Mahawanso' of Ceylon, wherein mention has been made of capacious Bengali ships in which Prince Vijay and his companions arrived in Ceylon in the 6th Century B. C., and other works of authority on Bengal's maritime activity similarly furnish authentic accounts of the subject, hitherto neglected by our countrymen. In the Manasamangal poems and the

In *chandikavyas* we find animated descriptions of the commercial and maritime activities of the Bengali people during the pre-Mahomedan period, although the poets dealing with those subjects belonged to a subsequent age. These accounts refer to a period when Bengal enjoyed political independence and when her merchants crossed the seas on commercial enterprises unfettered by the trammels of social rules. The ships visited distant countries, such as Ceylon, Guziat and Java, and the old Bengali literature described incidentally the routes, the islands, and their inhabitants and various other things in connection with their voyages. The description, though otherwise exaggerated due to poetic excesses, is amazingly accurate in respect of the route taken by the vessels. With all these poetic extravagances and absurdities the mention of huge crabs and lobsters in the Madras waters, by the poets, is found to be true even to this day.

The mention of the Portuguese private-ships (Armadas) and the once-important ports of Tamruk and Chicacole (Madras Presidency), which we come across so often in the pages of our old literature, is a matter of common knowledge. The Bengali ships are stated as having doubled Cape Comorin and reached Patan or Somnathpatan in Guziat. The hugeness of ships and the picturesque shape of the prows representing various animals according to the traditional mode of shipbuilding (as mentioned in *Yuktikal-pitaru*) are interesting indeed. The poets seem to have described facts, though not entirely free from poetic flourishes. The rites and beliefs in connection with sea-voyage and sea-going vessels curiously resemble those prevalent in the days of Greek civilization, in Europe.

The crew of a ship consisted of carpenters, pilots, and naval forces. There was a time when carpenters filled the places of modern engineers both in the East and the West, when these ships were principally made of wood and plied with the help of sails and oars.

The overseas trade, once carried on by the people of Bengal, was really extensive and the merchandise in which they generally dealt consisted mainly of agricultural products which formed the chief resources of the country. Among other items of export, glass deserves special mention. The fact that Bengal once used to manufacture glass, can be substantiated by reference to the pages of the

old Bengali literature is also to the statement made in the *Petripus*.

The grains, earthen and wooden wares, cloths, especially of very fine textures, were exported in exchange for spices, horses, etc. Spices were perhaps brought from the East Indies.

Now, so far as costume is concerned, there has not been any considerable change. The dress worn by the people of this country in ages long gone by, was very much the same as it is in the present-days. In spite of this fact, it is not very difficult to mark some peculiarities which were current in the Hindu period and were even in existence during a considerable part of the Mahomedan rule. We have it, on the authority of the *Manasamangal* by Bangsidas, a book written in the 16th century A.D. that people used to wear the cloth almost in the same fashion as their upcountry brethren do now. In the by-gone days of the Hindu rule the warriors perhaps wore armour, indications of which may be found in the *Dharmamangal* poems. No doubt the practice lingered to some extent, even during the Mahomedan period. Wearing of velvet shoes by the warriors and the silver shoes by the rich as described by the poets of the *Dharmas* songs and the *Manasamangal* poems deserve our notice. In the days of old Hindu rule the fashion was perhaps to wear *chudda*, save and except on special occasions. The more general practice of wearing shirts and coats seems to have come into existence with the advent of Mahomedans in this country. In the *Manasamangal* poems we find the use of turban (*pagri*) confined only to the well-to-do section of the community.

It is in the costume of ladies that we mark a more remarkable change. They used *saris* of fine fabric which are now no longer in use. Among these may be mentioned *meghlat*, *mechadumbur*, *ganga-gati* and other *saris*. The ladies wore an underwear resembling the petticoat of the present day and a kind of belt known as the *utabandha*. We find the under-wear mentioned in the *Gobindalila-mrita* of Jadunandan Das. Sometimes the ladies of aristocratic families wore *Ghagra* (Gowns), *Odana* (scarfs) and *Kanchuli* (corsets) probably after the Mahomedan fashion. But *Kanchuli* (corset) had the antiquity of the days of the Vedic culture. Among the toilet requisites *Dhup* (incense) was invariably used to scent the hair. *Amlaki* or myrobalan was generally used in place of soap, though the

use of the latter was not wholly unknown, as we find in the *Kamasutra* of Batsayana the mention of *Phenak* (a kind of soap). The art of decorating the face with paints was practised with great care. It was known as *putra-rachana* (lit. leaf-painting) and somewhat commonly described as *Alaka* and *Tilaka*. The *Tilaka* marks had a great utility in indicating the caste to which a particular man belonged.

Some changes are noticeable in respect of ornaments. Such ornaments as *keyura*, *angada*, and *balaya* of various types have come down to us from a remote past and we find mention of them in the *Ramayan* and the *Mahabharat*. Many of these ornaments were worn by both the sexes from the forgotten past down to a considerable part of the Mahomedan period. Of the very old ornaments *Satasauri har* and *Hiramangal Kari* (for the ears) attract our attention. *Magarkharu* and *Mallatodar* are some of the old items of ornaments. Of these *Mallatodar* was perhaps introduced in the country during the days of the Mahomedan rule. The name seems to suggest that the ornament might have derived its name from Todarmal, the great finance minister of Akbar, who stayed in Bengal for a short period. The *Mallas* or wrestlers favoured this ornament, which they wore on their feet when going out to exhibit the feats of arms 'Khadu' and *Tad*, a kind of armlet, once constituted articles of gift for presentation purposes. *Bishu* was another kind of old ornament used to adorn the nose, being still worn in some parts of our country.

Some of these ornaments are still favoured by women in the countryside, though the glamour of modern civilization has completely revolutionised the ancient forms and usages in the bigger centres of metropolitan life. Jadunandan Das, in his famous work, the *Gobindalilamrita*, gives an account of the old ornaments and ladies' costumes, while describing the toilet of Radha.

Culinary art attained a high degree of perfection at the hands of the Bengali women from time immemorial. Knowledge of the details of cooking was considered essential for women in general and efficiency in this art was looked upon as an attainment even by ladies of high rank in our society. Our poets often took pride in depicting female characters, possessing, among other finer qualities, a knowledge of this special art. Thus Khullana,

Sanaka and a host of other ladies whom we find to have excelled in this art remind us of the typical Greek community of Homeric days.

The Hindus always refrained from taking meals cooked by strangers, in support of which hard and fast rules were framed to suit their own interpretation of 'achara' or purity.

A newly married wife was required to cook dainties and serve them with her own hands to the kinsmen and relatives, assembled to partake of the nuptial feast.

Great stress was always laid upon the selection of the various items of food from considerations of health, and elaborate rules were framed accordingly. The very old sayings of Dak and Khana show the particular attention paid to the selection of food. Even today Bengali almanacs show to what excess restrictions in matters of food were carried. Although to a casual observer these rules may appear absurd and meaningless, some of them may be based on solid hygienic principles.

More attention was given to the preparations of sweets, vegetables and fish curries than those of meat. Special preparations of sweets, called *Alfa* and *Indranuth* are now completely forgotten in our country, though they are so often spoken of by old Bengali poets. *Sitamishi* and *Olaladdu* also are becoming forgotten. Among vegetable dishes *Dugdhakusumbha* was once very famous. Many of the old varieties of fish and meat curries are still prepared in the country. In the list of meat curries given by Kavi-Kinkar in his celebrated *Chandikavya* that made from sheep-skin is really amusing.

It seems that before the advent of the Mahomedans in India the people used to enjoy a free life unfettered by the trammels of increasingly numerous social and religious institutions. The women took part in physical exercises both indoor and outdoor. This may seem strange now-a-days but nevertheless it was a fact based on literary and historical evidence. Examples of women possessing physical strength, as in ancient Sparta, may be seen in old Bengali works, such as the *Dharmamangal* poems. The Amazonian princess *Mallika* is an example on this point. The young always took

* The Hindu dishes were perhaps simpler than those of Mahomedans. The spicy meat-dishes, as described by our poets, seem to have been extensively introduced in the post-Mahomedan days after the Islamic taste.

great interest in physical culture. And demonstrations of physical feats were often held and enjoyed by the people very much in the same way as the boxing tournaments in western countries.

The wrestling of Prince Lausen with his wicked adversary shows the modes generally adopted in a contest. In the Maynamati songs, Mymensingh ballads and the Manasamangal poems, we learn that hawking or leonry and pigeon-rearing formed some of the favourite pastimes in the days long gone by. Another game once very popular is the celebrated 'gendu' play.

This gendu or ball-playing still obtains in some parts of West-Bengal. But the more popular among the outdoor games was the aristocratic 'Chaugan', corresponding to polo, which was current during the Mahomedan period. The game was a favourite one with the Emperor Akbar. The word 'Chaugan' is Persian, signifying play with a ball and a stick. It was played on horseback (see *neye Britt*) and is known to have originated in Kashmir, from which it travelled to several countries, including Persia, Tibet, Amur and Bengal, Bengal being directly indebted to Manipur for its introduction into this country. The description of Chaugan given in Alaol's *Padmarati* is interesting. With the loss of her political freedom, Bengal lost many of her indigenous games, especially the outdoor ones—and the ladies gradually ceased to take any interest in them.

Of the indoor games, dice and chess found favour in the days of old, as they do now. Even the women joined in these games. In the Maynamati songs we learn of a peculiar game known as Duapati, which might be the same as or similar to chess.

The description of warfare, as given by our poets, refers to the Hindu period, but the accounts were written in the Muhammadan period and, as such, could not be altogether free from Muhammadan influences. The twelve lords attending a king was a time-honoured custom. The description of weapons too points to the same conclusion. The *mushals*, *udiyars*, *shels*, *suls*, etc., were as old as the days of the Ramayana and the Mahabharata. An elaborate description of these weapons and their use may be found in the Dhanur-veda, Arthasastra, Nitiprakashika and some of our other works dealing with the subject. Some of these weapons resemble a boomerang of Australia and a cross-bow of mediæval

Europe. The mention of swords therein leads us to suppose that Bengal might have manufactured the weapon. The chariots, the elephants, the cavalry and the infantry were known as the four arms. There was no caste-distinction among soldiers, who were recruited from all sections of the community. Even foreigners were employed, of whom Telugus (the Madrasis) were prominent.

As for war-music, it may be said with certainty that many of the old instruments are still retained in use. Among these the varieties of drums and pipes, etc., attract our attention. The horn is no longer to be found, although it was extensively used.

After the conquest of Bengal by the Mahomedans, the two communities, viz., the Hindus and the Muslims, lived together on cordial terms and the vexed question of Hindu-Muslim unity did not arise at all. Although the Mahomedan rulers at first grew unpopular with their Hindu subjects because of their foreign origin and iconoclastic activities, the situation changed as soon as the religious zeal abated with the march of time and the rulers began to direct their attention to administrative reforms. Of course, ill-will existed in individual cases as it exists everywhere. But it was caused rather by personal jealousies than by any communal dissensions. When an autocrat abuses his powers—he be a Hindu or a Mahomedan—ill-feelings are, as a matter of fact, sure to grow, and this does not require any serious communal difference to aggravate it.

No wonder, therefore, that the two communities sometimes fell out under similar circumstances. Among other works, the Mymensingh ballads and the Manasamangal poems contain descriptions of racial animosities being provoked by similar causes.

Bengal was not much known in the past to the outside world for the excellence of her architectural work. According to the verdict of Western experts Bengal could not develop her architecture to any great extent on account of certain natural causes, for example, want of stone quarries and general unsuitability of the soil for solid stone buildings. Among the supporters of this view, Mr Ferguson's name deserves special mention. Although this view is to some extent correct, it is nevertheless open to contention. Our old literature throws a sidelight on our past architecture, the grandeur of which seems to be a wonder to us. No doubt, the poets are apt to exaggerate but

what they said was generally true. In the work of Dwija Kamalalochana (e. g., *Chandikavya*) and in many other works we find excellent descriptions of stone-buildings inlaid with gems of various colours.

The peculiarities of temple-construction with jars fixed above the spires were indeed remarkable. The extensive use of glass too is worthy of notice. The peculiarities of the building of cities and the construction of fortresses had been mentioned in detail by various poets, among whom we may specially mention the poet Bharatchandra, the great contemporary and court-poet of Raja Krishnachandra, who flourished in the first half of the 18th century. The Mahomedan architecture developed in no small degree in Bengal, which belonged to the Gaudian style. Distinct traces of this type of architecture in the works of Bharatchandra and many others, of Mahomedan stamp, are noticeable. The architectural ruins of Gaud, once the capital of the Mahomedans, drew the admiration of the world and Ferguson* had incidentally to admit the abundance of stone-buildings in this province.

But the greatest credit of Bengal lies, according to this authority, in the introduction of curvilinear roofing in her buildings. Bengal is said to have taught the world the method of building this kind of roofs. With

bamboo and thatch the Bengalees used to build curvilinear roofs in the past, though these are now growing gradually scarce.

Even in stone and brick-built houses these roofings were used. In old Gaud and in Bishnupur in the Bankura district ruins of such houses may still be seen. Another peculiarity in the building of houses was quite unique. It was the use of two doors in a room, known as Barodoowghar. In Gaud there still exist the ruins of a room with 12 doors. In the recently discovered Mymensingh ballads Barodoowghar has been mentioned in more than one place. Among other peculiar construction steel-houses of Lakshindra in the Manikmangal poems, the "Tungighar," rooms built in a lake, as is found in the Chandika and Gorakshavijay, and the underground prison houses deserve special mention. Peculiar ditches or moats surrounding fortified castle, the concentric circles of wards around a city, the Chowkbazar, the Kotowali (the police station) were perhaps partly Mahomedan in origin. But the system of allotting different parts of a city to different castes and professions perhaps mainly originated with the Hindus and we read about them in old Sanskrit literature on architecture and town-planning.

TO MY INDIAN SISTERS

By ANN MARGARET HOLMGREN,

"THE MOTHER OF WOMAN SUFFRAGE IN SWEDEN."

DEAR INDIAN SISTERS,

YOU cannot imagine how happy I am to have the opportunity of writing to you. Mrs. Butenschon, a friend of Mr. Nag, has asked me to tell you something about myself and my work for woman suffrage, because I have been called "the mother of woman suffrage in Sweden." I hope my doing so will be of some help to you, though it would have been far more agreeable for me to write about other women's work.

I was born 1850 in an old country-house. My parents belonged to an old aristocratic

family, and my father, before he overtook the management of the family-estate, had been a diplomat and consequently learnt to love other countries. In politics he was conservative, but in matters concerning women's rights he was in many ways far in advance of his time. From him I inherited my interest in politics and my love for my fellow-men. At the age of seventeen I lost him. He had been to me not only a beloved father but also my best comrade, and that in spite of the fifty years' difference in age.

At nineteen I married a professor

physiology at the university of Upsala, Erik Holmgren. He was a very clever and health-loving man, of whom there are not many, and it was he that influenced my mind to take a more liberal view of life, a view I have always since maintained, and which has widened in spite of my old age.

I have been the mother of nine children in a large family, in addition to the management of a large household, made great demands on a woman, and it was at times almost too much for me. To my other household duties were added bi-monthly receptions at our home for university students. I did not, however, let material cares drag me down, but found recreation for my soul in music, literature and ideal social work. Of valuable importance for my spiritual life has been the tie of friendship binding me to the late Norwegian poet and author Bjornstjerne Bjornson and his wife.

I must acknowledge that it is mostly men who have had the greatest influence on my spiritual development, with however, two exceptions. One of these is my sister, who, though all my life has been a great help to me, and the other is the great authoress Ellen Key.

To Bjornson belongs perhaps the largest amount of credit for widening my views. His faith in woman and her position in society gave me a self-confidence which I had entirely lacked, but which is a necessity for one who becomes a public speaker. For a long time I was quite convinced that I was good for nothing.

Four years after my husband's death I died in Stockholm, the capital of Sweden. In the year 1901 I was elected vice-president of a Women's Peace Association. The following year thrust an immense amount of work on the woman suffrage movement upon me, a question having become acute in consequence of a bill laid before our parliament. The mayor of Stockholm Carl Lindhagen, advocating the right of woman to the franchise. A Woman Suffrage League was formed here of which I became the vice-president. In order to attain our goal, we found that much would have to be done to arouse the interest and energies of women all over the country. But how was this to be done without financial means or a speaker, who had time to travel about the country?

My eight children were now all grown-up and had left home. I had, therefore, nothing to hinder me, except that I consider-

ed myself completely unfit for lecturing. It appeared to me just as terrible to mount a platform as to mount a scaffold; yet a voice within me kept saying it was my duty to make the attempt. I was convinced that the right of political vote for women was the key to their entrance to the management of state and public affairs with an equal responsibility with men, which I considered as necessary for the women themselves as for the development of the state.

I worked out a lecture, which I hoped would be instructive and stimulating, and trained my voice on the basis of the singing lessons I had had in my youth. After some months I felt prepared for my undertaking and wrote to known and unknown people in different towns asking them to receive me and arrange for a hall where I could speak. The answer I often received was that I should not trouble to come, as there was not the slightest interest in this question in their district. However, I would not be discouraged, but wrote back that if it really was so serious and all interest lacking among the women, there was all the more reason for my coming, and a visit to these places was arranged in consequence.

In this way I became the pioneer in Sweden of woman suffrage. I had to travel as cheaply as possible because no support could be expected from the League, and this helped to undermine my already rather delicate health. During some years I continued making long and troublesome journeys, and went through many hardships, but was everywhere heartily received. Sometimes I was a guest in a wealthy great house, at others a poor lonely woman invited me to her small humble dwelling. In this way I met and learnt to know a number of women belonging to different stations in life and of varying occupations, and came to understand the difficulties with which they had to fight, which made my devotion to our cause all the stronger. My lectures were everywhere well received, both by the audiences and the critics. The conservative papers, which were against us, were nevertheless very loyal, and not a single unfriendly word was uttered. I carefully avoided anything that could sound aggressive or give offence. I spoke with the warmest conviction on the profit and necessity for the common weal to give woman the right to vote. I was successful in winning many

partisans, indeed leagues were forced in 60 different places.

In the year 1903, when I was planning a lecturing tour in the most northerly part of Sweden, I visited a high official of the state-railways to obtain advice in regard to my journey. He was almost horrified when he learnt that I intended at that season (early winter) to tour farther north than the Polar circle, and he asked me if I understood that I ran the risk of being snowed up in the lonely wilds, possibly for several days at a time. He also reminded me that not long before serious riots had taken place on the trains during the transport of drunken navies and he finished by saying "The devil himself would not dream of undertaking such a journey at this time of the year."

The political situation was at this time, however, such that it was necessary to do what could be done in haste. No one could then have foreseen that we should have to wait eighteen years for the accomplishment of our aim.

I was obliged to procure furs in which to wrap myself up from head to foot, and to provide myself with a basket of food, in case we should get snowed up. The train started, however, and no other adventure overtook us than that we were stopped for an hour in one place by a herd of reindeer, which had placed themselves on the line. But a twelve hours' journey in bitter cold and dismal darkness is anything but agreeable. What however did this matter, when my soul was on fire for the righteousness of woman's cause? I suffered subsequently, however, from all this knocking about and was no longer able to undertake such trying journeys.

During these years several speakers had come forward and about 250 leagues had been formed in different places. I received later many agreeable proofs that people wished to hear and see me.

How rapidly times and men can change. When I look back to those years of toil, my heart is full of gratitude for all the encouragement and love I have met with among women as well as men in our country. My fellow-workers have had great patience with me. I have, I must own, some difficulty in working with others than those who hold the

same views as I do. If I feel in any way tied, I become shy and stupid. Only allowed to follow my own way without restraint, is it possible for me to use my power to advantage.

Liberty and righteousness are the essential things for me. I, therefore, understand and respect these feelings in the individual as well as in a nation. I still work with enthusiasm for women's rights and equality with men, but we have yet far to go before we attain this, and not least in the development of women themselves.

I should have wished the great suffering organization to have continued as a neutral league of women, but I was unable to convince others on this subject. All these centres were, therefore, allowed to die out, and I shall sorrow over this fact as long as I live. Before women have learnt the value of uniting in solid organizations they will never be able to do anything of importance; they will not be able to carry out the great transformation of the heart of the world, leading to the abolition of that greatest disgrace to humanity, war and violence.

Could the women all over the world form a sisterhood of love and goodness for the maintenance of peace and good-will, they should fulfil a mission greater even than that of motherhood.

With all my heart I wish you success in your work for freedom.*

* In publishing the letter of Madame Holmer to our Indian sisters I beg to acknowledge my debt of gratitude to Madame Butenschon of Oslo (Norway), an idealist and a great friend of India. She was my first hostess in Scandinavia and through her I came to enjoy the privilege of knowing intimately many women workers of the land of women pioneers.

While this letter of "the mother of woman suffrage in Sweden" is going through the press, I receive the sad news of the departure of another great woman pioneer of Sweden, Ellen Key, of international renown. I had the rare good fortune of meeting her and enjoying her hospitality in the hermitage of Alvastra. I reserve for the next number of the Modern Review my humble tribute of gratitude to her sacred memory. The life and career of these heralds of woman's destiny are sources of perennial inspiration to women of all lands. May our Indian sisters march forward on the path of freedom and creation, following the foot steps of their great sisters of the Occident.

KALIDAS NARAYAN

A PORTRAIT OF RAJAH RAM MOHAN ROY (*)

Calcutta, June, 25, 1829.

RAM Mohan Roy is the learned Brahmin whose conversion to Christianity, and polemical works against Hindu theologians and European missionaries, have made his name well-known even in France. Before coming out to India, I knew that he was an able orientalist, a subtle logician and an irresistible dialectician; but I had no idea that he was the best of men.

Mr Calder, whose affections, celebrity keeps intact for the whole human race, is actively associated with all kinds of benevolent activities and is acquainted with everybody who may turn out to be useful. This morning he procured for me the pleasure of a meeting with his friend. For many days, I had been telling him of this wish of mine, and, last Sunday, the 21st June, he made an appointment with both of us, in his house, in order to introduce us to each other.

Ram Mohan Roy is a man of about fifty years of age, tall, stout, rather than fat, and of a middle complexion among the Bengalees. The portrait in profile which they have made here, is a close likeness, but the front view is not so good, his eyes are too small for his large face, and his nose inclines to the right side. He has a very slight moustache, his hair, rather long behind, is thick and curly. There is vigour in his physiognomy, and calmness, dignity and goodness. His dress is of the simplest, differing from that of well-to-do natives only in the socks and shoes of European pattern which he used instead of wearing slippers on bare feet. He wore no trinkets, not even the sacred thread, unless he had it under his dress.

* Victor Jacquemont—*Voyage Dans L'Inde*, Tome I. Paris. 1841, pp 183-188. This interesting contemporary account has not been utilised or noticed in any of the existing biographies of Rajah Ram Mohan Roy by Miss Carpenter, Miss Collet and Babu Nagendranath Chatterji. Its importance lies in the fact that it is the testimony of a cultured European who was not obsessed by the religious controversies of the day. It also throws considerable light on the political ideas of Ram Mohan Roy.

This article is the concluding portion of "Pages from the Diary of a Frenchman," published in this Review in December 1925.

Some compliments on my part upon his learning, acquired in the face of many difficulties, led him naturally to speak about the miserable condition of all things in this country.

The turn of his mind is wholly metaphysical. Logic is also a 'weapon' of which he makes frequent use and he does not like to put it away. He is a man who always speaks, acts, and, in fact, lives on the defensive. He had been attacked so often! He never expresses an opinion without taking precautions on all sides. This excess of prudence is necessary in war but it is only embarrassing among friends, it makes conversation a little heavy.

Ram Mohan Roy received the usual education of a Brahmin, but instead of stopping where others generally do, at a superficial knowledge of Sanskrit and of Hindu scriptures, he pursued his study with ardour, and became not only an excellent Sanskritist but a thorough Persian and Arabic scholar as well, and through these two languages, more especially through Arabic, acquired a knowledge of the philosophy of the Islamic people and of the philosophy which they had borrowed from the Greeks.

Early in life, he had been repelled by the absurdities of Hinduism and took the bold step of protesting against them. He wrote books with the object of re-establishing the pure doctrines of the Vedas, which had become corrupted in course of time by a host of abominable superstitions.

While attacking the religion, as it was practised in his country, he professed, in reality, to defend it, just as the Reformers of the sixteenth century who stood up against Catholicism laid claim to be the defenders of the Christian faith.

Then he began to compose numerous pamphlets in Bengali with the object of setting forth the pure and unadulterated doctrines of the ancient Vedas and of stripping Hinduism of the absurd dogmas and gross superstitions with which it has become overlaid. The orthodox offered no reply to him, in speech or in writing, but he had to suffer persecution at their hand. Rejected by his caste, alienated from his family, he found himself abandoned even by his young

wife and children, who had been misled by people; but this unjust reprobation did not overwhelm him. Convinced that, in their existing state, the precepts of Hindu religion violated all moral principles and were inveterately opposed to all attempts at betterment, he did not cease in his attacks upon them.

In the midst of the labours which this fruitless struggle imposed upon him, he acquired a perfect knowledge of English and of Hebrew and made a study of the scriptures of the Christians. In all possibility, he was guided in these studies by a Christian priest. He approached the Presbyterian Church. He found nothing in the Vedas which was inconsistent with Christianity; and without openly abjuring Hinduism, without losing his caste, without even formally embracing any cult, he soon passed for a Christian.

I do not know what proofs he advanced of his faith. I believe, he restricted himself to a regular attendance at the religious services of the Presbyterians, and I have reason to suppose that he also went to the Anglican Cathedral frequently, but the reason which had driven him to abandon the irrational faith of his countrymen, very soon estranged from him the Anglican cult, so rich in absurd dogmas, and he appears to have followed the Presbyterian Church.

But it was not long before the extravagant sermons of a minister alienated him even from this cult. After this, the Anabaptist missionaries strove to take the possession of this vacant soul, but Ram Mohan Roy was not a simple or ignorant man; he knew Christian theology as well as those who wished to be his masters. Endowed by nature with a feeling for religion, but freed from all prejudice, he had read the scriptures of the Christians critically and independently. He had found in the New Testament only the history of the life and opinions of a just and wise martyr to the cause of humanity which he had made an attempt to improve; the ethical system of the gospels appeared to him to be the highest and the sublimest of all moral codes. He accordingly joined the sect very improperly called Christians, which proclaims boldly and unreservedly the unity of God-head and reveres Jesus only as the holiest of men. Thus Ram Mohan Roy became a Unitarian, while people wished to make of him an Anabaptist. A controversy between

him and the missionary who sought to convert him ensued; in this Ram Mohan showed such superiority that the poor missionary, honest fellow that he was, could see nothing but the new conviction which had been brought to him, and publicly embraced Unitarianism.

So, Ram Mohan Roy is nothing but a Deist who chooses to attribute some sort of divine sanction to the morality of the Gospels.

He had been long lost to the Brahmins, who gave up all attempts to recall him to the fold, their persecution, too, relented, and he became united with his wife and children. But his first inconstancy among the Christians and the pure and the philosophical faith in which he had, at last, found an anchorage, still drew upon him the enmity of many people. The vulgar herd who give little thought to religion, who, I venture to say, are without religion, and who pride themselves upon their constancy, upon their religious immutability, as if there was any merit in the inertness of sleep or of death,—the vulgar made it a reproach against Ram Mohan that he so often changed his faith, and because devout people see no difference between a deist and an atheist, he is charitably considered to be a wretch without a religion. Further grievances against him are not found lacking in these charitable souls. Though, ever since his youth, he has ceased to go to the temples of the Hindus, he nevertheless observed some of the rules which impose abstinence from certain things. For example, he does not take beef, or wine, and if he joins the dinner of a European, it is only to sit at the table with his arms folded. These are the heinous offences for which he is abused, and which draw upon him the charge of cherishing a remnant of affection for the superstitions of the Hindus.

Had this man been a mere speculative philosopher, had he entertained no ambition of becoming the leader of a sect, his high and straight-forward sense of reason would not have made any concession to these absurd but innocent prejudices of Hinduism for which he had been often reproached; but Ram Mohan Roy is a practical man. He is not a passionate idealist who attempts to realise impossible theories; all that he wants to do is to bring about the possible good; and however limited the measure of the possibility for the good may be, he is resigned to concentrate his effort within the channel in which it will be useful. Had he taken meals with Christians, he would have lost his caste; and

being thenceforward an object of contempt to men of all castes, his voice and his example would have carried no authority

His father left him some fortune, but he has probably spent all of it in charities and he lives in the strictest economy in order to be able to give away more.

Ram Mohan Roy has surprised me by the accuracy and the range of his knowledge of the various states of Europe. Formerly, when he was a young man, he himself told me, this Europe, the mistress of his native land, was odious to him, in the blind patriotism of youth he detested the English, and all that came from them. Since that time, he had learnt more about the benefits which have followed upon the establishment of the British power, and has come to regard it as beneficial for India*. National independence is not an absolute good; the object, the goal, so to say, of society is to secure the happiness of the greatest possible number, and when left to itself, a nation cannot attain this object, when it does not contain within itself the principles of future progress, it is better for it that it should be guided by the example and even by the authority of a conquering people who are more civilised.

The metaphysical intellect of Ram Mohan Roy did not let go this opportunity of playing upon the words dependence and independence. "When we have to depend," he said to me, "by the very conditions of our existence upon all things and all beings in nature, is not this fiery love of national independence a chimera? In society, individuals are constantly driven by their weakness to seek help from their neighbours, if, above all, the neighbours happen to be stronger than they; why, then, should a nation have the absurd pride of not depending upon another? Conquest is very rarely an evil when the conquering people are more civilised than the conquered, because the former bring to the latter the benefits of civilisation. India requires many more years of English domination so that she might not have many things to lose while she is reclaiming her political independence."

The sincerity of such language, in the mouth of a Hindu whose thorough knowledge

* This statement also occurs in the autobiographical fragment attributed to Ram Mohan Roy himself. But his political views are more explicitly stated here and this statement precedes that of the Autobiography.

of the culture of Europe warrants us in assuming that he has sentiments and feelings resembling ours, might seem to be doubtful. But I have not found it so, for, brought up as I have been in a country of faith in absolute liberty, in national independence at any cost, and subjected as I have been from my childhood to the opinions of those among whom I have lived, I have yet learnt from solitary reflection that these beliefs are more noble, more generous than useful.

My Indian philosopher seemed to take a new interest in the conversation when I spoke to him about what I had seen in the United States of America. He had just paid rather exaggerated compliments to the more or less constitutional monarchies of England and France to which I wished to reply by setting forth the advantages of a democratic republic and that was how I was led to speak about the United States of America. The enviable condition of this country may be described by a few touches which are easily intelligible to unprejudiced minds. All the inhabitants of this country speak the same language, with almost the same purity; everybody knows how to read and to write. Outside the professions, there is very little distinction of dress. The richest dinner resembles the poorest found in any other country. Cultivation of the mind has made a progress in all ranks of society almost in parallel lines with physical well-being. Daily wages for even the most mechanical labour is sufficient to procure for those who have only their hands to live by, ample nourishment, good clothes, and satisfactory housing. There are very few servants, because there is very little of the misery which leads men to sacrifice their liberty. Everybody works and works for himself; no idlers to lead useless lives on the riches acquired by the toil of others. A man hardly ever saddles a horse for anybody else to ride upon; the loaf is almost always for him who bakes it.

This order of things is exactly opposed to the organisation of the Asiatic societies. Ram Mohan Roy expressed his admiration for it, he felt interested in it and his heart warmed up at this picture. "Certainly," I told him, "I too have drawn a grave satisfaction from it, the sight of happiness calms the mind, but being brought up in a country where society is differently organised and where bad government has created a leisured class, which is at the same time learned and elegant, refined pleasures which I have long enjoyed

have become for me a necessity which American society cannot satisfy; I admire it; but from my own point of view I cannot love it. In it I shall be alone."

Ram Mohan Roy has also known this pain of isolation. He has grown in a region of ideas and feelings which is higher than the world in which his countrymen live, he

lives alone, and though, perhaps, the consciousness of the good he is accomplishing affords him a perpetual source of satisfaction, sadness and melancholy marks his grave countenance.

COMMENT AND CRITICISM

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticising it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally, no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor The Modern Review.]

Some Information on "Cooch Behar Affairs"

A letter of the State authorities (Regency Council) of the Cooch Behar State regarding the appointments of Nawabzada Abdul Karim Khan and Nawab Khusru Jung has been published in the May issue of the Modern Review. The letter says that the first appointments of both the officers were given by His late Highness and not by the Regency Council. They added that Nawabzada Abdul Karim Khan was appointed as secretary to H. H., etc., at that time but they are silent about the previous post or designation of Nawab Khusru Jung in Cooch Behar.

No record in connection with the appointment of Nawab Khusru Jung has been published before the formation of the Regency Council and everyone knows that Nawab Khusru Jung has been appointed for the first time by the Regency Council under the Presidency of Her Highness the Maharajee. We quote here the orders of the Regency Council regarding the appointments of Nawabzada Abdul Karim Khan and Nawab Khusru Jung:-

The Cooch Behar Gazette, Extraordinary, Tuesday, May 22, 1923.

"Orders by the Regency Council, Cooch Behar.

"The 21st May 1923—

"Nawabzada Abdul Karim Khan, M. A. (Oxon), Bar-at-law, Secretary to His Highness, is placed temporarily in charge of the Audit Department vice Mr. B. Ghose retired."

The Cooch Behar Gazette, Extraordinary, Friday, May 25, 1923.

"Orders by the Regency Council, Cooch Behar.

"Appointment.—The 24th May, 1923.—Major Nawab Khusru Jung is appointed Guardian to His Highness Maharajah Jagaddipendra Narayan Bhup Bahadur and Maharajkumar Indrajit Narayan and

is also appointed Controller of the Household, both appointments taking effect from the 1st of April 1923.

"Nawabzada Abdul Karim Khan, M. A. (Oxon) Bar-at-law, is appointed Private Secretary to Her Highness the Regent."

It is understood from the above orders that Nawabzada Abdul Karim Khan was previously in the post of secretary to H. H., and the name of Nawab Khusru Jung is simply mentioned in the order without any reference to his previous official designation.

A certain Khadim-i-Islam, a supporter of Nawab Khusru Jung, in his letter published in the "Englishman" on the 11th May, 1926, says that Nawab Khusru Jung has been made "Guardian" to the minor Maharajah by Her Highness the Maharajee. The same facts have been published also in page 587 of the Modern Review of May issue and in other papers. It is pointed out in the same letter that the subsequent appointment of Nawab Khusru Jung as "Tutor" to His Highness the minor Maharajah was given by the Regency Council and the appointment of the said Nawab as "Tutor" to His Highness was approved by the Government of India. The people of the Cooch Behar State are in dark about the approval of the Government, but the official orders of the Regency Council, quoted above, show that the appointments given are of "Guardian" and "Comptroller of the Household" and not of "Tutor".

I quote the following information from the "State Almanac" of 1926, which is published annually by the State authorities:—

"The Guardian to His Highness the Maharajah Bhup Bahadur and Maharaj Kumar Indrajit Narayan—Major Nawab Khusru Jung"

"Major Nawab Khusru Jung—Comptroller of the Household"

In supporting this more up-to-date information

it may be mentioned here, but I am afraid to give the readers trouble and to pass any opinion on the merits of the allegation current in Cooch Behar, that a new attempt is being made to retain Nawab Khusru Jung in a post inferior to that of the "Guardianship".

Another remark of the State authorities in the same letter on the petition submitted to the Government is as follows:

"That careful enquiries have elicited the fact that practically all the signatures were forged and that the petition was in fact a bogus petition."

I, therefore, leave it with all publications, without any comment, for the readers, who will be able to arrive at their own conclusion.

A RESIDENT OF COOCH BEHAR.

THE GROWTH OF COMMUNALISM AMONG HINDUS

BY A BRAHMANA

THE recent riots in Calcutta, lasting for over a month, have seen the birth of communalism among the Hindus. The communal feeling is primarily connected with religion, and was hitherto confined to one particular community, the Mahomedans. So long as it was limited to its own proper sphere, religion, the tolerant Hindu did not take any notice of it. When it began to spread over the social and political spheres, some thoughtful Hindus saw the necessity of organising themselves communally, though even they did not think it desirable to allow communalism to invade the field of politics. But the ghastly horrors of the recent outburst of communal passion have given the general body of educated Hindus, especially in Bengal, furiously to think, and the feeling among them has become very general that unless they succeed in welding the loose and incoherent mass of Hindus into a strong and compact community, they are sure to go under in the struggle for existence *vis à vis* the vigorous, united and aggressive Islamic brotherhood of India. Let us see how this new tendency in Hinduism is likely to work itself out.

As all civilised peoples in the world except, Mahomedans, and particularly the Mahomedans of India—for we must exclude the Turks, and possibly also the Egyptians, who live side by side with the Christian Copts, of whom Zaghlul Pasha is the best known—are aware, communalism is a thing of evil growth. It is an anachronism, a fossil, a survival of the Dark Ages and mediaeval times, when rivers of blood flowed in Christian Europe in the name of religion, and religious wars between Roman Catholics and Protestants, crusades against Saracens,

St. Bartholemew massacres, Ghettoes, *auto-de-fes*, were the order of the day, and Torquemada and the Inquisition became a byword for brutal fanaticism. The gradual separation of the Church and State, religious disestablishment, Catholic emancipation, all paved the way for a return to sanity in civilised societies, but even in recent Russian history pogroms against Jews were not unknown. But then Russia was considered to be a semi-oriental country which stood apart from the general march of European civilization and was not affected by its rationalistic and scientific spirit.

At the dawn of recorded history, of which the Vedas are the earliest monument, India was a land of Aryans. The mighty Dravidian civilization was absorbed by Aryanism, but neither tradition, nor history suggests that cultural conquest was anything but peaceful. The age of Asoka was followed by the spread of Buddhism all over the land, but the records of Chinese travellers and the occasional references in Sanskrit literature point to the fact that Brahmins and Sramans lived side by side, breathed the same cultural atmosphere, and the weapons of logic and philosophy and the dialectic method were usually the only weapons employed by them in their mutual warfare. A time came, with Kumarila Bhatta and Sankaracharya in the eighth and ninth centuries of the Christian era, when Hinduism first took a definite shape. It rose out of the ashes of Buddhism, which was driven out of the land, but once again history does not record any bloody combats, and cultural assimilation seems to have been the sole process of achieving this mighty conquest. Mahayanic Buddhism left its traces

in image and relic worship, and in the doctrine of *ahimsa*, which converted a meat-eating people (*vide* Charaka, Susruta, the epics, and even the Upanishads) into a nation of vegetarians. Then came Islam with Mahomad Bin-Kasim, who overran Sind. It was the first time that the Hindus felt the impact of a virile and aggressive foreign religion which offered the alternative of the sword or the Koran—a method of persuasion hitherto unknown to the philosophic Hindu, to whom adequate spiritual preparation was the one essential pre-condition of conversion. The Devala-Smriti, which laid down laws akin to those by which in our own days war-babies in France and elsewhere were naturalised, was written at this juncture to stem the tide of Mahomedanisation. Two or three centuries later came Mahmud Ghori and Mahmud of Ghazni, and with them Islam was fully established in the land, and in the pages of the learned Al-Beruni (who alone of all Moslems known to history, the brothers Faizi and Abul-Fazi and the royal Dara Sukhoo excepted, made an intensive study of Hindu culture), we find how sad was the devastation caused by the Ghaznavide invader, and from the Rubaiyat of Omar Khayyam (stanza XLIV) we know that by the beginning of the twelfth century his name had passed into a byword for ruthless conquest in Moslem countries. The harrowing tale of broken images and temples and forcible conversions and abduction of women that followed from that time onwards to the days of Hyder Ali and Tippoo Sultan (and even down to the recent Moplah rebellion), is written into the blood-red pages of history. The iron was driven deep in the Hindu soul, and the memories of those days rankled in his breast like a horrible nightmare.

The methods of the Devala-Smriti were not given a sufficient trial, for they were repugnant to a people who were deeply wedded to their ancient customs and held strong views on the admixture of blood. On the physical plane, they found their kings unable to defend them against the general Islamic onslaught, partly owing to mutual dissensions and rivalries, and partly to other reasons, such as the practical exclusion of all except the warrior caste from the military profession, the want of solidarity due to caste divisions, and the imperfect development of the patriotic sentiment. Casting about them for moral means of defence, they bethought themselves of strengthening the

bonds of exclusion and isolation, and the lawgivers of all parts of India who founded the various schools of Hindu law, as well as their numerous commentators, prohibited sevoyage and tightened the reins against admixture of blood even among the different castes, and shut the door altogether against social intercourse with the newcomers from beyond the border, designated Mlechchhas and Yavanas (originally Bactrian Greeks who had become Buddhists or Hindus). In this way they sought to preserve the purity of their race and their cultural traditions, and it cannot be denied that in the worst days of Hinduism, when Islam occupied all the seats of the mighty and there was hardly any secular defender of the Hindu faith, it was this cultural isolation which saved the masses of the population from merging themselves in the Church triumphant. Nevertheless, admixture of blood could not be altogether prevented and social intercourse could not be absolutely interdicted. The proud Rajput supplied mothers to Moghul Emperors, and the *Mel* system of the Brahmins of Bengal betrayed the extent to which 'impurities' had entered their blood. As a result, common manners, customs and social observances grew up. The court dress and court language of the Moghuls were adopted by both Hindus and Mahomedans, *pirs* and *fakirs* were respected equally with *sadhus* and *sanyasis*, and Mahomedans joined in Hindu fairs and festivals, while Hindus waited for the *darshan* of the emperor before taking their food. The first glimmerings of the dawn of a common culture were thus beginning to be visible, and the Din-Ilahi or universal religion of Akbar loomed on the horizon for a time.

Hinduism suffered its greatest defeat in the overthrow of the whole of Southern India—the country of Sayanaacharya and Madhavaacharya, the cultural stronghold of the Hindus during the dark days of Moslem rule—at the fateful battle of Talikota, where the combined Moslem forces crushed the greatest Hindu power of India in the fifteenth century. Then the Mahomedans fell out among themselves, luxury and power produced their inevitable consequences, military efficiency declined, religious persecution under the bigoted Aurangzebe alienated the Hindus, and the great Shivaji with his Marhatta hordes re-established the Hindu power, and it was from them rather than from the Moslems that the British carried away the sceptre. "The

empire of the Moghuls was already doomed before any of these [Dupleix or Clive] appeared on the scene ; and had they never been heard of, there can be little doubt that some Marhatta bandit or Sikh freebooter would in due time have seated himself on the throne of Akbar and Shahjehan" (Irvine, *The Army of the Indian Moghuls*, ch XXV) Meanwhile the way for the foreigner beyond the seas was paved by Ahmed Shah Durani at Panipat, which proved the grave of indigenous empires and involved Hindus and Moslems in a common ruin. In the general decay which followed, noble ambitions and high aspirations, and all that was great and good in both the communities, disappeared from the land, each fought for his own hand, people ceased to think for the country as a whole, the power of initiative was lost, and religious bigotry, driven inwards, alone reigned supreme, and in the case of the Hindus, assisted by the ostrich like policy of the lawgivers, isolation and exclusiveness reached the extreme limits at the hearth and home, and the forces of contraction well-nigh strangled the impulse to expansion visible in every healthy society.

When Islam came down from its high pedestal and found itself on a level of equality with Hinduism in India, the thinking section of Mussalmans found that they were not liked by the Hindus, who felt towards them in the same way as towards their own untouchables. The nimble wit and ready adaptability of the Hindus also gave them a start in English education which was now the passport to success. In most of the provinces the Hindus outnumbered the Moslems, and yet they had in the course of eight centuries become the next largest community in India. Sir Syed Ahmed saw that in education lay their only chances of self-improvement, and started the Aligarh College and withdrawing his followers from political antagonism with the ruling power, exhorted them to concentrate their energies on communal progress. The wonderful success of his policy did not prevent his successors from indulging in political free thought, for they found from the example of the Hindus that it was a potent instrument for the general advancement of the country in which Mahomedans must also participate, but they stuck fast to the communal part of the programme, and aided and abetted by 'command performances' (to quote Mr. Mohamed Ali as president of the Coconada Congress) from

Simla and elsewhere, they started an intensive agitation for the communal distribution of the loaves and fishes of office and of the instruments of power, such as representation on public boards and councils. And as numbers count for so much in communal representation, a vigorous propaganda for proselytization was carried on simultaneously by fanatical preachers up and down the countryside, so that Sir Abdur Rahim, the protagonist of communalism in Bengal, in moving his amendment to the resolution for the proportionate representation of Mahomedans, was able to congratulate himself in open council that fortunately the number of Mahomedans in Bengal had gone up from 52 to 56 per cent within the last few years (vide Proceedings, vol. XX, pp. 140-42, dated 18th Feb., 1926).

The distrust of Hindus by Mussalmans, was, it must be admitted, not without justification. Tolerant of every variety of religious experience and opinion, the Hindu does not carry his tolerance beyond the region of theory into the field of practice. He does not, it is true, betray any active intolerance, or try to impose his religious views on others, and in recent Indian history he has not thought of making converts on any large scale from other religions, whatever may have been the case when Buddhism was ousted from the peninsula. The well-known doctrine of the *Gita*, that to die in one's own Dharma is the highest virtue and to follow another's Dharma is terrible, is doctrine which he applies equally to himself and to the votaries of other religions, so that for Hindus and Mahomedans alike, change of faith was equally repugnant to him. The Hindu has never been guilty of reprisals like mosque-breaking and the like. But he maintains a stolid attitude of passive intolerance in practical life, and does not permit any intimate social intercourse between himself and the Moslem. As soon as a Hindu goes over to the Islamic faith, he is lost to Hinduism for good, and all social connection with him is cut off. The Hindu treats the Moslem and the Christian with absolute impartiality in this matter, and his attitude of passive intolerance is not aimed especially against the former. In return, the Moslem has repaid him in his own coin. Few as his peculiar customs and social prejudices are, he clings to them for all he is worth, and the Koranolatry (if I may coin the word) of the Moslem holds him in its grip as in a vice, so that even in his thought

he cannot free himself from the shackles of mediæval theology, and his scripture stands to him for the sum of all wisdom, human and divine, and supplies the norm by which everything else must be judged, even in fields most remote from religion. The very multitude of the Hindu's scriptures, on the other hand, and the conflict of opinion of the Hindu sage on all vital questions, and the different schools of Hindu philosophy in which ultimate problems have been discussed with the utmost freedom, as well as the diversity of social practices and usages prevailing in different parts of the country, have all combined to give the Hindus width of view, a liberality of thought, and a range of philosophic vision which may have prevented their unification in the sense in which Mahomedans in India are united by their religion, but have kept them abreast of the highest and best thought that has obtained currency in any epoch of the history of the most highly civilised peoples of the modern or the ancient world.

Thus we find that the toleration of the Hindus, in the sphere of thought, has given them a universal outlook not confined within the limits of their creed or country, but that at the same time, their *laissez-faire* policy to live and let live—has, in the practical sphere, greatly narrowed their horizon and limited it virtually to their own community. And even here, the fact that there are a thousand and one sects into which the community is divided, bent on the same policy of letting well alone, has further accentuated this exclusiveness, so that there is no such feeling for the community as a whole as prevails among Mahomedans, and communal consciousness is substituted by group consciousness. The mass of Hindus never care to look beyond their nose and think of Hinduism only in terms of their sect, sept, or group, with the natural result that Hinduism has become indifferent and apathetic to the gross abuses that have sprung up in society as a whole in the course of ages. It has proceeded on the easy-going principle that whatever is, is for the best, and has absorbed everything and rejected nothing. The Hindu's social insularity has prevented him from taking back those lost souls who have strayed away from the fold and from throwing a cloak of protection over the helpless widows and orphans and the depressed classes who find a refuge in the hospitable social organi-

zation of other religions. The Hindu has hitherto suffered the depletion of his ranks or the humiliation of his co-religionists without a pang and has never dreamt of taking the field aggressively to retrieve the situation, believing that every one pays the penalty of his *karma* and what is fated will happen. And all the time in his heart of hearts he has harboured an intense pride which filled him with a passive determination to avoid the least social intercourse with the renegade from the fold. It never occurred to him that it would be the manlier part to try to shape the course of destiny, give it a different turn by his own individual efforts, and mould society anew in the light of the new problems that the changing needs of the times had ushered into existence.

Thus, while the followers of the Prophet were vigorously pushing on their communal propaganda, the Hindu allowed things to drift so far as his own society was concerned. Not that he was a silent spectator of the social drama. Mighty thinkers and reformers arose among the Hindus throughout the nineteenth century, who dreamt of a universal religion and wanted to effect a radical transformation of Hindu society. The gross evils that had crept into it, the prejudices and superstitions that had eaten into its vitals like a canker, the ritualism that had all but destroyed its spiritual essence, were sought to be wholly done away with, and an eclecticism based on all that is noblest in Hindu religion, to which was added the highest elements of other religions, became the favourite creed of the best minds among the Hindus. The hoary traditions of the ancient culture on which the evil customs were engrafted and which fed their roots were ignored, and it was forgotten that a great historical religion cannot be easily uprooted from the soil where it had implanted itself for thousands of years, that it has an imperishable core which deserves to be nourished and that no consciously evolved creed can replace it effectively in the minds of the masses, nor can it have the same influence for good over them. It was Dayananda Saraswati who, in spite of his defects, was the first reformer to have a clear grasp of this fact, and his great scheme of reform was based on its recognition. Later, Swami Vivekananda worked on the same lines, and tried to make the Vedanta practically fruitful by preaching the unity and equality of all

als in the social as well as in the spiritual sphere, and in the place of the *tamasic* torpor that had overtaken the ancient religion he reached a rejuvenated and aggressive Hinduism which would make a spiritual contest of the whole world.

Out of the teachings of Swami Dayananda the great Arya Samaj, the only vigorous and living organization of Hindu social reform, took its rise; and his doctrines, together with those preached by Vivekananda, have given birth to the *suddhi* and *sangathan* movements in Hinduism. It is not for nothing that Mussalman leaders scent in them a danger to the spread of Islam in India. So long as Hinduism was unorganised and apathetic, the missionary zeal of Islam met with no check in its triumphant career, and its success was extremely gratifying. But with Hinduism resolved to put a brake on it by setting its own house in order, and not only so, but so far advanced as to undertake the reconversion of converts, the propagation of Islam, it was felt, would become as easy. And ever since Indian Moslems have begun to think communally, they have attached the greatest importance to such peaceful penetration, which was about to be threatened by these new movements started in the bosom of orthodox Hinduism.

The unity of Hindus and Mahomedans on an unprecedented scale was attempted in recent years by Mahatma Gandhi, but it was an attempt which was doomed to failure, for he overlooked the essential factors of mutual antagonism, and based itself on two things, first, a common hatred of the foreigner, and a false expediency, to wit, the support lent to the Khilafat movement by the Hindus. In the nature of things the former could not form the basis of a permanent union, and the latter, pampering the extra-territorial and Pan-Islamic proclivities of Indian Mahomedans which the Hindus could neither have hurt nor lot, interfered materially with the growth of a united Indian nation. The shallowness of the union was proved to demonstration only the other day at the great Khilafat gathering at Delhi, when Mahomedan leaders vied with one another in spouting venom against the Hindus, whom they refused to call brothers, and Mr. Mahomed Ali longed for the day when he would bring the Mahatma himself within the ranks of the faithful. Even the great personality of the Mahatma could not prevent this ill-fated attempt at reconciliation from meet-

ing with the fate it deserved, founded as it was, not on the bedrock of truth, but on false premises which could not bear the light of day.

A word regarding Indian Christians will not be out of place here. The recent riots have shown, what was all along evident to thoughtful observers, that between the Hindus and the Indian Christians the gulf was nothing like so wide as that between them and Indian Moslems. The reason is not to be sought in a common racial background, for that is shared by the Hindus as fully with the Mahomedans who equally with the Indian Christians have mostly sprung from the same Hindu stock. It is to be found in the cultural affinity of the Hindus and Indian Christians, and also to some extent in the fact that in such matters as dress nomenclature language and domestic observances of a non-religious character, the latter do not make a point of accentuating their differences with the Hindus. Polytheism and idolatry for the masses, and pantheism for the higher minds, have characterised Christian Europe down the ages as much as Hindu India. Culturally, Christian theology and Hindu philosophy, especially of the Bhakti School, have many points in common, while both the educated Hindu and the educated Indian Christian keep a chamber of the mind open to the reception of the best secular thought and do not merge their whole individuality in their religious creed, however sincerely they may believe in it; and in the cultivation of music, sculpture, painting and the rest of the fine arts, some of which are taboo to the orthodox Moslem, they can associate on a common platform without trenching on the tenets of their religion. The rigid monotheism of the Semitic creed of a jealous God, the Lord of Hosts, had its counterpart in the religion of the prophet of Arabia, the commander of the faithful, but the intolerant Hebraic element in Christianity was in course of time completely submerged by the Hellenic element with which Hinduism itself, an ethnic creed like that of Greece has much in common. The nationalism of the better class of Indian Christians, again, is rooted more deeply in the country's soil than that of Indian Moslems with one eye fixed on Arabia and the other free Islamic countries of the world.

We have now come to close quarters with the subject of our paper. A distinct tendency towards communal organization among Hindus has manifested itself in and through

the recent riots. The rioters made no distinction between Brahmas, England-returned Hindus and orthodox Hindus, between Marwaries and up-country Hindus and Bengali Hindus, and for that matter, between Sikhs, Jains, Arya Samajists, and other Hindus. This naturally had the effect of throwing all the offshoots of orthodox Hinduism, and orthodox Hindus of all classes, irrespective of their place of origin, into one another's arms for mutual protection and defence, and made them conscious of their essential unity. Once this consciousness is born, it is bound to grow, and with its growth the feeling of unity between the higher and the so-called lower castes of Hindus will grow also; and in the growth of fellow-feeling between the different castes and sects into which Hinduism is split up, and especially between the higher castes and the depressed classes, we see the best augury for the growth of Indian nationalism.

A strongly organised, virile, and aggressively intolerant community, by its vigorous impact, has made the Hindus alive to the need of thinking in terms of the community before thinking in terms of the nation. Hindu opinion, which so long gave no thought to the matter, and in a vague sort of way dreamt of a united India without even a passing look at the enemy within the gates—the caste system with its fissiparous tendencies, is beginning to crystallise itself and feel that communal homogeneity must precede national solidarity and unification. A well-known public man has recently observed to the writer that there is no deception like self-deception and no community suffers so much from this vice as the Hindus. It will not do, for instance, for one belonging to the higher castes to take a glass of water at the hands of an untouchable at a public meeting for the uplift of the depressed classes, and, after earning the plaudits of the spectators, relapse into his habitual mode of living from which the submerged classes are rigorously excluded. It will not do for the pandit who poses as a reformer to say, as has recently been said in Bengal, that Hindu philosophy recognises no distinction between individual selves which are all emanations from the supreme soul, and that the depressed classes have only to work out their evil *Karma* in this life to entitle them to equality with Brahmins in another life. If it is necessary for Hindus to unite among themselves, they must take their courage in both

hands, abjure all pretences and make-beliefs, and build anew from the very foundations so that every Hindu, whatever his rank, may feel that he has a stake in his religion and a place in the hearts of his coreligionists. It will be necessary for the leaders to follow the lines of least resistance in dealing with a social organisation of such hoary antiquity. But the adaptability of Hinduism to changing environments, its mobility and flexibility, has been a prominent feature of the religion which has hitherto preserved it from extinction, furnishing whatever justification may be urged for the proud name of Sanatan Dharma, or the Eternal Religion, which it has been pleased to give itself. The Namasudra in East Bengal, the Rajbansis in North Bengal and the Pods and Bagdis in West Bengal, are a simple kindly lot, with a fine physique, and quickly responsive to sympathetic treatment. And it is them whom we have kept at arm's length and hesitate to call our brothers, though their services have been freely requisitioned by the higher castes in defence of their hearths and homes. The whole caste system of the Hindus is bound to succumb to the hard logic of facts and must be thrown into the melting pot. The communal attacks which have spread into the interior and are likely to last so long as the communal fever lasts and its evils are not brought home to the champions of communalism will assist in hammering the Hindus into shape and in bringing about the Satya Yuga of which the Puranas have sung, when there will be but one caste. The Brahmins of Southern India, who still insist on imposing abject and ridiculous restrictions on the Panchamas, can hardly be made to feel, as we in Bengal do, the urgency of giving up all internecine dissensions, for there the Moslem element is so numerous, and the foolish game of Parsiah baiting may be continued for some little time yet without its suicidal effects being manifest. But the day is coming, if it has not come already, when the Hindus of the whole of India must learn to combine and set their own house in order, if Hinduism is to survive and maintain its self-respect as a religion.

Another well-known public man has recently expressed to the writer his opinion that the true uplift of the masses of Hindu society depends not so much on a formal removal of their untouchability as on the removal of their dense ignorance. With

education will come better manners, more rational customs, and a more hygienic mode of life, on the one hand, and on the other, a greater confidence in self, higher desires and nobler aspirations, and along with it all, a consciousness of equality which nothing can long withstand, and social intercourse and intermarriage with the high castes will follow as a matter of course, and will not have to wait upon any solemn pact or covenant or legislative enactment. It seems to the writer that there is a good deal of ruth in this and that more and more attention will have to be paid to the educationally backward sections of the community if greater solidarity and cohesion be aimed at, and the zeal shown in the cause of mass education will be the acid test of the goodwill of the higher towards the lower castes. Ignorance being the mother of religious bigotry and fanaticism, education is likely to clear the ground for a better understanding between the two great communities, and from his point of view also the problem of elementary education should be seriously acknowledged.

How will a strongly organised Hinduism, communally marshalled like Indian Moslems and united and therefore bold in defence of its just rights, stand in relation to the other communities of India, is the question which next suggests itself for our consideration. We have seen at the outset that communalism has worked immense mischief in Europe and has been abandoned by all the civilised countries of the West, Turkey being the latest conspicuous example, for it has discarded the last symbol of religious segregation, the Fez, along with religious endowments, an established Church and the theocratic organization of the State as embodied in the Khilafat, earning thereby the respect and admiration of all civilised countries for the far-seeing wisdom of her statesmen. We have seen how the separation of the Church and State, instead of weakening Turkey, has immensely increased her prestige and influence in the chancelleries of Europe. The Montagu-Chelmsford Report had not a word to say in favour of communal representation and did not hesitate to point out its evil effects. Yet, egged on by a third party, the numerically smaller of the two great religious communities of India held fast to it with all the tenacity born of a mistaken sense of self-interest. The repercussion of this separatist movement has begun to produce its effect among the Hindus,

with this difference, that in the case of Hindus its effects will not be as bad as among the Mahomedans, and in fact, will, on the whole, be more beneficial than otherwise, for it will help to unify the community and enable it in course of time to attain the sense of democratic brotherhood and equality which prevails among the Indian Mussalmans as a whole, and is at present confined to the different castes *inter se* among the Hindus. We do not ignore the fact that the democratic ideal of the Moslem suffers from a serious drawback, inasmuch as it does not embrace the whole of India, irrespective of caste and creed, within its purview, and is rigidly confined to his coreligionists, but what we mean to say is that the Hindu must first advance as far as the Moslem has gone and transcending his caste-consciousness learn to feel for the entire body of Hindus, before both the Hindus and the Mahomedans can extend the democratic ideal still further and learn to think of themselves as Indians first and as Hindus or Mahomedans afterwards. It must be remembered that the only unity between Hindus and Mahomedans which can prove lasting must be based on mutual strength and equality. There can only be a semblance of equality among communities unequally matched, who have no real respect for each other's strength. In the words of Mahatma Gandhi, the stronger power is likely to develop into a bully and the weaker to degenerate into a coward. When the two communities are equally strong and united, the narrow self-interest which has induced some Mussalman leaders to foment communal zeal will appear in its true light and end in disappointment. For, the Hindus being in a large majority in all but two provinces, where they are slightly outnumbered, will then be able to enforce their communal demands in the same way as the Mahomedans are now doing in Bengal, and, to take a concrete instance, Moslems will no longer monopolise 24 per cent of the official posts where they form only 10 per cent of the general population, as is the case in Bihar and Orissa. If what Sir Abdur Rahim said in the Bengal Council on the resolution on proportionate representation be sincere, and the Mahomedans seek no undue advantage for themselves, and are "ready to concede the same to all other communities similarly situated," then it will not take long for the members of his community to be disabused of their great expectations, so far as the leaves and fishes of office, which

form the main bone of contention between the educated section of both the communities, are concerned. Fitness and capacity will then once more become the true test of public service. Again, when Moslems find that Hindus are as democratically organised as themselves, but not before this, they will perceive the utter unwisdom of confining their outlook only to their coreligionists, for by holding the whole outer world of kafirs at arms length they would only invite an equally strong determination on the other side not to allow the Mleccha to predominate. Finally, they will then be made to understand that for Moslems, born and brought up in India for centuries and sprung from her soil, to look to Arabia or elsewhere for cultural inspiration is radically wrong, and that the Moslem culture of India must be built on the foundation of the more ancient Hindu culture and come to terms with it, and with all this will come the crowning consciousness, without which no true Indian nation can be born, that all the different communities of India must look to India herself as their motherland and must not surrender themselves to a vague, mystical, extra-territorial sentiment of nationhood which other Indian communities are bound to repudiate emphatically and which the foremost Moslem countries of the world have definitely abjured.

I shall close with a word of warning to my coreligionists, the Hindus. A Hindu philosopher of European reputation has told the writer in connection with the Hindu-

Moslem problem, which is the most vital problem of the hour, that it is important for us to remember the noble truth which is as old as the Buddha himself that hatred cannot be overcome by hatred, but can be conquered only by love, and in order to cultivate that feeling it is necessary for us to study the religion and cultural history and social organization of the Mahomedans just as it is necessary for Mahomedans to study the religion and cultural history and social organization of the Hindus. It is no answer to my friend's observation to say that few Moslems do it. It is our duty to point out the way and set an example, if we are what we pose to be, viz, more culturally advanced as a community than Indian Moslems. If we do so, we may perchance discover points of contact which will draw us more towards each other, and predispose us to substitute love for hatred. These such culture-contacts had been established in the past, will be evident from the history of the mystical sect of Sufis. Without some such cultural *rapprochement*, our communal organizations of the future may long continue to maintain an attitude of armed neutrality towards each other, poisoning the whole atmosphere with their miasmatic effluvia, and retarding the growth of that common Indian nationality of which the world-poet, who is also in a peculiar sense the great representative mind of India, has sung in his *Gitanjali*.

RACIAL PARTIALITY IN THE INDIAN ARMY

By Dr J. N. GUPTA

If you are chased by a venomous reptile, the best way of saving yourself from its attack is to throw behind some of your wearing apparels so that the chasing reptile may entangle itself in the apparel thrown and in the meantime you reach a safe distance. This is probably the only way by which one can save himself from a certain death, and this procedure of self-protection from sudden attacks from unexpected quarters is well appreciated by the bureaucratic

Government of India, for whenever they are heckled and harassed in the Legislative Assembly for the adoption of a certain measure against their will, they throw Committees, upon the Members of the Assembly, which body is required to frame and issue questionnaires, invite answers, examine witnesses, consult and deliberate and finally to submit their reports and recommendations. For carrying out all this it takes about a year in the least. Now-a-days

among the members of such Committees, there invariably are a few who dissent from the report of the majority and submit one of their own. This latter is called "minority report". Assent or dissent, none-the-less it is given the shape of a book and is sent to the Assembly for criticism, discussion, debate and adoption or rejection as the case may be. Whatever may be the result of debate and voting in the Legislature, even if the House by an overwhelming majority recommends to the Government for its adoption, the voluminous reports, which are prepared at the cost of the poor tax payers, find peaceful shelter in the Libraries of the Legislatures ultimately to be devoured by ants. Many Committees and Commissions have come and gone leaving behind reports of their elaborate inquiries and recommendations, but the fate of nearly all of them have been the same. We therefore may very reasonably expect that the fate of the report and recommendations of the Committee sitting at present, I mean the Sken Committee, or rather the Indian Sandhurst Committee, will be the same as that of others of its like which preceded it.

Taking for granted that at least in this matter relating to the grant of the King's Commission to Indians in the combatant units of the Indian forces, the Government are really anxious to find out ways and means for properly training Indian youths, so that they may be entrusted with the commands of Platoons and Companies, what necessitated the formation of the Indian Sandhurst Committee? What benefit would the Government derive from the evidence of the people? What new information do the Government hope to get by the examination of witnesses? If the Government are really desirous of finding out a judicious way of Indianising the Army, then are we to suppose that in their estimation the Members of the Legislative Assembly and the Council of State are not competent enough in this respect and that is why this elaborate scheme of evidence-taking has been resorted to? Had there been the slightest sincerity of purpose of the Government in this matter they had a thousand and one ways and means of devising a scheme for the Indianisation of the Army. Had the Government been interested in the welfare of the teeming millions of this unfortunate country, more than in anything else, they would have taken steps to curtail the Army Budget which costs us about 56 crores a year, more so, for the

reason that the maintenance of British a Regiment in this country means a cost four times as much as it costs an Indian Regiment. If not for any other reason, at least for the curtailment of the Military Budget, which entails a heavy drain upon the Indian Exchequer, the Indianisation of the whole of the Army in this country is indispensably necessary.

Since the last 7 years Commissions, though only a very few, are being granted to Indians in the combatant units of the Indian Army, and as a result of the agitation of the Members of the Legislative Assembly, a few more young men may be admitted to the existing Sandhurst College or an Indian Sandhurst that is yet to be. It is said that Government are in right earnest about Indianising the Army and that is why they have separated 8 units of the Army where His Majesty's Indian Commissioned Officers are posted to prove their ability. If this 8-units-Indianisation-scheme succeeds they would, in the same way, commence with other units for their Indianisation as well. But as I have mentioned above, there is want of sincerity of purpose of the Government. At this rate of progress it would take about 450 years to complete the scheme. And with their present mentality, their scheme of Indianisation would never succeed, for it is very well known that Indian young men look down upon this 8-units-Indianisation-scheme for their justifiable pride and self-respect is wounded by this policy of segregation of His Majesty's Indian Commissioned Officers from the British Officers holding the same rank, the same status, the same qualifications and ability. A unit consists of 12 officers, so for 8 units, 96 officers are necessary. The number of Indians admitted to the Sandhurst College at present is approximately 4 a year, so in 24 years the full quota of officers for these 8 units will be trained. Thus for the 140 units of the Indian Infantry, it would, roughly take about 450 years to complete the scheme of Indianisation. Then is to be considered the 'Sappers and Miners', Royal Air Force, Tank Corps, Artillery Corps etc.

The above calculations prove that the Government are not really desirous of Indianising the Army and that the talk of Indianisation, which they say is in progress, is a mere sham and farce.

"The Statesman" in its Dak Edition of the 11th November 1925, says,

As a matter of fact an excellent career in the

Indian Army is now offered to Indians. Not only has it been decided to reserve certain units exclusively for Indians thus giving them a better chance of promotion than British officers in the Indian Army, but they are placed on absolutely equal terms with respect to promotion with their British Comrades".

It is indeed very fine to hear of equality "with respect to promotion," and the phrase "British Comrades" but by following facts I would point out what this much trumpeted "Equality" is in practice and whether the British people (in India) entertain the spirit of comradeship with Indians, "the natives" "The Statesman" further says

"From twenty to twenty-five years is the time required in any army for a newly commissioned officer to rise to any independent command".

Further assurance is given by the "Statesman" to Indians about prospects in the Army thus :

"Twenty-five years hence when questions of seniority and selection arise, all the chances will be in favour of the Indian. To-day he must like the other be content with doing his duty and learning his profession"

Let us now see how far the "Statesman," an English organ, gives a correct interpretation of the situation. We are afraid that the colour prejudice that is in existence will be a stumbling block on the way to treating Indians on equal terms with respect to promotion and posting. To know what will be the position of His Majesty's Indian Commissioned officers in the combatant units, one is to consider the treatment meted out to Indians in the I. M. S., which is the only service in which the King's commission has been open to Indians for the last 60 years or so

(A) APPOINTMENTS

(I) High administrative posts, such, as D. M. S., D. G. I. M. S., Surgeon Generals, D. D. M. S., A. D. M. S., etc., are practically not open to the Indians, with the exception of only one instance where an Indian (Col. Bholanath) was temporarily posted as A. D. M. S. A solitary instance in 60 years.

(II) Excepting a very few instances, Indians have not been given charge of those posts which carried allowances, such as Specialists, Cantonment Medical, Officers, Officer Commanding Units, etc. As long as collateral charge allowance was admissible, i. e., upto 1918, postings were so arranged that the European section of the I. M. S.

used to draw these allowances. After 1918 when these allowances were stopped, such posts were thrown open to the Indians as well. Old records from Brigades will corroborate this. Statement of the last 50 years regarding the postings in such offices with the names of officers posted, will conclusively prove this fact.

(III) Take the instance of senior Indian I. M. S. Officers. It is found that by sheer cleverness in the manipulation of postings of Officers, these Indian officers were shunted behind to make room for Junior European I. M. S. Officers for higher appointments. A detailed statement showing postings of I. M. S. Officers with the years of service noted therein, will prove my allegations beyond doubt.

(IV) Out of 1200 temporary I. M. S. Officers during the last great war, over 900 resigned. One of the main reasons for their not sticking to the military service, was the existence of acute racial partiality and colour prejudice. During the last war, a temporary Indian I. M. S. Officer was refused entrance into an Officer's mess which consisted of European officers only. That gentleman brought this affair to the notice of the Officer Commanding and on his intervention the Indian Officer was taken in, but his life was made miserable by the inmates of the mess as a consequence of which he had to walk out and after great difficulty and hardship secure shelter elsewhere.

(B) PROMOTION

From a glance at the Army list it is found that an I. M. S. Officer can go up to the rank of Lieut. General. But curiously one finds that since commissions in the I. M. S. were thrown open to Indians about 60 years or so ago, not a single Indian Officer rose above the rank of full colonel. Only two Indians have so far risen to the rank of full colonel in this long period of 60 years. (Col. Bholanath and Col. Banatvala).

(C) HONOURS AND DECORATIONS

During the last war, it was while attached to the combatant units that Indian I. M. S. Officers, though only a very few, have received honours and decorations and practically none from medical units. The reasons are obvious. European I. M. S. Officers were the commanding officers of the medical units and as such they were the judges of the working

of the Indian I. M. S. Officer serving under them. It is the rule in the Army, as well as in the civil service, that the officer-in-charge recommends for decorations, honours or reward. To recommend Indian officers for honours and decorations for their bravery, meritorious and exemplary services means to recognise their ability and to jeopardise the very existence of the European I. M. S. Officers in India at the same time. That is why the claims of the Indian Officers were invariably kept in the back ground. But such was not the case in the combatant units where the interest of the European Commanding Officers never clashed with that of the Indian I. M. S. Officers of the same regiment. As they belonged to two different branches of the military service, so the bravery and good work of the Indians were recognised, appreciated and rewarded.

(D) POSTINGS DURING THE LAST GREAT WAR

Indian I. M. S. Officers were invariably posted to the danger zone whereas the European I. M. S. Officers were given places of comparative safety. A glance at the postings of Medical Officers in Regiments during 1914-22 in different theatres of war will corroborate all that I say.

(E) INSOLENCE OF BRITISH SOLDIERS.

Insubordination and insolence in manners towards His Majesty's Indian Commissioned Officers is the characteristic of a British "Tommy". If there be two Officers, one European and the other an Indian, the British Soldier would turn his back toward the latter and salute only the British Officer. A petty soldier earning only 30 or 40 Rupees has the audacity to insult His Majesty's Officer. This is but a daily occurrence in places where there is a fort or a cantonment. This is indeed racial arrogance. Indian Officers thus insulted are in no way losers, but it clearly shows that the talk of discipline and obedience which it is said, is the key stone of the British Army, is mere sham. If a subordinate officer of the Army does not salute his senior, this does not mean that the senior man is injured, it means that they insult only their King, the constitutional head of the British Commonwealth of Nations. Aggrieved Indian Officers, whenever such affairs happened, reported to the officers commanding but no steps whatsoever, to their knowledge, have been taken to bring such offenders

to book and thereby maintain the dignity, discipline and solidarity of the British Army.

As I have explained above, preference has always been given to the British Officers both in the Civil as well as in the Military services. As I am dealing only with the latter service, I leave alone everything regarding the Civil department. Let us now see what sort of officers are sent out to India for whom the claims of Indians are ignored. The fact that incompetent men are sent to this country to command and rule over Indian Jamadars and Subadars, who are competent enough for military purposes, and that it was these men who were the real leaders, fighters and winners of the last great war, will be confirmed beyond all possible doubt by the following. The Mesopotamia Commission in recognising and eulogising the services of these Jamadars, and Subadars, who hold only the Viceroy's Commission (an inferior rank, inferior even to the Dominion Commission) says --

Our investigations show that what is in default is not the fighting capacity and efficiency of the combatant forces of the Indian army, but the system of military administration in control of that army. In spite of being ill-equipped, ill-trained and resting on paper-reserves, the Regimental Officers and the rank and file of the Indian Army have fought in a manner to show that, with proper drafts and properly trained and equipped, they would have few or no superiors. They are worth something better than management and control by eastern lethargy and bureaucratic incompetence."

A further quotation from the separate Report of Commander Wedgewood, M. P., a Member of the Mesopotamia Commission, will show the real state of affairs in the Indian Army and the condition of Indians serving in that Army in spite of a vicious system of Administration, which is condemned both by Indians and responsible officers of the British Army and Englishmen of light and leading in general. Commander Wedgewood says. —

"Either the inquiry suggested above or the Indian administration itself should immediately consider whether the old fashioned prejudice against giving King's Commission to natives of India cannot be set aside during this war. Even with the invaluable assistance given by the civilians who flocked to the Indian Army Reserve Officers, the evidence given before us showed a lamentable shortage of officers with the Indian Regiments, which must adversely affect their fighting value. There seems no reason to suppose from the Mesopotamia Campaigns that Indians as fighting men, are any less capable than Turks, who have

their own officers under some German guidance. Indian officers under British guidance should do as well".

We Indians often hear the bureaucrats say that the British Officers (who are born with the spoon of efficiency in their mouths) are Indispensably necessary for the Indian Army and that is the reason why, inspite of the heavy cost for the maintenance in India of a British Regiment, which (according to Mr. Burdon, the Military Secretary of the Government of India) is four times what an Indian Regiment costs, the British troops and officers are maintained in this country at the cost of poor Indians. If what is said regarding the efficiency of British Officers and uselessness of Indians be a fact then their presence at a heavy cost is indeed "indispensably necessary" for the benefit of the British and Indians alike. Let us now see what General Sir James Wilcocks, Commander of the Indian Army Corps in France (during the last Great War), says about these "efficient British Officers" whose service are "indispensably necessary" for the maintenance of "Law and Order" and the protection of India from foreign aggression. General Wilcocks says:

"During my tenure of command of the Northern Army, nothing struck me more than the hopelessness of the system adopted by the War Office and the Government of India in fixing the age for higher commands, such as Divisions and Brigades, and in the Indian Army of Regimental and Battalion Commanders. The consequence was that in a country like India where youth and vigour should rank first in apportioning work, exactly contrary was the case. Merit had to subordinate itself to rules and customs and far too old a race of officers were frequently in positions for which they were unfitted. But if this was the case in the Indian Army, encrusted in obsolete traditions, what excuse can be offered for the method adopted by the War Office in selecting Officers of the Home Service for higher commands in India? In fact the War Office used India as the dumping ground for senior officers whom they wished to reward but for whom they did not mean to find a place in England."

So the above goes conclusively to show that officers who are considered incompetent for service at Home are sent out to India, which is the "dumping ground" for such incompetent and useless men. It is often said by these very men that Indians are incompetent to be placed in command of regiments but now that the above facts, which were hitherto out of view of the public eye, have been laid open, what have the Government of India and those officers who are in charge of the administration of the Army Department got to say in support of the baseless

allegations made against Indians? Let us for the sake of argument, assume that Indians are a race of incompetent and inefficient fighting men which necessitates restrictions in the grant of King's Commission, but the British Officers are condemned in no uncertain terms for their failure in carrying out the duties appportioned to them during the last War, when as many as 21 Generals, not to speak of the smaller fry, were relieved of their commands, in Mesopotamia, merely for their incompetence and inefficiency. If Britishers are inefficient in holding the King's Commission, then why maintain British officers in India instead of Indians, whose maintenance would cost much less than the British, who are no better? In the face of these documentary evidences there can be no denying the fact that the European Officers are not as competent for the posts which they fill as is trumpeted, whereas in the case of Indians it is said by the people who belong to the same race as the white bureaucrats of India that Indians "are worth SOMETHING BETTER" and that "with proper drafts and properly trained and equipped they would have 'FEW OR NO SUPERIORS.'" It is indeed owing to racial arrogance, racial partiality or colour prejudice of the Europeans in India, that Indians are said to be incompetent for Army officership. These are only baseless allegations and cannot be supported by facts. In France, in Gallipoli, in Palestine, in Egypt, in Mesopotamia, in fact, in every theatre during the last Great War, it was the Indians, inspite of the humiliating conditions of service, who have fought and won, but recognition there is none, reward, honour and decorations have practically been denied us; a bad name has been given instead as a recompense for loyal and honourable services, and we are eternally doomed to live and die the deaths of serfs and scullions, "unhonoured, unwept and unsung."

The Indian Sandhurst Committee have not concluded their inquiry about the reasons for which there is dearth of candidates for the military career. I have stated above some of the reasons which justified Indian young men to refuse military service under the existing humiliating conditions. If the Government are really anxious to take in Indians for the military services with the idea of ultimately Indianising the whole Army they should at once remove the grievances as stated above and admit our youngmen

isely on the same terms and conditions as to the Britishers. Our next grievance is the bad system of education in our country. With this system of education we can never be competent for any service. The existing universities are only manufacturing machines and these have to be transformed and made into manufacturing institutions. Those of my country who are even now unaware of the defective system of education as pursued in this country, I would refer to the Report of the Calcutta University Commission handed over by Sir Michael Sadler.

There can be no controversy about the defects in educating our boys, but in some quarters the English Public School system is being advocated. Some witnesses before the Indian Sandhurst Committee recommended the institution of English Public School education methods in our country with the idea that Indian boys thus educated will be competent for Army service. I would not speak for or against that method of imparting knowledge to innocent boys, but I would quote a few lines and it is for the sake of the system to judge how far adoption is advisable. Rev. F. W. Fairbairn, F. R. S., Dean of Harrow, in his lecture on "some Defects in Public School Education" says.—

"I can draw no other conclusion than that which may be summed up in these few words. That but a small proportion of our boys, say twenty-five per cent, go to the Universities, that yet the curriculum of our Public Schools is framed with a view to the Universities; and that even of this poor twenty-five per cent, who are as it were the very

flower and fruit of the system, and I may so phrase it its *raison d'être*,—a considerable number (many would be inclined to say the larger number) leave school at the age of eighteen or nineteen, not only ignorant of history, both ancient and modern, ignorant of geography, ignorant of every single modern language, ignorant of their own language and even of its mere spelling, ignorant of every single science, ignorant of the most elementary elements of Geometry and Mathematics, ignorant of music, ignorant of drawing, profoundly ignorant of that Greek and Latin to which the long ineffectual years of their aimless teaching have been professedly devoted, and we may add, beside all this, and perhaps worst of all, completely ignorant of and altogether content with their own astounding and consummate ignorance".

About the English Public Schools, T. Taber says "I don't wonder, that one-half of our boys, who go to schools, do become downright asses rather than learned men".

We are denounced by the 'Whites' as being unfit for holding any responsible posts, both civil and military, but in thus denouncing us they blame themselves. Seely says "subjection for a long time to a foreign yoke is one of the most potent causes of national degeneration". If we are a degenerated nation, if we are unfit for any responsible service, if we are unable to protect our hearths and homes, it is to a great extent due to the deliberate policy of demilitarization and emasculation of the people, and it is this policy which stands as a stumbling block in the way of Indian youths joining the Army.

The two divergent ideals of the grant of Self-Government to Indians and British domination in every walk of life cannot thrive together. Either the one or the other must go.

INDIAN PERIODICALS

Stone Image of the Buddha in Sarnath Museum

In describing in *Rupam* what 'happiness' is, one image of the Buddha in the Sarnath Museum has brought to him, Mr. Nanda Lal Bose, the great artist, observes :—

One of the Vedic truths of revelation shines in this aphorism—"Raso Vaishnav", i. e., the divinity is tasted in and is the flavour of life. Conversely the *rasa* is the sentiment, the passion, or the flavour of the soul of all aesthesia—is pictured by a simile

which pairs it with the taste or experience of divinity. In some such symbols the face of the Buddha in our frontispiece may be most aptly expressed. For, it is the crystallised image of a *rasa*—the flavour of a quintessence of Bliss. It is hardly possible to render the idea in more explicit terms. Blessed are the artists who are gifted to visualise the incarnation of Bliss—the *rasa*—or the flavour of Divinity. It is given to the artist to render in the language of form the abstract quality of Bliss. The poet can put it in his verse, the singer can catch it in his song, but we doubt if the learned critic or the commentator in words can indicate or express it in the gilded phrase of his

purple prose. For it can only be felt and cannot be set down in words. If you seek to dissect it with your words you can catch very little of it. With the aid of symbols or similes you can but convey a hazy idea.

Sir P. C. Roy on Solution of Unemployment

Bread and Freedom is a magazine mainly engaged in the solution of the poverty problem. Its editor Capt. J. W. Petavel is widely recognised as an authority on the problems of poverty and unemployment. Capt. Petavel's scheme of organising self-supporting educational colonies, where students would be taught the difficult art of earning a living along with other things, has been appreciated by many leading workers and thinkers. The May number of the magazine contains an appreciation of the Colony Idea by Sir P. C. Ray, who says

We could give the unemployed bread, clothes and shelter by organising them to produce the necessities of life for themselves. In such an organisation there would be plenty of work suitable for educated people, so they could take their part in it just as well as those of the labouring classes. The weakness of the colony organisation hitherto has been that man does not live by bread alone, and wants one thing more, namely, prospects. If work does not give prospects he will, in many cases, let his arms drop and will drift. But now it has been demonstrated, that owing to mechanical progress, people, working in a good colony organisation could earn, not only their maintenance, but a surplus. We could have colonies in which they could go and work for a time and come away with a little sum to start an enterprise of their own with. This in every way makes the colony a possible solution.

The success of the colonies will, without doubt, depend on the efficiency and wisdom of the organisers, and on the amount of land and capital they can secure for their work. Only workers, however able and willing, will hardly be able to produce much. They must secure good land and enough capital to begin and succeed in their work. And their success will be commensurate with their resources. With the backing of men like Sir P. C. Ray, the work should progress favourably.

Rabindranath on National Reconstruction

Rabindranath Tagore writes in the *B. N. W. Ry-Men's Magazine* :

The greatest danger looming before us is the drying up of the low current in villages where the shadow of death and want is daily growing

deeper. And herein lies the chief difference between India and other countries. The civilisation of Europe is a centralised civilisation, concentrated in cities, whereas our civilisation is one that spread itself out over a wide expanse of a surface of the country. That is the reason why China has survived numerous cataclysms hurled against her. Her life is everywhere and cannot be killed through the destruction of any of her limbs. In all other schemes of re-generation or reform we have to bear in mind this special genius of our civilisation and culture in spite of our boasted success in the imitation of town-like civilisation of the west. This hybrid product which could establish itself elsewhere could not flourish in the eternal plains of India where simple villagers live and suffer. A town is a home of formality and heartlessness. A nation can not live there. What we want is a resurgence of the current which would again instil into the mind of the whole country the need of festival days, ancient times when a house-holder threw the door of his house wide open to welcome all.

Real cause at the bottom of the conflict between Hindus and the Mahomedans is also the same, failing off in the capacity for friendship. Foolishness today and there is a deadly strike for a little that there is. Besides the country being everybody what has been handed down to him none felt any personal tenderness for it. However, we could join hands with one another in creating the country anew with the toil of our own hands and with the love of our own hearts. Then we could come to conceive a peculiar affection for what we could create, would regard it as a fruit of our self-dedication and thus would feel no petty jealousy or hostility towards others who had been equally associated in the work. True friendship will be the friendship which circumstances irresistibly compel. It will not be a shallow amity based on contracts for the division of properties. Friendship or intimacy of heart cannot be induced with bribes.

To be true workers in village-service my institution served the Hindu and Muslim villages alike and within a short time they had worked their way in the confidence of all. I do not want anything from villagers in return but only a natural right to serve his fellowmen without a hope of reward. If that spirit could be introduced everywhere in the country their problems would be solved in the due course of time. It might be said that the zone of his activities is exceedingly narrow but the power of truth does not depend upon its side, and if a man honestly and strenuously gives unto the world the truth that is in him his work will have incalculable results.

Arya Sangathan

Prof. S. Krishna M. A. writes in the *Ved Magazine* protesting against the use of the term "Hindu" to signify that section of the Indian people which is of Hindu culture. He prefers the term "Arya" to "Hindu" and considers the latter to be a foreign infliction. Says prof. Krishna.

By 'Arya-Sangathan' we mean the so-called Hindu Sangathan. We do not recognise the word

Hindu'; so we have not adopted it. It is used to signify the original race and religion of the people of this country, but it does not. It has no such significance. It is not a right name, for the latter of that. It is the distortion of a name. The Persians are said to have first called us 'Hindu' because they couldn't say 'Sindhu.' May be true, so did the Arabs that came after them, so did the Greeks. And to-day the whole world thinks we are 'Hindus' and smilingly we say 'yea.'

We do not like this spirit. Our fathers were not nomads and barbarians. They were men of understanding and culture. They have given names—and these are the only enduring symbols of any civilisation—to so many things in heaven and earth. They were not without a name for themselves. They called themselves 'Aryas' which means 'gentlemen' in its best sense. It is not self-praise, but is a symbol. It tells us their ideal life. The old books all contain this name.

One may say the Aryas are only a section of the people, and the name is, therefore, exclusive. I deny, with all the emphasis at our command, I deny this country belongs to any but the Aryas. The Smritis declare with one voice that *four castes are 'Arya' and that there is no fifth* *arna so to speak.*

Hinduism and Buddhism

The *Prabuddha-Bharata* says

To many the religion of the Buddha signifies denial and repudiation of Hinduism, as if they were rival churches without an underlying unity. His rivalry of religions is an idea which is absolutely foreign to the Indian mind. Divergent philosophies there were, and correspondingly different practices. But all these, in spite of their philosophical quarrels, were considered equally valid means of realising the life's ideal and as such valued components of the One Eternal Religion. In this light only the mutual relation of Hinduism and Buddhism can be correctly seen. The idea of their mutual exclusiveness is, we are afraid, of modern and foreign origin. The ancient vision is today clouded by confused understanding and ignorance. True to our intellectual vassalage to the West, we have swallowed this intellectual morsel unaltered, and have consequently to witness the sight of daughter aggressively asserting themselves against the Mother Church, as if in their Mother's house they have not room enough to live and grow freely to their full stature! Nothing could be more erroneous and suicidal. The vision of the nascent Hinduism, synthetic and all-comprehensive, reclaiming her lost provinces and assimilating all ones, is, alas, yet enveloped in thick darkness in the mass of our educated countrymen!

Bohemians of Bengal

Mr. Jayanta Kumar Das Gupta M. A. writes in *The Indian Educator* on Bohemianism in Bengali Literature. Bohemian means, we are told, a "vagabond", an "adventurer" or "a

person of irregular life or habits." Among the Bohemians of the literary world had been many masters of literary expression and keen students of human nature. These ideal Bohemians have inspired a whole gang of inferior intellects whose literary ventures have played havoc with the mental and artistic sanitation of humanity. Mr. Das Gupta summarises the achievements of the Bengali school of Bohemians in the following words and concludes with a short advice

The lucidity of Dickens, Hugo and France, is rare in many realistic writers who pretend to speak of life as it is. Some of our present day writers think that they have known all the secrets of our social life. Cafes, restaurants, houses of ill-fame, grog and opium shops, rendezvous of hackney-coach drivers, rickshawwallas, carters, coolie lines, beggars, drunkards—all these figure prominently in some of the modern short stories in Bengalee.

The "Byah" "Upasana" and "Kallol" groups are mainly responsible for these stories. But sometimes these are extremely painful and unbearable. There is no care for morals, no respect for dignity, manners and modes of life are undesirable, slang, colloquialisms, jargons and cant are used frequently, there is no rigidity even in the use of punctuation marks. For a comma a mere dash is used. The writers want to appear life-like—life as it is free from all outside trappings. The "Bharati" group of Bengali novelists make a speciality in picturing Bohemian life. A latest book by a senior member of this group is the love-story of an actress and a moonstruck poet, resembling very much a story by the American Novelist, Leonard Merrick. But perhaps the best work of this group is on "The Night Life of Calcutta" the underworld of Calcutta, its thieves, swindlers, criminals, the piccadillo.

Mr. Sarat Chatterjee's "The Claim of the Road," his latest novel, socio-political, is a thought-provoking creation. It has been suggested in certain quarters that it owes its inspiration to Maxim Gorky's "Mother." It is Bohemian life in the form of a political league with side-lights of human tragedy. Mr. Chatterjee's Bohemianism, however, is stimulating and invigorating. Its influence does not degrade while the descriptions of some of the other writers are nauseating, nasty and offensive. The "Bohemian Club" in a novel written by a very well-known Bengalee gentleman is a dangerous institution. Even the most radical critics cry halt now, to this sort of 'art for art's sake' writing. It is not in any way bemoaning for the literary man to write of humble people. Defoe and Fielding wrote of robbers, highwaymen and vagabonds. Yet these great writers never gave any favour to the action of their characters. They did not hate the sinner but had an aversion for the sin. Hugo's "Jean Valjean" is portrayed not for the sake of his adventures but for the delineation of the innate goodness of man. But on the screen, the spectators clap their hands when he breaks the prison-bars as they clap when Tarzan is through one of his wonderful feats or when Craig Kennedy bags a clever crook. In spite of their wide sympathies Oscar Wilde and Leo Tolstoy

were not Bohemians. The former had too much of the aristocrat's blood in him.

It is mostly in French novels (e.g. Paul Bourget, Paul de Cock), or English sensation novels that the spirit of Bohemianism is rampant and runs riotous. Among Americans, Bliss Carmon and Emerson Howe specialise in this kind of writing. Thoughtful men in the West are attacking this growing menace to social life.

Bohemianism is natural, it is sometimes good, but it should never be used in lending a lurid colour to life.

Lala Lajpat Rai on the Clash of Creeds

The Hindustan Review publishes an article by Lala Lajpat Rai dealing with the religious problem of India and its political and economic implications. Says Lala Lajpat Rai

The problem of India is a part of the world problem. India is the heart of the Orient. I deliberately say the "Orient" therein including Africa and Asia both. As long as India is under the political and economic domination of the white people, Asia must remain so, and as Asia is not free, Africa must, perforce, be exploited by Europe. India's political subordination is the key to the political bondage of all the coloured races of the world.

And

The clash of different religions is the principal cause of India's political bondage and economic dependence. If we could remove this obstacle, we could solve India's problem without much difficulty and thereby help substantially towards the solution of the world problem. Can we solve it, and if so, how?

At about the time that Islam finally overthrew the Eastern Roman Empire and drove Greco-Roman genius back into the heart benighted Europe thus setting it to relight its torch of intellect and scientific enquiry Europe was oceanbound and cut off from the rest of the world. Then came Columbus and Vasco da Gama and four centuries of European expansion. So that now, in the words of Mr. Basil Mathews, author of the *Clash of Creeds* by Lala Lajpat Rai.

"There are on earth some fifty three million square miles of habitable land surface. Of these miles forty-seven are under white dominance or nearly the whole habitable area of the world. Of the remaining six million square miles over four million square miles are ruled by yellow races—the Chinese and the Japanese: the latter now having sway over Korea, Formosa and the Pacific Islands that Germany used to govern north of the Equator.

"Of all this vast area of forty-seven million square miles, controlled by the white races, by far the greater part is under the hand of the English-speaking peoples. Of every seven people in the British Empire, six are coloured.

How did Europe achieve this? Says Lala Lajpat Rai:

Europe's success in taking possession of the whole world is due to power placed in the hand of its peoples by the growth of knowledge, and progress that has taken place in science during the last two centuries.

"The very facts," says Mr. Basil Mathews, "that the siege of Islam forced the white man to turn to the ocean, drove him also to begin inventing new instruments for navigation, and so led on to new sciences of mathematics, astronomy, engineering, construction, medicine and so on, and created the intellectual inquisitiveness and inventiveness which are (when you get down to the roots) the central creative forces of the new world."

The inventions of James Watt and George Stephenson created the industrial revolution. The industrial revolution brought in its train wealth and an increase in population. This followed the fairy-like development of transport and of farming and of mining until disaster was destroyed and space shrank into smallness.

But this is at best, only a half truth. There was not much of science in the 16th and 17th centuries when the real disintegration of India began. This disintegration was started and helped by internal causes rather than by external pressure, which in fact did not come into force until long after Aurangzeb's death. Till then the Europeans in India had only been petty traders who relied much on the support of the native ruler for the safety of their trade and effects. The cause that brought about the dissolution, first of the Moghul and then of the Mahratta Empires, stands quite apart from the growth of science and knowledge in Europe. The flame that consumed the Moghul Empire and later burnt and reduced to ashes the Mahratta Federation, was ignited by the clash of faiths, and the consequent lack of cooperation between the people and their rulers. Individual ambition and treachery also played their part, but the main underlying cause was the clash of religions. On occasions, people of different faiths joined hands against the British, but the latter could always successfully play one against the other, so much so that the followers of different faiths vied one with another in serving the British and extending their Empire all over Asia.

Then came the growth of science which accelerated the movement thus set in motion by the clash of faiths, until step by step nearly the whole world came under the domination of the white race. Mr. Basil Mathews excludes China and Japan from his description, but China is, perhaps, as good as a European farm.

So that by our religious quarrels we have done the greatest possible disservice to the East. Are we going to live eternally under European domination? Are we going to free ourselves by a Race War? We are told:

Mr. Mathews' examination of the race problem leads him, as it has led many other thinkers, to the conclusion that race antagonism is rooted in primitive instinct, it is not present in the natural child, it is put there through suggestion.

and education by the adult. It is not fundamental, it need not exist. This discovery breaks the terrible tyranny of race-antagonism over man. He can conquer and destroy race-war. We can wipe out our enemies by 'wiping out our enemies.' The third thing is, that the highest authority—as well as from our own outlook on history—the world domination of the white man is a recent growth and is not likely to persist indefinitely.

"What then is needed to achieve the ideal of the world-team on the plane of our life here and now? We need in the affairs of man, some real and powerful force that will fuse the separate national and racial spirits into a unity. We need a King Arthur idea and ideal to gather the warring knights into a Round-Table of world-chivalry to co-operate in defending the distressed and the weak and in fighting for world-peace."

How far this is likely to happen and what is going to be the offshoot is known only to gods.

The Problem of India is two-fold Racial, in that India is the slave of Britain; creedal, in that India knows no internal Inter-Communal peace. All these have a world significance Lala Lajpat Rai goes on

Ours is a land of many faiths. Some call them all "warring faiths", but the actual struggle for supremacy is confined to three—Hinduism, Islam and Christianity.

Just at present, the number of Christians is not sufficiently large to cast a shadow on the political future of the country. Moreover the younger generations of the Indian Christians are coming to realise that on the ground of religion they should advance no claims for special treatment in the domain of politics. They are content to take their stand on merit and merit alone.

What actually troubles us at the present moment is the antagonism (which is growing, both in volume and intensity) between the two principal religious communities of the country—the Hindu and the Muslim. Both are suspicious and mistrustful of each other. One has always been militant, the other is developing that characteristic very fast. One is anxious to increase its numbers, the other, at least, to maintain the *status quo*. This, the latter thinks, it can only achieve by becoming as aggressive as the other is i.e., by adding active conversion of people of other faiths to its programme. Shuddhi and Tabligh are the craze of the day. I say this in no deprecating spirit as I am myself an advocate of the first, as Muslims are of the second. Anxiety to increase numbers for eventual political gain is at the bottom of both. Religion is thus made a handmaid of politics, as it has always been in the history of the human race.

The clash of Hinduism and Islam, however is not the only clash that troubles us. Within Hinduism itself there is a clash between the reformers and the orthodox—the Arya Samaj and the Sanatan Dharma Sabha,—also in the south of India there is a rivalry between Brahmmins and Non-Brahmins. In Islam equally there is a clash between Sunnis and Shias, Ahmadis and Non-Ahmadis. Where this is going to end, nobody knows.

Anyway, if the present is any basis for the future, India bids fair to be a vast battle-field for the clash of faiths and creeds. No one can have any objection to freedom of propaganda, but this kind of rivalry or competition, which is almost unique in the modern world, is bound to affect most injuriously India's prospects of political freedom. Our masters, the most astute, the most wide-awake and the most accomplished Imperialists of all history, are too human and too clever not to take advantage of the opening thus made by ourselves. We do not need a prophet to tell us, that until in some way or other, this clash of faiths is so regulated as to be made inoffensive for political purposes, politically we are a doomed nation. However much we may foam and fret, till then no substantial political advance is possible. And unless we get our freedom, neither the rest of Asia nor Africa will get theirs. We will, thus, by a conflict of religions in our own country, be a direct cause of the coloured world's continued bondage, as we have been in the past the principal cause of their fall in the whiteman's march towards world-dominion.

He reviews the world situation and concludes his article exhorting Muslims to be sensible.

Let us glance over the map of the world and examine the situation a little carefully. Egypt's advance towards independence has been substantially checked. She is sandwiched between the Suez and the Sudan, both of which are indispensable for the maintenance of British supremacy in Asia and Africa. Turkey is free, but her frontiers on the East and the West, the North and the South, are so arranged as to keep her constantly at war with some one or other of her neighbours including some Muslim tribes. Her bravery and strategy of Kamal Pasha have forced a Lausanne treaty, but Europe has not forgotten that the Turk is an Asiatic and a Muslim to boot. As for the homelands of the Arabs—Arabia, Syria, Palestine and Mesopotamia—any one who has eyes can read the writing on the wall. China in the East, and the homelands of the Arabs in the West will never be allowed to have peace. They are nominally free but we know what their freedom means. In the heart of these Arab lands British Imperialism has implanted an Ulster which has sealed the fate of all of them. The clash of doctrine and theology aided by the ambition of individual adventurers will do the rest. The "indomitable courage" of the Riffs has raised a slight hope, in the hearts of some, of the coming freedom in North Africa; but European interests in Africa, East, West, North and South are too extensive and valuable to let that hope be realised even to a modest degree. France and Spain are already joining hands to crush the Riffs. Britain will play a watching game until she finds that the situation is beyond the means of two. Then she may step in to give the final blow.

Let us now look at Central Asia. Afghanistan is no doubt progressing, but the recent Khost trouble ending in the drastic measures which His Majesty the Amir took against the Ahamdiyas, is a warning finger for those who are in the habit of generalising and building on very slender foundations.

Let not Indian Muslim leaders, then, be deluded by the friendship of Anglo-Indian scribes who are goading them on to a bitter and never-ending quarrel with the Hindus, and always backing them against the latter. I may be a "firebrand extremist," but I have not spent years in Europe and America without knowing a bit of western mentality. The westerner is no saint. His alleged benevolence and philanthropy is not even skindEEP. His professions are only a part of a political game. In actual life he is as cruel and as merciless as any other Imperialist in the history of the human race has been or can be. At present his one aim is exploitation. He can feed his economic serfs well, he can allow them a morsel of civilised life too, if and as much as it suits his purpose. But the moment he finds that his "benevolence" or "philanthropy" or "love of justice" is likely to interfere with his gains, he stoops to such low tactics and such destructive processes as befit only those who are eaten up with their own self-interest. Let the victims of the Punjab Martial Law regime speak. Let the Egyptians give evidence. Let the Africans tell their tale of woe and afflictions. Imperialism is a monster which knows no law and no bounds. Self-aggrandisement at any cost is the only law it knows and recognition.

In the circumstances, it is for the Muslims to decide whether the game they are playing is worth the price they shall have to pay for it. They can have communal representation all along the line, in the Councils, the Local Bodies, the Services and the Universities, but at what price? Are they not bartering away the liberties of the Islamic world for a mere mess of pottage? Are they not reducing the chances of an Islamic revival by prolonging the period of India's bondage and reducing the chances of its gaining Swaraj, because that is what communal representation, if carried to its logical length, means and involves. Is it not worth their while to acquire the friendship and good-will of the Hindus by giving up their demand for communal representation or by coming to a reasonable understanding with them as to how far this principle should go. Communal representation in the hands of resourceful people like the British, is a weapon which will effectively bar India's march to freedom. Communal representation is only another name for the continuance of this clash of creeds in its full fury. Must this clash continue to poison our political life? Is it impossible to eliminate it? Let us pause and ponder. We are taking a very grave responsibility, too great and grave to be lightly underrated by making ourselves responsible for the continued political slavery of more than three-fourths of the human race who have their home in Asia and Africa. The only way to get rid of this responsibility is to banish religion from the field of politics and take our stand all along the line on pure Indianism.

Sandal Oil Industry of India

The U. S. Trade Commissioner writes in the *Mysore Economic Journal* :

The sandalwood oil industry in India has been of very recent growth, and is principally confined

to the State of Mysore, which has extensive sandalwood forests within its boundaries. While the neighbouring districts of Coimbatore and Coorg are also noted for a fair share of sandalwood production, Mysore has all the advantages incidental to the manufacture of the oil, being supplied with cheap electrical power. Up to 1916 the State of Mysore, in common with the Madras Government had been exporting all its sandalwood cut in the area without refining it in the country. The output of sandalwood from these three districts then amounted to 3,000 tons per annum, of which 750 were consumed locally and 250 by the other parts of India. The principal consumer during these years was Germany, which purchased nearly three-fourths of the exports from India, which amounted to about 2,000 tons. Mysore's share of the production amounted to nearly 2,500 tons. Coimbatore and Coorg between them supplying about 500 tons.

Sandalwood oil is required for various purposes, the three principal uses being for perfumery, medicine, and the manufacture of soaps.

During the war when Germany was cut off from the rest of the world, the Mysore Government was getting no revenue from sandalwood exports. In 1916, therefore, two factories for manufacturing the oil were started in the State one at Mysore and the other at Bangalore City, and operation on full scale commenced in 1917. These two establishments are reported to be the largest sandalwood oil producers in the world, with a total annual output of 200,000 pounds of oil. The director to one stated that this output could be increased still further and that the State is now in a position to meet the world's demands for sandalwood oil.

The plantations in charge of the Agricultural and Forest Departments are well cared for and the supply of sandalwood is said to be unlimited, the system of felling mature trees and replanting the cut area being carried on systematically.

Australia, the Netherlands and East Indies manufacture a similar but lower grade of oil. The Australian oil, although not actually classified with Indian sandalwood oil, is exported in large quantities to America, where it is used for blending purposes. The Dutch East Indian product, known as "Macassar oil," is equal to the lowest grade of Mysore oil and is also exported in moderate quantities to America and the Continent. The Mysore product is chiefly exported to Japan, where it is used for medicinal purposes the other two oils mentioned being of a lower grade and not suitable for either internal or external use.

Romain Rolland Interviewed

The *Current Thought* publishes an account by D. K. Roy of an interview with M. Romain Rolland. Mr. Roy had a long conversation with the great Frenchman on the subject of Art in the course of which Mr. Roy suggested that Art was only for the elite. Rolland said,

"What you say, is true only on the surface. I must explain this to you at some

length. I must however warn you beforehand that these views of mine are not consonant with those that obtain among the elite.

"I am definitely of opinion that real art must of necessity appeal to all but the half-educated. That is to say, really great art must needs appeal to the uneducated as well as the truly cultured classes. Only it does not move the half-educated who however, feel cocksure that it is for them alone that great art is intended. The reason of the latter's failure to respond to the appeal of art is probably to be sought in the fact that the grinding-mill of our so-called modern education cures them most effectually of that freshness of spirit which is one of the first conditions of all feelings of exaltation. Thus they are unconsciously rendered incapable of deriving the right kind of inspiration from art.

True Art said Rolland appealed to the uneducated as intensely as to the well-educated. It was only the badly-educated half educated who failed to appreciate true Art. The uneducated appreciate Art, may be in a different way from the cultured, but nevertheless to a great extent.

The heart, unsophisticated by our so-called education, is still athirst for art, which cannot unfortunately be said of the half-educated whose love of art is so proverbially banal and superficial. You may raise the objection that the uneducated will not be able to judge correctly of the difference between superior and inferior art. May be. But my principal point is that this is not to be put down to any incapacity on their part to respond to the evolved art. What is responsible is their or'd preclusion from opportunities for self-culture which alone can serve to educate the tastes."

Evidently Rolland argued from the psychological stand-point that Art is intuitional and not conceptualistic in its nature. Conceptualistic or thought-out things require training to be understood; intuitional things on the other hand make a direct appeal to the emotions which are the heritage of all normal human beings, educated and otherwise. The cultured people are those whose emotions have been rendered specially keen by constant and right use and they appreciate Art with comparatively greater intensity and in ways which may not be open to cruder souls. Only the wrongly-educated cannot appreciate Art, because their emotions have been rendered dull and respond queerly to Art stimuli due to prolonged misuse.

Mr. D. K. Roy drew his own conclusion from Rolland's words and did not agree with him. He opines:

I was at the time much struck by this view of Rolland's although it cannot be said that it is quite original. For it savours distinctly of Tolstoyanism in so far as it defends even lack of culture. Rolland is however wiser and more

satisfying than Tolstoy, in that he does not, like the latter, belittle the place of real culture in artistic appreciation. Rolland seemed to me to have tried to effect some sort of harmony between the too one-sided views of Tolstoy in art criteria and the aristocratic outlook on art according to the accepted criteria.

When all is said and done however, it is difficult to maintain that Rolland is in the right, and that for the following reasons.

Truth being greater than idealism or optimism, one must base one's theories on the data of human experiences and not view truth or facts in the light of preconceived notions about the same. Now, it is an indubitable fact in the history of human experience that one cannot taste of a superior ecstasy unless and until one strives to acquire a capacity for its reception. Our Hindu philosophy also endorses this view. For it has repeatedly asserted that no spiritual realisation is possible to one who has not gone through the requisite *Sadhana* (discipline) therefor. The same applies to all realisations.

Here Mr Roy is evidently thinking Art to be something too high, subtle or intellectual to be grasped by any but the *Sadhak*. True Art is seldom that *Sadhana* may enable one to get more out of Art; but it is not an essential condition of appreciating Art. Rolland also says this. To imagine that Art must of necessity yield only "superior ecstasy" is moving far on the wrong side. Art is at once simple and complex it is there for the enjoyment of all but the morbid. The more refined and supple one's feelings are the more one would get out of Art. "Hindu philosophy" gives *Sadhana* a high place, but it does not deny the rustic, the "man in the street" a *darshan* of the god. So Mr D K Roy is not justified in quoting "Hindu philosophy" in support of his condemnation of Rolland's view. Rather, Hindu "Philosophy" is one with M Romain Rolland in that both say *Atma Vidya Bhayankari*.

Are some 'Musalmans' Hindus? ✓

The majority of Indian Musalmans have escaped the full consequences of the denationalising influence that Islam exerts on its converts and have retained much of Hinduism in their conduct. Some Musalman's are partly Hindu even in their creed. The Aga Khanis are a good example. Pt Chhatrapati Sir G. G. G. Gives us an account of the cult of the Agakhan in the *Vedic Magazine* which should be read with great interest. In it we find

The Agha Khanists pay nominal reverence to the Kuran which, in common with other Mohammedans, they are now-a-days being taught to regard as their scripture. Their daily recitations contain very little from the Kuran. In Ganans—a

corrupt form of Jnana—i. e. hymns which they read for their spiritual upliftment, the Kuran sometimes comes in even for denunciation. For instance in the *Ganan* 64 at P. 15 of 100 *Ganan k Chaupari* there occur the following stanzas :—

Rove rove Hindura duja Musalman
Rove Brahman Joshira vachan pustak Puranji
Rove Mulla Kajira heje parhan Kuran
Rove jinda Jogira baitha madhiye masan
Rove Kuda Sunni sag saccha shah na sambhan.
Weeps the contemptible Hindu, the Musalman,
Weeps the Brahman astrologer, who reads the
Puran,
Weeps the Mulla, the contemptible Kazi, who reads
the Kuran.
Weeps the living Jogi who sits on the shrine and
in the crematory.
Weeps the false Sunni, the dog who recognises
not the real Lord.

The highest authority attaches to the commandments of the Hazir Imam, i. e. the living incarnation, who at present is no other than H. H. Aga Sultan Muhammad, the well-known Aga Khan, whose reputation in the outside world is more political than religious.

In the *Arabi* recited daily in the Jamaat Khanas it is expressly stated :—

Atharva Veda manhi jo koi mahir
Dasma din dayal Prabhu baitha chhe jahir.
He who is conversant with the Atharva Veda,
To him the merciful tenth Lord will be manifest.

The Aga Khanis are Shias inasmuch as they have sincere reverence for Ali whom they regard to have been, or to be the prospective, 10th embodiment of God, and from whom the present Aga Khan is thought to derive, by physical heredity, his divinity. Their name for Godhead is Oham, a corrupted form of Om. Says Ahmed in his *Siharti* :—

Oham niranjan ek vriksh jo kita
Un ko dahi do hi dita
Ek nur Muhammad Mustafa
Duja nur Ali Murtaja
The absolutely detached Om brought forth a
tree
And gave it two branches,
One Muhammad the Chosen,
The other Ali, the beloved,

The tenth incarnation is believed to have been preceded by the nine principal Avatars of the Hindus, viz. the Fish, the Tortoise, the Boar, the Man-Lion, the Dwarf, Rama, Parshurama, the Buddha and Krishna. The tenth, Ali is sometimes mentioned as having already come while in other places prediction is made of his future advent. In the *Dasavatar*, which is read in the Jamaats on all important occasions, a brief story is told in verse of all these incarnations. The last chapter glorifies Ali, who is identified with Nishkalanka and whose account is received most reverently, the Jamaat standing while it is recited. The object of the incarnation is stated in these words :—

'Bhakta uddhariye, asur sanhariye, danav dariye,
'Gatiyan tariye, asha puriye, vacha paliye,
'Shankha Chakra lese Shah hath.'
'Save the devoted, kill the devils, saw the fiends,
'Take (us) across Sansar, fulfil hopes, keep
promises
'The Lord will take in his hand the Shell and
the Disk.'

Who will after this say, Ali is a Muhammadan deity ?

Mogul Nobility

The following quotations are from an article on the above by Mr R. P. Khosla M. A., I. E. S. in the *Journal of the Bihar and Orissa Research Society* :

The great Mughal emperors lived in gorgeous style. Their courts eclipsed in splendour and magnificence the pomp and display of those of all their contemporaries whose brows ever ached beneath the burden of a crown. Such ostentation was maintained at a fabulous cost. They had a long chain of noblemen who used to dance attendance at court. These grantees, magnificent in themselves, were in reality parvenues. They were adventurous men who flocked from different parts of Muhammadan India and Asia in search of the avenues of honour, rank, and power. They were mostly soldiers of fortune actuated by motives of self-aggrandisement. It was from this band of fortune-hunters that the Mughal nobility was mainly drawn. Consequently, it came to be a heterogeneous mass composed of incongruous elements—Turk, Tartar, Persian, Indian, Muslim and Hindu. The want of homogeneity was at once the strength and the weakness of the empire. They could never form into one caste, one sect, or one class. This largely eliminated the possibility of a united revolt. A clever king could easily play one contending faction against the other, but an atmosphere was always kept up for palace intrigues, and conspiracies were frequently hatched. Although the nobles were men of high trust and great emoluments yet the great Mughals could never boast of a united following of selfless grantees. Power seemed to swing in a balance between the king and the nobles. During the reign of a weak king the nobles would appear to have gained some substance of real power which would dwindle into a shadow simultaneously with the accession of a strong sovereign.

The nobility in India, in Mughal times, was fundamentally different in principle from that of the west. Here the nobles were as much the creatures of the king as elsewhere, but heredity, which is generally the most essential aspect of accidental nobility, was wanting in the oriental. In Europe the law of primogeniture determined the line of succession in noble families, but in Mughal India no incident of the dignity was heritable. Like every other personal decoration the investiture of nobility had to be individually earned. The Mughal noble was a noble not because he was the son of a nobleman but because the king chose to distinguish him as such. Family distinction could not long be maintained. There was hardly a Mughal noble who could trace his high lineage into the twilight of past ages. The want of heredity and the uncertainty of the duration of power left most of the nobles in meek submissiveness to the will of the king and in uncomplaining subservience to his interests. Mughal nobility was a personal and not a territorial nobility. It was not decreed by the mere accident of birth but determined by the opportunities of life. It was a

recognition of services rendered to the crown but not verily a reward for a real merit. Even in those days of mediæval chivalry it was not necessarily a brave man who could win the smiles of the king: a courteous flippant man of flattering manner could easily strike the keynote to royal favor.

All the land of the state primarily belonged to the king who was the heir of all his subjects. The amirs could not be proprietors of land and could not enjoy independent revenues like the nobles of Christian Europe. The pension granted in line of fixed services was all that could be called the nobleman's income. Although it was no small pittance yet the high cost of military establishment and the expensive manner in which he himself had to live did not leave him much by way of a provision for a rainy day. The pension was as a rule derived from a jagir. In fact, the whole of the country, with the exception of the royal domain, was a network of jagirs. These jagirs were frequently changed lest an amir grew too powerful by holding the same jagir for a long time.

When a nobleman died his belongings went to the coffers of the king. The descendants were ruthlessly deprived of the earnings of the deceased and the jagir lapsed to the crown. The amir's death extinguished nobility in his family. His sons and grandsons were reduced to penury. They had no place left for them in the ranks of nobility. When a noble died it was customary for the king to offer high sounding condolence to the bereaved family, but the receipt of condolences was a signal for further destitution because condolence was followed by forfeiture of wealth. Perhaps the message of condolence and the order for forfeiture were contained in the same letter. The Moghul kings were not altogether devoid of all sense of propriety. The grown-up sons of the deceased nobleman were given just a start in life and were sometimes placed on the lowest rung of the aristocratic ladder. They began carving their careers anew.

The absence of a hereditary nobility had both good and bad points. There was no occasion for any serious tug-of-war between the king and the barons as in the Norman or Plantagenet England. There was no possibility of any oligarchical oppression. India was free from an organised, reactionary, powerful, selfish noble class as disturbed the peace of France for centuries. As the land throughout the Empire was considered the property of the king, there could be no earldoms or duchies in India. The society was not nobility-ridden and was free from the forest laws of England or such tyrannical and burdensome enactments as vitiated the French Statute book even after the destruction of Feudalism. The Moghul noble was entirely at the mercy of the sovereign and could never play the role of the over-mighty subject who was responsible for the cruelty of the Wars of the Roses. A further precaution against the aristocratic class was taken when the amirs were forbidden to contract marriage alliances without the royal permission.

Every amir started very low. He generally began his career as a commander of twenty and had to be ready with his followers to mount guard. Amirs had to furnish contingents in time of war, and like feudal barons had to fight the battles of the king. They had to recruit and equip a certain number of men and horses besides elephants. Regulations were devised to

secure the recruitment of the actual numbers prescribed and to prevent fraud in the provision of horses and equipment. A commander of 5,000 was not necessarily at the head of a contingent of 5,000 men. Men actually in service rarely approached the number expressed by the title of the amir.

Ranks above 5,000 were reserved for princes of the blood royal who from time to time were deputed to wage war in the distant parts of the empire and sometimes to put down rebellious provincial governors. There was no regulated chain of civil service in Moghul India and the provincial governor was as great an autocrat in his own province as the emperor was at Delhi. He did not hesitate to unfurl the banner of rebellion when he thought that the central government was weak. Sometimes, in very exceptional cases, the high honour of being the commander of 7,000 was conferred on a very tried and faithful pillar of the empire. Raja Man Singh was raised to this rank as a mark of special favour. A little later Mirza Shahrukh and Mirza Aziz Koka were elevated to the same dignity.

Abul Fazal has left a fairly complete list of amirs. From that list it appears that among the high mansabdars there were very few Hindustani Musalmans, Persians and Afghans far outnumbered them; but there was a fair number of Hindus. It is noticeable however, that the number of Hindu amirs in higher ranks got proportionately smaller and smaller every year after Akbar's reign.

Amirs did not lose their mansabs after the death of one emperor, but as a rule, continued to enjoy them under the new emperor. We find many names common to two consecutive reigns.

The Anglo-Indian Speaks out

W. A. Hobson writes in the *Young Men of India* vindicating Anglo-Indian claims to communal representation. The writer, if not wise is outspoken. He speaks some home truths and puts forward claims in behalf of his community which rhyme with the prevailing craze for separate representation for every family, but make one wonder, "what are we coming to?" Says Mr. Hobson:

Let me clear the issue at the very outset by saying that all intelligent and educated Anglo-Indians regard themselves as natives of India, whatever their blood and cultural ties may be with England. Racially, we are neither English nor Indian.

It is true that many or all of us claim to be English, at least culturally. This claim is obviously untrue in the case of a very large number of us. The Englishman would be the first to repudiate this claim, but, even in the case of those who do resemble Europeans very closely in their mental and moral characteristics, a careful examination will show great and radical differences. What is true is that the Anglo-Indian has been educated and brought up by the British to believe that he is an Englishman. This has been done mainly with a political motive, but I am convinced, as I

have tried to show elsewhere, that it is this assumption which is mainly responsible for the weakness and unprogressiveness of the Anglo-Indian community. Instead of being allowed to develop on his own lines, he has been forced to give an exotic and extremely precarious bloom in the hothouse of an English educational system which totally unfits him to live and thrive in the natural atmosphere of the world he inhabits. On the other hand, he is also from the cultural point of view different from the pure Indian. He has his own peculiar habits and customs, not to mention language and religion. But none of these things should prevent him from regarding himself politically as a native of India, not merely in a statutory sense but in fact and reality. As a community, we originated in this country, and the vast majority of us will live and die here. No progress is possible for us unless we thoroughly assimilate this into our consciousness. We differ from the Madrass or the Bengalee or the Punjabee or the Marathi as much as they differ racially and culturally from one another, but with them we are sons of the soil and own only one motherland, India. It is not only to our interests but also our moral duty to live and work for the good of India. We must not claim, and we will not get, any preferential treatment over the other communities of India. But we also expect to be given our due rights and privileges in the country.

I personally have no particular admiration for the political abilities of Colonel Gidney or Mr. Barton, or Mr. Rencontra, honest as these gentlemen are. Beyond speaking occasionally on behalf of the Anglo-Indian community, though something more is true of Colonel Gidney and Dr. Moreno, they seem to be taking no real part in the work of developing the country itself. The Indian representatives are far abler from every point of view and our own communal interests are likely to be better served by them than by our own leaders. But the real trouble comes in here. These Indian leaders themselves are at present animated by a strong communal bias. The Hindu is for ever keeping an eye on his Moslem brother. The Moslem is not always certain that the Hindu is wholly sincere in his national outlook. The Brahmin of Southern India is still a Brahmin first and needs to be watched by the non-Brahmin, and both by the representatives of the depressed classes. When all these people talk about the Indianization of the public services they always exclude the Anglo-Indian, as we can show from what is actually happening today in all parts of India. Our educational grants are never secure. We have to fight for them every year. Whilst Gandhi wants us to spin *khaddar* with him, Mr. Satyamurthi of Madras is endeavouring to abolish our communal schools altogether and destroy our culture and our religion. In these circumstances, we must quite candidly say that to forego communal representation means destruction for us and we must fight against its abolition. We are ready at any time to accept this abolition, if our Indian brethren will only give us a guarantee, not only in word but also in deed, that our interests, in so far as they do not conflict with the interests of other people, will be protected and developed by them. The whole thing really rests with them, and I must honestly say that so far I have noticed no real attempt on the part of these people to act, or even to think, nationally and non-racially. It

would be foolish on our part to give up communal representation merely to allow the Hindu or the Muhammadan to rule the roost and divide the loaves and fishes among themselves. We must face facts, and then dream dreams of national unity.

Women Workers of India

The Indian and Eastern Engineer says

We are indebted to the courtesy of the Roy Society of Arts for a copy of the paper recently read by Lady Chatterji, on the employment of Indian women and children in industry. Principally concerned with the textile, tea and other industries, Lady Chatterji pointed out that women had taken and were taking a steadily increasing share in industry. Women employed in factories had increased fivefold in thirty years and children threefold. In the mines some forty thousand were employed below and twenty-five thousand above ground according to the 1922 figures which also mentioned 800 children below ground and 3,200 above. The principal reason given for women going into industry was the simple one, that they were driven to it by poverty and the reader pointed out that all but the highest classes in India worked for the whole or some part of their living. The vast majority of the people were agriculturists and the conditions of life for them were poor, the villages are mostly insanitary and wretched, wages or receipts from farm operations poor and the money-lender unavoidable. The system under Hindu and Muhammadan law by which inheritance were constantly being divided and subdivided among heirs all tended to the impoverishment of the country dwellers. They entered the industry to gain money, to escape their surroundings, and to be more independent, three causes that have their exact counterparts in the same cases in the West.

She spoke of the modern mills of Cawnpur, Bombay or Calcutta as mostly airy, sanitary places but condemned the majority of the cotton presses and ginning sheds. In the mills the women's work was not in itself so exhausting and was removed from the din of the machinery, they being mostly employed in the reeling and winding department. The children were more unfortunate as they had to work removing bobbins among the dust and rattle of the machinery. Conditions for women were better in the jute mills than in the cotton mills and women took a much larger share in the manufacturing, men being employed on the heavier work, but in the handsewing department whole families sometimes working together.

In the coal-fields children are not now employed below ground where the men hew the coal and the women carry it in baskets often as far as 200 yards and up a steep incline. A load might be from 60 to 80 lbs. The question of the cessation of women's employment underground has been under discussion since 1894 but nothing has been done.

In the tea gardens of Bengal about 215,000 persons were employed in 1921 and about 400,000 in Assam, half of whom were women and girls. The tea industry involved both indoor and outdoor work.

Discussing the sources of labour, Lady Chatterji said that much of it wherever employed came from great distances. Much of the Bengal imported labour came from the United Provinces. An analysis of the workers showed over seventy different types employed and every variety of race and caste, the majority being normally agriculturists or craftsmen from villages, to whom work in the factory was a secondary means of livelihood. In the tea gardens about half the labour was local, the rest being imported from Nepal. In Assam the plantations were entirely dependent upon imported labour. The coal mines drew their unskilled labour partly from the local tribes of Santhals and Bauris and the remainder from the Central and United Provinces.

Agriculture and coal mining went well together on the worker's point of view as when the rural work was urgent the coal mining was simply neglected. Both in the tea gardens and the mines it was possible for whole families to work together with a certainty of thus getting family employment which was not so great as before owing to the restrictions on child labour.

In textile work conditions have improved. Hours of work are restricted to 11 a day or 60 a week with rest intervals. The presence of women in factories at night is prohibited. Wages are generally paid monthly after a waiting period of fifteen days. Ahmedabad they are paid fortnightly, a week in hand. Much diversity exists in the province of Bombay where monthly, fortnightly, weekly and daily systems of payment were worked side by side. Women's wages in August 1923 in Bombay averaged about Rs. 17 and children's about half that amount. Ahmedabad wages were slightly more and Solapur only about Rs. 8-9-0 a month.

In the Bengal Jute Trade Report for 1924 it was shown that women piece workers received from Rs. 7-0 to Rs. 7-8-0 and women preparers from Rs. 4-0 to Rs. 4-0-0 per week. A child's weekly wages ran from Rs. 1-9-0 to Rs. 2-8-0 a week. Housing was one of the most difficult questions facing workers, and as an indication of the congested conditions in Bombay the infant mortality rate per 1,000 was given as 419, though conclusions drawn from this must naturally be affected by the fact that there "is wholesale immigration of people into Bombay from elsewhere." The provision of housing for the Bengal jute mill employees was not such a difficult question as the housing of Bombay cotton operatives. There is more space, though directly a new mill was projected it was not so easy to find land in the vicinity to rise in price immediately as an attempt to hold up the jute mill company who would naturally need land for the other purpose of dwellings. For this reason a large proportion of the workers were housed in mud villages near jute mills and not in sanitary buildings erected by the employers. In coal mining districts the irregular attendance of workers, always keen to look after their own little plots of land which were often a considerable distance away, made it very difficult for the employer to provide suitable accommodation without putting himself in the position of being a mere convenience to the worker.

Lady Chatterji led the greatest stress on the need for supervision of women workers, provision for their maternity troubles and provision of

adequate housing so that they might be independent of the need to make irregular alliances with men for the sake of a home and protection. She strongly advocated the appointment of more welfare officials and the encouragement of normal family life, which the increase of women in industry had rather had the effect of discouraging.

Art and Freedom

Writes W. G. Raffle in *Shama'a*.

Vitality in the entire work of building is the fundamental secret of the vigour and beauty of Gothic building and craftsmanship. This it was that led Ruskin, the famous exponent of Gothic architecture, to seek and find the living source when became one of the most remarkable expressions of human art that has been known to history. He found it sprang from the freedom of the worker in his daily work, so that the lowest labourer could take definite delight in the work that he did, being under no compulsion other than the normal agreement in labour among his fellow men. Ruskin did not love the Greek work, because he assumed it, rightly or wrongly, to be born from a condition of slavery, and that one fact as it seemed to him, blotted out much of the beauty of Greek craftsmanship, in favour of the living freedom of the vital medieval builder.

It concerned the craftsman little that he had no municipal or parliamentary vote, this "freedom" once a year, or once in five years would not have convinced him that he was a "free man" if he had been under any external compulsion in his daily labour. What freedom is there in the world, better than to do one's best in daily work as a task which is done because it is of service to the community and not to provide profits to some one who is merely exploiting the needs of the community? A craftsman could labour, day by day, with no fear of short time or discharge, and no great need to concern himself with denunciation disputes. He learned not merely a detail of his trade, but, if he was capable, all of it.

The spirit of Gothic came from the tremendous vitality of the freedom of the craftsman in daily labour, a condition that was common to the time, in a public sentiment that was based on a regard for the common weal first and private wealth a long way after. In such conditions great public art was normal, it was the unavoidable expression of the current terms of life in current terms of art. The life of every nation is reflected in its architecture, as may be seen in our ugly chapels, dirty factories, splendid public houses and cinemas and hotels and horrible railway stations—and our slums.

Diet and Race

Writing on diet and its influence on physical fitness, in the *May Welfare*, Mr. C. F. Andrews advances many arguments in favour of a change in diet in many parts of India. He cites many authorities and quotes their conclusions regarding the effects of

various kinds of diet on the human body. Mr. Andrews concludes:

It may be asked, what practical value do these studies possess in India itself. It is not possible to change in a day the rice diet of many millions of people even if we should wish to do so, but it may be quite within the range of possibility to modify it in a more healthy direction. Two thoughts suggest themselves. (i) The wonderful soil of Bengal might produce a *rabi* crop without exhaustion in certain large areas, if the whole problem of rotation of crops were worked out on scientific lines. This *rabi* crop might be some grains richer in protein and in certain vitamins than rice itself. (ii) The absolutely vital need of preserving and improving the cattle in these areas is made abundantly evident. For if a milk diet could be added to the starchy rice food, it would be an altogether more effective producer of physical fitness than the unmixed diet of rice. The gentry of Bengal are often magnificent specimens of humanity in physique. But this is because their rice diet is largely supplemented by the animal products.

On the whole, therefore, the new scientific discoveries, with regard to human diet, are altogether discouraging for Indians as a whole. For India is one of the largest wheat growing countries in the world and its capacity for wheat production is only at the beginning of its course. It has not reached its fullest expansion. A hundred years ago, India produced far less wheat than now. In another hundred years, India may be expected to produce almost infinitely more. The balance, therefore, of good values is being restored in this direction rather than lost.

But by far the most serious factor on the adverse side is that of the deterioration of cattle. Here there has been during the century a dead loss and the last state of things is worse than the first. Yet even here, a practical effort is still possible, which may counterbalance the loss that has already occurred. The veneration for the cow in ancient India had undoubtedly its own practical and scientific value. It is not too late to restore it under modern sanctions. Thus, with abundance of milk and cheese and corn added to the staple rice-diet, the physique of the rice-eating people of India might indefinitely improve and health might advance in proportion.

FOREIGN PERIODICALS

How can we Produce Scientific Workers ?

The visible, external, material benefits of science are plain even to the man in the street. Referring to them Prof T. D. A. Cockerell writes in *Scientific American* —

"Within the last quarter of a century there has been an enormous increase in the number of College students in America. At the same time, the applications of scientific discovery and invention have changed the very aspect of our civilisation. According to the United States Public Health Service, the annual death-rate per hundred thousand in the United States has dropped in the 20 years from 1755 to 1288. The applications of science are keeping us alive, raising our standard of living, and bringing us conveniences and luxuries previously undreamt of. Large sums of money are given to scientific institutions and some of the results of their activities are eagerly received by the public and widely discussed."

But, says the Professor :—

"The material benefits of science are not the only benefits. If we study any one branch of science, we find that the active and fruitful research workers are extremely few, except in those departments which are stimulated by commercial profit. Look at it from any angle and you have the spectacle of a very small minority feeding the great multitude, often under difficulties. This minority is so efficient that progress is rapid,

perhaps more rapid than is altogether good to us. In the meanwhile, the people as a whole have little of the true scientific spirit such as animated those great naturalists of the past century, Darwin and Wallace. So little indeed, that they will not even create adequate facilities for those who are actually doing the work."

If this is true of America, it is most lamentably true of India. That is one of the chief reasons why India is making such slow progress materially, and even morally and intellectually. For, says the writer —

"We maintain, in fact, that scientific interest and activity are worth while as direct sources of pleasure and intellectual culture. They make the man, without which, as Edwin Markham said 'these cities glorious' are of no avail. It is hardly too much to say that the moral benefits of science are much more important than the material ones, and it may be true in a new sense that if we seek the kingdom of heaven first, all else shall be added unto us."

"...the study of the work of nature is an efficient means of education, if by that term we mean the development of the desirable qualities of mankind. It is the path to true religion, if that word implies a sense of the wonderful order of the universe which we must understand if we would successfully govern our own lives. Thus, and not otherwise, may we attain virtue. In that sense the scientific and religious attitudes are one, and

can look back with veneration on those religious teachers of the past who were striving to bring man's mind into harmony with the ruling spirit of the universe."

The Professor now proceeds to ask —

"Perhaps we may now, a little more acceptably ask again how we may produce more scientific workers? How may we raise up a nation of people genuinely interested in natural phenomena, and especially in the processes of life? How may we attain that sort of scientific virtue which makes us see things as they really are, and desire to solve human problems according to their real merits? How may we make scientific observation a social function, so that it does good fellows, bound together by the kindness of a common interest? No doubt the key to this problem is with the child. Wallace and Darwin and many others like them, refer to very early influences, very early developing aptitudes."

It may be that some children have an inborn taste for science. But,

"No matter how strong the inborn taste, it needs to be shared with others, or fostered by the sense that others have felt the same. The beginnings must be voluntary, part of the play activities of childhood ripening into more systematic and purposeful efforts in later years. When there have been such beginnings, it is difficult to stimulate the abilities which have already begun to atrophy, crowded out by others which have taken precedence. This may in a large part account for the appointing sterility of the colleges, which are certainly not giving us the intellectual types we might have had a right to expect."

Is it possible by taking thought to add one more to our scientific stature? Assuredly, it is possible to develop innate faculties, but all observation indicates that these are too easily oppressed or crowded to the wall. We are not getting the results which our natures permit or could permit under favourable conditions. Those favourable conditions can be created if we have the will, but we must first have the grace to understand."

Malaria and the Mosquito Fish

In this article in the *Scientific American* under the above caption Dr David Starr Jordan, Chancellor Emeritus, Leland Stanford

University, observes that prevention being always better than cure, "the way to put an end to malaria ravages is to extirpate the mosquitos." He adds.—

"The Campagna of Rome, and 'Five Fingered Fata' are classical examples of the undoing of populations by mosquitos. The 'fading of the glory it was Greece', due primarily to her suicidal wars, was also in large part, the work of mosquitos. I know personally something of their havoc in Macedonia and I am told that in regions about the Black Sea the plague is still more virulent. To get rid of mosquitos is now one of

the first elements in "preventive medicine" or sanitation.

"How shall this be done? There are three lines of attack to get rid of their breeding places, to cover these with oil, or to bring in an enemy which will devour their eggs and young."

"As to the first, pools can often be drained or filled up with sand or rock. As to the second all mosquitos lay their masses of eggs in quiet or stagnant water, in which they hatch. A layer of petroleum over the water will smother their larva or 'wigglers' and will also prevent the winged insect from ever escaping. But there are many bodies of water in which neither of these methods can be used. In such cases, the mosquito-eating fishes are the best resort. A good many kinds of little fishes will eat mosquito eggs or larvae when they find them convenient. Sticklebacks, young trout, some minnows, even goldfish do this to some extent. But what is needed is a kind of fish that makes mosquito killing its chief business, which enters on it with alacrity and which will not or cannot have other more choice kinds of fish."

"These desired traits are found in perfection in the 'top minnows' or 'Gambusia' of the genus *Gambusia*."

Our Anti-malaria and Health Societies and Government ought to import this fish. For "the *Gambusia* is extremely hardy. It will thrive in any still water, not too cold."

Turkey and a New War

The rise of a new and militant Turkey with Kemal Pasha at its head has created the possibility of a Turkish conflict with European imperialism. Will it be Britain that Turkey will fight, for Mosul or will it be Italy, for leadership in the Asiatic world? It may be any or both. The *Literary Digest* quotes from the Turkish and the European press to come to a definite understanding of the situation. One Turkish paper, the *Jumhuriyet* writes:

"The prevailing imperialism in Europe is the only possible cause for a new war. The latest war created an endlessly unsolvable economic situation, from which some European Powers are still wondering how they are going to escape. Taking advantage of this situation, the diplomats are making diplomatic combinations. The combination Chamberlain concluded with Mussolini at Rapallo, after the Locarno agreements, may be considered a direct menace not only to European but to universal peace. It was followed by the Italo-Yugo-Slav understanding, which resulted in the rise of the question whether Italy must not have a Navy as strong as that of France in the Mediterranean."

"While the reasons for a possible new war are being examined, it occurs to one to question what part the oppressed Powers are going to play. Surely Great Britain considers this point very seriously. British

imperialism would not refrain from entering eight, or even ten, world wars so long as its aim is to prevent the resuscitation of nations now deprived of their human rights.

"We cannot say whether or not there will be a new world war. We know only that all Europe is afraid of it, and consequently we must own that war is unavoidable, and be in readiness to face any eventuality. That is the right way. It is preferable to remain awake rather than to sleep and dream of danger."

A British View seems to make much of Mussolini's visit to Tripoli. It says

"Ordinarily, the partial Turkish mobilization would be regarded as a gesture directed against this country in connection with the Mosul negotiations, but comments in the Turkish press seemed to make it clear that it is Italy which is seen as a possible enemy."

"In some quarters here the Duce's visit to Tripoli was seen as the prelude to a bid for Italian hegemony in the Arab world, in which the Fascist chief would attempt to don the mantle of protector of Islam, which the former Kaiser tried, but failed to assume. Thus, it was pointed out would place in his hands a potent weapon with regard to both Asia Minor and the African middle eastern territory under the French sphere of influence. Turkey no longer can appeal to the Arabs on the basis of Islam, and the French are hard put to it to hold their own against the discontent of the Arab elements throughout their overseas possessions and mandated territories. This is a situation which clearly could be turned to Italy's profit if she were able to establish herself as the leader of the Arab world."

Mosul seems to afford the strongest stimulus:

The Turkish government organ, *Millet* (Constantinople), declares flatly that the Mosul problem was so changed at Geneva that it "removed the mask of the laughing-stock called the League of Nations and the world woke up." We read then

"The resolutions passed and the results obtained constitute a travesty of truth and justice. Instead of solving the Mosul question, the League extended Great Britain's mandate for twenty-five years. History does not record anything so ridiculous done in the name of humanity. It is now understood that this League is simply a net of treachery in the hands of the powerful against the weak. Likewise it is the center of intrigues which, rusing the powerful against the powerful, are in consequence able to set the universe aflame. No doubt, the world is carefully watching the tragic comedy of Geneva."

"What a ridiculous and melancholy game" this newspaper exclaims, when it is considered that the "highest politicians, controlling the destinies of Europe," are playing it, and it adds: "This fact is quite enough to show the rottenness of the basic situation of Europe, which every moment threatens to disturb the peace of nations. Wiles and hypocrisy, corruption and ruthlessness can never build up a community of interests."

Turkey, Islam and British Policy

"You can kick the Turk; but pamper Moslem" seems to have become the British motto since Turkey gave up Islam and assumed Rationality. The following extracts from *Review of Reviews* explain why the oil-own Turk is so despised of the British as to why Britain loves to yield to Moslems points of "religion".

In Turkey, Mustapha Kemal is doing his utmost to uproot the Moslem religion and to suppress outward signs of attachment of it. He forbids the wearing of the fez and has caused not a few recalcitrant Turks, who regard it as a badge of their faith, to be executed for disobedience. There is a strange story to effect that a Turkish cruiser was sent not long to punish a fishing village whose inhabitants ignored the "hat law," and that on the morning of its arrival a long row of corpses was laid on the beach—with the result that the cruiser was too short-handed to return. If this, anything like it is the spirit of Turkish fishermen and Turkish peasants, Mustapha Kemal may be laying up for himself more trouble than he or Bolshevik exemplars will easily be able to attract. This consideration may or may not render him less inclined to seek prestige in a quarrel with Great Britain over Mosul, yet in a view of general outlook in the Islamic world, it is that should give pause to ill-disposed armchair critics of responsible British Ministers.

While Turkey thus worships the Goddess of Reason and flouts the religious feelings of her people, Arabia is coming, or has come, completely under the control of the Wahabi, or Puritan, Islamic Sultan Ibn Saud. To his conquest of Mecca he has added the capture of Medina and has driven King Ali, son of Hussein and brother of the Persian of Iraq, Ibn Saud, who has long been the ablest Arabian ruler is now the outstanding personage in Islam. A Moslem Mission from England and India has been conferring with him, surprise need be felt should he assume Caliphate and seek to restore the power of Islam on a Puritan basis, though he may need to be wary and to calm apprehensions that the imitation of his fanatical followers have aroused other parts of the Moslem world. With him British relations have, on the whole, been good, there would seem to be no inherent reason why they should deteriorate.

Military Budgets

The nature of Military budgets is to assume proportions with reference only to the doubts, established custom and whims. Amount of preparedness is a guarantee against foreign aggression. Overpreparedness is rather provocation to others and, as such, a cause of war. Even the British are not overflooded of Military budgets as can be seen from the following quotation from *The Inquirer* London.

We welcome the fact that not in Opposition circles alone but among the Conservatives protests arise from time to time against the assumption that all this expenditure on forces and armaments is necessary to our national safety; the notorious fact being that on the one hand the more the armaments of the nations are increased the greater is the danger of the outbreak of war, and, on the other hand (as the highest experts assure us) there simply is no adequate defence against the attacks made possible by modern invention. We are spending these immense sums of money in the purchase of a safety which is illusory.

Italy and France

Europe is once more neck-deep in diplomacy and intrigue. Nations are combining and recombining with and against one another in the vain hope of profiting thereby. Another period of madness, to be followed by—what? Regarding Franco-Italian relations the *New Republic* says:

Italy is without doubt the chief thorn in France's side at present. Mussolini clearly wants to be the head of a great Latin-Slav block, and he is just as clearly getting there, at the expense chiefly of France. He has come to an agreement with Yugoslavia which will be very useful to him, provided the present quarrel between the Serbs and the irrepresible Croat leader, Radich, does not end in a revolution. He has made, or is about to make, an agreement with Rumania supporting the latter's claim to Bessarabia—an agreement so useful to the Rumanians that it is likely to survive the fall of the dynasty if, as is more than possible, that should take place. He may or may not have made the agreement with Pangalos in Greece which the Turks allege. He is known to be firmly allied to the Fascisti in Hungary and Bavaria, two groups both of which are plotting revolutions. This leaves France, despite her much-vaunted European hegemony, with only Czechoslovakia and Poland still in the status quo. Is Poland still true? Skrzyński has just been in Vienna for the purpose of negotiating a treaty of mutual arbitration with Austria. Poor little Austria is not worth placating for her own sake, but she is an excellent back door through which to reach Berlin, and if the correspondents are right, it is for just that purpose that Poland means to use her.

Trousers Criticised

Public Opinion

Says:

"About one hundred and twenty years ago men began to wear modern trousers. They were instantly condemned as immoral and unworthy of a gentleman. They were the badge of the 'Reds' of the day, the revolutionary sans culottes, it is well known that the Duke of Wellington was refused admittance to Almack's on the ground that he was wearing trousers," writes Mr. Ramsay Traquair in the *Atlantic Monthly*.

"At Trinity College, Cambridge, students were notified that those attending chapel or college in

the objectionable garments would not be counted present; and in 1820 the English Nonconformists decided that a minister should on no account ascend the pulpit in trousers.

"To-day we retain in our dress all the worst points of the worst period of early Victorianism. We have indeed fairly banished the tall hat, but from the neck down we are expensive, insanitary, and ugly.

"A man's coat is so cut as to weigh heavily upon the spine at the base of the neck with the collar stud pressing firmly on the backbone. An attitude with the head poked forward is the result in most elderly men.

"The neck is encircled by a tight band, often of stiffly-starched linen. This is patently absurd and unnecessary. The soft collar is a boon, yet even that is much too tight. Women, who leave their necks free, do not catch more colds than men.

"It is indeed true that men are constitutionally a little more delicate than women, but that is no reason for this swaddling of the neck. Sailors are probably more healthy than business men, yet they expose their necks. This appears to be an urgent reform.

"The coat and waistcoat have a curious history. In Caroline times they descended to the knees, forming a kind of stiff kilt and effectually preventing the wearer from sitting in an ordinary chair. Then they ascended in front until in the days of Napoleon they resembled a chest-protector surmounting a large egg. To-day they have descended to the hips, leaving exposed just that vital region about the waist where so many of our ills originate.

"The modern waistcoat leaves the waist unprotected. The modern jacket is a pocket-and-dust receptacle. Man has far too many pockets attached to every part of his person, into most of which he dare not put anything for fear of spoiling the suit. Even if he uses them, they are so numerous that objects such as letters for the post may be lost in them for weeks.

"When a man buttons his jacket, he can with difficulty raise his arms above the shoulder. If he wants to do any work he has to take off his coat. It binds the shoulders and many a man has been drowned by his coat.

"Trousers are generally acknowledged to be illogical garments. We cannot very well walk without bending the knees so we not only wear garments with no knee-joint, but even insist on a careful crease in just such a position as to make knee-bending as difficult as possible.

"Our clothing should recognise that the human body has joints and bends them. Our present clothes are admirably adapted to be worn by dummy figures, they look at their best in the tailor's window. They hinder us in sitting down and in standing up to a far greater degree than we realise.

"They should leave as much skin exposed as possible, according to the climate. Doctors tell us that we cover ourselves up far too much and that direct light is good for the skin. This is the particular virtue of the sailor's collar, of shorts, and of kilts.

"It has been noticed that the changes in man's dress have always come from below in society upward. Our dress coat does not come to us

from the courts of kings, but from the riding-coat of the English farmer in the eighteenth century.

"Our trousers come from the French peasant; our soft collars originated in Whitechapel; the jacket is a garment of the common people; knickerbockers were originally worn by the lowland Scottish peasant. We adopt our fashions in dress from the proletariat."

Reasons Why Turkey May Keep Peace at Mosul

War and Peace are not products of momentary impulses. Statesmen think more than twice before they go in for either. There are reasons why Turkey should fight for Mosul, but there are yet other reasons why she should not do so. The *New Republic* says:

Mosul compels Mustafa Kemal to choose between continued nationalist consolidation and a revival of Ottoman imperialism. The choice may not be altogether his own. If his opponents at home are unwilling or unable to utilize the Geneva defeat for the promotion of their political fortunes, Kemal may persuade the National Assembly to confine its activities, for the present at least, to a formal verbal protest against the League's award. Peace, even without victory, would enable the continuance of social reforms at home without troublesome foreign complications. But despots have a way of thriving on imperialism and war. A successful military campaign for the recovery of Mosul would silence the criticism of opponents, would restore the Ghazi's prestige, and would make possible the more general use of martial law for the suppression of political dissent.

In such a war, in the opinion of the writer, Turkey would have nothing to gain and everything to lose. Should Mosul be recovered, it would bring with it a crop of minorities problems which would mark a departure from the nationalist policy of Turkey for the Turks and would invite perennial persecution and massacre of the approved Hamidian type. Its exposed frontier would be difficult of defense except at a cost of men and of money which would seriously hamper the economic reconstruction of devastated Anatolia. Its oil fields would make Angora a Mecca of concession-hunters and would bring back to Turkey the curse of the country for a century—foreign capital and foreign capitalists, with foreign interference in their train. If, on the other hand, a war for Mosul should be unsuccessful, Turkey undoubtedly, would be carved up in the spirit of the war-time secret treaties and the defunct settlement of Sevres. Any war, successful or unsuccessful, would bring down upon Turkey the just condemnation of the western world for having repudiated a solemn pledge to accept arbitration. A quarrel with Iraq might be picked on some pretext other than the boundary award, but few would be deceived by the stratagem. And there are enough enterprising statesmen in Europe—Mussolini and Pangalos, to mention but two—who would welcome with open arms the opportunity to enforce the verdict of the League.

In a Spanish Train

An amusing account of a journey in a Spanish train is given by Alfred J. Brown in the *Chambers's Journal* from which we quote portions:

When we entrained at Jaca for Saragossa, two gendarmes escorting a prisoner entered our carriage and sat facing us. A Spanish gendarme is a much more terrible person to look at than a guardsman. He is armed *cap-a-pie*. He wears a uniform as splendid as anything in grand opera, and his belt carries a suggestion of tremendous dignity. Even his dazzling yellow shoulder-straps are impressive and his sword dangles alarmingly at his side.

The prisoner—a meek, little, unshaven fellow who looked very cowed and innocent—sat between them, handcuffed. All three won our admiration, the gendarmes because, in spite of the killing heat they had made an arrest; the prisoner because in the same circumstances, he had summoned up sufficient energy to commit a crime. The heat to us was quite a sufficient deterrent against crime. It was as much as we could do to walk about at all, and the energy required for wrong doing of any kind must have been enormous.

It seemed inconceivable that such a chap-fallen-looking prisoner had exercised it. But, unlike our travelling companions, we could not satisfy our curiosity by asking the gendarmes point-blank what wrong the prisoner had done. As one enters Jaca there is a notice on the walls which, translated reads—

BEGGING AND BLASPHEMY PROHIBITED

It was possible the prisoner had begged, but he looked far too solemn and subdued for the effort of blasphemy.

When the train started, one of the gendarmes removed the prisoner's handcuffs and fastened them on to his feet like gyves so that he could smoke.

Now, any man who can smoke a Spanish cigarette without making a fool of himself merits attention, but a man who can smoke one successfully with his feet fastened together is worthy of tumultuous applause. More than applause. A man who can smoke Spanish cigarette after Spanish cigarette with gyves on, as that little criminal smoked, should be allowed to leave a carriage without a stain upon his character.

The little prisoner, however, smoked cigarettes until his feet ached, and then, quite rightly, he asked to be handcuffed again. One of the gendarmes who was ferociously chewing a cigar, at once obliged; and his companion, who had been making copious notes ever since he entered (every now and again passing his book to his colleague for approval), nodded his agreement.

A peasant woman entered. Peasants are always entering and causing a commotion. This one priced and pushed an enormous sack of olives into the compartment. We arranged it, and made way for her to enter. She pushed another rather larger sack of olives into the carriage, and we arranged that and squeezed up a little further. Then she swung two gigantic baskets of peaches and a crate of melons into the carriage, and at last breathlessly climbed after them.

Then the author changed trains.

In the new carriage which we entered a lottery was in progress. A pedlar with a tray full of boxes of chocolates and the like went the round of the compartment, selling tickets. When all had been supplied, the draw was made and the winning number announced. A very old man with an extraordinary wrinkled face jumped up to claim the prize. He danced a fandango of delight when the box was presented to him and then, very gallantly, offered his prize to a sour old woman sitting nearby, who refused it.

At the next stop the lottery-man slunk out of the carriage, and two new and still more awesome gendarmes entered. It was clear they were on the track of the lottery-man. They asked searching questions all round, and took a book of evidence the old man keeping very quiet through it all and looking rather sick. Not being inspectors, however, the gendarmes could leave the carriage only when the train stopped, by which time the lottery-man had assuredly made his way farther along the train, and it was clear he would never be captured until he attempted to board the engine.

With diversions of this kind, long journeys are made light, and even gay.

The Stage in Turkey

We take the following from *The Literary Digest*:

We have heard not a little latterly about the political and international affairs of Turkey, but nothing or almost nothing about its literature and art. Is it too distressful a country—is it indeed too insecurely a country at all—to have poets and painters? Who are the Thomas Hardys and the Eppsteins of Mustapha Kemal's dominions? And is there a theatre in Turkey—at least a little theatre?

This last question is answered by a Constantinople correspondent of the *Manchester Guardian*, who bears testimony to the stirrings of a nascent dramatic art in that city and beyond. What should be of chief interest to English observers is the fact that until within the last two years the main obstacle to the development of a theatrical art in Turkey was the veto on actresses parts being taken by Turkish women. To appear on the stage a woman would have had to discard her veil and only recently has that been socially possible. Yet it seems never to have occurred to the Turks that boys might take women's parts as effectively as they did on the Elizabethan stage in England. If it had, the Turkish drama might have been enriched by a series of roles, such as those of Rosalind and Viola, created with boy actors in mind.

What actually happened was that a generation or two ago the Turkish-speaking Armenians of Constantinople formed the idea of organizing public theatrical representations in Turkish, since Armenian women were under no such restriction. Unsatisfactory as this must have been to one-hundred-per-cent Turks, it was the basis for a gradual adjustment of the popular mind to the idea of a national drama, and it was not long

before more and more natives took to the art of acting. The last step was taken when two years ago, a Turkish woman, Mme. Bediur Hanum, appeared before the footlights. This lady is the wife of the director of the Dar-ul-Bedai, a national conservatoire and dramatic company. The occasion for her appearance was a tour of the company to Smyrna, where owing to the events of the war, Armenians were not allowed. "The company," says this correspondent, "met with no protests, though it went on to Trebizond and Samsun, which are considered to be conservative and backward areas. Everywhere the advantage of naturalness, not only in pronunciation but even in representation, due to having true Turkish actresses, has been recognized and acclaimed, and there will be no going back from it now."

There are now eight Turkish actresses in the Dar-ul-Bedai and the innovation may be said to have established itself. What the theatrical life of the country needs chiefly is funds and dramatic authors. It is easy to see why native writers have not hitherto felt particularly drawn to the stage, why Armenian actors—culturally as well as linguistically alien—have not been a great stimulus to potential Turkish playwrights. Until very recently the stock-in-trade of the stage in Constantinople has been adaptations, chiefly from the modern French drama. The adapting it is true, is usually very freely done, so that sometimes the original finds itself in an almost unrecognizable form; nevertheless the plays that result are essentially derivative and would never constitute an original dramatic literature. At the best they could but serve as models for genuinely indigenous plays.

"Original dramatic authorship," says the writer in the *Guardian*, is naturally rare, "but a number of recent plays have hit the public taste, and there is promise of a school of Turkish drama for the future. There have been tragedies, plays of peasant life, and even historical plays in verse. On the whole it would seem that the Turkish dramatic mentality tends toward tragedy; the adaptations take the lighter line, but most of the original creative work runs at present to serious moralist and even tragic plays."

A Royal Indian "Navy"

It is a doubtful question whether one should call the programme for the construction of a Royal Indian Navy, a Naval Programme. It appears, however, that some people have taken a serious view of the thing. *The Literary Digest* says:

Thinking men in India have long desired the creation of an Indian Navy for India, we are told, which should be capable of defending her coasts, harbors, and commerce and now that "laudable ambition" is to be realized.

Distrust of the Indian Navy project colors some editorial expressions in the Japanese press. Thus the Tokyo *Nichi Nichi* remarks that Great Britain has already enlarged her Asiatic fleet, while she has shifted the base of her naval operations to a point in the Mediterranean, and this daily continues.

In addition, Singapore will be fortified, an Indian

Navy will be created and the Australian fleet will become powerful, thus making British defenses in the East, complete. Great Britain has her eyes riveted on the East, the peace of which is effectively guaranteed by means of the Four-power Treaty.

"To detect her motive is a question. The object for which she makes good the abrogation of the treaty of the Anglo-Japanese Alliance is also a question. We must scrutinize whether the intention of Great Britain is internal or international. Except for remote futurity, during which unexpected events may occur, it is not difficult for us to answer this question. The object of British policy is no doubt, China and India. To the eyes of Great Britain, China and India are one and the same thing.

"What is the reason for this argument? The possible antagonist of Great Britain will be Soviet Russia, as Czarist Russia was for a long time in the past. The rival of Great Britain is neither the United States nor Japan insofar as China is concerned, whether this conjecture is to the mark is another question. Britain's policy toward China is based on this possibility. Great Britain's dreadful antagonist over India is also Soviet Russia. There are a variety of movements, such as pan-Asianism, constituting menaces to the existence of the British Empire, but the greatest probable threat to the power of India is, in all likelihood, Soviet Russia. To ward off these dangers forms the cause for the orientation of British national defense.

The position which Japan occupies in the field of international politics, the *Nichi Nichi* adds is important to herself as a matter of course, but important also to Great Britain which cannot remain indifferent to Japan. As long as the present relations between Japan and Russia, between Great Britain and Russia, and between Japan and Great Britain, continue, it is asked, how will the triple relations among these three nations develop in the course of time? If the present Russo-Japanese relations should compel the United States to take action similar to that of Great Britain, the probable dangers will be aggravated, in the judgment of this newspaper, which goes on to say that "in this sense the creation of an Indian Navy is a great question."

Italy's work of Italianisation

The Literary Digest says . . .

The violent Denationalization of Italians, French and Slavs by the Germans was the great charge brought against Germany on behalf of those foreign nationals who lived under German rule before the war, but now, we are told by some German editors, it is the turn of the Germans to complain of a similar policy being carried on by Italy, France and some Slav countries toward German nationals who live in their respective territories. Calling a German out of his name, or making him over into an Italian in South Tyrol, we are reminded, was the cause of the speech-making duel between Prime Minister Mussolini of Italy and Foreign Minister Stressemann of Germany. The Italian "Duce" it will be remembered, delivered a thundering speech, in which he maintained that German newspapers and politicians should not waste their time in criticizing the policy pursued by the

Italian authorities in South Tyrol, which before the war was Austrian. Italy, he said, would allow any one to tell her what to do, or not to do, in the regions put under her control by international treaties concluded after the war. German journals assert that the situation of German nationals in South Tyrol is such that Germany's public opinion must sympathize with them, and the *Hamburger Fremdenblatt* observes

"There is hardly a country in the world where the policy of nationalization, or rather of denationalization, has been applied with such energy and zeal as in South Tyrol. What has been done there since the advent of Fascism, that is to say, in the course of three years, would, under normal conditions, require the work of a great many commissions during a great many years.

The inspirer of this policy, according to the *Hamburger Fremdenblatt*, is Ettore Tolomei, who before the war was the leader of the Italian irredentist movement in the Trentino, but now alleged to have changed his role from that of defender of the oppressed into an oppressor, was the "violent Italianization" campaign of South Tyrol. We read further

"Ettore Tolomei declares that Italy will succeed in possessing Tyrol only if she applies the most radical and energetic methods of Italianization. He has succeeded in persuading Fascism to adopt his program. Mussolini himself declared in 1923 that he considered Tolomei's policy as his policy and, considering it, he made it part of the policy of the Italian Government. Since that time, day by day, this policy has been gradually put into effect.

"First of all, the authorities Italianized geographic names, introduced the Italian language in local institutions and removed elected magistrates in the larger cities. Many local officials were ousted or transferred to other provinces. They followed the attack on German inscriptions on public buildings, on German signs, and, indeed, on any display of German. Next came a series of measures leveled against the German language in general, which was prohibited from the courts of justice as the official language, with the result that the few German judges who still hold office are now obliged to resort to the services of interpreters whenever a case between Germans is tried. From the schools the German language has practically been expelled, because the hours for teaching German are reduced by law in the primary classes to zero, through the tacit resistance of the school authorities. But the most painful of restrictions is the attempt of political authorities, and police agents—unjustifiable from a legal standpoint—to prevent parents from giving their children a chance to learn the German language in the hours when they are not busy in the Italianized schools. Private German lessons are permitted only in groups of not more than two children. It is impossible to describe Tolomei's work in all its ramifications. Day after day, decrees, orders and threats befall the population. All these measures naturally provoke every feeling in Italianized German except love for Italy."

Distance lendeth Charm

Mr. G. B. Phanse, a contributor to the *Indus*, a student's magazine published from

London, thinks too highly of the Legislative Assembly of India. It is, in fact, not half so interesting an institution as Mr Phanse, admiring it from a distance, believes it to be. If set to work properly, we think, the Legislative Assembly could bore the Himalayas from end to end in the course of a single session. However, Mr Phanse says

In that most spectacular debating society in the world, wrongly called the Legislative Assembly of India, there recently was held an extremely instructive debate, the subject of which was the desirability or otherwise of extending the provisions of the Government of India Act of 1918 to the North-West Frontier Provinces. A proposition in favour of such extension was moved by an admittedly Muslim bloc, so that from the earliest stages the entire discussion was vitiated by the obstruction of irrelevant considerations. A question, whose essence was by no means of a communal character, was sought to be utilised for their own ends by vainglorious politicians anxious to take up a pose to capture the imagination of their constituents. Mr Bepin Chandra Pal, on whom advancing years seem to have bestowed an insatiable thirst for notoriety, made a dramatic gesture, the discussion threatened to become far too unanimous even for an Indian assembly, and had to be adjourned. On its resumption there was an outpouring of speeches from the Hindu, and quotations from the Muslim members. A hapless Mahasabhee declaimed for fifty minutes on the disaster that would ensue by the extension of reforms to a province which was separated from its own domicile by a matter of several hundreds of miles! The Muslim members repeatedly interrupted the speech—following only that growingly popular tradition of their co-religionists, the tradition of abrogating to themselves ten times more good than they are legitimately entitled to—for, 'as' are they not a poor, victimised, angel-faced lamb-natured, milk-fed minority, which is being daily exploited by a rapacious hectoring, bullying, domineering majority!

But I am digressing, I must return to my hapless Madrassee, whose soul-stirring harangue was abruptly cut short by the President of the Assembly. The original proposition was then put to the vote and carried. This, however, is quite a minor point, for we are assured by *The Times* correspondent that every one was highly pleased with the result (see *The Times*, March 26). Now perplexed observers will naturally ask the how and the why of this bewildering phenomenon. If a man opposes a thing and the thing gets done, why then, the man must be sorry! Well, not quite that in India. Everyone knew, of course, before the discussion began that no matter what its result, it would not affect the Government plans in any degree whatever! The farce was put through, not because it would materially alter the plans made, but just because it supplied yet and more opportunity for educated Hindu and Muslim leaders to abuse one another! The abuse was open, frank, though sometimes it was done under the cloak of defending "principles." Now, whenever an educated Indian politician talks of "principles," depend upon it, there is ground for suspicion; let us, however, console ourselves that we are not the only

people on this earth who hide their grudge against personalities behind the tall talk of principles, though we are more addicted to this cowardly habit than most other peoples.

Mr. Phanse has many other things to say from which the two following quotations point him out as a person with a keen intellect and a sharp tongue

The Muslims, who are always alive to the danger of the exploitation of a minority provided that they themselves are that minority, show here such lamentable lack of imagination that even an Englishman would be ashamed of it. This reluctance on the part of the Muslims to recognise the rights of any other minority but their own lends weight to the apprehensions of the Pandits.

As one reads the debates in the Assembly one realises at once that shorn of all hypocrisy, to the Indian members at any rate, communal considerations were the most important. They may masquerade under a benevolent plea for safeguarding the frontier of India or under a long-winded argument about foreign policy. But such disguises impose on no one. The Government of India chose to keep a discreet silence during the whole debate. It had no need to commit itself, all its dirty work was obliquely being done by the Indian leaders themselves. Let the cocks fight between themselves, whichever is killed, we will cook him for supper, said the innkeeper to his spouse!

Egotism the Prime Virtue

The Public Opinion gives the following

That ability in public life and public life depends on egotism, and that it applies equally to journalists and to politicians, was one of the contentions made by Lord Beaverbrook when delivering the Russon Lecture at the Royal Institution, Liverpool. His list of the egotists will be read with interest, and the frankness of the utterance will be generally admitted.

In the course of the lecture reported in the *Daily Express*, Lord Beaverbrook's own organ, the speaker said—

The detractors of Northcliffe, while acknowledging his power and his victory, hurl at him with an air of damning and final denunciation the charge that he was an egotist. Of course he was an egotist. If he had not been an egotist of genius and sincerity he would have achieved nothing. For nothing great is done in journalism or in politics without egotism.

Mr J. L. Garvin is an egotist that is why he is the greatest living writer of leaf stories this generation has seen. Mr Gardiner is an egotist it is his temperament which gives the colour of reality to his strong political convictions. In journalism the stringing together of words is nothing. It is the egotistic temperament which tells.

Mr. T. P. O'Connor is an egotist but his manner is so charming that he almost invariably manages to conceal the fact even from his greatest friends.

Mr. St. Loe Strachey is an egotist—hence his eminence. He is so kind a man that he makes

not forget the foundation of his reputation : but it is there.

Lord Rothermere is the only great publicist who is not also an egotist. If his success in journalism is less absolute than that of his brother (which I do not admit) it is due to his lack of egotism.

"The public misconception on this point is so deep that I almost despair of removing it. But none the less I must bear witness to the fact

"Lord Rothermere is a man who is modest by nature, and is always only too anxious and willing to efface himself. But the curious thing is that the critic and the opponent will never give Lord Rothermere credit for this obvious defect, they invariably treat him as if he were an egotist like the rest of us.

"If you want to see matters as the ordinary man sees them, and yet in a lambent flame of intuition and inspiration—in other words if you want to be a journalist—you have to be an egotist.

"The politicians also must of necessity be exactly what the journalists are. Can anything equal the egotism of the average Cabinet Minister? Egotism is, in fact, the hall-mark of the politician. He suffers from egotism to a greater degree than any other specialised class in the community, and I have been in close contact with most of these classes in my time.

"I do not think I shall be asked to make out a case to prove that Mr. Churchill is an egotist, or, let us say, Sir William Joynson-Hicks either. I shall take what might appear to be the more difficult instance of the Prime Minister.

"Mr. Baldwin is a shrewd man, but he is an egotist, for he possesses the pride of humility. The Pharisee thanked God that he was not as other men are, meaning that he was better. Mr. Baldwin gives public thanks to Providence that he is not as other statesmen are, meaning that he is not so clever. That is his humility. The implication is that he is more virtuous—that is the egotism.

"I am not blaming the politicians for their egotism. My complaint is that the politicians deny their own egotism, and actually have the audacity to charge journalism with this vice, as though it were a special defect of Fleet Street."

The British Coal Problem

R. H. Tawney writes in the *New Republic*.
(Before the General Strike)

Of all the industrial problems which have haunted Great Britain since 1918, that of mining has been almost the largest and quite the most insistent, and the historian of the future, who explores the troubled years which followed the Armistice will find them black with coal. There have been two national stoppages, one serious district strike, two occasions on which a national strike has been averted only by the appointment of a Commission. Throughout the whole period the industry has been a laboratory of economic and social theories. At the competing hands of mine-owners, mineral-owners and miners, mining experts, public officials and social reformers, it has been offered incompatible drafts of soothing and violent elixirs. And, after a period of unusual prosperity, it entered

towards the end of 1920 on a depression so unforeseen, so profound, and so tragic in its consequences, that the observer is tempted to suspend analysis of the disease in pity for its victims. With an interval of something under eighteen months during 1923 and part of 1924, in which a fillip was given to the export trade by the paralysis of production in the Ruhr, the depression has lasted from that day to this.

The climax was reached last August, when the owners gave notice of a sweeping reduction of the miners, supported by the whole trade union movement, resisted, and the government averted a crisis by agreeing to pay a subsidy up to the end of April of this year, and appointed a commission (composed of persons of unimpeachable respectability) to explore the conditions, organization and prospects of the industry. The report which has just appeared is the fruit of their labors.

In the controversy which has raged round the coal industry in the last seven years, consideration of two separate kinds have usually been confused. The first relates to the economics of the industry—what causes have produced the present depression and what are the prospects of its lifting. The second relates to what may be called its politics—is the present system of ownership and organization to be continued and, if not, on what lines is it to be amended? Obviously these questions overlap: the economic condition of the industry depends both on the world's demand for British coal and on its own organization, and it is unintelligent to wring our hands in fatalistic despair, if the present situation is partly due, as competent critics have affirmed, to wasteful and inefficient methods of production and distribution.

The immediate causes of the present depression in the coal industry are not recondite. Of the total annual output of coal produced in Great Britain, about 12 percent is used for domestic purposes, about 55 percent is used for industrial purposes at home, and about 33 percent is exported. The demand for the first has been practically stationary since 1913, the consumption of the second has declined, the third has been sharply reduced, the difference between the exports for 1909-13 and 1925 being over 15,000,000 tons, the equivalent of the output of about 68,000 miners. The reduced consumption of coal for industrial purposes at home is due to the general depression, particularly in the iron and steel industries. The reduced export is not primarily due, as is often suggested to the fact that British coal is being undersold in neutral markets by foreign competitors; on the contrary (though the Commission's report does not, I think, give the figures) British exports appear to have formed an actually larger proportion of world exports of coal in 1925 than in 1913. The explanation is partly that, owing to the general dislocation of European economic life, the curtailment of industrial development, the diminished output of manufactured goods, and, till recently, currency difficulties, the demand for energy has declined, partly that part of that demand is now being met from sources other than coal, for example hydro-electric power and oil; partly that certain countries which previously relied on imported coal, are now developing their own mineral resources.

Such difficulties are serious enough; but, given energy and intelligence, they are not insuperable and the Commission does not endorse the tragic

view that the days of the British coal industry are numbered, and that the present depression is merely the opening phase of a long decline. The real problem is on a different plane. What has happened is that the old days of easy-going affluence when the British coal industry, the spoiled favorite of fortune, found wealth washed to its shores by the mere tide of economic expansion, have finally come to an end. It still possesses extraordinary advantages, in the situation and quality of British coal. But the impetus derived from mere priority of development has been spent. The new economic environment imposes a new economic strategy. The days of the pioneer with a nose for money—of vicious scrambling for rising profits—are over. What is needed now is science and organization. The question is how far the coal industry, as hitherto conducted, satisfies that requirement.

Nothing has produced more wrath among mine-owners and in the Conservative press during the last seven years than the miner's allegation that the industry is inefficiently organized, and their repeated insistence that before wages were reduced or hours lengthened, the mine-owners should set their own house in order. Their criticisms on the existing organization, though not their proposals for transforming it, are confirmed, with hardly an exception, by the Commission. The private ownership of coal is pronounced contrary to the public interests, and it is proposed that the mineral-owners (who in Great Britain are normally separate from the lessees, the mine-owners) should be compulsorily bought out, the ownership of minerals being thus vested in the state. The existence of numerous small collieries is declared to be prejudicial to efficiency, and it is recommended that the state, as mineral-owner, should have power to insist on amalgamations. The distribution of coal at home is declared to be unnecessarily expensive, and the Commission advises that local authorities (i.e., municipalities and county councils) should be empowered to undertake the retail sale of coal. The transport of coal, owing to the multiplicity of different interests to whom coal wagons belong and the absurdly small size of many of the latter, is too costly, and suggestions are made for reorganizing it. The lack of cooperation among exporters is criticized, and it is urged that cooperative selling agencies shall be established.

The whole thing savours strongly of "nationalisation," but that word is taboo among a large section of conservative Britishers. Says Mr. Tawney.

The British practice of making fifty bites at a cherry, while protesting all the time that there is no intention of doing anything so vulgar as swallow it, has its disadvantages. But, provided the patient takes the medicine, it is reasonable that he should be allowed to choose the label on the bottle, and in view of the prejudices of their fellow countrymen, the Commissioners were probably prudent in protesting that they are not as these bold bad men who deal in nationalization.

The situation just before the strike was as follows:

"The miners argue that for seven years they have pressed for improvements in the organization

of the industry, that their criticisms have been confirmed by one inquiry after another, and that it is monstrously unfair to make them pay for the refusal of successive governments to carry improvements into effect. The mine-owners want a reduction of wages, but hate the reforms which the Commission urges, should accompany it. The government naturally does not want to continue paying the subsidy, but it wants a stoppage still less, for a stoppage would probably cost more than the subsidy itself. Some Conservatives are indignant at the coquetting with Socialism which they seem to discern in the report, while the trade union movement is alarmed at the threat to wages.

How Japan Views the Singapore Scheme

M. Ito writes in the *Young East*

A great disturber of the future peace of the Far East is the British scheme to convert Singapore into a strong naval base. This is my strong belief, which is shared by a great many leaders of Japan. In fact, for the sake of friendly relations between Great Britain and Japan, I regret it deeply and wish that it had never been conceived.

Let us be quite frank. It is a fact that all intelligent men of Japan regard the fortification of Singapore as a great disturbing element to the peace of the Far East and entertain a strong feeling of antipathy towards Great Britain in regard to this matter.

What are then the reasons for which the Japanese regard the British policy with suspicion? It is impossible for me to enumerate all in this short article, but the following may be pointed out as chief reasons:

(a) Singapore is nearer to Japan than Pearl Harbour, by 870 nautical miles. While the distance between Yokohama and Pearl Harbour is 3,470 nautical miles, that between Sasebo and Singapore is 2,560. In other words the menace to Japan of Singapore is 35 percent greater than of Pearl Harbour.

(b) The fortification of Singapore is cold water thrown on the warm memory of the Anglo-Japanese alliance. It turns two intimate friends into potential enemies, as was aptly expressed by Lord Grey some time ago.

(c) Singapore is situated at a point only five degrees out of the limit provided in the Washington Treaty. Theoretically it is right to arm the port, but morally wrong. Not only that, but is against the spirit and tendency of the present day favouring disarmament.

(d) The Singapore scheme will be completed in 1931, the very year when the Four Powers' Treaty expires. It gives rise to a suspicion that Great Britain has no intention to renew the treaty.

(e) Singapore is the base for British aggression in the Far East. What is a great naval port, which will give shelter to the whole British fleet if it is not a base for some offensive operations in the Far East?

The present Conservative authorities of Great Britain assert time and again that the Singapore base will be nothing more than a defensive organ. This is mere camouflage. No military or naval

organ without offensive equipments can be of use for defensive purposes. An efficient defensive organ may be converted any time into a powerful weapon of offence.

Let me ask a question: Against what country other than Japan does Great Britain intend to fortify Singapore? Is it against China, or Siam or Annam? There can be no military preparations which have no party as objective. Against whom does Great Britain intend to arm Singapore by spending as much as ten million pounds sterling and that when the world is at peace and public opinion is in favour of limitation of armament? I say without hesitation that it is against Japan, for nowhere in the Far East except her has Great Britain any great power to arm against.

Were Japan to ask the British Government the question, "Against whom are you arming," it would at once reply, "Against nobody." If so, why not suspend the Singapore scheme?

Indian Words in the Japanese Language

J. Takakusu gives us a list of some words that the Japanese have borrowed from India, in the *Young East*. For example

One of the words a foreign visitor to Japan hears most often spoken by rickshaw men, salesmen and other persons of lower classes is 'danna'. This is an abbreviation of the Indian word *danapati* (benefactor), and is used in the same sense as master or sahib in India.

A present given to a Buddhist temple is called 'dashin', which is a corruption of *daksina*.

Japanese visiting Buddhist temples or Shinto shrines say 'namo' (salutation) when paying homage to the objects of worship enshrined therein.

The Japanese word 'tera' meaning a Buddhist temple comes from the Pali word *thera* (in elder).

In America, Land of Equality

The following bits are taken from *The World To-morrow*

Recently the "Christian Herald" advertised a trip to the Holy Land for preachers. A minister of the south who had been taking the journal for years wrote and booked passage and paid his fee, but when his passport came in, it was found that he was colored. Upon arriving in New York, he was refused passage and his money was refunded with \$150 extra for his other expenses.

"Wanted. Factory helpers; experienced only. white \$24.00, colored \$20.00. Apply—"

The dentists of an eastern state held a convention in a large city. A few days before the convention met, the colored dentists of the city received word from their professional brethren that they might attend the convention provided they used the fire escape at the rear of the building and sat in seats that would be reserved for them.

In South Carolina a white man stole an auto and was sentenced to thirty days; on the same day and by the same judge, a Negro who stole a

bicycle was sent to the chain gang for three years.

An educated and gentlemanly colored man returned from serving in France "to make the world safe for democracy" to his home in a northern state. He took a civil service examination for a position in the customs service and was notified by mail that he stood first on the list of candidates, with a grade of 98.5 per cent. When he went to the office to see about his appointment, the woman in charge was dumbfounded to discover that he was a colored man. "I didn't suppose you would make any difference," he said. "In this case it does," said the woman. The position put him in charge of ten white women. The position was given to a white man who rated 75 per cent on the examination.

A colored girl on the faculty of a Negro college recently went to stay overnight with her brother who lived a few miles out from the college town. He was a successful farmer whose cotton crop had aroused the envy of some of the white farmers of the neighbourhood. There were rumors that his cotton might be burned. Late on the particular night the brother and sister heard a disturbance about the out-buildings. He went outside. The sister heard a shot, and as she went on she saw him lying dead. As she stood by the side of his body some of the group of white men standing by said, "Let's kill her too." But the sheriff stepped out of the group and ordered them to leave her alone. Unaided, she then loaded her brother's body into his truck and drove him to town.

A colored man was recently sentenced to death in Delaware for assaulting a white girl. In white men in Alabama were fined \$250 each for assaulting colored girls.

She is a native of Gulf state who until several weeks ago was on the college faculty. But she attended a Negro student conference and ate several meals with colored students so the president is dismissing her. But she said to a friend, "The conference was worth it."

A colored student home from college for vacation was working in his father's store. When a white drummer accosted his mother familiarly by her first name, the lad asked the man if he would not use the term "Mrs." The drummer assented, but later the incident got around town, and the mayor with several other men came to the store and threatened the boy. So the parents, fearing for his safety, sent him away that night and have not allowed him to return.

The Matteotti Trial

The *Review of Reviews* says:

To the crime of having murdered Signor Matteotti, the Fascist system has now added the lugubrious farce of the "trial" of his immediate assassins. Some lingering sense, not of shame but of fear of public opinion, seems to have prevented at the last moment the triumphant acquittal of all the accused and the organisation of festivities in their honour, but after several days' proceedings two of them were found "Not Guilty," while the remaining three were convicted of "unintentional homicide extenuated by the subnormal physical

justice of Signor Matteotti and by other circumstances." Thus in reality Matteotti was found guilty of reprehensible weakness in succumbing 'subordinally' to the daggers of the "practical jokers" who led him. Upon the chief assassin, Damm, and 20 of his accomplices a sentence of five years even months and twenty days' penal servitude was passed, four years having been already remitted under the recent amnesty and one year and nine months' simple imprisonment having been served while awaiting trial. They were left with two months and twenty days to tide over before release. Now closely this result agrees with Professor Javvini's forecast in the January number of a REVIEW OF REVIEWS, our readers will remember said the sentence "might be six years—diminished on account of extenuating circumstances—suppose that five years are given. Four of them are voted by reductions under the amnesty, and the accused have already spent eighteen months in prison." With unconscious irony, Mussolini followed up the "trial"—which doubtless took a load off his mind—with a speech celebrating the seventh anniversary of Fascism in which he said "It is good to live and also to die under the shadow of a Fascist standard."

Lord Reading

The same Journal says

Lord Reading has left India and Lord Irwin his successor in the Viceroyalty, has taken his place. All the credit for the improvement noticeable during the past few years were to be given to the outgoing Viceroy, he would be entitled to rank as one of the great rulers of the Indian Empire. As he would be the first to admit, he has been 'lucky' and he has also been ably seconded. He knew when he accepted the appointment, that he was running great risks and the risks attracted him, as he was as bold as he has been fortunate, and his country has no reason to regret either his illness or his good fortune. Luck has sometimes been defined as the reward of men who know how to enter into it as much as chance. In all probability, Lord Reading has had more merit than a entirely dispassionate analysis of his record in India might award to him. If he sometimes seemed to temporise when firm action appeared expedient, he can at least claim to have handed over to his successor a far more tranquil and prosperous India than his predecessor bequeathed him. He will be welcomed home as a man who has done well, and in India, his name will not be forgotten.

As Others See Us

Regarding the Hindu-Moslem situation in India, the American *Current History Magazine* says:

The situation is not hopeless. Professor W. Norman Brown of Johns Hopkins University states the truth when he points out that Hindus and Moslems have more in common between themselves

than have either with the alien British. Despite all their present-day fanaticism and bitterness, there is really nothing fundamentally antagonistic between the Hindus and Moslems. Sooner or later they will have to merge their differences, as they did under Mahatma Gandhi, and unite as a nation, one and indivisible. Hard knocks and sad disillusionments will show them the folly of committing national suicide and drive them in the arms of each other, never to separate again. There is no other choice. In the meantime the dogs of fanaticism and fratricide are to set, and it is interesting, though painful, to watch developments.

Let us hope that Prof. Brown is right.

Green Lives

ARE THERE PLANTS WHERE PLANTS ARE SUPREMACY?

The following extracts from an article in the *Morning Post* of London under the above caption will convey some idea of the profound impression made by Prof. J. C. Bose's discovery of the *Nervous Reflexes in Plants*. These discoveries establish the generalisation that the physiological mechanism of the plant is identical with that of the animal. For there is hardly any phenomenon of irritability observed in the animal which is not also discoverable in the plant. In the multicellular animal organism as higher complexity was attained, it was accompanied by the gradual evolution of a nervous system, by which the different organs are put in intimate connection with each other and their various activities coordinated for ensuring the common good of the organism. Such connecting nervous links had not been suspected in the plant, commonly regarded as distinctly lower in the scale of evolution.

PLANT IRRITABLES

The researches described in the present work show that not only has a nervous system been evolved in the plant, but that it has reached a very high degree of perfection, as marked by the reflex arc, in which a sensory becomes transformed into a motor impulse. It was the discovery of the electric response of non-living matter, such as metals, to stimulus, published in 1900 by the International Congress of Science, Paris, which set Sir Jagadish Chandra Bose investigating the problem as then practically untouched, of plant-impulse. As early as May, 1901 in his famous Friday Evening Discourse before the Royal Institution, he was able to show that every plant—i.e., the ordinary plant, which cannot be described as a 'sensitive,' scientifically or poetically—and even every organ of plant, is excitable, and responds to stimulus by electric response of galvanometric negativity, the response being abolished at the death of the plant. It has been a long struggle to remove the *a priori* misconceptions and baseless speculations which checked advances in our knowledge of plant-physiology. The story of the Bengal discoverer's triumphs, culminating in the creation of the Bose Research Institute at Calcutta, which provides a basis of further investigation, is admirably told in "The Life and Work of Sir Jagadish Bose" by Professor Patrick Geddes (same publisher).

VEGETABLE WORLD

This proof that life in a plant differs not in kind, but only in degree, from that in an animal is of vital importance for the future "It may be confidently expected," writes the famous discoverer, "that the broader outlook of the unity of physiological mechanism in all life will lead to a great advance in the physiological investigation of the irritability of all living tissues." But can a plant be said to possess consciousness, as much as might be described as an embryo *ego*? That is one of the fascinating subjects which must be presently explored—for a study of plant-psychology is the inevitable sequel to the study of plant physiology. Here is a task which has already been touched, and may be left for the present to the Director of the Bose Research Institute, who has the poetic imagination possessed by all great scientists, and that being so, naturally dedicates his latest book to his life-long friend, Sir Rabindranath Tagore. On this planet the animal has conquered the plant, turning it into a food supply or a decoration. Yet the world power immanent in vegetation is significantly brought home to the

lords of creation by R. L. Stevenson's strange poem on the silent warfare in a sub-tropical forest.

Even our million-mansioned London may some day be re-possessed and changed into green mounds by the green lives which were there before the prehistoric city was first dreamed and even now re-appear wherever a cleared area is left derelict for a short time. But, among the innumerable planets which circle about the countless distant suns, there may be vegetable worlds where the plant has become self-portant (we have examples of such) and developed wisdom and power and an *ego*, retained the lordship over a living creatures. Such a world may exist underneath the unbroken cloud canopy which hides the solid surface of Venus, our nearest planetary neighbour, from the astronomer's assisted eyes. Discoveries such as Sir Jagadis Bose's not only add to our pride in the intellectual life of India but also enable the imaginative spirit of man to clap its silver wings and fly through new vistas of thought.

NOTES

The Presidency Area (Emergency) Security Bill

Lord Lytton, Governor of Bengal, addressed the Bengal Legislative Council before the Presidency Area (Emergency) Security Bill was taken up. He gave an exposition of the circumstances which, in the opinion of his Government, had rendered the measure necessary. We have read his speech, from the first sentence to the last, but have not been convinced by what he said. Nor has the speech of Sir Hugh Stephenson appeared to us convincing.

His Excellency argued that the Executive and the Police had not sufficient powers to deal with emergencies like the recent Calcutta riots and orgies of assassination. That is the official view and also the non-official Anglo-Indian (old style) view. But the Indian non-official view has been for the most part quite different. In order to ascertain what the unbiassed non-official view is, it is necessary to pay attention to what was said by Indians before the public became aware of the fact that such a Bill was to be placed before the Council. For, whatever its numerical strength and importance, there is a section of the people which always

supports official measures, sincerely, or from motives of self-interest or of expediency.

The organs of Indian public opinion which represent the views of the majority of politically-minded Indians complained during and after the riots that the Bengal Government and its Police had not done their duty during the first stage of the riots and that policemen and soldiers drafted to do police duty had looked on while looting and stabbing, etc., went on before their eyes. It will not do to dismiss this and other similar condemnation of the Government as irresponsible utterances of professional agitators. For, the resolution passed unanimously at the conference of some Hindu and Moslem leaders held at the British Indian Association coincided with this view of Government's neglect of duty. At this conference there were present men like the Maharajadhiraj of Burdwan, Sir Abdul Rahim, Sir Probhas Chunder Mitter, etc., some of whom had filled the offices of Executive Councillor, Minister, etc., and had direct personal knowledge of the powers and duties of the Executive and the Police under the existing laws. These men, and men like the Nawab Bahadur of Murshidabad, who can

by no stretch of imagination be considered professional agitators or firebrands, joined in condemning the supineness and neglect of duty of the Government. None of them said that Government's failure to do its duty, was due to its not possessing sufficient powers to deal with a situation like the Calcutta riots and assassinations. They were undoubtedly of the opinion that, by the exercise of the powers given to the Executive and the Police by the existing penal laws for preventive and punitive purposes, the riots could have been either prevented or speedily suppressed.

Even after the publication of the draft of the Bill in the papers the majority of Indian papers considered it unnecessary and condemned it. A very small number, *e.g.*, *The Bengalee*, supported its principle but wanted it to be amended in certain vital respects, which was not done before its passage into law.

We do not hold it proved, then, that Government required fresh powers to deal with emergencies like the Calcutta April riots.

It was said at the British Indian Association conference, and it has been observed in both Indian and Anglo-Indian papers, that there were "brains" behind the riots. This we believe to be true. At the conference the Maharajadhiraj gave the broadest possible hint that at the conference hall itself the possessor or possessors of the brains were present. A now famous (or notorious?) speech delivered some three months before the riots, contained a sort of threat that, unless the Hindus gave up their *shuddhi* and *sangathan* movement, there would be a conflagration. Minatory articles, in a certain section of the press, calculated to excite hatred against the Hindus, were not also wanting. The questions, therefore, arise, why a Government which can ferret out real or supposed revolutionaries, whose ("I. D. scent political danger where none exists and open and keep photographic or other records of even private correspondence, could not or did not suspect that there would be trouble ahead owing to such published utterances and articles, and why such a Government could not or did not spot these "brains" before or even after the riots. It may, of course, be that the ears and eyes of the Government are so wholly preoccupied with possible dangers to itself that attention can not be spared for taking note of what may lead to religious riots, which are held to

strengthen the foundations of British rule and to prove its *raison d'être*.

In East and North Bengal, the desecration, mutilation and stealing of Hindu idols and the desecration or burning of Hindu temples have been taking place for some time past. Government issued a *communiqué* some time ago stating that the reports of such occurrences were either exaggerated or inaccurate. Exaggerations or inaccuracies there may have been in some of the reports--we do not know. But the *communiqué* did not contradict or correct all the reports, but only a few. The obvious logical conclusion would, therefore, follow that the remaining, uncontradicted and uncorrected, reports were true. And after the issue of that one single *communiqué*, reports of these nefarious deeds have appeared in the papers in more alarming numbers than before. There has not been any fresh *communiqué*. What is Government doing to put a stop to these cowardly acts of wicked and stupid fanaticism? Or is it waiting for fresh outbursts of communal fury in order that it may be able to claim fresh powers to deal with such emergencies?

We say all this in order to show that Government is not sufficiently careful and energetic to nip evils like communal riots in the bud, though it is more than sufficiently careful and energetic nay, overzealous, in nipping possible political dangers to itself in the bud.

Lord Lytton contended in effect that an emergency having arisen and Government not having been in possession of sufficient legal powers to tackle it, the passing of a new Act to give it such powers was justifiable. We have shown above that the prevailing Indian opinion is that Government did possess sufficient powers to deal with the situation quickly. We assert, in addition, that Government was indirectly responsible for the outbreak of the riots and certainly responsible for their continuance for such a length of time. That such an emergency arose at all is a condemnation of the Government, and proves its lack of foresight. Why could not Government anticipate the possibility of the riots and prevent them? It had sufficient materials before and sufficient powers to do so. Why could not Government at the very first stage adopt all those steps which ultimately it took to put an end to the evil? Why could not Government warn or prosecute the newspapers which in its opinion were guilty of exciting class hatred or of

inciting to violence, early enough? As a matter of fact, prosecutions were started after more than sufficient mischief had been done.

We do not cherish the diabolical desire that there should be any more communal riots anywhere. But if unfortunately they do occur in future, and if Government fails to do its duty, we shall thank our stars if it does not again demand fresh powers.

The Security Bill was a transparent attempt to whitewash Government's supineness, neglect of duty and failure to protect the lives and properties of the citizens of Calcutta.

"The Dangerous Element Imported from Up-country"

It has been said that the intention of the Bill is mainly to rid the city of the dangerous element imported from up-country. With that intention right-thinking men may not have any quarrel. But good intentions are not always sincerely entertained, and the powers taken for the purpose, even when not abused, often produce undesirable results.

Had the Goonda Act been as extensively used and applied as it should and could have been "the dangerous element" from up-country would not have been so large in Calcutta as it is to-day. Moreover, "the dangerous element" does not certainly consist of up-countrymen alone. According to Sir Hugh Stephenson himself, "the registered bad characters in Calcutta" number about a thousand. He did not say in his speech that they were imported by anybody or had themselves come of their own accord from up-country to take part in the recent riots, but he stated that "in times of disturbance they were most dangerous to Calcutta."

"The dangerous element imported from up-country" has been trailed across the path of duty of Bengal politicians as a sort of red herring, making them forget an important principle.

When the Non-Burman Offenders' Expulsion Act was passed by the Burma Council, subsequently when it was urged in the Legislative Assembly that the Governor-General should not allow it to become law, it was urged by Indian politicians in all Provinces of India, including Bengal, that no province of the British Indian Empire should, on principle, be allowed to discriminate against

the inhabitants of other provinces in its legislative activities. It was also observed that the Governor-General ought not to have allowed Non-Burman Offender's Bill to be introduced in the Burma Council. In the case of the Calcutta Security Bill, not a single member of the Bengal Council appears to have referred to this principle. So far as we are aware Bengal newspapers also seem generally to have overlooked this principle. The Non-Burman Offenders' Expulsion Act provides for the expulsion from Burma of only those non-Burmans who may be proved guilty of certain offences after trial in open court. Still the Act was objected to. But in the case of the Calcutta Security Bill, though there is to be no trial and no appeal to any law-court, though men would be ordered to leave the Presidency Area or the province of Bengal, as the case may be, *for no proved offence*, yet in the opinion of its supporters, it was quite justifiable in principle. We are not jurists and should not be held to be laying down what ought to be the correct principle to be followed. What we desire to point out is, that, whereas in the case of Burma it was considered improper for her to seek to dump her non-Burman offenders on other provinces, in the case of Bengal it has not been thought improper for her to dump non-Bengalis, merely suspected by the Police and the Executive of being potentially dangerous, on other provinces. In the case of the Burma Government, it was thought that the Act might be made a wrong use of from political motives, but in the case of the Bengal Government, the supporters of the Security Bill thought that the persons constituting it and its executive and police in the Presidency Area at present and in future were and would be angelic in the accuracy of their information, infallible in their wisdom and impeccable as regards their intentions and freedom from political and economic bias against individuals and classes.

It is notorious that the police could not (one need not say "did not") protect the lives and property of the citizens of Calcutta in many cases. Mr J. N. Basu said in the Bengal Council, without being contradicted, that some firms wanted police protection during the riots but were told to make their own arrangements. He mentioned other facts to show that the police could not give sufficient help to the citizens. We do not, of course, think the number of policemen

can be so increased at any time in any city as to be able to protect all persons and their property in times of trouble. Therefore, it is necessary that people should have other means of protection. They should be able either to protect themselves, or to engage men who would be able to protect them. That is common sense. But Lord Lytton said that to allow the citizens to arm themselves and become responsible for their own defence would lead straight to the jungle, to the "rule of claw" in which the beasts preserved their lives, instead of the rule of law by which civilised communities were governed. We intend to comment on this statement later on. There remains to consider the alternative of employing a sufficient number of men to protect one's life, limbs and property. The men who would be able to give such protection would necessarily be able-bodied men—in some cases they may be particularly strong men. But these are the men who are likely to be considered potentially dangerous. So the alternative of having private protectors may be very risky, both to the men and their employers. For both may come under the clutches of the law. Therefore, this Security Law is also in a sense an Insecurity Law. For, if one is weak and unarmed and without private defenders, his life and property are unsafe. If one is strong, unarmed, he is potentially dangerous, and may, if a non-Bengali, have to leave Bengal for a time, and, if a Bengali, may have to leave the Presidency Area for a time. If one has private defenders, he and his defenders may meet with a similar fate.

So the safest (!) course is to be weak and undefended and to depend entirely on the good intention (bought or unbought), the mercy, and the ability of the police to give adequate protection at all times, including times of commotion and danger.

To be emasculated and unmanly is, therefore, a great virtue, and the greatest promoters of pacifism are the emasculated peoples of the earth. Lord Lytton and his satellites should be awarded this year's Nobel Prize for promoting peace, because they may hereafter be credited with having unconsciously set in operation forces and tendencies contributing, to however slight in extent, to the emasculation of the people of some parts of India.

Many up-countrymen come to Calcutta to make a living by unskilled labour. Some

of them and others afterwards open a small shop and end by becoming even millionaires. But when they arrive at Calcutta they have no ostensible means of living. Anything which may in the least deter such men, who sometimes have a good physique, from coming to Calcutta, would be a loss to the country as a whole.

We cannot dogmatically assert that the Security Act will certainly produce all the evil consequences apprehended. But neither can it be dogmatically asserted that it will not.

The Rule of Claw and The Rule of Law

Apt alliteration is artful and may be a help to the craftsmanship of poets, but it has not yet been claimed that anything like it develops statesmanship. Therefore, when Lord Lytton referred in his address on the Security Bill to the rule of law and the rule of claw, the antithesis may have adorned his oration, but it did not heighten people's opinion of his statesmanship.

His Excellency will excuse us for reminding him that we do not live entirely under the rule of law there being so many "lawless laws" encumbering our liberties. Even on the assumption that the Security Act was required, it cannot but be characterised as another "lawless law", because, under it, it would enable the police and the executive to punish people by depriving them of their freedom of residence and movement without any trial by any court of law, either open or in camera, and without the right of appeal to any law-court. To speak of the rule of law in connection with such an Act was, therefore, an unintended joke which we are unable to appreciate.

The antithesis between claw and law may have served some rhetorical purpose, but Lord Lytton knows that his country has yet arrived at the stage when laws would no longer require some sort of claws to secure obedience to them. Whether such a time will ever come is another question.

The Security Act does not intend to bring about the chipping of all claws, or the total abolition of the rule of claw. What it intends is that within the area of its operation private persons of Indian extraction are not to have claws—in any case, not effective claws, and that it is only the police and men of that ilk who are to have claws. 'The jungle' is not certainly fit for "civilised communities" to live in.

But can His Excellency assert that a country where the police alone are considered fit to have and wield arms is fit for manly and self-respecting "civilised communities" to dwell in? Really manly and self-respecting people cannot but despise a country where an imported or dumped Governor can propound unchallenged the kind of political doctrine about law and claw that Lord Lytton has done. The jungle where the rule of claw prevails is at least a nursery of self-help and courage. But what virtues will the rule of law *a la* Lytton beget?

Are there any "civilised communities" in any country in which the people have not the right of private defence? "Ill fares the land to hastening ills a prey", where the police can make or mar and men decay.

Centralization of Power

Wrote a certain British officer,

"I would reward good conduct (of natives) with honour, but never with power."

Nullam imperium tutum, nisi benevolentia munitum. The goodwill of the natives may be retained without granting them power, the semblance is sufficient, and although I abhor in private life that maxim of Rochefort's which recommends a man to live with his friends as if they were one day to be his enemies, I think it may be remembered with effect by the sovereigns of India.

This was the counsel of perfection on which the authorities acted after the suppression of the Indian Mutiny in order to consolidate their power. No opening was left in the Army for ambitious and deserving natives of this country. Everything was kept under the control of the foreign bureaucracy in whose hands power was thus centralized, and the interests of the millions of the "heathens" were seldom attended to by men in authority. This led to the destruction of the ancient social hierarchy of India. Major Evans Bell wrote.—

"In almost every province we have done our best, or worst, to sweep away every link between the Government and the tiller of the soil. Over the greater part of the Madras Presidency the Princes, the nobles, the Polygars and the Zemindars,* have sunk and expired under the exactions and confiscations of our system, and we have handed the ryot to the tender mercies of the Cornum and the Tehsildar. The genial relations

of landlord and tenant have been dissolved, the ancient social hierarchy has been destroyed and the leisured class has disappeared."

X

Enactment of Criminal Law in India

The Charter of 1833 saddled India with a Law Member, the first being Macaulay. He prepared the Penal Code, but this was not enacted as long as the East India Company ruled India. It was after the abolition of that Company of Christian adventurers, not "gentlemen", and the transfer of the Government of India to the Crown, that Macaulay's draft of the Penal Code became the law of the land.

The great Irish orator Edmund Burke described the Irish Penal Code as

"well-digested and well-disposed in all its parts: a machine of wise and elaborate contrivance and as well-fitted for the oppression, impoverishment, and degradation of a people, and the debasement in them of human nature itself, as ever proceeded from the perverted ingenuity of man."

The Indian Penal Code is much worse than the Irish one. The principle of the equality of men in the eye of the law has not been observed in it throughout. It has greatly emphasised the color bar in India. This with the Criminal Procedure Code has made it very difficult, if not impossible, for an Indian victim of the colorless European criminal to obtain due redress or justice. There can be very little doubt that the enactment of the criminal law was designed to consolidate the Christian Power by depressing Indians by always keeping the sword of Democles hanging over their heads.

Regarding Law in general, an eminent jurist named William Godwin said.—

"Law is an institution of the most pernicious tendency."

Whatever excesses or barbarities the man in authority commits he does it in the name of Law and Order. Nowhere is this more evident than in India.

X

Musalman Servants in the Employ of the Hindus

There was a time when, in England, communal riots were no less frequent than they are unfortunately in India. Not only were there fracas between Christians and Jews, but

* Appendix to Report from Select Committee on the affairs of the East India Company. 1832 Vol. V. (Military) pp. 480-483 (Captain P. Page's Memorandum).

* Quoted by D. E. Wacha in "Indian Polity," p. 43. Bombay. 1895.

between Protestant Christians and Roman Catholic Christians also. Although such communal riots have become things of the past in England, yet there is not much love lost between the Roman Catholic and Protestant Christians in that land. A Roman Catholic, so far as possible, and if he can help it, will employ a Protestant servant and vice versa. The Protestants are divided into different sects, such as, Baptists, Quakers, High Church, Low Church, &c. As a rule, a man of one sub-sect does not engage the services of a servant of a different sub-sect. It is a land of toleration. A Hindu does not scruple to employ a Musalman for such services as he is fit for. It is, therefore, that Muhammadans find employment in large numbers in rich Hindus' houses as coachmen, cooks, menials, &c. Musalman servants have of always proved loyal and faithful to their non-Moslem masters. In the Calcutta riots, one of the Moslem servants acted treacherously.

Non-Brahmana Party in Madras, was celebrated in Madras a month ago with great enthusiasm. A big procession passed along the streets.

Sectarian and communal organisations may, if they try, do good to the groups they represent in the spheres of social and economic progress. In politics they have proved a nuisance and an unmitigated evil. We are, therefore, prepared to do honour to all leaders of the Non-Brahmana and other sectional movements for what social and economic services they have rendered or may render to their classes. But we are against their political activities, and cannot but deplore and condemn the bad blood which has been created by them.

Sir A. R. Banerji

On the occasion of the retirement of Sir Albion Rajkumar Banerji from the Dewan-ship of Mysore His Highness the Maharaja of Mysore spoke of him in words of fitting

The Late Sir P. T. Chettiar

The first anniversary of the death of Sir P. Thiruvagaraja Chettiar, leader of the

The Late Sir P. T. Chettiar

Sir A. R. Banerji

praise. Sir Albion first made his mark as an administrator as Dewan of Cochin. He then passed on to Mysore as a member of its Council, and was subsequently appointed

its Dewan. According to His Highness, Sir Albion became Dewan at a time of financial strain, but was able to leave the finances of the State in a sound condition. Reforms and progress in other directions also stand to his credit. It is said, he will seek election to the British Parliament as a Liberal candidate. Whatever his British politics may be, his Indian countrymen will hope and expect that a man of his calibre and experience will speak up for India whenever any occasion arises for doing so.

Miss Sonutai Chavan

It is a pleasure to note that Indian women are gradually taking their place in the public life of the country. One of the latest to do so is Miss Sonutai Chavan. She graduated from the Indian Women's University with credit and was appointed principal of the Kolhapur Abalya Bai Girls' School. She has now become a commissioner of the Kolhapur Municipality. If women

Miss Sonutai Chavan

members of municipalities, besides taking part in their general work, paid special attention to those departments of work which bear on child welfare and women's welfare. They would be able to do much good.

Berhampore Poorland Farm

In 1921, Prof. S. Sinha of the Krishna College, Berhampore, purchased a run-down farm (area 31 bighas) and named it "Berhampore Poorland Farm". When he named it, his desire was to change its name to "Berhampore Richland Farm" when a decent price would be obtained from it. Prof. Sinha

Chinsurah Green Jute Plants as standing on the Berhampore Poorland Farm. Height ... 13.1 on 22nd August, 1925, when the photograph was taken. Height on the 22nd Sept. ... 19'8" - yield 8½ and per bigha

is the capitalist and director of the Farm. He has not introduced any improved field machinery into his farm, he has increased the yield of crops by proper application of manure, by planting good seeds, by rotation of crops etc. Here we publish a picture of the "Chinsurah Green" jute plot of the said Farm. The picture and three

... exhibited at the Murshidabad District Agricultural Show, held on the District Agricultural Farm on 9th and 10th January 1926, and were highly praised by the Deputy Director of Agriculture and District Agricultural Officers of Nadia and Murshidabad. Although the farm has been self-supporting and paying, Proof. Sinha does not wish to change its name now to Richland Farm, as the very name "Poorland" has been a "blessing" to him.

The Matteotti Trial and Verdict

For the greater part of our knowledge of current foreign affairs, we have to depend on Reuter's agency and newspapers conducted in English by Britishers and Americans. As for commercial and also imperial purposes, a sort of understanding exists between Great Britain and America, the information relating to foreign affairs which reaches India is mostly what can be reported from the British and American points of view. Hence, we try, whenever we can, to show our readers the other side of the shield, without, of course, taking sides ourselves. It is on that principle that we publish in this issue Dr Taraknath Das's article on Mussolini.

It is necessary to know what British and American papers generally charge the Fascists and Mussolini with. These will be clear from some American papers' comments on the Matteotti trial and verdict. In a Baltimore *Sun* article it is stated:

Matteotti was killed on June 11, 1924, in a motor-car, somewhere in the wild region of the campagna Romana, north of Rome, having been that afternoon seized and abducted in the open street a few hundred yards from his own door. His body was discovered at Quartarella, close to the Via Flaminia, some fifteen miles from Rome, 40 months after the crime.

The amazing circumstances of the crime and the splendid character of the victim so seized the popular imagination that it is no exaggeration to state that Giacomo Matteotti after his death, became the object of a kind of religious cult for millions of Italians.

The trial that followed has been regarded in many countries outside of Italy "as a farce. Almost two years have elapsed since the murder.

In the recent trial at Chieti, in the Abruzzi, pointed out the Brooklyn *Eagle*, "the Fascists picked the jurors, chose the prosecuting officers, and terrorized the court." "An unprejudiced trial

was therefore out of the question, maintains the Louisville *Courier-Journal*, which sees in this 'political crime' a 'blot upon the escutcheon of Fascist Italy.' The defense presented will not quiet the belief that Fascist leadership was involved and that the murderers were agents, and not principals. Believes the Newark *Voice* From England, Cesare Rossi, formerly Mussolini's press agent, is said by the Boston *Globe* to declare that the three men who were sentenced at Chieti were members of the Fascist secret police, acting under the orders of Mussolini.

"UNFINISHED COURAGE"

And patient obduracy, we are told, were two of the characteristics of Giacomo Matteotti, this socialist member of the Italian Parliament, whose death at the hands of political adversaries in June, 1924, threatened for a time the power of Mussolini. Three of the five Fascists charged with the crime have been found guilty.

The Norfolk *Virginian-Pilot* of America calls the verdict of the jury in the Matteotti case one of the most ingenious verdicts in Italian jurisprudence. The jury found that

Three countrymen of the Italian Parliament

Member committed homicide, but unintentionally, for cause, with relative complicity and with extenuating circumstances. The extenuating circumstances are said to have consisted of the jury's decision that the Italian Deputy's physical resistance was below normal, that the blow or blows which killed him would not have killed a normally robust man. With this finding before him, says the Rome correspondent of the *New York World*,

"The Judge sentenced the three men to five years and eleven months imprisonment. He then softened the blow by deducting four years, under the King's amnesty proclamation of last year and another twenty months which the accused had spent in jail awaiting trial. So all three will be free men in June."

It is to be noted that the Italian King's amnesty proclamation was issued after Matteotti had been killed.

Henry W. Harris writes in a *Boston Globe* article

"The trial which the Italian Government would like to have considered of no moment, is the culmination of a crime which nearly shook Mussolini from power, which caused the whole opposition to withdraw from Parliament which forced the Dictator to suppress all unfriendly newspapers, and which caused him to take complete dictatorial powers into his own two hands."

The *Boston Herald* writes

"Not being able to prove the slayers of Deputy Matteotti guilty, they did their utmost to make his character appear as black as their own shirts. Crown Prosecutor Salmeri, officially representing the Mussolini Government, lent aid to the prisoners by expressing belief in the story that they had intended to do no more than abduct Matteotti, and had killed him only when he had made unexpectedly fierce resistance. So it would seem he was responsible for his death at their hands because he tried to fight them off when they seized him."

New South Wales Premier's Attitude towards "Imported Governor"

A Sydney despatch of April 6 states that Mr. Lang, Premier of New South Wales, speaking at the Labor Party Conference, made the following significant remark:

"I calmly say that I do not recognize the right of any imported Governor, who is here to-day and away to-morrow, to interfere with the functions of Parliament. I do not recognize the right of a non-representative nominee chamber to destroy Labor legislation and I intend to use every constitutional means to abolish the council."

In India "imported Governors" ride rough-shod over the Legislature and veto laws and make laws by using their power of certification. This is possible because Indians are not masters of their country, and this

will continue until Indian national leaders unite under a common platform of "Hindu First."

T. D.

"Hindu-Musalman-ki Jai"

The *Guardian* of Calcutta has published a cartoon by Chanchal Kumar Banerjee showing how the Hindu and Moslem

"Hindu-Musalman-ki Jai"

communities have, in a suicidal manner, vindicated their honour and saved their prestige. It may be fitly called "Hindu-Musalman-ki Jai," "Victory to Hindus and Moslems."

J. L. Garvin on Mussolini

Opinion outside Italy having generally gone against Mussolini, partly; it may be necessary for the sake of fairness to set out at least fragments of what has been said in his favour by foreigners. But so far as we are aware, nobody has attempted a justification of what Mussolini and the Fascists have done.

The *Observer* of London prints a long article on "the real Mussolini" by J. L. Garvin in its issue of April 11. We give a few extracts from it below. Referring to Mussolini, Mr. Garvin says—

"The younger man, as near a divinity to his followers as mortal may be, sways at his will the solidly dominant forces of a great nation by practical and passionate. They hail him with

RAMANANDA CHATTERJEE

Born, May 30, 1865

PRASAD PRESS CALCUTTA

and began firing upon the mob. Unfortunately the two heroic young men were shot dead. Their heroism and self-sacrifice will remain enshrined in the hearts of their countrymen. Funds continue to be raised to help their families.

The Sikh Procession in Calcutta

It is a matter for satisfaction that the postponed Sikh procession, which was to have

The Sikh Procession in Calcutta

been held in April, passed off last month without any untoward incident. The Sikhs were able to repair a desecrated and damaged *Sangat* and keep in it a copy of the *Granth Sahib*, replacing the one damaged by a Muhammadan mob.

Some newspapers and some people seem to have considered the day of the procession a day of national triumph. But it was in fact a day of national humiliation. For, the procession could not pass peacefully, not because of any animosity or misunderstanding between the religious communities whose feelings have been embittered, but because of the presence of the police and the military who are servants of an alien power which holds in leash or release the dog of war at its will.

Mr Frankau on Anglo-American Union

A recent issue of the *Chicago Tribune* informs us that Mr Gilbert Frankau, the British novelist, is in America for a lecture tour to cement Anglo-American Union. He "urges the union of America and England to preserve peace by means of a world benevolent force." He also favours "making safe for English speaking commerce" by "banding together of British and American authors" to "preach commonsense with the fluff and politics removed."

We are inclined to think that England and America are already united in using then enormous "benevolent force." The policy of anti-Asianism which prevails in the British Empire and the American Empire makes us shudder at the thought of further and closer Anglo-American union "for the peace of the world." The people of Asia must realize that as long as they will continue to live in their present servile condition, perpetuated by civil war as it exists in

China and communal strife as it exists in India, [they will continue to be victims of] "benevolent force" used "to make the world safe for English-speaking commerce."

T D

Adaptation

Adaptation is a law of nature on which great stress has been laid by evolutionists since the days of Darwin and Wallace. In the struggle for existence, it is the fittest who survive. Fitness consists in adapting oneself to the environment. After the Indian Mutiny, some natives of England came to realize the importance of adaptation in consolidating their power in India. *The Calcutta Review* (Vol. XXX, p. 32) wrote:

We trust that adaptation may be the keynote to our future Indian policy. There is a wide gulf between the Oriental and European mind. It has a *different nature of things*, in climate, race, association, historical reminiscences,—these we cannot alter, do what we can, and in the vain attempt to do so we might be like the frog in the tub who burst at the attempt to make himself like an ox. There is no union without unity, as for longing acts of uniformity, whether in religion or language. In India all past history shows it to be vain. The gulf between the Oriental and European mind must remain, but there may be two useful bridges grown over it—Christianity and knowledge. English ideas to tell on the country must be cast in the Western mould and given in forms suitable to the Oriental mind.

They remembered that it was by adapting themselves to their environment in India that the French succeeded in making themselves popular there. Heber wrote in his well-known *Travels*:

I took this opportunity of inquiring in what degree of favour the name of the French stood in the part of India where for so many years they reigned; and I was told that many people were accustomed to speak of them as often oppressive and avaricious, but as of more conciliating and popular manners than the English Sahibs. Many of them, indeed, had completely adopted the Indian dress and customs, and most of them were free from the exclusive and intolerant spirit which makes the English, wherever they go, a tribe by themselves, disliking and disliked by all their neighbours. Of this foolish, silly, national pride I see but too many instances daily, and I am convinced it does as much harm in this country. We are not guilty of injustice or wilful oppression, but we shut out the natives from our society, and a bullying, insolent manner is continually assumed in speaking to them.

But when the English discovered that they could not colonize India, they bade good-bye to adaption. Nothing more was talked about it as a means of consolidating their power in the country.

Soviet Canned Goods Win Exposition Prizes.

(By United Press.)

Copenhagen.—For toothsome and skilful cooking the canned goods of the Soviet Republic

walked off with nine honorary diplomas at the International Exposition of the Canning Industry here.

This triumph has greatly surprised the canned goods experts of Europe who had not counted upon Bolshevik competition.

This news-item will serve as food for thought to the critics of the Soviet regime in Russia who only harp on its negative, destructive and dark side. It may be said without any fear of contradiction that the Soviet Government, in spite of its desperate economic position, has done much for the cause of education of the masses. T. D.

Extra-territorial Patriotism of Indian Khilafatists

A recent Beirut report to *New York Herald* (Paris edition) states—

Local newspapers report today that a Druse leader recently received from an Indian caliphate committee \$6,000. Druses, it is reported, have decided to send a deputation, headed by Kessab, to India to raise more funds.

The people of Syria have the right to be free and independent. In all struggles for national independence, foreign aid and external contact often form a very vital element. Thus the Druses are justified in seeking aid from the Khilafatists of India. But this question may be asked to Indian Pan-Islamist leaders: "Would it not have been better for India if such a large sum of money as is being sent out to aid the Moslems abroad were spent for the education of Moslem children in India?" The Moslem leaders of India are bitten with the bug of extra-territorial patriotism and communalism, and apparently they cannot think in terms of Indian nationalism and Indian solidarity.

"Money is the snows of war, and extending financial aid to a party fighting a friendly nation is a violation of neutrality." We all know that the British Government will be pleased to see France, her real rival in Europe, eliminated from the Near East. But when the British Government allows the Khilafatists of India to extend financial aid to the Druses who are fighting the French, it is establishing a dangerous precedent. The British Government complains against the Third International spending money for anti-British propaganda in the Orient. She cannot justly do so until she prevents Indian Moslems from carrying on anti-French activities. T. D.

Progress in Turkey

A new Turkish civil code, forbidding polygamy and abolishing certain traditional laws forbidding marriage between Mussulmans and Christians, has been recently passed by the Turkish National Assembly. The new legislation allows every citizen to make a free choice of his religion.

Another very sensible thing has been inaugurated in Turkey. It is the boycotting of the wedding-gift practice. From New Turkey the people of India can learn a great lesson on national solidarity as well as emancipation of women. T.D.

Imperial Conference and Australian Statesmanship

Recently speaking at Braidwood the Australian Prime Minister, Mr Bruce,

"announced that he would personally attend the Imperial Conference, which is due to be held in London next October.

Australia, he said, wanted to have the right to influence Imperial decisions. He had a great regard for many British statesmen but he absolutely refused to leave Australian interests in the hands of any British statesman or body of statesmen."

Six millions of Australians are so conscious of their self-interest that they refuse "to leave Australian interests in the hands of any British statesman or body of statesmen" and they are determined "to influence Imperial decisions." The project of establishing the great naval base at Singapore has been the result of Australia influencing Imperial decisions. Similarly, the "White Australia Policy," "the White Africa Policy" or in other words, Britain's anti-Asian policies, are furthered by Australia, Canada and South Africa. The impotency of Indian statesmanship and the Indian nation became evident when the Indian leaders in the Legislature agreed to entrust the interest of Indians in South Africa to the so-called Indian Government. 320,000,000 Indian people can revolutionise world politics and play a dominating role in British Imperial politics. But to-day the majority of Indian leaders lack world-vision. T.D.

First Negro Woman at Bar of Supreme Court

"The first negro woman lawyer ever admitted to practise before the Supreme Court of the United States has become a member of that bar."

She is Violette N. Anderson, of Chicago was admitted upon a certificate which showed she had practised for more than three years before the highest court of Illinois."

This is a great achievement, because there are not many white American women who enjoy the privilege of practising before the U. S. Supreme Court. But if we consider the fact that a little over sixty years ago, the Negroes were slaves and had no opportunity for education, then the achievement of Mrs. Anderson becomes much more significant as an index of the progress of the Negroes in America. Negroes in America are making progress at an astonishingly rapid pace, and to-day about 70 per cent of the Negroes can read and write. Negro women are qualifying themselves as physicians, lawyers, nurses, and teachers. We Hindus often speak of our ancient civilization and mention instances of highly cultivated Hindu women, but we are doing less for the education of women than the Negroes in America, under the most adverse circumstances, are doing for their women. As long as early marriage remains something like a sacred institution for the Hindu society, there is no great prospect for the education of women to a higher degree. T.D.

"Asian Circle" Is Formed In London

London, Apr. 2.—For the purpose of furnishing more informed views on affairs in Asia a new group called the "Asian Circle", made up of men who have a large experience and knowledge of the East, has just been formed in London. Its president is the Right Hon. Lord Meston.

Members of the organization announced, they would contribute, as far as possible, to the "Asiatic Review", a publication which gives a monthly survey of affairs in the Orient.

Mr Stanley Rice, writing in the April number of the review, explains the reasons for the organization of the circle in this way:

"A few men have been impressed with the importance of Asia and the outcome of their conferences has been the formation of an 'Asian Circle' the aim of which is to widen the scope of knowledge in England on Asiatic subjects through periodical articles. These articles may deal with any aspect of Asiatic affairs in any country in Asia. We, many of us, at least have yet to realize that Europe is not the world and that the future of the British empire rests in larger measure on the development of the natural resources of the undeveloped countries than upon the avoidance of the continual quarrels in Europe."

The above news-item is of great significance to those Indian statesmen and scholars who are alive to estimate the real position

of India in the British Empire, in relation to the British Empire's future in Asia and the rest of the world. It is needless to say that Indian statesmen and scholars have less first-hand and thorough knowledge of Asian countries than British statesmen and scholars. There are many Indians who are members of the Asiatic Society of Bengal and other organizations who have not travelled beyond the borders of her own land. We hope that a large number of Indian scholars will in future visit Asian lands to establish intellectual contacts. It will not be out of place to form an "Asian Circle" in Calcutta to promote better understanding between Asian countries. There are responsible Chinese, Japanese, Persians, Turks and others in India who may aid such a movement to success.

T D

Bishop Fisher on Christianity in India

Rev. Bishop Fisher of Calcutta during his recent visit to New York was a guest of honor in a dinner given by New York Hymn Society at the Town Hall Club. He had much to say about India's future. We reproduce two sentences from his speech as quoted by the *New York Times*. The Bishop said,

"Unless you want revolution in India and revolution in China, and unless you want the security of the British Empire imperilled and our economic system as carried on in India imperilled, do not preach Christianity in the Orient. 50 per cent of the personnel of the Indian National Assembly being Indians, this would bring about a move for general change looking to India's status as a dominion, and lead to Britain's eventual withdrawal."

Bishop Fisher thinks that the teachings of Christianity will bring about revolution in the Orient, particularly in India. We should be very sorry if the British authorities in India, scared by the possibility of a revolution by Indian Christians, started a crusade against mission schools, colleges and proscribed the Bible as revolutionary and seditious literature!

T. D

How America Meets Flood Menace

Floods have caused incalculable loss of life and property in various parts of India, but practically nothing has been done to prevent such havoc in future. Devastating floods occur in America, too. But the

Americans do not think that disasters caused by floods cannot be prevented. With characteristic hopefulness and energy they try to prevent such havoc. On previous occasions we have drawn attention to some American engineering works constructed to meet the menace of floods. We shall notice another such feat in this note.

In June, 1921, the river Arkansas overflowed its banks and devastated the area of Pueblo, Colorado.

"As matters stood then, the city was indeed hard hit, with the heart of its business district wrecked apparently beyond repair. And that was not all. Stretching west to the mountains was the drainage basin of the Arkansas River, a triangle containing 1800 square miles of mesas and foothills, with steep slopes and impervious soil, subject to the cloudbursts of the mountain country. From the same source would come other floods, greater, perhaps, than the one just past, and in time the disaster was sure to be repeated."

By the date of the fourth anniversary of the flood the devastated area had been rebuilt along better lines, with no evidence of the disaster except an occasional high-water mark on some brick building. For dealing with the peculiar flood situation that has menaced the city from the days of the first settler, a protection system, capable of taking care of the biggest flood the Arkansas can ever send down the valley, has been brought into existence.

The first problem which the engineers had to face was to determine the greatest flood that could come out of the region west of the city. The next, was to design and build protection that would take care of that flood with a liberal margin of safety.

"The matter of cost made it impracticable to resort to the simplest solution—a channel big enough to deal with any flood that might come. The key features of the protection which were finally worked out are a channel through the city, capable of carrying a flood one and a half times as great as that of 1921, and a retarding dam, or barrier, west of the city, for cutting down the peak flow of greater floods.

"The peak flow of the 1921 flood was slightly less than 100,000 cubic feet per second or 'second-feet,' as commonly called, this stage being reached at one o'clock at night.

"The old river channel had a capacity of only 38,000 second-feet. There was only one possible result, and for several hours swift currents swept through the streets at a depth of from 9 to 14 feet. The new channel has a capacity of 125,000 second-feet when filled to a depth of 27 feet, and at this depth the velocity of flow will be 23 feet per second.

"Owing to the liberal freeboard and the extra capacity given by a parapet wall that tops the north bank for a distance of 6000 feet at the lower end,

the channel in an emergency could carry a flood of 150,000 second-feet. But that would be its limit.

"In their study of the situation the engineers found that the old river channel was not only too small but that it was too crooked and was in the wrong place. Accordingly, the river was moved half a mile across town to a comparatively straight course along the foot of the Mesa bluffs, where an expert city planner would probably have located it in the first place."

For other details and illustrations, those who are interested in the subject are referred to *Scientific American* for May, 1926, to which we are indebted for the extracts

✓ Learned Japanese Count Finds America a Nation of Hypocrites

Count M. Soyeshima, former member of the House of Peers and one of the prominent publicists of Japan, who recently returned after lecturing at the University of Chicago, views America unflatteringly, according to a recent article written by him for the *Taio* (Sun), a Tokio monthly magazine.

"I was not very favorably disposed toward America and the Americans," he said. "I did not like the Americans, because most of them are in fact most arrogant imperialists, while they have constantly justice and humanity in their mouths. While they set themselves up as ardent champions of justice, they really are the devotees of the outrageous and brazen-faced Monroe Doctrine."

"While Americans are kind-hearted on the one hand, they are extremely selfish on the other. There is an extremely complex character. Intense advocates of humanity and philanthropy, they are at the same time extremely selfish, unjust, inhumane as their crafty underhand foreign policy shows."

"They are in favor of the independence of Corea, while they are most strenuously opposed to the independence of Hawaii and the Philippines. While they publicly identify themselves with justice and humanity, they tolerate the existence of the Ku Klux Klan for the persecution of Negroes and otherwise discriminate against the colored nations."

"While the military authorities of America are so busily engaged in the amplification of armaments, however, it appears that the majority of American people are opposed to the idea of war and in my opinion this is quite as it should be, for a war between America and Japan would be like a fight between a tiger and a shark."

"However strong the tiger may be, it cannot attack the shark; nor can the shark fasten a quarrel on the tiger, whatever hatred the former may conceive against the latter. Neither of the two powers can take the aggressive with any prospect of success." *New York World*—Feb. 4, 1926.

Character of Woodrow Wilson's "Idealism"

We are often told by Europeans and Americans that Orientals lack honesty in political life. But when the real truth comes to light about European and American political life, one trait often becomes apparent—duplicity and double dealing. Woodrow Wilson has been painted as a great idealist and a devotee of the cause of Truth, Justice, Liberty and Peace. A new light has been thrown on the life, character and international policy of this great American President by the publication of Colonel House's *Intimate Papers*, which has been edited by Prof. Seymour of Yale University. One of the leading New York dailies editorially comments thus on Woodrow Wilson's and the Democratic Party's foreign policy before America entered the World War against Germany:—

Colonel House's *Intimate Papers* have shattered many historical legends. They have furnished a means of correcting current impressions of what was going on before the public by revelations of what was going on behind the scenes.

One dramatic disclosure is that of the pathetic unreality of the issue on which President Wilson was re-elected in 1916. In the mind of the convention which renominated him and of the vast majority of the voters who supported him, the President stood for strict neutrality as between the Allies and the Central Powers and for a resolute avoidance of belligerency. "He kept us out of war" was the slogan of the convention and of the Democratic campaign orators.

Colonel House shows that this slogan was a pure myth. All through 1915 and 1916 he had himself labored to bring about an understanding with the Allies under which the United States would enter the war on their side if Germany refused the House-Grey terms. He was thoroughly pro-Ally. The President was also pro-Ally, though to a less degree.

T. D

Vidhva Vivah Sahaik Sabha

Reports of 242 widow marriages have been received from the different branches and co-workers of Vidhva Vivah Sahaik Sabha, Lahore (Punjab), throughout India in the month of April 1926. The total number of marriages held in the current year, i. e., from 1st January 1926 to the end of April 1926, has reached 865, as detailed below:—

1. According to caste:—

Brahmin 158. Khatri 95. Arora 88. Aggarwal 141. Kaisth 27. Rajput 79. Sikh 112. Miscellaneous 165. Total 865.

2. According to Provinces ;—

Punjab and N. W. F. P. 569 Sind 36.
Delhi 23. U. P. 180. Bengal 35 Madras 1
Bombay 1. C. I. 6. Assam 2. Behar and Orissa
12 Total 865.

3. Voluntary donation received during
the month is Rs. 85-10-0 and the total amount
during the year is Rs. 257-9-0.

On Romain Rolland

[The friends and admirers of Romain Rolland, from different parts of the world, greeted this friend of Humanity on the occasion of his 60th birth-day (January, 1926) by publishing their thoughts and sentiments in a magnificent volume *Libet Amicorum Romain Rolland* (Rotafel-Verlag, Zurich-Leipzig). Extracts are given below from some of the striking utterances of the contemporaries of Romain Rolland. Kalidas Nag].

From ALBERT EINSTEIN—

HONOURED MASTER,

With my fleshly eyes I have seen you once only, fresh under the impression of the outbreak of the European war—a lonesome observer, suffering inexpressibly with your fellow-beings, oppressed with the consciousness of not being able to bring forth light that would redeem all. That through your sublime art and through your words you could influence the finely organised souls, was never a consolation to you ; you wanted to help the human creatures who were tormented with the miseries of their own creation.

The raw mass of people move and act under the influence of dull passions, to which they and the State that incorporates them are slaves. In their madness they rage against one another and drive each other to catastrophe, they, however, do not suffer to any great extent from inner conflict. The few, however, who do not partake in the feelings of raw humanity, and who, uninfluenced by these passions, cling to the ideal of human love, carry a heavier burden. If they do not indulge in acts against which their conscience rebels, and do not remain cowardly silent over what they see and feel, they are expelled from human society and are treated as lepers. You, honoured master, have not kept silent, but you have fought, suffered and defied, like a great soul.

The present age, so shameful for us Europeans, has shown that intellectual, athletics is no protection against littleness of soul and barbarous sensibilities. I do not believe that noble human dispositions thrive more in the

Universities and Academies than in the working places of dumb unknown human beings.

To-day the congregation of those who see in you a radiating ideal, greet you. It is a community of lonely individuals who are immune from the epidemic of hate, who work for the abolition of war as a first step in the moral convalescence of the people—which to them appears as incomparably more important than the special interests of their own particular state or nation.

From T. G. Masaryk (*President of the Republic of Czecho-Slovakia*)—

It is a great pleasure to me that I have been allotted a place in the *Libet Amicorum Romain Rolland*. I have known Romain Rolland before the war, his Europeanism was sympathetic to me, and I was attracted by his rousing call to the intellectual Europe to a heroic life.

As the war broke out, and I decided at Geneva, the place of Rolland's residence, to join in it, I reconsidered once more the ideas of Tolstoy and Rolland against it. All the fighting nations, it seemed to me, had responded to Rolland's call to heroic action, heroism was opposed to heroism, heart against heart, intellect against intellect—and in this lay to me the tragedy of the World War.

After the war was over, it was my privilege to come to know Rolland personally, while in Switzerland I sought out the recluse of Villeneuve.

Every cultured person has a number of chosen spirits out of the world literature with whom he forms an inner circle of friends. Rolland is one of my authors and authorities, with whom I am in intellectual intercourse. I believe, therefore, I can claim a small place in the *Libet Amicorum*.

[Translated from the original German by Professor Dr D. M. Bose, Ph. D. (Berlin).]

To our Contributors

We have to inform our contributors that as we have a good many long and short articles in our hands, we regret it is not possible for us to promise immediate or early publication to most of them. Many topical articles also are delayed in publication owing to this cause. For this reason we are reluctantly obliged to say that if any of our contributors want their MSS. back, we shall return them with thanks.

Those writers who wish to contribute

to this Review will kindly bear in mind that it is always difficult to find space for long articles. Sometimes when, for some reason or other, we publish long articles, we have to print extra pages and incur additional expense. We should be obliged if writers did not exceed the limit of 3500 or 4000 words for a single article.

N. B. Writers are particularly requested not to send us any MSS which they have already sent or intend to send to other journals. We want to publish only those articles which are meant exclusively for this Review.

An Empire Adrift

India was never governed by the British on any consistent policy. It was unknown in the history of India under the East India Company. But this became so glaring that it led the cynical Marquis of Salisbury to declare that

"We have not the power to give permanent force to a new policy. Can we enact that our successors shall do exactly that which we are not doing—forebear from altering their predecessor's work? Sir Louis Mallet notes a long series of inconsistencies in the course of the Indian Government. Have we any grounds for thinking they will cease? They are not merely subjects of reproach, they are a warning of the fashion after which our Indian Government is made. By the law of its existence it must be a government of incessant change. It is the despotism of a line of kings whose reigns are limited by climatic causes to five years. Whatever power exists in England is divided between a council of which the elements are fluctuating, and a political officer whose average existence amounts to about thirty months. It would be absurd to expect from this arrangement a persistent and systematic policy, if the policy is to depend on the will of the Government. We might indeed commence a new policy with some confidence, if the state of opinion in the services and among Anglo-Indians here was such as to give assurance that it would be sustained; but of that security there is no appearance. Any sharp change of measures would not be a natural development. It would be "Octroyé" by the present Government, and would be at the mercy of any succeeding Government to set aside; and another link would be added to the chain of inconsistencies that would present themselves to future criticism."—*Notes on Indian Land Revenue.*

Thus it was considered the best means of consolidating the Christian power in India to govern it on no consistent policy. But the only consistent policy in governing India was what the same peer indicated by saying, "India was congested and must be bled."

Some Lessons of the Recent Calcutta Riots

The recent communal riots in Calcutta are replete with lessons for all sections of the community, some of which may be summarised thus:

(1) Between some well-known communal leaders and dancing dervishes the difference lies only in outward polish and a superficial veneer of culture. (2) The cult of hate preached in season and out of season by intellectual *goondas* who disseminate poisonous ideas has been carried into effective practice by their less sophisticated *confreres*. (3) From communal leadership to leadership, by easy stages and fine gradations, in the gentle art of manslaughter is only a step. (4) Mad mullahs and red pamphlets spring up like mushrooms in the rainy season entirely among one of the rival factions in such troubled times. (5) Public life suffers an unspeakable degradation at the hands of such communal leaders and every cultured citizen must hang down his head in shame at the result of their activities. (6) It is self, pure and simple, that they think of;—before their own personal advancement and the satisfaction of their political ambitions, the lives of their countrymen, even of coreligionists, weigh as nothing in the balance. (7) The denser the ignorance of the community, the fiercer the communal zeal. (8) Action is invariably followed by reaction, and hate begets hate, and communal organization is a game which both the rival communities can play at, and if Mahomedans of all parts, including Peshawaris and Kabulis, can combine, Hindus, be they Bengalis, Hindustanis, Marwaris, Jains, Brahmos, Arya Samajists or Sikhs, may also do so when the cry of 'religion in danger' is raised, and the most horrible crimes may be committed in the name of the most sacred of causes.

Some other lessons of more immediate practical consequence may also be noted.

(1) Where police protection fails, self-help and self-confidence develop, and, practised on a large scale, they are a national gain. (2) Self-defence, and defence of one's hearth and home, is a sacred and inalienable right, for exercising which every man should be prepared at all times. (3) Daggers and choppers, with which every loafer will arm himself, should be placed under a strict ban, while revolvers and pistols, for which a license, difficult to obtain, is necessary, should be made more easily available to respectable gentlemen. (4) Mob-violence is effective only in its first onslaught, and can be seriously checked by a little organisation, in which

brains and power of economic endurance play a more prominent role than mere physical strength. (5) Even brutal and dastardly attacks by secret assassins can be repulsed by a little courage, concerted action and presence of mind. (6) *Goondas* are bullies and cowards, whose keen enthusiasm for a short cut to paradise by murdering unbelievers cools down to zero at the display of a little determination. (7) A united stand is often all that is necessary to repulse the attacks of frenzied mobs, whose fanatical fury usually melts away as soon as it meets with organised opposition. (8) Habitual indulgence in bombastic fustian by the semi-educated fanatic who translates into action the communal leader's veiled threats for the benefit of the multitude, gives him an exaggerated sense of his own importance, and the time has come for a little plain speaking on the part of the sober section of our publicists with a view to prick the communal bubble and bring down these fussy mischief-mongers from their high pedestals.

The distribution of the loaves and fishes of office on the communal basis has filled the educated sections of the major community in Bengal with high hopes as to the potent virtues of communalism. But their laugh will be on the other side of the cheek when they find that on the population basis, their number in the public services of a neighbouring province like Bihar and Orissa should be considerably reduced, if the same test be applied by an impartial Government everywhere. That would soon bring them back to their senses, and make them feel that even on the low plane of material interests, efficiency and capacity are the ultimate tests of success, and communalism is the deadliest enemy of progress.

Those among the ruling class who think it a huge joke to stand by and let the rival communities indulge in a little game of blood-letting, will find anon that it is a grim business which has its serious side. The communal manœuvres, if their object be to separate the Moslems from the Swarajists and the creation of a new loyal Moslem party in the Council under the banner of a well-known communal leader who is constitutionally incapable of thinking in terms of the nation, will not in the long run foster loyalty, for when the rival factions grow wiser by their experience, as grow they must, all their hatred will be focussed on those who set the less educated and tolerant

faction by the ears and fomented the dissensions for political purposes, and then will come the day of reckoning. It is a true English saying that, though God's mill grinds slow, it grinds exceedingly small, and sinister advocates of the divide and rule policy will do well to note this. Then the utter futility of the law and order theory, which has been so ruthlessly applied to keep down our intellectuals, made manifest in the recent riots, when official indifference reached its acme presumably because no European lives were lost, as in the Punjab before the Jallianwallah Bagh massacre, is bound to tell with deadly effect against those who are never tired of putting it forward as the sole sufficient justification of foreign rule.

The European press in Calcutta has displayed an attitude which would be amusing, if it were not so sad. So long as murderous assaults with lethal weapons which only *goondas* seemed privileged to carry, were the order of the day, and innocent Indian lives were lost, they did not betray the slightest anxiety for stiffening up the administration, nor did they object to the head of the province enjoying himself in the cool heights of Darjeeling. But as soon as the effect of the riots was visible in the scarcity of meat and foodstuffs in the Municipal Market, and the fear of pestilence from unswept streets and decomposed Indian corpses became serious, and the dislocation of trade owing to the shortage of coolies in the godowns and clerks in the offices became imminent, they suddenly woke up to the necessity of vigorous measures and began to demand the presence of the Governor in his capital. And it dawned even on the *Statesman*, what should have been apparent from the very first, that

"a beginning may be made with the task of rooting out the *goondas*. Although most of the men are known to the police [which makes it all the more surprising why they were not rounded up so long] it will not be sufficient to deal merely with the blackguards who stab and loot. During these riots there has been ample evidence of an organization behind the *goonda* and using the *goonda* for its own purposes. The leaflets which have been distributed in thousands, the meetings that have been held, the harangues that have been delivered, all suggest that somewhere in the background is somebody with funds and brains and a rudimentary kind of organization which is much more dangerous to the community than any gang of *goondas*."

The main business of the administration should now be to get at these intellectual *goondas*, fired with communal hatred, who

inspire the mullahs and pamphleteers. But will the police dare to do it?

'MAN IN THE STREET.'

Muhammadans or Marwaris

In the course of the debate on the Security Bill a rather irrelevant question, *viz.*, which community started the recent Calcutta riots, was asked, and answered by different speakers differently. Whichever may have started them, nationalists of all communities should feel ashamed of them and regret their occurrence. But when

Mr. Kader Bux asserted that the Marwaris and not the Mohammedans were primarily responsible for the riots, as all the disturbances had always originated in the locality inhabited by Marwaris

his reasoning was faulty. All dacoities take place in the houses of rich or well-to-do men. But for that fact, it is the dacoits who are to blame, not the possessors of property. Similarly, it is not entirely or mainly religious zeal, but expectation of loot also which takes hooligans mostly to localities inhabited by Marwaris, because the latter are men of substance.

In East and North Bengal, it is mostly wretches who disgrace the Muslim community by calling themselves Moslems, who abduct, kidnap and ravish widows and some other women also. One might as well blame these unhappy victims of brutality for these dastardly crimes as blame the Marwaris for the acts of violence and plunder committed by hooligans against them in the quarters inhabited by them.

How the Bengal Government has Broken the Swarajya Pact

An impression prevails among Moslems, to which a Muhammadan contemporary has given expression, that under the Goonda Act more Muslim goondas have been expelled from Bengal than Hindu ones. It is a wrong impression. Sir Hugh Stephenson said in the course of the Security Bill debate:

The Government had used the Act successfully; 88 men had been externed under its provisions and, in order that there might be no question of communalism, he might mention that 45 were Hindus and 43 Mohammedans, while ten cases were pending.

Of course, if the Bengal Government had observed the "Swarajya Pact," according to

which Moslems in Bengal ought to have had a greater share of all advantages than Bengali Hindus, it would then have taken care to extern 54 per cent. of Muslim *goondas* and 44 per cent. of Hindu *goondas*. It is a legitimate grievance of all Bengali Swarajists, particularly of the Muslim variety, that the Bengal Government broke the pact before its recent annulment at Krishnagar.

'Divide et Impera' and Discrimination against Up-countrymen.

The Security Bill provides for the externment of Bengalis also. But as, according to the pro-Government *Statesman*, "the burden of his [the Governor's] speech was that steps must be taken to rid Calcutta of the dangerous element imported from up-country," there is little doubt that the Act is intended to be used mainly against non-Bengalis. By all means let dangerous persons, to whatever province they may belong, be suitably dealt with. But no animus or bias should exist or be created against outsiders from any quarter. In the defensive measures adopted and the defensive steps taken during the riots, Bengalis and non-Bengalis often worked together. This growing solidarity ought not to be allowed to be broken—whether intentionally or unintentionally, does not matter.

Sir M. O'Dwyer on the Riots and the "Reforms."

The recent riots have given many British lovers of India, who love India as mutton-eaters love sheep, the occasion to draw various morals. Sir M. O'Dwyer is one of them. He would make the introduction of democratic or representative government (God save the mark!) in the shape of the Montagu-Chelmsford Reforms, responsible for the riots. Of course, the Reforms are no more democratic than the crocodile is a fish. Nor is the ex-proconsul of the Punjab right in thinking that the Reforms have diminished the authority and prestige of British civil servants, and resulted in riots, etc. The real truth is that the 'steel-frame' not only remains intact, but has been strengthened.

What is true is that the Reforms were given to India with a strong admixture of the poisonous principle of distribution of political

advantages, e.g., votes, seats in the legislative bodies, etc., and of appointments in Government offices, along communal lines. This has aggravated the communal rivalries, jealousies, and hatred, which existed from before the time of the Reforms. Their genesis need not be discussed here. Some Mussalman leaders and journalists have exploited the situation for promoting their own interests. Hindu communalism and fanaticism have in consequence begun to be diverted to the field of politics.

As real democracy or representative government does not take into account men's needs, it should not be made responsible for the riots. What is responsible for them is the communal virus in the Reforms.

"Heads We Win, Tails You Lose"

On Maulvi Abdul Gaffur's Resolution for the amendment of the Bengal electoral rules for the election of representatives to the Bengal Council in proportion to the numerical strength of the different communities of this province, Sir A. Rahim said in part

"We the Muhammadans seek no undue advantage for ourselves, but all we do wish is to safeguard our interests. We are ready to concede the same to all other communities similarly situated. The Muhammadans happen to be in numerical majority in Bengal and in the Punjab. In the rest of India they are undoubtedly in a minority, not even in Bengal and the Punjab what is the majority? It is a majority of 4 or 5 only out of a 100 seats. But anyone who knows anything about the working of representative government will not at a moment think that it is possible for a majority of that character to carry on the government defying the wishes of the minority. It is impossible. It has been said by some eminent Hindu politicians that what we are seeking is heads we win, tails you lose—that is a mere travesty of our position. According to the then census (when the Franchise Committee sat), the percentage (of Moslems in Bengal) was 54, but has now fortunately gone up to something like 56 per cent. . ."—*Official report of the Bengal Legislative Council*, Vol. XX No. 1. Twentieth session, 1926, pp. 140-42.

Sir Abdur Rahim knows very well that the resolution carried in the Bengal Council can be applicable outside Bengal. So, if Bengal Muslims obtained any advantages in proportion to their numbers in Bengal, that would not affect the advantages enjoyed by Muslim minorities elsewhere in excess of what they would be entitled to in consideration of their numbers there. Hence he could say without any risk that, 'Heads we win, tails you lose' was a travesty of the Muslim

position. It is *not* a travesty but a fact. Let Sir Abdur Rahim mention a single province where the Moslems are in a minority and have expressed themselves willing to have seats in the Legislature and posts in Government offices in exact proportion to their numbers in the province and we shall admit that he is right. Or, better still, let him call a conference of the political leaders of Moslems in all provinces and get a resolution passed there to the effect that Muhammadans throughout India would be satisfied to have only their numerically proportionate share of political advantages and "loaves and fishes" of office.

We do not know on what data Sir Abdur based his statement that Moslems now constitute 56 per cent of the population of Bengal—probably the addition of Sylhet to Bengal has increased their proportion. But his exultant reference to the fact shows what great importance Moslems attach to increase in their numbers. It was known all along—at least to us, that Sylhet was a district where Muhammadans were in a majority, but in spite of that fact, Hindus did not object to its re-inclusion in Bengal. That ought to convey a lesson to Moslems.

Bengali-speaking Areas outside Bengal

Sylhet was not the only district where Bengali is spoken and which once formed part of Bengal. The Manbhumi district in Chota Nagpur and some other areas now included in Bihar are Bengali-speaking and formerly formed part of Bengal for administrative purposes. These should be again given back to Bengal. There should be a movement both in these areas as well as in Bengal for their re-inclusion in the mother province. Even if they were re-included, the Moslems would remain a majority in Bengal. In any case, the question of communal majorities and minorities ought not to stand in the way of the observance of the higher principle of recognising linguistic ties, approved in the Montagu Chelmsford Report and practically given effect to in the case of Sylhet.

"Cooch Behar Affairs"

We are obliged to again refer to Cooch Behar affairs. A correspondent has written to

us a letter from Cooch Behar which will be found in the Comments and Criticism section. He calls in question the accuracy of some of the statements made by the Cooch Behar State authorities. What have the latter got to say now? If they have any answer, let them also fortify themselves by mentioning the date of the late Maharaja's death.

The Riff Struggle for Liberty

The Riffs of Morocco who have lost after a long struggle for freedom under their heroic leader Abdul Karim present as noble an example of the undying love of liberty which inspires the human heart, as the joint endeavour of France and Spain to crush these gallant people is an ignoble example of imperialistic greed. The conduct of Spain and France shows that neither Christianity nor republicanism, nor a combination of both, can suffice to really civilise a people.

U. P. University Standards

A recent U. P. Government resolution on the Public Instruction Report of that province draws attention to the widely different standards which prevail in its universities. In a certain examination one university is stated to have passed a little more than 50 percent of the candidates whilst another has passed more than 90 per cent. This itself does not, of course, prove that the standard of the latter is lower than that of the former. In a small teaching university which is non-affiliating, it is not very difficult to make the teaching so efficient as to secure a high percentage of passes.

The complaint that university standards are low in India is very often heard. But a high percentage of passes is not by itself a sufficient proof of the allegation. There must be other corroborating facts.

As regards one U. P. university, which we will not name, we know of one such significant fact. In a certain examination of this university in a certain subject, all the candidates failed to secure pass-marks. But when the results of the examination were announced, all were found to have passed. We had this piece of information at first from a college professor, and subsequently the examiner

himself bore testimony to its correctness. We are not authorised to mention names.

In India the United Provinces are one of the most backward tracts in education. The number of students there is comparatively small. At the same time these provinces have more universities than any other. Hence there may be a temptation to attract students by lowering standards. Such harmful competition is probable. But whether any of the U. P. universities have succumbed to such a temptation is more than we can say.

The Lamp-lighters of Calcutta.

During the riots and cowardly assassinations the lamp-lighters of Calcutta kept their colours flying—they regularly lighted all the street lamps at great risk to themselves. If they had not done this, the horrors of those April days would have greatly increased. All honor to these heroes in humble walks of life. If the officers and subordinates of the conservancy and road-watering departments had emulated the example of the lamp-lighters, instead of neglecting their duties for weeks, they would have risen greatly in the estimation of their fellow-citizens.

Bengal Provincial Conference at Krishnagar

It is greatly to be regretted that Mr. B. N. Sasmal, President of the Krishnagar session of the Bengal Provincial Conference felt obliged to vacate his office. It is not always possible for the president of such a conference to hold and express opinions identical with those of his audience. The delegates present may in case of such difference of opinion, if serious, pass a resolution expressing their dissent. But it need not take the form of or be practically a vote of censure on the president.

It is some satisfaction, however, that the conference was held under the presidency of Mr. J. Chaudhuri, who is a well-known public man.

At this conference, the Swarajya pact, entered into in the palmiest days of Mr. C. R. Das's influence, was annulled. It has not been annulled too soon.

Admission to Medical Colleges in Bengal.

The country stands in need of a much larger number of trained medical men than it has. It is necessary, therefore, to increase the number of medical schools and colleges. But the authorities are not only unwilling to add to the number of medical institutions themselves, but are also very reluctant to recognise institutions started by private bodies and possessing buildings, some funds and a qualified staff. The Bankura Medical School is a case in point.

Admissions to medical colleges and schools should be made with the strictest justice and with sole regard to the qualifications of the candidates for admission. But so far as the Government Medical College of Calcutta is concerned, this does not appear to be done always. Owing to this reason, there is no doubt that sometimes very deserving students are shut out. We will give an example. Some half a dozen years ago a student named Jogesh Chandra Banerji sought admission into the Calcutta Medical College. He was at first refused admission. It was with the greatest difficulty that he could afterwards obtain admission. At his final M.B. examination this young man obtained in due course a First Class First. Similar brilliant success had marked his academic career at the Medical College throughout. Consequently he has been also the recipient of about two dozen medals, prizes and scholarships. Who knows if young men of similar ability, have not been denied medical education, in spite of their seeking it? So, it behoves the selection boards of medical institutions to be very careful and impartial in their work.

Public Instruction in Bengal in 1924-25

The report on public instruction in Bengal for the year 1924-25 is an informing and interesting document, of which we shall make fuller use hereafter. In the meantime we note a few facts.

The great disparity in the spread of education among boys and girls will appear from the fact that,

"Of the total number of pupils studying in all classes of institutions on 31st March 1925, 1,770,472 were males, and 380,470 were females, in the preceding year the corresponding figures were 1,692,688, and 364,374 respectively."

The backwardness of Muhammadans in

collegiate education will appear from the following figures —

"The number of students reading in arts colleges for men increased from 20805 to 21919 of whom 18697 were Hindus, 2853 Muhammadans and 369 were of other communities. The corresponding figures for the previous year were 17656, 2756, and 393 respectively."

The Director of Public Instruction is right in observing that "the condition of secondary schools in general and high schools particularly continues to be unsatisfactory."

In primary education Muhammadans, who are in the majority in Bengal, are doing better than in higher education: they are making more rapid progress than Hindus, as the following paragraph will show —

"Primary schools for Indian boys were attended by 597265 Hindu and 687399 Muhammadan pupils on 31st March 1925. The corresponding figures for 1923-24 were 575647 and 657201 respectively. Thus the number of Hindu pupils rose by 21628 and of Muhammadan pupils by 30195 during the year under review. Of the total Hindu male population 56 per cent, and of the total Muhammadan population 53 per cent were in boys' primary schools on 31st March 1925 the percentages for the preceding year were 55 and 507 respectively."

In the chapter devoted to unrecognised institutions, Mr. Oaten's remarks on Santiniketan are as follows:

In the latter, the founder (Dr. Rabindra Nath Tagore) is attempting to combine the oldest Indian traditions with the best features of modern education. Santiniketan devotes considerable attention to the inculcation of religious and moral principles, manual and farm work, art, music, social service and self-help generally. The institution, which bears on every aspect of its work, the impress of the culture, the spirituality and the idealism of its founder, values its independence of control as essential to its work. Without in any way surrendering that independence it has recently made arrangements to present such of its pupils as desire it at the examinations of the University of Calcutta. A special feature of its work is the co-education of boys and girls and its system of open air class work under trees. The visitor has something to criticise and much to praise, but he will agree with wholehearted assent that its library is a scholar's joy, its spirit of unity an oasis of peace in a desert of jarring disharmonies, and that whatever the future may hold in store for it, Santiniketan has already achieved in three main directions, viz., its department of advanced oriental research, in which foreign savants have co-operated, its art school, under the direction of Mr. Nanda Lal Bose, and its village industrial and social service work, in which it has had the skilled assistance of Mr. Elmhurst.

New Session of Visva-bharati

Information relating to the new session of Visva-bharati will be found in an advertisement of the institution printed elsewhere. In deciding to join this institution or not, students may take into consideration the remarks of Mr. Oaten, Director of Public Instruction of Bengal.

Swarajist-Responsivist Agreement Not Ratified

The agreement between Swarajists and Responsivists provisionally drawn up at Sabarmati in April, at a conference of the leaders of the two parties, was subsequently submitted, as previously arranged, to the executive of the two parties for ratification. It is to be regretted that it could not be ratified. The construction which Pandit Motilal Nehru sought to put upon the agreement was, in our opinion, one which it cannot bear.

The Recent Strike in Great Britain

Though the recent great strike in Great Britain, originating in disputes between the miners and the owners of coal-mines in relation to wages and hours of work, has had to be called off, harmonious relations, have not yet been established between the labourers and the capitalists concerned. British Labour is organised to a far greater extent than Labour in India. But the capitalist Government of Great Britain is still better organised. This fact seems to have had not a little to do with the collapse of the strike. Labour also appeared to be to some extent like a house divided against itself, as large numbers of women dependent on labour were against any strike.

It may be observed incidentally that the strike gave rise to many serious riots, and also to the deliberate wrecking of trains attended with loss of life and property. These similar disturbances, when they take place in India, prove the unfitness of Indians for self-government. But happening in Great Britain, they prove the necessity of further democratisation of Government and industries.

Indian Teachers and Western Students of Modern Science

At present, so far as modern science is concerned, Indians are generally learners and occidental scientists the teachers. Speaking generally this state of things is likely to continue for many years yet, though in the case of a great scientist like Sir J. C. Bose, some foreign students and scientists have, no doubt, expressed a desire to work under him in his Institute.

Such being the case, we are glad to note that an advanced student of the University of West Virginia in America, named Le Roy V. Clark, has expressed a desire to work at the chemical laboratory of the University of Allahabad under Professor Dr. Nil Ratan Dhar, the head of the chemistry department. "The numerous articles under the head, 'Studies in Absorption', which have appeared in the *Journal of Physical Chemistry*" and which were contributed by Dr Dhar, have led this American student to inquire if assistantships or work of that nature may be had under Dr Dhar.

It is a very small matter, but we notice it because it suggests the possibility of Indian scientists becoming teachers in some branches of modern science to foreign students.

How Some Indian Chiefs Reul.

Progressive government in a few of the larger Indian States should not blind us to the neglect of their duty to their subjects of which large numbers of Indian ruling chiefs are guilty. *The Subodha Patrika* of Bombay writes.—

The state of Khairpur in Sind is one the present ruler of which has been using the whole of the state revenue for his personal luxury and this state of things has been going on for many years past. The extravagance of the Alwar Maharaja is not less on a par with that of Khairpur. Out of a total revenue of fifty lakhs no less than 45 lakhs go to satisfy the thirst for luxury of the Maharaja. Many other states have the same tale to tell.

The Servant of India gives the following figures for the Jodhpur State :—

Expenditure on				
Year.	Revenue.	Education.	Medical	Motor garage
1921-23	1,20,01,738	1,76,427	1,80,785	1,41,305
1922-23	1,25,05,506	2,13,825	1,79,039	3,12,530
1922-24	1,72,77,498	2,84,492	1,96,077	3,25,398

The same paper says :—

A Correspondent writing in the *Princely India* April 26, says that in Patiala this year after many years a budget has been framed and that Mr. K. L. Datta, the financier who was employed as Accountant General of Patiala, resigned his post, as the Maharaja would not cut down his personal expenditure to reasonable limits.

It asks ; "why cannot the Patiala State stand a conscientious Accountant General?"

Those who waste their subjects' money in extravagance and vice are unfaithful servants of their people and worse than thieves, whatever high-sounding names they may have.

Regarding the Nizam's Administration in 1923-4, the *Mahratta* writes :—

The administration of any State has to be judged by its progress in the matter of advancement in education, in political power and in the peace that the subjects enjoy. The report records abolition of 113 primary schools of the experimental type but it gives no reason for this drastic action. The percentage of scholars is only 107, here is a distinct fall in the number of schools for girls as well as depressed classes. No thought seems to have been given to the technical and industrial education at all. Regarding the progress on the political side, even the Montagu-Chelmsford reforms have left the administration cold. Democracy is a far off cry but even the ordinary rights of representation are denied to the people in spite of the best efforts of the people. The Muslims boast of their spirit of democracy, only it is not translated into action outside their community or in political matters. Further, the increase of revenue and the surplus by hundred and fifty percent over the estimates coupled with the ill of remissions is a standing stigma on the administration, because the year being a famine year, it shows that the exactions from the ryots were made most cruelly. Those who advocate communal representation, and the Mahomedans are the loudest in their demand in this respect, ought to express their opinion on the disparity of either the rarity of Hindu representation in the public services in the Nizams dominions. Eighty-six percent of Hindus have practically no representation while fourteen percent of the Muslims monopolise the public services.

South African Colour Bar Bill.

Whether the South African Colour Bar Bill, which has been passed by the Union Parliament, will at present or in future affect Indians in South Africa is not the only or main question which ought to concern us. It is a monstrous piece of legislation which intends to prevent the coloured indigenous population of South Africa from ever earning a livelihood by skilled labour in mines, etc. His effort to keep human beings in the position of cattle for ever, is bound to fail.

We have no hope that the Imperial British Government will negative this legislation

South Africa and the Empire.

In spite of the Color Bar Bill, some of our countrymen are determined to hope against hope that the South African Government will listen to the voice of reason and justice and modify Dr. Malan's bill for "reducing the Indian population to a minimum" in South Africa. Some even expect help from the British "Home" Government! They do not know the temper of the South Africans. General Hertzog declared in the S. A. Parliament on April 22 that

in his view the Union stood on an equal footing with Great Britain. It was no longer a question of fighting for an independent status. They had that now. It was question of assuming more and more rights which they were entitled to assume. He felt convinced that if they openly took up the attitude before the whole world that South Africa was independent all the difficulties which had arisen in the past would disappear.

General Hertzog added

We say that a free nation must recognize only one authority—the will of its own people. As far as I am concerned, it must be clearly understood that this country takes its place in the affairs of the world as a nation free and on an equal footing with the rest of the world."

From a letter of Sir Purshotamdas Thakurdas published in the London *Times* of April 20, we learn that Sir Thomas Watt, an ex-Cabinet Minister of the Union of South Africa, has said on the Indian question :—

"This matter is to us in South Africa such a vital and fundamental matter that no ethical considerations, such as the rights of man and equal opportunities for all non-Europeans, will be allowed to stand in the way. It is a question of self-preservation with us."

On this Sir Purshotamdas observes in part :—

In other words, right or wrong, Sir Thomas Watt will stop at nothing to reach what he considers to be his goal, right or wrong, he hopes for the Mother Country's sympathy and support in the task he sees before his country, but he says that if that is withheld South Africa "will not be deterred."

He definitely says that the natives must not be given "full political and other rights" if the Europeans are to remain there. He unequivocally declares that if by this policy the white settlers of South Africa "are committing a great wrong to a people for whom they are trustees, they must be left to manage or mis-manage their own affairs."

South Africa is a member of the League of Nations, I wonder what the League will think of this conception of trusteeship by one of its members? The Union of South Africa is the mandator for South West Africa. One is constrained to inquire whether, with so clear a declaration of policy as that enunciated by Sir Thomas Watt, the mandate is in safe hands.

Khilafat Conference at Delhi

We are very sorry that members of the Khilafat Conference at Delhi indulged in so much 'frightful' talk and paid such little regard to truth. It will harm them more than anybody else. We would not have written even these few lines had they not been fellow-creatures and fellow-countrymen.

Agricultural Improvement in Bengal

That agriculture should be improved in Bengal and the raiyats' condition also should be bettered, admit of no doubt. Dr. Nares Chandra Sen Gupta has stated in our present issue how this may be done. It would be helpful if the landlords stated how they would bring about the same results.

The principle that the raiyats should be made proprietors of the land, because it is they who do the actual work of cultivation, admits of wider application. In soap factories, glass factories, cotton mills, etc., the capitalists do not do the actual work of production;—some do not pay sufficient attention to the works, and even follow wasteful methods. It may be argued that, for these reasons, the labourers ought to become proprietors of these factories. But even the Soviet method in Russia has not been able to eliminate capitalists. And landlords are after all capitalists of a sort. The case of Ireland is not similar to that of Bengal.

The editor of this Review is neither a zemindar nor a raiyat: he does not own even a square yard of land. He may, therefore, claim to be somewhat unbiassed.

We do not say that the landlords cannot be eliminated. But would that be a sufficient remedy?

Dr. Nares Chandra Sen Gupta says.—

It would also be necessary to pass appropriate

laws against alienation of lands to non-agriculturists and fixing the minimum size of holdings. An effective anti-alienations law would be to lay down that when land is purchased by a person which he does not cultivate himself or by hired labourers, the person actually cultivating the land should be deemed to be the actual proprietor subject to a rent-charge.

A law against alienation of land to non-agriculturists was passed some years ago in the Punjab. But our impression has been that its results have not been satisfactory. Recently we learnt on enquiry from a very well-informed and trustworthy person that the working of the Punjab Act has not given general satisfaction.

Japanese Opinion on the so-called Indian Navy

Distrust of the Indian Navy project colors some editorial expressions in the Japanese press. Thus the Tokyo Nichi Nichi remarks that Great Britain has already enlarged her Asiatic fleet, while she has shifted the base of her naval operations to a point in the Mediterranean, and this daily continues.

In addition, Singapore will be fortified, an Indian Navy will be created and the Australian fleet will become powerful, thus making British defenses in the East complete. Great Britain has her eyes riveted on the East, the peace of which is effectively guaranteed by means of the Four-Power Treaty.

To detect her motive is a question. The objective for which she makes good the abrogation of the treaty of the Anglo-Japanese Alliance is also a question. We must scrutinize whether the intention of Great Britain is internal or international. Except for remote futurity, during which unexpected events may occur, it is not difficult for us to answer this question. The objective of British policy is, no doubt, China and India. To the eyes of Great Britain China and India are one and the same thing.

What is the reason for this argument? The possible antagonist of Great Britain will be Soviet Russia, as Czarist Russia was for a long time in the past. The rival of Great Britain is neither the United States nor Japan, insofar as China is concerned. Whether this conjecture is to the mark is another question. Britain's policy toward China is based on this possibility. Great Britain's dreadful antagonist over India is also Soviet Russia. There are a variety of movements, such as Pan-Asianism constituting menaces to the existence of the British Empire, but the greatest probable threat to the peace of India is, in all likelihood, Soviet Russia. To ward off these dangers forms the cause for the orientation of British national defense.
